Hwai Ho (**Huai Ho**), R., N. China; rises in Tungpeh Shan, flows E. between N. China plain and lower Yangtze; subject to disastrous floods and changes of course; since 1950 flood control and irrigation canal to sea; c. 765 m. long.

Hwainan (**Huainan**), c., Anhwei prov., central China; ctr. of China's ch. coalmng. region; p. (1953) 286,900.

Hwang-Hai (**Yellow Sea**), arm of Pac. Oc. between Korea and China; branches into Gs. of Pohai and Liaotung; shallow sea; named after yellow silt coming from the Hwang-Ho; length 600 m., greatest width 400 m.

Hwang-Ho (**Yellow R.**), China; rises in Kunlun range, S. Chinghai prov.; flows circa 3,000 m. into G. of Pohai; cuts through Shensi in a deep gorge; filled with yellow silt (loess) from this a.; floods frequently and changes course (once entered sea S. of Shantung); in lower part forms fertile plain; now part of multi-purpose scheme for hydroelectric power, irrigation and flood control; 2,900 m. long.

Hwangshih (**Huangshi**), c., Hupeh prov., China; main iron and steel ctr. of central China, built since 1950; p. (1953) 111,500.

Hyde, t., Gtr. Manchester, Eng.; on R. Tame, 5 m. S.E. of Manchester; paints, chemicals, food-processing, tobacco, rubber; p. (1971) 37,075.

Hyderabad, ch. c., Andhra Pradesh, India; on R. Musi; walled t. and impt. comm. ctr.; univ.; p. (est. 1970) 1,316,802 (c.), 1,376,856 (met. a.).

Hyderabad, c., Pakistan; 3 m. W. of Indus; 90 m. N.E. of Karachi; old cap. of Sind; univ.; noted for silk, gold and silver embroidery; now varied mnfs.; dam at nearby Kotri; p. (1969) 608,000.

Hythe, t., Kent, Eng.; on S. cst., 3 m. W. of Folkestone; one of the Cinque pts.; military canal passing through t., used for boating; p. (1971) 11,949.

I

Iasi. *See* Jassy.

Ibadan, c., cap. of Western prov., S.W. Nigeria; univ.; ctr. of rich agr. a., between the savannah and forest regions; p. mainly Yoruba; crafts, small inds.; p. (est. 1970) 745,756.

Ibagué, c., cap. of Tolima dep., Colombia; transport ctr.; cotton, tobacco, sugar, leather gds.; p. (est. 1969) 178,821.

Ibarra, t., Ecuador; alt. 7,300 ft. at foot of Imbabura volcano; on Pan-American highway; p. (1960) 182,700.

Iberian Peninsula, S.W. peninsula of Europe; containing sts. of Spain and Portugal; lge a. of high tableland; interior isolation and regionalism; historical and contemporary importance for minerals; a. 229,054 sq. m.; p. (1968) 41,500,000.

Iceland, rep., N. Atl. Oc.; volcanic I. with ice-covered plateaux; glacier fields cover 5,000 sq. m.; only 1 per cent of a. cultivated; cold

climate; hot house cultivation using thermal springs; economy dependent on fishing and fish-processing inds.; high standard of living; tourism increasingly impt.; 7 admin. dists.; cap. Reykjavik; a. 39,709 sq. m.; p. (1969) 203,442.

Ichang, c., S.W. Hupeh, **China**; on R. Yangtze; site of famous gorges; terminus for lge vessels from Shanghai.

Ichinomiya, c., S.E. Honshu, **Japan**; anc. Shinto shrine; textiles, pottery; p. (est. 1969) 212,000.

Ichow, c., Shantung, **China**; at foot of Shantung highlands; silk ind.; p. (est.) 100,000.

Icknield Way, anc. highway in S. **Eng.**; from nr. Bury St. Edmunds, through Wantage to Cirencester and Gloucester.

Idaho, st., **USA**; one of the Rocky Mtn. sts.; rich in minerals; agr. mainly in irrigated Snake R. valley; cap. Boise; a. 83,557 sq. m.; p. (1970) 698,275.

Idaho Falls, c., Idaho, **USA**; on Snake R.; food-processing, lumbering; silver, lead, and gold mines nearby; nuclear experimental breeder reactor; p. (est. 1969) 36,500.

Ida Mountains, range, N.W. **Turkey**; volcanic, hot springs; max. alt. Mount Gargarus, 5,797 ft.

Idi Amin Dada (L. Edward), on frontier of **Uganda** and **Zaire**, one of the sources of R. Nile; occupies Gr. Rift Valley; alt. 3,000 ft., 44 m. long, breadth 32 m.; salt, fishing, wildlife.

Idle, t., West Yorks., **Eng.**; in Aire valley, 3 m. N. of Bradford; woollens.

Ife, t., **Nigeria**; ctr. of the cacao tr.; univ.; p. (est. 1970) 154,589.

Ifni, enclave, S. **Morocco**; ceded by Spain to Morocco (1969); cap. Sidi Ifni; a. 579 sq. m.; p. (1964) 51,517.

Igarka, sm. t., Siberia, **RSFSR**; on R. Yenesey, 400 m. from its mouth; graphite plant, nickel-mines, lumber mills; p. 15,200.

Iglesias, t., Sardinia, **Italy**; N.W. of Cagliari; mng. for lead, pyrites, zinc; p. (1961) 28,004.

Iguaçu, R., trib. of Paraná; mostly in **Brazil**; famous falls where Argentina, Brazil, and Paraguay meet, excelling Niagara, height 210 ft.; hydroelec. power potential.

IJmuiden, c., N. Holland, **Neth.**; on cst. at mouth of N. Sea canal; fishing; gasification plant, major iron and steel plant; p. (1968) 67,864 (c.), 135,334 (met. a.).

IJsselmeer (Lake IJssel), freshwater reservoir, **Neth.**, formerly Zuider Zee; separated from N. Sea by Wieringen–Friesland Barrage; active land reclamation in progress; Wieringermeer drained 1930, N.E. Polder 1942, E. Flevoland 1957, S. Flevoland 1968, Markenwaard to be drained 1980; when reclamation complete by end or cent. a. of Neth. will have been increased by some 6 per cent.; ch. c. on inlet (IJ) Amsterdam.

Ilchester, t., Somerset, **Eng.**; on R. Yeo; N.W. of Yeovil; birthplace of Roger Bacon.

Îles d'Hyères, I. gr., **France**; in Mediterranean off Toulon; tourism.

Ilesha, t., **Nigeria**; tr. ctr., cotton weaving; p. (est. 1970) 197,111.

Ilford. *See* Redbridge.

Ilfracombe, t., N. Devon, **Eng.**; sm. pt. on cst. of Bristol Channel; seaside resort; p. (1971) 9,846.

Ilhéus, spt., Bahia, **Brazil**; exp. cacao, timber; losing tr. to lge pts.; p. (est. 1968) 100,687.

Ili, R., Central Asia; rises in Tienshan, China, and flows into L. Balkhash in Soviet terr.; new t. of I. at site of hydroelec. sta.; c. 750 m. long.

Iligan, t., Mindanao, **Philippines**; integrated steel mill; cement; p. (1960) 58,433.

Ilkeston, t., Derbys., **Eng.**; W. of Nottingham; iron, engin., locknit fabrics, needles, plastics; p. (1971) 34,123.

Ilkley, t., spa, West Yorks., **Eng.**; on R. Wharfe, N.W. of Leeds; local mkt.; p. (1971) 21,828.

Illawara, dist., N.S.W., Australia; forming belt of land between S. tableland and cst.; very fertile; dairy farming; coal seams; ch. ts., Kiama, Wollongong, Bulli, Geringong.

Ille-et-Vilaine, dep., N.W. **France**; on English Channel; a. 2,699 sq. m.; agr.; cap. Rennes; p. (1968) 652,722.

Illimani, one of the high peaks of the Cordillera Real, Bolivian Andes, 21,184 ft., E. of La Paz.

Illinois, st., **USA**; in Middle West; named after its principal R., a lge trib. of Mississippi; many Rs.; cap. Springfield, metropolis Chicago; rich agr., fuel and mineral resources; inds. inc. meat-processing, farm implements; a. 56,400 sq. m.; p. (1970) 10,973,986.

Illinois, R., Ill., USA; glacial valley; long history of settlement; impt. routeway; 273 m. long.

Illyria, region, mainly in **Yugoslavia**, stretching along Adriatic Sea from Trieste in N. to **Albania** in S. and inland as far as Rs. Danube and Morava.

Ilmen, L., RSFSR, nr. Novgorod; drained by Volkhov R. into L. Ladoga; a. 360 sq. m.; fisheries.

Ilminster, t., Somerset, **Eng.**; 10 m. S.E. of Taunton; cutstone, concrete, collars, radio valves; p. (1971) 3,375.

Iloilo, c., cap. of I. prov., Panay, **Philippines**; ctr. of rly. network; impt. pt. exp. sugar, rice, copra, hemp; p. (est. 1968) 201,000.

Ilorin, t., N. **Nigeria**; on Lagos–Kano rly.; agr. and caravan ctr.; govt. sugar-growing scheme at Bacita; p. (est. 1970) 247,896.

Imabari, t., spt., N.W. Shikoku, **Japan**; on shore of Inland Sea; mnfs. cotton textiles, paper, canned fruits; p. (est. 1969) 109,000.

Imatra, t., Kymi, **Finland**; hydroelectric power sta. supplies S. Finland; electro-metallurgy; p. (1968) 35,694.

Imbroz (Imbros), I., off W. **Turkey**, in Ægean Sea at entrance to Dardanelles; a. 108 sq. m.; p. 5,800.

Immingham, pt., Humberside, **Eng.**; on the Humber, N.W. of Grimsby; lge docks; new deep-sea oil and coal terminals; chemicals, engin., refinery nearby at Killingholme.

Imola, t., **Italy**; S.E. of Bologna; cath.; glass, pottery; p. (1961) 51,289.

Imperia, t., **Italy**; on G. of Genoa; sm. pt., olive-growing ctr.; resort; p. (1969) 38,831.

Imperial Valley, S. Cal., **USA**; extends 30 m. S.E. from Salton Sea to Mexican bdy.; mainly below sea-level; hot, arid climate; irrigation from Colorado R. chiefly by All-American Canal nr. Yuma; total irrigated a. 1 million acres; principal crops, fruit, dates, tomatoes, cotton, and dairy prod.

Imphal, cap. of Manipur, **India**; in rice-growing basin in hills of Assam nr. Burma bdy.; p. (1961) 67,717.

Inari L., extensive L., Lappi, **Finland**; outlet into Barents Sea; hydroelec. power; a. 685 sq. m.

Ince-in-Makerfield, t., Gtr. Manchester, **Eng.**; nr. Wigan; engin.; p. (1971) 15,925.

Inchon, c., S. **Korea**; on Yellow Sea; pt. for Seoul; exp. soyabeans, rice; textile ctr., steel mill, glass, diesel engines; p. (1966) 525,072.

Independence, c., Mo., **USA**; S.E. of Kansas; oil refining; agr. machin.; p. (est. 1969) 112,000.

India, rep., indep. st. (since 1947), S. **Asia**; second cty. of world by p.; 21 sts. and 9 union terrs.; peninsula bounded by Himalayas in N. extends in wide plateau to Indian Oc. in S.; most of p. concentrated in Indo–Gangetic Plain; unpredictable monsoon climate; heavy dependence on agr.; 70 per cent of p. farmers; few cash crops except cotton (the Deccan), tea (Himalayas), and jute (W. Bengal); 854 languages and dialects impede economic development; strong caste system; high illiteracy rate (70 per cent); little industl. development except in Damodar region; cap. New Delhi; a. 1,262,000 sq. m.; p. (1971) 547,949,809; (+25 per cent since 1961).

Indiana, st., **USA**; in Middle West, bounded by Mich., Ohio, Ill. and sep. from Ky. by Ohio R.; agr.; coal, limestone, petroleum; steel, metal prods., machin., food prod.; cap. Indianapolis; a. 36,291 sq. m.; p. (1970) 5,143,422.

Indianapolis, c., cap. of Ind., **USA**; on White R.; univ.; rly. ctr.; meak-packing, jet engines, aircraft parts, chemicals, pharmaceutics; p. (1970) 742,613 (c.), 1,099,628 (met. a.).

Indian Ocean extends from S. of Asia and E. of Africa to the C. of Good Hope and C. Leeuwin in Australia, separated from the Pacific by the Malay Archipelago and Australia; a. 29,340,000 sq. m.

Indigirka R., Yakut ASSR, RSFSR; flows into Arctic Oc.; hydroelec. power; 1,100 m. long.

Indo-China, S.E. Asia; federation in Fr. Union until end of hostilities July 1954; consisted of the three sts. of Vietnam, Cambodia, and Laos.

Indo-Gangetic Plain, India and Pakistan; name applied to flat land created by the Indus and Ganges basins; densely populated a.

Indonesia, rep., S.E. Asia; former Neth. E. Indies; made up of many sm. Is. straddling equator for over 3,000 m.: many Is. in W. volcanic and E. coral; lgst Is. inc. Java, Sumatra, Kalimantan (S. Borneo), Sulawesi, and Irian (W. New Guinea); mostly under-developed except Java; rapidly developing oil industry; 64 per cent p. on Java, planned decentralisation to other Is.; cap. Djakarta; a. 736,512 sq. m.; p. (1971) 119,200,000; (+21 per cent since 1961).

Indore, c., Madhya Pradesh, India; in valley of Narbada R.; comm. ctr.; cotton-mills; p. (est. 1970) 494,664.

Indre, dep., central France; agr. and industl.; cap. Châteauroux; a. 2,666 sq. m.; p. (1968) 247,178.

Indre-et-Loire, dep., central France; drained by Indre and Loire Rs.; vineyards, orchards; cap. Tours; a. 2,377 sq. m.; p. (1968) 437,870.

Indus, R., Pakistan, rises in Tibet, flows through Kashmir, Punjab, Sind, to Arabian Sea; 5 tribs. Jhelum, Chenab, Ravi, Beas, Sutlej, form one of world's major R. systems, now used extensively to irrigate the Punjab and the Sind; impt. cotton, wheat, and sugar dist.; hydroelec. power; supported Indus valley civilisation 3,000–1,500 B.C.; 1,800 m. long.

Ingleborough, mtn., near Settle, North Yorks., Eng.; underground caves, stalactites; made of limestone and millstone grit; alt. 2,373 ft.

Inglewood, t., S. Cal., USA; sub. of Los Angeles; chinchilla farms; furniture, lt. engin., aircraft parts; p. (est. 1969) 85,000.

Ingolstadt, t., Bavaria, W. Germany; on Danube, nr. Munich; cas.; machin., cars, tobacco, oil refining; pipeline from Genoa; transalpine oil pipeline from Trieste, through N.E. Italy and Austria to I.; p. (est. 1967) 69,000.

Inhambane, spt., Moçambique; sugar, copra, oil-seeds, bricks, soap, tiles; p. (1960) 67,265.

Inishboffin, I., Galway, R.o.I., sm. I. off Connemara; farming, fishing.

Inishmore, lgst of Aran gr., Galway, R.o.I.; fishing.

Inkpen Beacon, hill, Berks., Eng.; highest point reached by chalk hills in Eng.; alt. 975 ft.

Inland Sea, Japan; between Honshu on N. and Shikoku and Kyushu on S.; sheltered sea with many Is.; ch. spts. Osaka, Amagaski, Kobe, Okayama, Hiroshima, Kure; Nat. Park; a. c. 3,668 sq. m.

Inn, R., traversing Switzerland, the Austrian Tyrol and Bavaria; enters R. Danube at Passau; hydroelectric plants; 320 m. long.

Innerleithen, burgh, Peebles, Scot.; on R. Tweed, 5 m. S.E. of Peebles; woollen cloth and knitwear; mineral springs; p. (1971) 2,218.

Inner Mongolia, Chinese aut. region, N.E. China; stretches along S. border of Mongolian People's Rep.; vast steppelands, sparse p.; st. farms for animal husbandry; peat beds; milk-processing; cap Huhehot; a. 454,640 sq. m. p. (1957) 9,200,000.

Innisfail, t., Queensland, Australia; ch. sugar-producing ctr. of Australia; p. (1972) 7,475.

Innsbruck, c., cap. of the Tyrol, W. Austria; on R. Inn; commands N. approach to Brenner Pass; univ.; tourism; fortfd. 12th cent.; p. (est. 1969) 112,824.

Inowroclaw, t., N. Poland; nr. Bydgoszcz; rock-salt, iron pyrites; agr. prod.; p. (1970) 54,800.

Insterburg. *See* **Chernyakovsk.**

Inter-American Highway, section of Pan-American Highway system, from Mexico to Panama.

Interlaken, t., Bernese Oberland, Berne, Switzerland; on R. Aar, between Ls. Thun and Brienz; tourist resort; p. (1960) 4,800.

Intracoastal Waterway, USA; toll-free waterway along Atl. and Gulf of Mexico csts.; completed 1949 using bays, rivers and canals; 3,100 m. long.

Inuvik, t., Artic, Canada; above the permafrost.

Inveraray, burgh, Argyll, Scot.; nr. head of Loch Fyne; herring fishing; p. (1971) 438.

Inverbervie, burgh, Kincardine, Scot.; on E. cst., 8 m. S. of Stonehaven; linen, rayon inds.; p. (1971) 850.

Invercargill, t., S.I., N.Z.; on S.E. cst.; sawmills, freezing wks.; aluminium smelter; served by Bluff Harbour; p. (1971) 47,092.

Inverell, t., N.S.W., Australia; 383 m. N. of Sydney; wheat and lamb cty.; tin; p. (1966) 8,411.

Invergordon, burgh, spt., Ross and Cromarty, Scot.; on N. side of Cromarty F., 12 m. N.E. of Dingwall; former naval pt.; whisky distillery; lge. chemical ind. and aluminium smelter projected; p. (1971) 2,350.

Inverkeithing, royal burgh, Fife, Scot.; on F. of Forth, nr. Dunfermline; shipbreaking, paper-mkg., quarrying; p. (1971) 5,861.

Inverkip, par., v., Renfrew, Scot.; 6 m. S.W. of Greenock; par. contains Gourock; resort; car ferry.

Inverness, royal burgh, co. t., Inverness. N.E. Scot.; on Moray F.; distilling, lt. engin., tweeds; sm. pt. for coal, timber; tourism; p. (1971) 34,839.

Inverness-shire, co., N.E. Scot.; mtnous. and well-wooded; rises to 4,406 ft. in Ben Nevis; crossed by Caledonian canal; little cultivation; deer forests and grouse moors, fishing, sheep-breeding, distilleries; hydroelec. schemes at Foyers, Glen Cannich, and Lochaber; a. 4,351 sq. m.; p. (1971) 89,659.

Inverurie, royal burgh, Aberdeen, Scot.; on R. Don, 14 m. N.W. of Aberdeen; rly. ctr., mkt. t.; tourism; p. (1971) 5,437.

Inyokern, t., E. Cal., USA; naval ordnance research sta.; p. (1960) 11,684.

Ioánnina (Janina), t., Epirus, Greece; nr. Albanian frontier; agr. tr.; embroidery; p. (1961) 34,997.

Iona, I., off cst. of Mull, Argyll, Scot.; early Scottish Christian ctr.; restored abbey; St. Columba's burial place; anc. burial place of Scottish kings.

Ionian Is., gr. in Mediterranean, belonging to Greece; comprising Corfu, Paxos, Levkas, Cephalonia, Zakinthos, Ithake; severe earthquake 1953; total a. 752 sq. m.; p. (1961) 212,573.

Ionian Sea, Mediterranean; between Greece on E.: Italy and Sicily on W.

Iowa, st., USA; in Middle West; prairie cty.; watered by Mississippi and Missouri; rich farm land; maize, oats, and other grains; hogs, pigs; processing of farm prod.; flood control, re-forestation; diverse inds.; cap. Des Moines; a. 56,290 sq. m.; p. (1970) 2,789,893.

Iowa City, c., S.E. Iowa, USA; former st. cap. (1839–56); univ.; p. (est. 1969) 47,000.

Ipin (Yibin), c., Szechwan prov., China; at junc. of Yangtze and Min Rs.; p. (1953) 177,500.

Ipoh, c., cap. of Perak st., N.W. Malaya; tin-mng. ctr.; Chinese rock temples; p. (1957) 125,776.

Ipswich, t., S.E. Queensland, Australia; coal-mng. ctr.; woollens; p. (1966) 53,396.

Ipswich, co. t., Suffolk, Eng.; pt. on estuary of R. Orwell; diesel engines, gen. engin.; p. (1971) 122,814.

Iquique, t., N. Chile; pt. on Pac. Oc.; exp. nitrates and iodine from Atacama desert; fish-canning; p. (1966) 48,000.

Iquitos, t., N.E. Peru; on Amazon, 2,300 m. from mouth; comm. ctr.; exp. timber, cotton; sawmills, oil refining; p. (1961) 57,777.

Iráklion (Candia or Herakleion), t., Crete, Greece; inpt. spt. on G. of I., arm of Aegean Sea; at foot of terraced hill slopes; wine, olive oil, fruit, fishing; tourism; p. (1961) 63,458.

Iran, kingdom, S.W. Asia; interior plateau at 3,000 ft., ringed by mtn. ranges of up to 18,000 ft.; much of a. is desert; settled agr. limited to Caspian plain; heavy dependence on oil; oilfields centred on Abadan; high quality carpets exported, esp. to USA; cap. Tehran; a. 628,000 sq. m.; p. (est. 1969) 28,386,000.

Irapuato, c., central Mexico; agr. tr. and processing; iron-founding; p. (1970) 175,996.

Iraq, rep., S.W. Asia; the anc. Mesopotamia; dominated by 2 Rs., Tigris and Euphrates; much of a. desert and semi-desert but irrigation in S. and centre enables settled agr. for barley, wheat dates, and tobacco; only outlet to sea at N.W. end of Persian G.; oil principal source of wealth; main oilfield at Kirkuk; main oil pt. at Basra; pipelines to Lebanon and Syria; new inds. based on oil; 14 provs.;

cap. Baghdad; a. 168,000 sq. m.; p. (est. 1970) 9,465,800.

Irazú, active volcano, 11,268 ft. high, central Costa Rica.

Irbid, t., Jordan; comm. and agr. tr. ctr.; p. (1967) 63,000.

Ireland, I., W. of Gt. Britain, separated by Irish Sea; divided politically into R.o.I. (Eire) and N. Ireland (Ulster, part of U.K.); ch. physical features, L. Neagh in N.E., Ls. of Killarney in S.W.; Rs. Shannon, Boyne, Blackwater; mtns. of Mourne, Wicklow, and Kerry; mild moist climate; called "emerald isle" because of grasslands; pastoral agr., especially dairying; tourism; a. 32,408 sq. m.; p. (1966) 3,088,759.

Ireland, Republic of, ind. st., W. Europe; comprises 26 of 32 cos. making up I. of Ireland; remaining 6 cos. belong to U.K.; ring of highlands surround central lowland basin, much of which is peat-covered; economy based on agr., especially dairying; exps. butter, cheese, bacon; new govt.-encouraged inds.; mineral resources; tourism; cap. Dublin; a. 26 600 sq. m.; p. (1971) 2,978,248.

Irish Sea, Brit. Is.; between Gt. Britain and Ireland, connecting N. and S. with Atl. Oc.; 200 m. long; 50–140 m. wide; greatest depth 140 fathoms; a. 7,000 sq. m.

Irkutsk, c., cap. of I. oblast, RSFSR; on Angara R. in E. Siberia; on Trans-Siberian rly., 40 m. W. of L. Baykal; univ.; engin., sawmilling, petroleum refining, chemicals, hydroelec. power sta.; p. (1970) 451,000.

Irlam, t., Gtr. Manchester, Eng.; engin., tar, soap, glycerine, margarine; steel wks. to close; oversspill p.; p. (1971) 20,571.

Ironbridge, t., Shrops., Eng.; scene of Darby's iron ind.; derives name from first cast-iron bridge (1779) which here crosses Severn; now inc. in Dawley new t.

Iron Country, Utah, USA; vast reserves of iron ore; undeveloped due to inaccessibility.

Iron Gate (Portile de Fier), Romania; famous rapids in R. Danube; Romanian–Yugoslavian hydroelectric and navigation project, 1964–71.

Irrawaddy, R., Burma; flows S. to Bay of Bengal; navigable for lge steamers 900 m.; irrigation wks.; major Asian rice bowl; 1,250 m. long.

Irthlingborough, t., Northants., Eng.; p. (1971) 5,145.

Irtysh, R., W. Siberia, USSR; ch. trib. of R. Ob; crossed by Turk–Sib rly. at Semipalatinsk and by Trans-Siberian rly. at Omsk; hydroelectric power stas.; 1,850 m. long.

Irvine, royal burgh, Ayr., Scot.; nr. mouth of R. Irvine; new t. (1966); cas.; hosiery, lt. engin., bottle wks., chemicals; p. (1971) 23,019.

Irvington, t., N.J., USA; industl. sub. of Newark; machin.; p. (est. 1969) 62,000.

Irwell, R., Gtr. Manchester, Eng.; flows through Manchester to the Mersey via Manchester Ship Canal; 30 m. long.

Isar, R., Austria and W. Germany; rises in Austrian Tyrol, flows N.E. to Danube; hydroelectric power stas. below Munich; 163 m. long.

Isarco, R., N. Italy; rises nr. Brenner Pass, flows S. into R. Adige at Bolzano; used by main rail and road routes from N. Italy to Austria; 50 m. long.

Isa Town, new t., Bahrain; 4 m. from Manamah; proposed p. 35,000.

Ischl or Bad Ischl, famous Alpine spa, Austria, in Salzkammergut.

Isdud, anc. c. of the Philistines. *See* **Ashdod.**

Ise Bay, inlet, S. Honshu, Japan; flanked by ch. textile mftg. a. of cty. with 5 million people centred on Nagoya; 40 m. long, 15–20 m. wide.

Iselle, t., N.W. Italy; S. terminal of Simplon Pass and tunnel.

Iseo, L., N. Italy; E. of Bergamo; 48 sq. m.

Isère, dep., S.E. France; drained by Rs. Isère and Rhône; cap. Grenoble; mtnous.; cereals; wine, butter, cheese; iron, coal, lead, silver, copper; gloves, silks; a. 3,178 sq. m.; p. (1968) 768,450.

Isère, R., S.E. France; rises in W. Alps (Grande Sassière), flows W. into R. Rhône nr. Valence; used to generate hydroelectric power; used, with trib. R. Arc, by main rly. from France to N. Italy through Mt. Cenis (Fréjus) tunnel.

Iserlohn, t., N. Rhine–Westphalia, W. Germany; S.E. of Dortmund; metal gds.; p. (est. 1967) 57,400.

Isfahan. *See* **Esfahān.**

Ishikari, t., Hokkaido, Japan; on cst. of Otaru Bay, 10 m. N. of Sapporo; ctr. of second lgst coalfield in Japan; sm. petroleum production.

Ishimbay, c., Bashkir ASSR, RSFSR; on R. Belaya; ctr. of Ishimbay oilfields; pipelines to Ufa, Orsk, and Shkaparo; p. (est. 1967) 53,000.

Isiro (Paulis), t., N.E. Zaïre; admin. offices; cotton ginneries; rly. repair shops.

Isis, R., headstream of R. Thames, Eng.; so named around and above Oxford.

Iskenderun (Alexandretta), spt., S.W. Turkey; recent modernisation for new Iran/Turkey rly.; new steel wks.; p. (1965) 69,259.

Islamabad, new cap. of Pakistan, in process of construction; to N. of Rawalpindi below Himalayas; nuclear power sta.; p. (1972) 235,000.

Islay, I. Inner Hebrides, Argyll, Scot.; a. 235 sq. m.; farming, dairying, distilleries; p. (1971) 3,827.

Isle of Grain, Kent, Eng.; flat promotory at confluence of Thames and Medway, once separated from mainland by a tidal estuary; lge oil refinery; pipelines to Walton-on-Thames and Heathrow Airport.

Isle of Man, Irish Sea; 27 m. from Eng. (Cumbria) and N. Ireland (Down); high plateau N.E. to S.W.; ch. t. Douglas; old cap. Castletown; admin. according to own laws; tourism; a. 221 sq. m.; p. (1971) 49,743.

Isleworth. *See* **Hounslow.**

Islington, inner bor., London, Eng.; N. of City; incorporates Finsbury; univ.; residtl.; clocks, precision engin.; p. (1971) 199,129.

Ismailia, t., Egypt; at mid-point of Suez Canal on L. Timsah, 45 m. N.N.W. of Suez; rail connections with Cairo, Suez, Port Said; p. (est. 1970) 167,500.

Isna (Esneh), t., Upper Egypt; on Nile; agr. ctr.; cottons, pottery; p. 26,000.

Ispra, t., Varese, Italy; nr. L. Maggiore; nuclear research ctr.

Israel, rep., S.W. Asia; occupies narrow corridor between Jordan valley and Mediterranean Sea; extends S. into the Negev desert (half a. of rep.); Mediterranean climate enables cultivation of early fruits and vegetables, especially citrus fruits; most highly industrialised cty. of S.W. Asia, especially for textiles and clothing; petroleum of increasing impt.; tourism; Jewish rep. since 1948; until then part of the mandate Palestine; surrounded by hostile Arab sts.; difficulties of increasing Jewish immigration; cap. Jerusalem; a. 8,050 sq. m.; nat. a. in dispute, particularly since Arab-Israeli war of 1967; p. (1970) 2,995,000 (75 per cent Jewish).

Issyk Kul, mtn. L., Kirghiz SSR, USSR; in Tien-Shan mtns., alt. 5,200 ft.; a. 2,400 sq. m.; ice-free in winter.

Issy-les-Moulineaux, sub. S.W. Paris, Hauts-de-Seine, France; engin.; p. (1968) 51,666.

Istanbul (Constantinople), ch. spt., former cap., Turkey; on Golden Horn peninsula on European cst. at entry of Bosporus into Sea of Marmara; divided into old "Stamboul" on S. side, and dists. of Galata and Beyoglu (Pera) on N.; the anc. Byzantium; magnificent mosque of Sta Sophia; univ.; industl. and comm. ctr.; tourism; p. (1965) 1,742,978 (c.), 2,043,447 (met. a.).

Istria, mtnous. peninsula, N. Adriatic, Yugoslavia; ch. c. Pula; agr., olives, vines, oranges, maize; p. Yugoslav and Italian; a. circa 2,000 sq. m.

Itabira, t., Minas Gerais st., Brazil; on Brazilian Plateau, 60 m. N.E. of Belo Horizonte; lgst deposits of iron ore in Brazil.

Jumna, R., N. India; ch. trib. of R. Ganges; rises in the Himalayas and flows past Delhi and Agra to Allahabad; 860 m. long.

Junagadh, t., Gujarat, **India**; agr. tr. and food-processing; industl. ctr.; formerly cap. of principality of J.; p. (1961) 74,298.

Jundiai, t., São Paulo st., **Brazil**; industl. ctr.; p. (est. 1968) 124,368.

Juneau, c., cap. of Alaska, **USA**; at foot of Chilkoot mtns.; lumbering; fisheries; gold settlement (1881); p. (1960) 6,797.

Jungfrau, peak, Bernese Oberland, **Switzerland**; height 13,642 ft.; electric rly. from Kleine Scheidegg to Jungfraujoch.

Junin, t., **Argentina**; agr. tr., rly. engin., pottery, furniture; p. (1960) 53,489.

Jura, dep., E. **France**; named from mtn. range on Franco–Swiss border; agr. and pastoral; cap. Lons-le-Saunier; a. 1,951 sq. m.; p. (1968) 233,547.

Jura, I., Argyll, **Scot.**; off W. cst.; a. 146 sq. m.; p. (1971) 349 inc. Colonsay.

Jura, mtn. range, **Switzerland** and **France**; folded parallel ranges separated by deep R. valleys; hgst. peak Crêt de la Neige, 5,653 ft.; 150 m. long, breadth 30–40 m.

Juruá R., greatest trib. of Amazon; rises in E. **Peru** and flows through Acre and Amazonas sts., **Brazil**; over 2,000 m. long.

Jutland (Jylland), peninsula, **Denmark**; intensive agr. and poultry farming; sandy heath in W.; more fertile clay in E. used for dairying; a. 11,411 sq. m.; p. (1960) 2,018,168.

Jyväskylä, t., central **Finland**; pt. on L. Päijänne; pulp, paper, plywood; univ.; p. (1968) 55,328.

K

K2. *See* **Godwin-Austen, Mt.**

Kabardin-Balkar ASSR, aut. rep., Transcaucasia, **RSFSR**; cap. Nalchik; livestock, lumber, wheat, fruit; non-ferrous metals; hydrometallurgy plant; a. 4,800 sq. m.; p. (1970) 589,000.

Kabelega Falls (Murchison Falls), on Victoria Nile, **Uganda**; falls between L. Kioga and L. Mobutu Seso.

Kabinda. *See* **Cabinda.**

Kabul, c., cap. of **Afghanistan**; on Kabul R. S. of Hindu Kush; 6,900 ft. a.s.l.; excellent climate; univ.; comm. and cultural ctr.; textiles, leather, timber inds.; p. (est. 1970) 307,388 (c.), 488,844 (met. a.).

Kabul, R., flows from Hindu Kush through gorges in Khyber Pass to Indus; site of dam for hydroelectric power and irrigation; length c. 300 m.

Kabwe (Broken Hill), **Zambia**; comm. and mng. ctr.; lead, zinc, cadmium, silver; p. (est. 1966) 44,600.

Kachin State, semi-aut. st., **Burma**; comprising former Myitkyina and Bhamo dists.; home of Kachins; a. 34,379 sq. m.

Kadiyevka, t., Ukrainian SSR, **USSR**; coal, iron and steel, synthetic rubber; p. (1970) 137,000.

Kaduna, t., N. **Nigeria**; cap. of the Northern Provs.; rly. junc.; aluminium wks.; spinning and weaving; p. (est. 1970) 178,208.

Kaffa, region, **Ethiopia**; mtnous., forested; natural habitat of coffee plant.

Kagoshima, c., at S. end of Kyushu I., **Japan**; pt. on K. Bay; univs., cas.; porcelain, silk and cotton clothing, food-processing, publishing; rocket launching site nearby at Uchinoura; p. (est. 1969) 407,000.

Kahoolawe, I., Hawaiian Is.; a. 45 sq. m.; uninhabited.

Kaieteur Falls, waterfall, **Guyana**; where R. Potaro leaves Guiana Highlands; among world's highest falls (741 ft.).

Kaifeng, c., Honan, **China**; nr. S. bank of Hwang Ho; one of the most anc. cities in China; cottons, chemicals; p. (1953) 299,100.

Kai Islands, Is., Indonesia; between New Guinea and Timor; timber; a. 680 sq. m.; p. 51,000.

Kaikoura, t., S.I., N.Z.; on E. cst., 80 m. N.E. of Lyttelton; in this region are the Kaikoura ranges, in which the highest peaks are Tapuaenuku (9,465 ft.) and Alarm (9,400 ft.); p. (1971) 1,607.

Kailas (Kang-ti-ssu Shan), mtn., S.W. Tibet, **China**; unclimbed sacred mtn.; source of Indus, Ganges, Sutlej and Tsangpo (headstream of Brahmaputra).

Kainji Dam, Nigeria; power sta. transmission system and river transportation on R. Niger.

Kaiping, t., Hopeh, N. **China**; second lgst. coal-mng. a. (Kailan mines) in China; coal exported through Chinwangtao.

Kairouan, holy c. of Moslems, **Tunisia**; 80 m. S.S.E. of Tunis; founded A.D. 670; mosque; p. (1966) 82,299.

Kaiserslautern, c., Rhineland–Palatinate, **W. Germany**; nr. Mannheim; iron, textiles, machin., tobacco, wood; p. (est. 1969) 84,900 (c.), 107,000 (met. a.).

Kaiser Wilhelm's Land, Australian dependency, **Antarctica.**

Kakamega, t., **Kenya**; E. Africa; 30 m. N. of Kisumu; ctr. of gold-mng. dist.

Kakinada, t., spt., Andhra Pradesh, **India**; cotton, oilseeds; p. (est. 1970) 149,146.

Kalahari Desert, region of semi-desert, southern **Africa**; between Orange and Zambesi Rs.; mainly in Botswana; alt. 3,700 ft.; a. 20,000 sq. m.; inhabited chiefly by Bushmen.

Kalamata, t., Peloponnesus, **Greece**; nr. Sparta; figs, currants, flour-milling, cigarette mftg.; p. (1961) 38,211.

Kalamazoo, c., Mich., **USA**; industl. and comm. ctr. in farming a.; paper, pharmaceuticals; fish hatchery nearby; p. (1970) 84,444 (c.), 199,287 (met. a.).

Kalemie (Albertville), t., **Zaire**; on L. Tanganyika; rail-steamer transfer point; p. circa 30,000.

Kalewa, t., **Burma**; at confluence of Irrawaddy and Chindwin Rs.; coal deposits.

Kalgan (Zhangjiakou), c., Chahar prov., **China**; nr. Great Wall, 100 m. N.W. of Peking; on main route to Mongolia; tea, wool, hides; p. (1953) 229,300.

Kalgoorlie, t., W. **Australia**; on transcontinental rly. route 350 m. E. of Perth; semi-desert conditions; nickel, gold-mng. a.; p. (1972) 20,784 (inc. Boulder).

Kalimantan (Indonesian Borneo); straddles equator; sparse p.; poor soils; lge areas of swamp; plans for reclamation; coal, oil, diamonds, gold in sm. quantities; rice, pepper, copra; a. 208,286 sq. m.; p. (1961) 4,101,175.

Kalinin (Tver), c., **RSFSR**; on upper Volga; diversified inds.; 17th cent. cath. and cas.; p. (1970) 345,000.

Kaliningrad (Königsberg), c., **RSFSR**; former cap. of E. Prussia; on R. Pregel, linked by canal to outer pt. Pillau; univ., cath.; shipbldg., machin., wood-pulp, chemicals, exp. agr. prods.; Kant lived here all his life; p. (1970) 297,000.

Kalisz, t., Poznan, **Poland**; on R. Prosna; industl. ctr., textiles; oldest Polish t., mentioned in 2nd cent. A.D. by Ptolemy; p. (1970) 81,200.

Kalmar, t., spt., S. **Sweden**; on I. in Kalmar Sound; cath., cas.; matches, food inds. shipbldg.; p. (1968) 37,965.

Kalmuk ASSR, aut. rep., **RSFSR**; on Caspian Sea; harsh and infertile steppe; pastoral agr.; cap. Elista; a. 29,300 sq. m.; p. (1970) 268,000.

Kalna, v., on Mt. Trara Planina, **Yugoslavia**; uranium mine and plant; nuclear power sta.

Kalpakkam, nr. Madras, **India**; nuclear power sta. being built.

Kaluga, c., **RSFSR**; pt. on Oka R.; chemicals, engin., hydroelectric power plant; p. (1970) 211,000.

Kalyan, spt., Maharashtra, **India**; bricks, tiles; p. (1961) 73,482.

Kalymnos, I., Dodecanese, **Greece**; mtnous.; a. 41 sq. m.; p. 13,600.

Kama, R., **RSFSR**; ch. trib. of Volga which it joins below Kazan; rises in foothills of Urals; lge hydroelectric sta. at Perm; navigable; 1,260 m. long.

Kamaishi, t., spt., N.E. Honshu, **Japan**; serves Kamaishi–Sennin iron-ore field, lgst worked deposits and reserves in Japan; impt. iron and steel ind.; p. (1965) 82,104.

Kamakura, t., Honshu, **Japan**; on shore of Sagami Bay; tourism; p. (est. 1969) 135,000.

Kamaran I., Red Sea; **Democratic Rep. of Yemen**; formerly under Brit. occupation, 1915–67; a. 22 sq. m.; p. 2,200.

Kamchatka, peninsula, E. Siberia, **USSR**; volcanic ranges; geothermal power sta.; mineral wealth, fisheries on cst., climate cold, wet and foggy; contains part of Koryak nat. okrug; cap. Petropavlovsk.

Kamenets-Podolskiy, t., Ukrainian SSR, **USSR**; on Smotrich R.; lt. inds.; mediaeval fortress t.; p. (est. 1967) 52,000.

Kamensk-Shakhtinskiy, c., **RSFSR**; on Donets R.; coal-mng. ctr., engin., food processing, artificial fibres; p. (est. 1967) 71,000.

Kamensk-Uralsk, c., **RSFSR**; aluminium, iron, steel, engin.; p. (1970) 169,000.

Kamet, Himalayan peak, on border of **India** and Tibet, **China**, 25,447 ft.; highest mtn. climbed (Smythe, 1931) until 1953 (Everest).

Kamloops, t., **B.C., Canada**; on Thompson R.; formerly Fort Thompson; on transcontinental rlys.; supply ctr. for mng. and grazing dist.; fruit and livestock mkts.; p. (1971) 25,599.

Kampala, c., cap. of **Uganda**; univ., ch. comm. ctr.; lt. inds., coffee-processing; p. (1969) 331,889.

Kampen, t., Overijssel, **Neth**; on R. IJssel; cigar-mkg.; p. (1968) 29,041.

Kampot, t., **Khmer Rep.**, spt. on G. of Siam; ctr. of pepper ind.; p. 7,500.

Kamyshin, t., **RSFSR**; pt. on Volga; textiles, mkt. gardening, grain; p. (est. 1967) 77,000.

Kan, R., S. **China**; rises in Nan Shan, flows N. into L. Poyang; valley provides route for main road from Kiangsi prov. to Kwangtung prov. over Meiling Pass; c. 550 m. long.

Kananga (Luluabourg), c., cap. of Kasai Occidental prov., **Zaïre**; on Lulua R.; comm. and communications ctr. in cotton-growing a.; p. (est.) 59,935.

Kanawha, R., W. Va., **USA**; rises in Allegheny mtns., flows into R. Ohio; runs through ch. mng. a. of W. Va. coalfield nr. Charleston.

Kanazawa, c., Honshu, **Japan**; in Kaga plain, on Sea of Japan; machin., silk and cotton textiles; landscape gardens, *No* theatre; p. (est. 1969) 342,000.

Kanchenjunga, mtn., on Nepal–Sikkim bdy., N.E. **India**; third hgst. mtn. in world, 28,146 ft.

Kanchipuram (Conjeeveram) t., Tamil Nadu, S. **India**; on plain S.W. of Madras; pilgrimage ctr.; textiles; p. (1961) 92,714.

Kandahar, c., former cap. of **Afghanistan**; alt. 3,400 ft.; 370 m. from Herat; linked by road to Kushka (Turkmenia) via Herat; fruit preserving and canning; textiles; p. (est. 1970) 130,212.

Kandy, c., **Sri Lanka**; in mtns. in ctr. of I.; 75 m. from Colombo; univ. at sub. of Peradeniya; resort in hot season; tea, cocoa; p. (1963) 67,768.

Kangaroo, I., S. **Australia**; eucalyptus; gypsum; summer resorts; p. (1966) 3,380.

Kano, c., N. **Nigeria**; emporium for whole of Sudan region; impt. airport and rly. terminus; groundnut ctr.; p. (est. 1970) 351,175.

Kanpur (Cawnpore), c., Uttar Pradesh, N. **India**; on R. Ganges; impt. mftg. ctr.; textiles, chemicals, leather goods, foodstuffs; p. (est. 1970), 1,197,255 (c.), 1,312,293 (met. a.).

Kansas, st., **USA**; called the "sunflower state"; prairie; farming, maize, wheat; cattle, dairying, pigs; coal, petroleum, natural gas, lead, meat packing, flour milling, aircraft, chemicals, machin.; cap. Topeka; a. 82,276 sq. m.; p. (1970) 2,222,173.

Kansas, R., Kan., **USA**; trib. of Missouri R., confluence at Kansas City; vegetable growing in valley; periodic flooding; 170 m. long.

Kansas City, Mo., **USA**; at confluence of Kansas and Missouri Rs.; univ.; gr. livestock mart, car and aircraft assembly, steel prods., meat-packing, food processing; p. (1970) 495,405; adjoins **Kansas City**, Kansas; p. (est. 1969) 172,000; 1,240,575 (joint met. a.).

Kansu (Gansu), prov., N.W. **China**; borders Inner Mongolia; cap. Lanchow; pastoral agr., wheat, cotton, tobacco; coal reserves; rich iron-ore deposits; a. 151,161 sq. m.; p. (1957) 12,800,000.

Kant, t., Kirghiz SSR, **USSR**; 12 m. E. of Frunze; to be expanded to industl. c.; proposed p. 100,000.

Kanye, t., **Botswana**, S. Africa; lgst t. in rep.; p. (1964) 34,045.

Kaohsiung, spt., **Taiwan**; on S.W. cst.; industl. ctr., road and rly. terminus; oil refining, aluminium wks.; p. (est. 1969) 784,502.

Kaolack, inland pt., **Senegal**; 70 m. up Saloum R.; groundnut ctr.; p. (1965) 69,500.

Kaposvár, t., S.W. **Hungary**; on Kapos R.; comm. ctr.; textiles, foodstuffs; p. (1968) 50,000.

Kara-Bogaz-Gol, lge shallow bay, Turkmen SSR, **USSR**; an arm of Caspian Sea; rapid evaporation allows huge quantities of salt from Caspian to be deposited along its shores (world's lgst source of Glauber's salt); a. 7,000 sq. m.

Karabuk, t., **Turkey**; N. of Ankara; steel wks.; p. (1965) 47,660.

Karacheyevo-Cherkesskaya, aut. region, **RSFSR**; in Greater Caucasus; cap. Cherkessk; livestock, grain; coal, lead, zinc; a. 5,442 sq. m.; p. (1970) 345,000.

Karachi, c., **Pakistan**; on Arabian Sea, nr. Indus delta; former cap. of Pakistan; univ.; spt., air ctr.; oil refining, industl. gases, steel mill, natural gas from Sui; nuclear power sta.; p. (1972) 3,469,000.

Karaganda, c., Kazakh SSR, **USSR**; on impt. coalfield developed since 1926; supplies industl. ctrs. of Urals; iron and steel wks., power sta.; p. (1970) 522,000.

Kara-Kalpak ASSR, aut. rep., N.W. Uzbek SSR, **USSR**; inc. Ust-Urt plateau, Kyzyl-Kum desert; irrigated agr.; cap. Nukas; a. 63,920 sq. m.; p. (1970) 702,000.

Karakorum Range, part of Himalayas between Kashmir and China; many lofty peaks, inc. Mt. Godwin-Austen; Karakorum highway linking Pakistan with Sinkiang prov. of China, opened 1971.

Kara-Kum, sand desert, Turkmen SSR, **USSR**; E. of S.E. shore of Caspian Sea; a. 135,000 sq. m.; canal 900 m. long across desert to be completed by 1975.

Karamai, t., Sinkiang, **China**; ctr. of lge oilfield; pipeline to Fushantzu refinery.

Kara Sea, Arctic Oc.; E. of Novaya Zemlya; navigation to and from Siberian pts. July–Sept.

Karelian ASSR, aut. rep., **RSFSR**; between Kola peninsula and Finland; lake-covered, coniferous forests; cap. Petrozavodsk; rich in timber, minerals, precious metals; granite and mica quarried; paper and pulp milling; a. 69,270 sq. m.; p. (1970) 714,000.

Karelian Isthmus, **RSFSR**; strategic route between Finland and USSR, impt. for defence of Leningrad.

Kariba Dam, in Kariba gorge of Zambezi R., on Rhodesia–Zambia border; operated jointly by the two govts.; one of lgst dams in world with vast artificial lake supplying hydroelectric power to Rhodesia, Malawi, and the copperbelt of Zambia; involved resettlement of Batonka peoples; completed 1960; since Rhodesian U.D.I., construction has begun on a second generating sta. on the Zambian side.

Karikal, former Fr. settlement on E. cst. of India; p. (1961) 22,252.

Karkonosze. *See* Riesengebirge.

Karl-Marx-Stadt (Chemnitz), c., Karl-Marx-Stadt

dist., E. Germany; leading industl. ctr.; cotton, woollens, machin., cars, furniture, chemicals, engin.; nr. lignite mines; p. (est. 1969) 297,133.

Karlovac, t., Croatia, Yugoslavia; S.W. of Zagreb; chemicals, textiles, food processing; p. (1961) 40,180.

Karlový Vary (Carlsbad), t., Bohemia, ČSSR; on R. Ohře; hot mineral springs; health resort; porcelain; p. (1967) 46,000.

Karlskoga, t., Sweden; E. of L. Vänern; seat of Bofors armament wks.; iron and steel, explosives, chemicals; p. (1968) 38,203.

Karlskrona, spt., S. Sweden; on Baltic Sea; main naval sta.; lighting fixtures, china; p. (1968) 37,249.

Karlsruhe, c., Baden-Württemberg, W. Germany; road and rly. ctr.; outport on Rhine; chemicals, engin., elec., tobacco inds., oil refining; nuclear reactor; oil pipeline to Lavera, nr. Marseilles; p. (est. 1969) 256,200.

Karlstad, t., Sweden; on N. shore L. Vänern; ironwks., engin., machin.; p. (1968) 53,208.

Karnak, t., Egypt; on Nile, 1 m. E. of Luxor; site of the anc. Thebes; ruined temples; p. circa 11,000.

Karnal, t., Haryana, India; clothing inds.; p. (1961) 72,109.

Karpathos, I., Dodecanese, Greece; Aegean Sea; between Rhodes and Crete; p. 8,747.

Karroo, W. Cape Prov., S. Africa; high plateau, scrub-covered; irrigated by Verwoerd dam on Orange R.

Kars, t., N.E. Turkey; in Armenia, alt. 6,000 ft., in strategic position nr. Soviet border; p. (1965) 41,200.

Karst, dist., Yugoslavia; in Dinaric Alps; gives name to limestone landforms which are well developed here.

Karun, R., S.W. Iran; mainly mtn. torrent; difficult access, sparse p.; 470 m. long.

Karvinna, t., ČSSR; on Polish border; ctr. of Ostrava-Karvinna coalfield; p. (1967) 73,000.

Kasai, R., Angola and Zaire, Central Africa; rises in Bihé Plateau (Angola) and flows over 1,200 m. into R. Zaire 120 m. above Kinshasa; alluvial diamond mng. at Chicopa.

Kasai, former prov., Zaire; agr.; impt. source of industl. diamonds; attempted secession 1960; now divided into E. Kasai (cap. Mbuji-Mayi), and W. Kasai (cap. Luluabourg).

Kashan, c., central Iran; in agr. oasis; carpets velvet; p. (1967) 58,500 (c), 153,980 (dist.).

Kashgar, c., W. Sinkiang prov., China; on anc. imperial silk route through central Asia; growth rapid with irrigation; visited by Marco Polo 1275; p. circa 100,000.

Kashmir. *See* Jammu and Kashmir.

Kassala, t., N.E. Sudan; ctr. of cotton-growing dist.; p. (est. 1966) 68,100.

Kassel, c., Hesse, W. Germany; on R. Fulda; cas.; machin., vehicles, science-based inds.; route ctr.; p. (est. 1969) 213,100.

Kastamonu, t., N. Turkey; cap. of K. prov.; ctr. of dist. rich in minerals; textiles, copper gds.; p. (1960) 19,450.

Katanga. *See* Shaba.

Kathiawar, peninsula, Gujarat, India; between G. of Kutch and G. of Cambay; ch. pt. Bhavnagar; very dry a.

Katmai, Mount, S. Alaska, USA; active volcano with crater L.; alt. 7,000 ft.

Katmandu, cap. of Nepal; on Vishnumati R., 75 m. from Indian frontier; highway to Kodari; hydroelectric sta.; brick and tile wks.; many palaces and temples; p. (1961) 121,019.

Katoomba, t., N.S.W., Australia; holiday resort; alt. 3,300 ft.; p. (1972) 11,573 inc. Wentworth Falls.

Katowice, prov., S. Poland; in Upper Silesia; cap. K.; mng. and industl. a, drained by Vistula and upper Warta Rs.; a. 3,674 sq. m.; p. (1970) 3,691,000.

Katowice, c., S. Poland; cap. of K. prov.; impt. iron-mng. and industl. ctr.; heavy machin., chemicals; p. (1970) 303,000 (c.), (est. 1966) 2,010,000 (met. a.).

Katrine, Loch, S.W. Perth, Scot.; beautiful woodland and moorland scenery; source of Glasgow water supply; scene of Scott's *Lady of the Lake*; 8 m. long, circa 1 m. wide.

Katsina, t., Nigeria; agr. tr. ctr., groundnuts, cotton; rural craft inds.; Hausa cultural ctr.; p. (1963) 56,000.

Kattegat, arm of N. Sea linked with Baltic; separates Denmark (Jutland) from Sweden; 40–70 m. wide.

Katwijk, t., S. Holland, Neth.; on N. Sea 15 m. from the Hague; resort; synthetic resins; p. (1968) 84,730.

Kaufbergen, t., Bavaria, W. Germany; on R. Wertach; textile mnfs.; p. (1963) 37,000.

Kaunas (Kovno), c., Lithuanian SSR, USSR; on R. Niemen; R. pt. and comm. ctr.; univ.; 11th cent. c.; metal gds., chemicals, textiles, hydroelectric power; Jewish p. (circa 30 per cent) exterminated during German occupation 1941–4; p. (1970) 309,000.

Kavalla, c., E. Macedonia, Greece; on Bay of Kavalla; processes and exp. tobacco; the anc. Neapolis; nearby peat deposits to be used for power; p. (1961) 44,517.

Kawagoe, c., Honshu, Japan; in Kanto plain; silk textiles; p. (est. 1969) 157,000.

Kawasaki, S. sub. Tokyo, Honshu, Japan; pt. for import of industl. raw materials; heavy inds.; p. (est. 1969) 932,000.

Kawthoolei State, st. Burma; former Karen st., extended to inc. areas in Tenasserim and Irrawaddy; inhabited by Karens; a. 11,731 sq. m.

Kayah State, semi-aut. st., Burma; on Thai border; forested plateau; tungsten mines; teak; a. 4,529 sq. m.

Kayseri, c., Turkey; S.E. of Ankara; textiles, carpets, food tr.; anc. Hittite c.; p. (1965) 126,653 (c.); 222,699 (met. a.).

Kazakh SSR (Kazakhstan), constituent rep., USSR; in central Asia; cap. Alma-Ata; steppe with stock-raising; lge. desert areas being made fertile by irrigation; grain in N.; coal at Karaganda; asbestos at Dzhetygara; minerals inc. metaborite (richest boron mineral); oil; atomic power sta. to W. of Caspian Sea; a. 1,072,797 sq. m.; p. (1970) 12,850,000.

Kazan, c., RSFSR; cap. of Tatar ASSR; pt. on Volga; impt. tr. ctr. for E. USSR, Turkestan Bokhara and Iran; cath., univ. (where Tolstoy and Lenin were educated); engin., chemicals, synthetic rubber, textiles, paper, oil refining; natural gas pipeline to Minnibayevo; p. (1970) 869,000.

Kazanlik, t., central Bulgaria; in region famous for attar of roses; p. (1965) 44,384.

Kazan-retto or Volcanic Is., gr. of Is., W. Pac. Oc. S. of Tokyo; sugar plantations, sulphur; returned to Japan by USA 1968.

Kazbek, extinct volcano, N. Georgian SSR, USSR; second hgst.peak of Caucasus; alt. 16,541 ft.

Kazerun, t., S.W. Iran; ctr. of agr. dist. where fruit, tobacco, opium, cotton grown; p. (1966) 39,758.

Kazvin or Qazvin, c., N.W. Iran; transit tr.; carpets, textiles; p. (1966) 88,106.

Kearsley, t., Gtr. Manchester, Eng.; chemicals paper; p. (1971) 11,243.

Keban Dam, S.E. Turkey; at confluence of the E. and W. branches of Euphrates.

Kecskemet, c., central Hungary; fruit-canning and wine-distilling from locally grown prods.; 4th cent. c.; p. (1966) 74,400.

Kedah, st., Malaysia; on Strait of Malacca, N.W. Malaya; rice, rubber, coconuts, tungsten; cap. cap. Alor Star; a. 3,660 sq. m.; p. (1967) 925,105.

Kediri, t., E. Java, Indonesia; food processing; p. (1961) 158,918.

Keeling Is. *See* Cocos Is.

Keelung, c., N. Taiwan; on E. China Sea; naval base and ch. pt.; exp. agr. prods.; chemicals; gold, sulphur, copper mined nearby; p. (est. 1969) 317,780.

Keewatin, dist., N.W. Terr., Canada; barren grounds; fur-trapping; a. 228,160 sq. m.; p. 2,400.

Kei or Kai Is., gr. off cst. of W. Irian, Indonesia; in Banda Sea; densely forested; p. 50,648.

Keighley, t., West Yorks., Eng.; in Aire valley, 15 m. N.W. of Leeds; engin., woollen and worsteds; p. (1971) 55,263.

Keihin, vast conurb. of Tokyo, Yokohama and Kawasaki, Japan; p. (1971) 14,650,000.

Keith, burgh, Banff, Scot.; mkt. t. in agr. dist.; p. (1971) 4,177.

Kelantan, st., Malaysia; one of most fertile areas on E. cst. Malaya; cap. Kota Bharu; rice, coconuts, rubber; a. 5,720 sq. m.; p. (1967) 677,205.

Kells or **Ceannanus Mor**, mkt. t., Co. Meath, R.o.I.; notable for monastic remains and illuminated Book of Kells, now in library of Trinity College, Dublin; p. (1966) 2,274.

Kelso, burgh, Roxburgh, Scot.; at confluence of Rs. Teviot and Tweed; p. (1971) 4,852

Kemerovo, c., **RSFSR**; S.E. of Tomsk; coalmng. ctr.; chemicals, textiles, plastics; p. (1970) 385,000 (c.), 417,000 (met. a.).

Kemi, t., N.E. **Finland**; spt. on G. of Bothnia; sawmills; p. (1968) 30,259.

Kemi, R., N.E. **Finland**; used for hydroelectric power and timber transport; 300 m. long.

Kempston, t., Beds., **Eng.**; on R. Ouse, 3 m. S.W. of Bedford; p. (1971) 12,790.

Kempten, t., Bavaria, **W. Germany**; nr. L. Constance; mkt. for dairying ind.; Benedictine abbey; p. (1963) 44,600.

Kendal, Cumbria, **Eng.**; mkt. ctr., footwear, woollens, paper; tourism; p. (1971) 21,572.

Keneh. *See* **Qena.**

Kenilworth, t., Warwicks., **Eng.**; 4 m. S.W. of Coventry; mkt.; lt. engin., agr. repair wk.; ruined cas.; p. (1971) 20,121.

Kénitra. *See* **Mina Hassan Tani.**

Kennet, R., Wilts. and Berks., **Eng.**; trib. of R. Thames; followed by main rly. London to W. of Eng.; 44 m. long.

Kennington, dist., in London bor. of Lambeth, **Eng.**; inc. the Oval cricket ground, home of Surrey C.C.

Kenosha, t., Wis., **USA**; on W. shore of L. Mich.; cars, furniture; p. (1970) 78,063 (c.), 116,734 (met. a.).

Kensington and Chelsea, Royal Borough of, inner bor., W. London, **Eng.**; mainly residtl.; contains Kensington Palace and Gardens; p. (1971) 184,392.

Kent, non-met. co., **Eng.**; intensive agr., mkt. gardening, orchards, hops; "Garden of England"; crossed by N. Downs and Weald; industl. zone bordering Thames and Medway estuaries; tourist resorts and cross-channel ferry pts. on cst.; London commuter hinterland; co. t. Maidstone; a. 1,440 sq. m.; p. (1971) 1,396,030.

Kentucky, E. central st., Mississippi basin, **USA**; agr., coal, fluorspar, petroleum, natural gas; chemicals, machin., metal, steel, asphalt; tobacco, corn; cattle and horse raising; cap. Frankfort; lgst c. Louisville, at falls of Ohio R.; hydroelectric power; tourism; a. 40,395 sq. m.; p. (1970) 3,160,555.

Kentucky, R., Ky., **USA**; flows from Cumberland plateau to Ohio R.; l. 250 m.

Kenya, rep., E. **Africa**; member of Brit. Commonwealth; comprises 7 provs.; straddles equator but climate modified by alt.; marked contrast between sparsely populated and arid N. and well-developed S. where S.W. upland climate has attracted the European p.; economy based on prod. and processing of arable and pastoral prods., inc. dairy prod.; relatively well developed cooperative African farming; ch. spt. Mombasa, airports at Nairobi and Mombasa; famous for big game; extensive a. of agr. land owned by white p. source of social friction; univ.; cap. Nairobi; a. 224,960 sq. m.; p. (1969) 10,890,000.

Kenya, Mt., volcano, **Kenya**; just S. of equator; snow-covered; alt. 17,040 ft.; 2nd. hgst. peak in Africa.

Kephallenia. *See* **Cephalonia.**

Kerala, st., **India**; cap. Trivandrum; plantations producing rubber, tea, pepper; higher proportion of literacy than in any other st.; a. 15,002 sq. m.; p. (1961) 16,903,715.

Kerbala, c., **Iraq**; N.W. of Hilla; ctr. of pilgrimage; sacred c. of Moslem Shiite sect; p. (1965) 247,000 (met. a.).

Kerch, c., Ukrainian SSR, **USSR**; in Crimea, commanding K. strait connecting Black Sea and Azov Sea; spt. and industl. ctr.; metallurgical plant, iron and steel mills, shipbldg., fisheries; iron-ore, vanadium, natural gas nearby; p. (1970) 128,000.

Kerguelen, archipelago, S. **Indian Oc.**; part of Fr. Antarctic terr.; whaling, fishing; famous for K. cabbage (*Pringlea anticorbutica*) discovered by Cook.

Kerkrade, t., Limburg prov., **Neth.**; coal mng.; anc. abbey; p. (1968) 50,206.

Kérkira. *See* **Corfu.**

Kermadec Is., volcanic gr., **Pac. Oc.**; 600 m. N.E. of N.Z.; a. 13 sq. m.; met. sta. on Sunday I. (lgst of gr.); annexed to N.Z. 1887; p. (1961) 10.

Kerman, region, S.E. **Iran**; mtnous., much desert land; agr.; carpet-weaving; coal and iron-ore mng. being developed; recent copper find; irrigation scheme projected; p. (1967) 243,770.

Kerman, c., S.E. **Iran**; prov. cap.; carpet-weaving ctr.; textile mftg.; airport; mediaeval mosques; p. (1967) 85,404.

Kermanshah, t., N.W. **Iran**; cap. of Kermanshahan prov.; agr., comm. and route ctr.; airport; oil refinery; p. (1966) 187,930.

Kern, R., E. Cal., **USA**; one of most impt. power-generating Rs. in st.

Kerry, coastal co., Munster, **R.o.I.**; deeply indented cst.; cap. Tralee; tourism; a. 1,816 sq. m.; p. (1966) 112,642.

Kerulen, R., N.E. **Mongolia** and **China**; flows parallel to edge of Gobi Desert; a. designated for economic development; 785 m. long.

Kesteven. *See* **Lincolnshire.**

Keswick, Cumbria, **Eng.**; on Greta R.; at N. end of L. Derwentwater; tourist ctr.; mkt.; pencils; p. (1971) 5,169.

Kettering, mkt. t., Northants, **Eng.**; nr. Wellingborough; footwear; iron mng.; p. (1971) 42,628.

Kew, dist., London bor. of Richmond-upon-Thames, **Eng.**; contains Kew botanical gardens.

Keweenaw, peninsula, L. Superior, **USA**; former impt. copper deposits.

Keynsham, t., Avon, **Eng.**; expanded t.; p. (1971) 19,007.

Key West, c., Fla., **USA**; on I. circa 150 m. from mainland; naval sta., coastguard base; cigar-mftg.; nearest US pt. to Panama canal; tourism; p. (est. 1969) 39,500.

Khabarovsk, c., **RSFSR**; cap. of K. terr., N.E. Siberia, on Amur R.; cath.; oil refining, aircraft engin., wood and paper inds.; pipeline links with oilfields in N. Sakhalin; transport ctr. of Far East; p. (1970) 437,000.

Khairpur, t., **Pakistan**; nr. Sukkur barrage; textiles; p. (1961) 34,144.

Khakass Autonomous Oblast, admin. div. of Krasnoyarsk region, **RSFSR**; pastoral agr., timber and mng. inds.; a. 23,855 sq. m.; p. (1970) 446,000.

Khandwa, t., Madhya Pradesh, **India**; S. of Indore; cotton, oil-pressing; p. (1961) 63,505.

Khania or **Canea**, c., cap. of Crete, **Greece**; in sheltered bay on W. cst.; historic sites; p. (1961) 38,467.

Khanka, L., **China–USSR** border; dairy farming, fishing; branch of Trans-Siberian rly. to W. shore; a. 1,700 sq. m.

Khanty-Mansi, admin. div., **RSFSR**; in W. Siberian lowland; sparse p.; cap. Khanty-Mansiisk (at confluence of Ob and Irtysh Rs.); natural gas; a. 215,000 sq. m.; p. (1970) 272,000.

Kharagpur, c., W. Bengal, **India**; industl., scientific research ctr.; rly. junc.; p. (est. 1970) 165,925.

Khârk, I., Persian Gulf, **Iran**; oil terminal for super-tankers, 30 m. from mainland.

Kharkov, c., Ukrainian SSR, **USSR**; impt. industl. ctr. in Donets coal region; cap. of K. region; univ., cath.; rly. ctr.; extensively rebuilt after second world war; p. (1970) 1,223,000.

Kitakyūshū, c., N. Kyushu, Japan; one of Japan's lgst. muns. on merging (1963) of ts. Moji, Kokura, Tobata, Yawata, and Wakamatsu; sixth c. to enjoy special aut. rights; p. (1970) 1,042,319.

Kitami, c., Hokkaido, Japan; mkt.; food-processing; p. (1965) 51,000.

Kitchener, c., Ont., Canada; agr. machin., tyres, hardware, agr. processing; p. (1971) 109,954 (c.) 224,390 (met. a.).

Kithira. *See* **Cerigo.**

Kitimat, t., B.C., Canada; lge. aluminium smelter powered by hydroelectricity from diversion of R. Fraser trib. through the Rockies.

Kitwe, t., Zambia; contiguous to mng. township of Nkana, ctr. of copperbelt; p. (1969) 179,300 (met. a.).

Kiukiang, c., N. Kiangsi prov., China; pt. on Yangtze R., at foot of forested mtn. of Lu-shan; entrepôt tr.; former treaty pt.; p. (1953) 121,000.

Kivu, L., on border of Zaïre and Rwanda; in highlands of Gr. Rift Valley, 4,829 ft. high., 60 m. long.

Kizel, c., RSFSR; on Kizel R., on W. slopes of Urals; coal-mng. ctr.; mng. equipment; p. (est. 1967) 55,000.

Kizil, lgst R. of Turkey; rises in Kisil Dagh, flows to Black Sea via Sivas; 700 m. long.

Kladno, t., ČSSR; 10 m. N.W. of Prague; coal-mng. ctr.; iron and steel wks., machin.; p. (1967) 55,000.

Klagenfurt, t., cap. of Carinthia, Austria; winter sports ctr.; varied mnfs.; p. (1961) 69,218.

Klaipeda (Memel), c., Lithuanian SSR, USSR; ice-free spt. on Baltic Sea; exp. timber, textiles, chemicals, paper; p. (1970) 140,000.

Klamath, mtns., N. Cal., S.W. Ore., USA; beauti-

ful ranges containing Nat. Park and Indian reserve; hgst. alt. Mt. Eddy, 9,038 ft.

Klamono, t., W. Irian, Indonesia; ctr. of oilfield; pipeline to Sorong harbour.

Klatovy, t., S.W. Bohemia, ČSSR; mkt.; rose-growing a.; textiles; p. (1961) 14.004.

Klerksdorp, t., S. Transvaal, S. Africa; gold, diamonds; p. (1970) 75,686.

Klodzko (Glatz), t., S.W. Poland; formerly in Prussian Silesia; rly. junc.; on R. Neisse; comm. and mftg.; p. (1970) 26,100.

Klondike, R., Yukon, Canada; sm. trib. of Yukon in gold-mng. region; gold rush 1896; 100 m. long.

Klyuchevskaya Sopka, one of 18 active volcanoes, RSFSR; in N.E. Siberia, on Kamchatka peninsula; alt. 15,566 ft.

Knaresborough, t., North Yorks., Eng.; 3 m. N.E. of Harrogate; mkt.; cas. ruins; p. (1971) 11,863.

Knighton, t., Powys, Wales; on R. Teme; mkt.; p. (1971) 2,010.

Knockmealdown Mtns., Waterford and Tipperary, R.o.I.; highest point 2,609 ft.; tourism.

Knob Lake. *See* Schefferville.

Knossos, ruined c., cap. of anc. Crete, Greece; S.E. of Iráklion; ctr. of Cretan bronze age culture, 1800 B.C.; archaeological source of knowledge about the Minoans.

Knottingley, t., West Yorks., Eng.; on R. Aire, 12 m. S.E. of Leeds; engin., glass, tar distilling, chemicals; coal mng.; p. (1971) 16,360.

Knoxville, c., Tenn., USA; univ.; livestock and tobacco mkt.; textiles, marble, plastics, chemicals, aluminium; p. (1970) 169,766 (c.), 391,974 (met. a.).

Knutsford, t., N.E. Cheshire, Eng.; mkt.; home of Mrs. Gaskell, author of *Cranford*; p. (1971) 13,765.

Kōbe, c., spt., Honshu, Japan; at E. end of Inland Sea; 5th c. of Japan; developed as pt. for Osaka and Kinki plain; iron and steel, shipbldg., rubber; p. (1970) 1,288,754.

Koblenz (Coblenz), t., Rhineland-Palatinate, W. Germany; at confluence of Rs. Rhine and Moselle; fine buildings; wine, paper, machin., leather, ceramics; p. (est. 1969) 105,700.

Kochi, plain and c., Shikoku, Japan; early vegetables, double rice cropping; p. (est. 1969) 249,000.

Kodiak I., lgst of Is. of Alaska, USA; 90 m. long; forested mtns.; fur-trading, salmon-fishing, canning; ch. settlement St. Paul on Chiniak R.; earthquake 1964; p. (1960) 2,628.

Kofu, basin and c., Honshu, Japan; rice, vineyards, orchards, silk, wine; p. (est. 1969) 184,000.

Kohat, t., Pakistan; on trib. of Indus; military t.; cement wks.; p. (1961) 49,800.

Koh-I-Baba Mtns., Afghanistan, spur of the Hindu Kush; highest point 17,640 ft.

Kokand, c., Uzbek SSR, USSR; in the Ferghana Valley; mftg. ctr., textiles, chemicals, engin.; p. (1970) 133,000.

Kokiu (Gejiu), t., Yunnan prov., China; leading tin-mng. ctr. of China; p. (1953) 159,700.

Kokkola (Gamla Karleby), t. Finland; on cst. of G. of Bothnia; sulphur plant; p. (1961) 16,153.

Kokomo, c., Ind., USA; on Wild Cat R.; ctr. of agr. region; car components; p. (est. 1969) 48,000.

Koko-Nor, salt L., Chinghai prov., China; at over 10,000 ft. in Tibetan highlands; a. 2,300 sq. m.; no outlet.

Kokura. *See* Kitakyushu.

Kola Peninsula, peninsula, RSFSR; extension of Lapland; rich mineral deposits; hydro-electric plants.

Kolar, c., Karnataka, India; the ctr. of the Indian gold-mng. ind.; textiles; p. (1967) 167,610.

Kolarovgrad (Shumen), c., cap. of K. prov., N.E. Bulgaria; agr. tr., leather, cloth, metal gds.; Moslem architecture; p. (1965) 59,293.

Kolding, c., at head of Kolding fjord, Jutland, Denmark; spt. and fishing base; lt. inds.; p. (1965) 37,093.

Kolhapur, c., Maharashtra, S.W. India; cap. of former princely st. of K.; bauxite; anc. Buddhist ctr.; p. (est. 1970) 252,109 (c.), 267,427 (met. a.).

Kolobrzeg (Kolberg), t., N.W. Poland; spt. on Baltic cst.; comm. and fishing harbour; resort and spa; p. (1970) 25,400.

Kolomna, c., RSFSR; on Moskva R., nr. confluence with Oka R.; industl. ctr.; engin., locomotives, machin., synthetic rubber; p. (1970) 136,000.

Kolomyya, c., Ukrainian SSR, USSR; on Pruth R.; in Carpathian foothills; agr. tr., metal gds., oil refining, textiles; p. 40,000.

Kolubara, basin, Serbia, Yugoslavia; impt. lignite source; forests.

Kolwezi, c., S. Shaba, Zaïre; comm. ctr. for mng. dist. (cobalt and copper); p. 48,000.

Kolyma, R., N.E. Siberia, RSFSR; flows into Arctic Oc., via Kolyma goldfields; navigable in summer; basin largely covered with tundra, sparsely p.; 1,600 m. long.

Komárno, c., ČSSR; on left bank, of Danube, opposite Hungarian Komárom, on right bank; R. pt., shipbldg., oil refining.

Komi ASSR, aut. rep., RSFSR; wooded lowland, pastoral agr.; coal from Pechora basin, oil at Ukhta and Troitsko-Perchorsk; mng. now ch. economic activity; cap. Syktyvkar, lumber ctr.; a. 160,540 sq. m.; p. (1970) 965,000.

Komló, t., Hungary; new mng. t.; coking coal; p. (1965) 27,800.

Kompong Som c., Khmer Rep.; deepwater pt. on G. of Thailand; linked to Phnom-Penh by modern highway; textile mills, tractors, oil refining; p. 11,000.

Komsomolsk, c., RSFSR; built by volunteer youth labour, after 1932; heavy industl. development; oil refining; pipeline connects with oilfield in N. Sakhalin; p. (1970) 218,000.

Königshütte. *See* Chorzow.

Komi-Permyak, admin. div., RSFSR; forestry, cellulose, paper; cap. Kudymbar; a. 12,000 sq. m.; p. (1970) 212,000.

Konstantinovka, industl. t., Ukrainian SSR, USSR; in heart of Donbas industl. region, 38 m. N. of Donetsk; heavy engin., iron and steel, zinc smelting, fertilisers; p. (1970) 106,000.

Konya, c., Turkey; cap. of K. prov.; agr. tr. ctr.; mnfs. textiles, carpets, leather gds.; the anc. Iconium, fortress of the Hittite empire; p. (1965) 157,934 (c.), 242,414 (met. a.).

Koolan I., W. Australia; rugged I. with iron-ore deposits worked since 1960.

Koolyanobbing, mng. t., W. Australia; high-grade haematite and limonite ores; linked to rly. between Kwinana and Kalgoorlie 1968.

Kootenay or Kootenai, R., flows from B.C., Canada; through Montana and Idaho, USA, into K. L., draining it by narrow channel into Columbia R.; beautiful scenery; resort at Radium Hotsprings; upper reaches inc. K. Nat. Park; 450 m. long.

Kopeysk, t., RSFSR; in Urals; lignite mng., agr. and mng. machin.; p. (1970) 156,000.

Korat Plateau, E. Thailand; headwaters of Mekong tribs.; cattle-rearing; tr. ctr. Korat.

Korcë (Koritsa), t., S.E. Albania; in infertile basin at 2,800 ft. nr. Greek border; mkt.; cultural ctr.; p. (1967) 46,000.

Korčula (Curzola), I., Yugoslavia; sm. I. in Adriatic Sea; ch. pt. K.; a. 107 sq. m.; p. (1961) 10,223.

Korea, Democratic People's Republic of, (N. Korea); occupies N. part of Korean peninsula (N. of 38th parallel), E. Asia; bounded on N. by China and USSR; continental climate; cold dry winters, hot humid summers; predominantly mtnous. with many uninhabited offshore Is.; all inds. nationalised and collective agr.; agr. employs half working p.; development emphasis on mng. resources of coal, iron-ore and on growth of heavy inds.; most industl. resources located in N. Korea; transport network under reconstruction after devastation of Korean war; some R. transport, international airport at cap. of Pyongyang; proposed union with S. Korea; a. 46,814 sq. m.; p. (est. 1969) 13,300,000.

Korea, Rep. of (S. Korea), occupies S. part of Korean peninsula (S. of 38th parallel); climate and topography resemble N. Korea's; massive US aid revitalised economy after Korean war; 50 per cent work-force engaged in agr.; industl. growth hampered by lack of resources, but iron and steel ind. at Pusan; fishing is both

source of subsistence and exp.; irrigation and power project (1971–81) for 4 Rs.—Hangang, Naktangang, Kum-Gang, and Yongsan-Gang; proposed union with N. Korea; cap. Seoul; a. 38,452 sq. m.; p. (1970) 31,460,994.

Korea Bay, Yellow Sea; between N. Korea and North-East China (Manchuria).

Koriyama, Honshu, **Japan**; textiles, chemicals; p. (est. 1969) 247,000.

Korsör, spt., Sjaelland I., **Denmark**; fine harbour; glass wks.; p. (1960) 14,276.

Kortrijk (Courtrai), t., W. Flanders prov., N.W. Belgium; textiles; 13th cent. Notre Dame church; battle of the Spurs 1302; p. (1968) 45,170.

Koryak, admin. div., N.E. Siberia, **RSFSR**; sparse p.; a. 152,000 sq. m.; p. (1970) 31,000.

Kos, I. *See* **Cos, I.**

Kosciusko, Mount, N.S.W., in Australian Alps; highest peak in Australia; 7,310 ft.

Kosi R., India; flows from Himalayas to Ganges; site of barrage for hydroelectric power and irrigation.

Košice, c., S.E. Slovakia, **ČSSR**; lies in fertile basin; major industl. ctr.; heavy inds., iron and steel plant; agr.-processing; univ., Gothic cath.; mediaeval fortress t.; p. (est. 1968) 119,757.

Kossovo-Metohija, aut. region, S.W. Serbia, **Yugoslavia**; mtnous., fertile valleys; stock raising, forestry; ch. t. Pristina; a. 3,997 sq. m.; p. (1961) 963,565.

Kostroma, c., cap. of K. oblast, **RSFSR**; at confluence of Volga and Kastromo; in flax growing a.; textiles, engin.; cath.; p. (1970) 223,000.

Koszalin (Köslin), c., cap. of K. prov., N.W. **Poland**; nr. Baltic cst.; paper mills, textiles, building materials; p. (1970) 64,400.

Kotah, t., **Rajasthan, India**; on R. Chambal; textiles; p. (est. 1970) 215,634.

Kota Kinabalu (Jesselton), t., cap. of Sabah, **Malaysia**; on W. cst.; main rubber pt.; rly. terminal; p. (1960) 21,719.

Köthen, t., **Halle, E. Germany**; in former st. of Saxony-Anhalt; lignite mines, sugar-refining, machin., chemicals; p. (1965) 38,205.

Kotka, spt., **S.E. Finland**; on G. of Finland, at mouth of Kymmene R.; major exp. pt. for timber, paper, pulp; p. (1968) 33,553.

Kotor, spt., S. Montenegro, **Yugoslavia**; on Bay of K., inlet of Adriatic; cath.; tourism.

Kotri, t., **Pakistan**; on R. Indus, opposite Hyderabad; barrage N. of the t., to help irrigate Sind; p. 7,617.

Kottbus. *See* **Cottbus.**

Koulikoro, t., **Mali**, W. Africa; on upper course of R. Niger; mkt. for groundnuts, gum-arabic, sisal; linked by R. to Timbuktu and Gao; rly. terminus, 760 m. from Dakar.

Kovrov, c., **RSFSR**; on Gorki rly. line and R. Klyazma; impt. agr. exp. ctr.; engin., textiles; p. (1970) 123,000.

Kowloon, peninsula, S.E. **China**; on mainland opposite Hong Kong I.; pt. installations; major industl. and tr. ctr.; held by Britain on lease expiring 1998; p. (1961) 726,976.

Kozani, dep., Macedonia, **Greece**; cap. K.; mainly agr.; a. 2,372 sq. m.; p. (1961) 190,607.

Kozhikode. *See* **Calicut.**

Kra Isthmus, neck of land between B. of Bengal and G. of Thailand, linking Malay peninsula with continent of Asia.

Kragujevac, t., central Serbia, **Yugoslavia**; on both banks of Lepenica R. (trib. of Morava R.); cath.; arsenal and garrison; route ctr., developing agr. and industl. ctr.; p. (1961) 52,792.

Krakatoa, volcanic I., Sunda strait, **Indonesia**; between Java and Sumatra; greater part blown up by violent eruption 1883.

Kraków (Cracow), c., cap. of K. prov., S. **Poland**; pt. on Vistula; cultural ctr., univ. (Copernicus matriculated here); many historic monuments; inc. c. of Nowa Huta, lgst iron and steel ctr. of rep.; machin., chemicals, farm implements; p. (1970) 583,000.

Kramatorsk, c., Ukrainian SSR, **USSR**; in Donets basin; heavy engin., metallurgy; p. (1970) 151,000.

Kramfors, t., **Sweden**; on G. of Bothnia; paper-mill and sulphite pulp wks.

Krasnodar Territory, region, **RSFSR**; extends from Sea of Azov and Black Sea to N.W. end of Caucasus; contains Kuban steppe and Maikop oilfields; fertile black soil; main pt. Tuapse; many health resorts.

Krasnodar, c., cap. of K. region, **RSFSR**; R. pt. Kuban R.; ctr. of industl. and agr. region; p. (1970) 465,000.

Krasnoturinsk, t., **RSFSR**; in Urals, 6 m. N.W. of Serov; aluminium, coal; p. 62,000.

Krasnovodsk, c., Turkmen SSR, **USSR**; pt. on Caspian Sea; oil-refining ctr.; handles agr. and oil prods.; p. (est. 1967) 48,000.

Krasnoyarsk Territory, extensive region, **RSFSR**; extends across Siberia to Arctic Oc.; traversed by Yenisey and tribs.; minerals, grain from Minusinska basin and timber from coniferous forests; cap. K.; a. of labour camps in Stalin era.

Krasnoyarsk, c., cap. of K. terr., E. Siberia, **RSFSR**; on Trans-Siberian rly. at crossing of Yenesey R.; hydroelectric sta.; industl. ctr.; local copper and iron-ore deposits; ctr. for grain and timber; p. (1970) 684,000.

Krefeld, t., N. Rhine–Westphalia, **W. Germany**; chemicals, steel, machin., textiles, soap; former ctr. of silk inds.; p. (est. 1969) 226,800.

Kremenchug, c., Ukrainian SSR, **USSR**; on R. Dnieper; timber, engin., textiles; hydro-electric sta.; oil refining; p. (1970) 148,000.

Krems, mkt., t., **Austria**; on R. Danube; fruit processing; founded in 10th cent. as imperial fortress; p. (1961) 21,046.

Kreuznach, t., N. Rhine–Westphalia, **W. Germany**; on R. Nahe; metallurgy, leather, optical and chemical inds.; viticulture, mineral baths; p. (1963) 35,800.

Krishna (Kistna), R., S. **India**; rises in W. Ghats, flows E. across Deccan plateau into Bay of Bengal; lower valley and delta under intensive rice cultivation; densely populated; 850 m. long.

Kristiansand, spt., S. **Norway**; on Skagerrak; shipbldg., ships timber, paper, pulp, fish; electro-metallurgy; p. (1968) 53,736.

Kristianstad, c., cap. of K. prov., **Sweden**; on Helge R.; its pt. Ahus is on Baltic; food-processing, clothing, machin.; founded 1614 as fortress; p. (1968) 42,456.

Kristiansund, spt., W. cst. **Norway**; built on 3 Is.; trawler fleet base; exp. dried fish; heavily damaged in second world war; since rebuilt; p. (1969) 18,588.

Kristinehamn, L. pt. on L. Vänern, central **Sweden**; p. (1961) 21,547.

Krivoy Rog, c., Ukrainian SSR, **USSR**; on R. Ingulets; ctr. of ch. iron-mng. a. of USSR; p. (1970) 573,000.

Krk, I., N. Adriatic Sea, **Yugoslavia**; S. of Fiume; agr.; tourism; ch. t., K.; p. 14,500.

Krkonose. *See* **Riesengebirge.**

Kronstadt, spt., on I. of Kotlin, **RSFSR**; at head of G. of Finland, nr. Leningrad; Baltic pt. and naval base; scene of naval mutiny which precipitated the Russian revolution; founded by Peter the Great 1710; p. 50,000.

Kroonstad, t., O.F.S., **S. Africa**; on R. Valseh; rly. junc.; agr. mkt.; engin., milling; p. (1970) 50,898.

Kropotkin, c., E. Krasnodar Terr., **RSFSR**; food-processing, engin.; p. (est. 1967) 62,000.

Kruger Nat. Park, N.E. Transvaal, **S. Africa**; game reserve; a. 8,000 sq. m.

Krugersdorp, t., Transvaal, **S. Africa**; gold mng., uranium, manganese; p. (1970) 91,202.

Kuala Lumpur, c., fed. terr., **W. Malaysia**; cap. of Fed. of Malaysia and of Selangor st.; univ.; ctr. of rubber and tin dist.; outport Port Kelang; p. (1968) 592,785.

Kuangchow (Kuang-chou), formerly **Canton**, c., cap. of Kwantung prov., S. **China**; industl. and educational ctr.; mnfs. inc. silk, paper, cement; univ.; former treaty pt. and major spt. of S. China but site on Chu-kiang delta results in silting and expensive harbour wks., hence Chinese interest in Hong Kong; ctr. of revolutionary movement from days of Sun Yat-Sen; p. (est. 1958) 1,867,000.

Kuantan, main t. on E. cst. **W. Malaysia**; linked by rly. to Kuala Lumpur; tin mng

Kuching, c., cap. of Sarawak, Malaysia; pt. on Sarawak R.; gold discovered nearby at Bau; p. (1967) 70,000.

Kucovë, Albania; nr. Berat; oil prod. and refining; pipeline connects to Vlonë.

Kufra, oasis, Libya; dates, barley; on caravan route.

Kuldja (Yining), c., W. Sinkiang prov., China; on highway to Turkestan and on Ili R.; coal-field; recent industl. development inc. iron and steel; p. (1953) 108,200.

Kumamoto, c., W. Kyushu, Japan; 3rd c. of K.; cas., univs.; food inds.; business ctr.; p. (est. 1969) 435,000.

Kumasi, c., cap. of Ashanti region, Ghana; univ., aerodrome; road and rly. junc.; ctr. of cocoa-producing a.; bauxite nearby; jute bags; p. (1968) 281,600 (c.), 340,200 (met. a.).

Kumba Konam, t., Tamil Nadu, India; on Cauvery delta; silks, cotton; sacred Hindu c.; p. (1961) 92,581.

Kunene (Cunene), R., Angola; scheme to channel water from Angola to S.W. Africa; 750 m. long.

Kungur, t., RSFSR; S.E. of Perm; oil ind. equipment; p. (est. 1967) 70,000.

Kun Lun (Kwen Lun), mtn. ranges, Tibet, China; extend 1,800 m. E. from Pamirs along N. edge of high plateau of Tibet; drained N. into inland drainage basin of Lop Nor; alt. frequently exceeds 18,000 ft.; rising to 25,340 ft.

Kunming, c., cap. of Yunnan prov., S.W. China; univ.; comm. and cultural ctr., noted for its scenic beauty; iron and steel, milling and boring machin., textiles, chemicals; p. (1957) 880,000.

Kunsan, spt., S.W. S. Korea; on Yellow Sea, on estuary of R. Kum; p. (1966) 102,800.

Kununurra Dam, Ord R., W. Australia; opened 1963; to irrigate 200,000 acres of semi-arid land for cotton, rice, and cattle.

Kuopio, t., Finland; on L. Kalki; timber inds.; tourism; p. (1968) 55,067.

Kura, R., rises in Turkey, chief R. of Trans-caucasia, USSR, flows into Caspian Sea; agr., fishing, hydroelec. power; 940 m. long.

Kurdistan (Country of the Kurds), includes parts of E. Turkey, Soviet Armenia, N.E. Iraq, and N.W. Iran.

Kure, c., S.W. Honshu, Japan; spt. and naval base; engin.; shipbldg.; p. (est. 1969) 237,000.

Kurgan, c., RSFSR; on Tobol R.; impt. junc. on Trans-Siberian rly.; tr. in cattle and food-stuffs; agr. engin.; p. (1970) 244,000.

Kuria Muria Is., 5 barren Is. in Arabian Sea off cst. of Oman; admin. by U.K. until 1967.

Kurile Is., chain of volcanic Is., N. Pac., RSFSR; extend from Kamchatka to Hokkaido; mainly mtnous.; sulphur, hunting, fishing; Japan claims sovereignty over 4 Is.; a. 6,020 sq. m.; p. 18,000.

Kurisches Haff (Kuršiu Martos), shallow lagoon, Baltic cst. of Lithuanian SSR, USSR; receives water of R. Niemen; narrow entrance to Baltic Sea at N. end of lagoon commanded by pt. of Klaipeda (Memel); length 60 m., maximum width 20 m.

Kurische Nehrung, sandspit, Baltic Sea; almost cuts off Kurisches Haff from Baltic Sea; 55 m. long.

Kurnool, t., Andhra Pradesh, India; agr. comm. ctr.; p. (est. 1970) 164,245.

Kuroshio (Japan Current), ocean current, flows N.E. along Pac. cst. of Kyushu, Shikoku and S. Honshu, relatively warm water, exerts slight warming influence on this cst. in winter.

Kurshiro, spt., S.E. Hokkaido, Japan; exp. lumber; local coal; fishing; p. (1968) 195,000.

Kursk, c., cap. of K. oblast, RSFSR; on Tuskor R.; rly. junc.; in fertile fruit-growing a.; engin., textiles, synthetic rubber; p. (1970) 284,000.

Kurume, t., W. Kyushu, Japan; on Chikugo plain; comm. ctr.; p. (est. 1969) 190,000.

Kustanay, c., Kazakh SSR, USSR; on Tobol R.; agr.-processing, lt. inds.; p. (1970) 123,000.

Kütahya, t., cap. of K. prov., central Turkey; agr. mkt. ctr.; ceramics; p. (1965) 49,227.

Kutaisi, c., Georgian SSR, USSR; on R. Rion (hydroelectric plant); chemicals, textiles, mng. equipment; big coal deposits being mined; mkt. gardening a.; p. (1970) 161,000.

Kut-al-Amara, t., cap. of K. prov., Iraq; on R. Tigris; agr. tr. ctr.; p. (1965) 104,000 (met. a.).

Kutch, peninsula, Gujarat st., N.W. India; bounded on N. by Pakistan; largely barren except for fertile strip along Arabian Sea; p. (1961) 696,440.

Kutch, Rann of, desert region covered with salt, but flooded during monsoons; nine-tenths belongs to India; one-tenth to Pakistan.

Kutchan, t., S.W. Hokkaido, Japan; ctr. of lge iron-ore field; ore smelted at Muroran.

Kutno, t., Lodz, Poland; route ctr.; sm. textile ind.; p. (1970) 30,300.

Kuwait, indep. Arab st., S.W. Asia; under Brit. protection until 1971; lies at head of Persian G.; mainly desert with a few oases; imports most of food requirements; possesses 17 per cent of the proved world reserves of oil; heavily dependent on oil and natural gas exports; industl. complex of petrochemical inds. at Shuaiba projected, 30 m. S. of Kuwait (cap.), which contains nearly half of p.; a. 9,357 sq. m.; p. (1970) 733,196.

Kuwait, c., cap. of Kuwait; pt. with natural harbour on Persian G.; p. (1965) 99,609 (c.), 295,273 (met. a.).

Kuybyshev, c., cap. of K. oblast, RSFSR; on R. Volga; major R. pt., rly. junc. on Moscow–Siberian line, airport; hydroelectric power sta.; comm. ctr. with varied mnfs., inc. cars, aircraft, textiles, synthetic rubber; oil refining; grain and livestock exp.; p. (1970) 1,047,000.

Kuzbas (Kuznetsk Basin), industl. region, Siberia, USSR; lies S. of Trans-Siberian rly. in upper valleys of Rs. Ob and Tom; second lgst coal output in USSR, iron and steel mftg., heavy metallurgical ind.; ch. ts., Novosibirsk, Novokuznetsk, Kemerovo, Leninsk-Kuznetsky.

Kvaløy. *See* Hammerfest.

Kwangsi Chuang (Guang Zhuang), aut. region, S. China; borders on N. Vietnam; cap. Nanning; drained by Si-kiang and tribs.; rice most impt. crop; timber from sub-tropical forests; home of the Chuang people (over 7 million); a. 85,452 sq. m.; p. (1957) 19,390,000.

Kwantung (Guangdong), prov., S. China; on S. China Sea; cap. Kuangchow; occupied by delta of Si-kiang and its confluents; Hong Kong in estuary; tropical monsoon climate; densely p. on R. plains and valley slopes; intensive farming of rice, sugar, fruits; a. 85,447 sq. m.; p. (1957) 37,960,000.

Kwanto Plain, S.E. Honshu, Japan; lgst a. of continuous lowland in Japan, extends 80 m. inland from Tokyo; plain devoted to intensive rice cultivation; higher, drier terraces under mulberry, vegetables, tea, tobacco; very dense rural p.; lge number of urban ctrs., inc. Tokyo, Yokohama; a. 5,000 sq. m.; p. (1960) 27,000,000.

Kwazulu, Bantu Terr. Authority (1970), E. S. Africa; runs 300 m. from Moçambique to Cape Prov. but in 29 separate as. interspersed by white as.; cap. Nongoma in N. highland; p. (1971) 2,100,00.

Kweichow (Guizhou), inland prov., S.W. China; upland a. with p. concentrated in valley urban areas; cap. Kweiyang; cereals; tung oil; forestry; coal, mercury; a. 68,139 sq. m.; p. (1957) 16,890,000.

Kweilin (Guilin), c., Kwangsi prov., China; on Kwei R.; univ.; textiles, sugar refining, timber; noted for its beautiful setting; p. (1953) 141,100.

Kweiyang (Guiynag), c., Kweichow prov., China; univ.; comm. and industl.; coal; iron and steel, textiles, chemicals; p. (1957) 504,000.

Kwidzyn (Marienwerder), c., Gdansk, N. Poland (since 1945); cath., cas.; industl. ctr. nr. Vistula R.; p. (1970) 23,100.

Kwinana, new t., W. Australia; oil refinery and steel plant, alumina reduction, blast furnace; integrated steelwks. by 1978; p. (1972) 10,096.

Kyle of Lochalsh, v., Ross and Cromarty, Scot.; at entrance to Loch Alsh, facing S. end of I. of Skye; terminus of rly. across Highlands from Dingwall; ch. pt. for steamers to N.W. cst., I. of Skye, Outer Hebrides.

Kymi, R., Finland; rises in L. Päijänne, flows to G. of Finland; many Ls., timber transport, hydroelec. power; 90 m. long.

Kyoto, c., Honshu, Japan; cultural and religious ctr., without lge-scale inds.; former cap. 794–1868; univ.; shrines, old Imperial palace; p. (1970) 1,418,993.

Kyushu, most S. of 4 major Is. of Japan; mtnous.; coal mng. in Chikuho basin; heavy inds.;

agr. on coastal lowlands; a. 16,219 sq. m.; p. (1960) 12,903,515.

Kyustendil, t., Bulgaria; in foothills of Osogovo mtns.; lge lead and zinc deposits; combined plant for mng. and ore dressing projected.

Kzyl Orda, R., Kazakh SSR, USSR; lge dam to irrigate rice plantations.

L

Laaland I. *See* **Lolland I.**

Labrador, mainland a. of prov. Newfoundland, Canada; separated from I. by Strait of Belle I.; barren, severe climate; impt. cod fisheries; rich iron ore reserves nr. Quebec bdy.; Churchill R. power project; cap. Battle Harbour; a. 112,826 sq. m.; p. (1966) 21,157.

Labrador City, t., Newfoundland, Canada; new t. built 1965, nr. Wabush L. to house workers of iron-ore mines.

Labuan, I., Sabah, Malaysia; rubber, rice, coconuts; cap. Victoria; a. 35 sq. m.; former free pt.; p. (1960) 14,904.

Laccadive, coral Is., Arabian Sea; about 200 m. off Malabar cst. joined with Minicoy and Amindivi Is. to form union terr., **India;** coir, coconuts; cap. Kavaratti; a. 11 sq. m.; p. of terr. (1961) 24,108.

La Ceiba, spt., Honduras; on Caribbean cst.; exp. bananas; p. (1966) 31,951.

Lachine, c., Quebec, Canada; on Montreal I. where St. Lawrence R. leaves St. Louis L.; iron and steel, wire, rope; Lachine canal by-passes rapids; summer resort; p. (1966) 43,155.

Lachlan, R., N.S.W., Australia; trib. of R. Murrumbidgee; irrigation; 920 m. long.

La Coruña, spt., cap. of La Coruña prov., N.W. Spain; fishing; import tr.; p. (est. 1969) 224,055.

Ladakh, dist., of the Upper Indus, India, bordering Tibet; ch. t. Leh; isolated and remote; alt. 12,000 ft.; p. (1961) 88,651.

Ladoga, L., Leningrad, USSR; a. 7,100 sq. m.; (lgst in Europe); drained to G. of Finland by R. Neva; fishing; navigable.

Ladybank, burgh, Fife, Scot.; 5 m. S.W. of Cupar; p. (1971) 1,176.

Ladysmith, t., Natal, S. Africa; cotton mills; besieged by Boers 1899–1900; p. (1968) 32,750.

Mérida, c., cap. of Yucatan st., S.E. **Mexico;** sisal-hemp; Spanish colonial architecture; tourism; Mayan ruins; p. (1970) 253,856.

Mérida, c., Badajoz prov., S.W. **Spain;** on Guadiana R.; comm. ctr. of Estremadura; impt. Roman remains; p. (1960) 34,297.

Mérida, t., cap. of M. st., **Venezuela;** in Andes; univ., cath.; tourist ctr.; world's highest cable rly. to Espejo peak (15,380 ft.); p. (1961) 40,404.

Meriden, t., Conn., **USA;** hardware mftg.; p. (est. 1969) 58,000.

Meridian, t., Miss., **USA;** mkt. ctr. in cotton, livestock, lumber a.; rly. and route ctr.; textiles, clothing; p. (est. 1969) 53,000.

Merioneth, former co., **Wales.** *See* **Gwynedd.**

Merksem, industl. t., Antwerp, **Belgium;** p. (1968) 39,659.

Merrick, mtn., Kirkcudbright, **Scot.;** highest peak in S. Uplands of Scot.; alt. 2,764 ft.

Mersea, I., at mouth of R. Colne, Essex, **Eng.;** oysters; holiday resort; 5 m. long, 2 m. wide.

Merseburg, c., Halle, **E. Germany;** on R. Saale; ctr. of gr. lignite field; paper mills, chemical wks.; historic c.; p. (1965) 54,467.

Merse of Berwick, region, S.E. **Scot.;** lower valleys of Rs. Tweed and Teviot; glacial clays; arable agr. for barley, wheat; dairy cattle; ch. t. Berwick-on-Tweed; a. 220 sq. m.

Mersey, R., Cheshire/Gtr. Manchester/Merseyside, **Eng.;** enters Irish Sea by fine estuary at Liverpool; 68 m. long.

Merseyside, met. co., N.W. **Eng.;** a around lower Mersey estuary inc. N. Wirral penin., pts. of Liverpool, Birkenhead and Bootle; many chem. and pt. processing inds.; p. (1971) 1,659,000.

Mersin, c., S. **Turkey;** spt. on Mediterranean cst.; oil refinery; dates from c. 3,600 B.C.; p. (1965) 87,267.

Merthyr Tydfil, t., Mid Glamorgan, S. **Wales;** in narrow valley of R. Taff, 22 m. N.W. of Cardiff; coal-mng. ctr.; hosiery, aircraft, bricks, elec. domestic gds.; p. (1971) 55,215.

Merton, outer bor., Greater London, **Eng.;** inc. former bors. of Mitcham, Wimbledon, and Merton and Morden; p. (1971) 176,524.

Meru, mtn., Tanzania, E. Africa; extinct volcano overlooking E. arm of Gt. Rift valley; coffee plantations at alt. 5,000–6,000 ft., some rubber below 4,000 ft.; alt. summit 14,953 ft.

Merv. *See* **Mary.**

Mesa, t., Arizona, **USA;** in Salt River Valley, founded by Mormons 1878; agr. ctr., helicopter mftg.; p. (est. 1969) 55,000.

Mesa Central, plateau, **Mexico;** part of Mexican plateau, major a. of comm. agr. (maize, wheat, agave); contains cap. Mexico City; dense p. and industl. comm. ctrs.

Mesa del Norte, plateau, **Mexico;** northern part of Mexican plateau.

Mesabi Range, hills, N.E. Minn., **USA;** vast iron ore deposits, now running out.

Mesa Verde National Park, S.W. Col., **USA;** Indian cliff dwellings.

Mesopotamia, anc. region, S.W. **Asia;** between Tigris and Euphrates Rs.; a. of early civilisation.

Messenia, anc. region, Peloponnesus, **Greece;** corresponding to present Messinia, densely p. agr. dep., cap. Kalamata; a. 1,315 sq. m.; p. (1961) 210,728.

Messina, c., spt., Sicily, **Italy;** opposite Reggio; univ.; exp. fruit, wine, oil; p. (1969) 272,312.

Messina, strait, between Sicily and Italian mainland; length 22 m., minimum width 3 m.

Mesta, R., Bulgaria, Greece; rises in Rhodope mtns., flows S.E. into Ægean Sea 15 m. E. of Kavalla; valley famous for tobacco; known in Greece as Nestos; c. 175 m. long.

Mestre, t., **Italy;** on lagoon at landward end of causeway linking Venice to mainland.

Meta, R., Colombia and Venezuela; navigable for 400 m.; trib. of R. Orinoco; 750 m. long.

Metz, c., cap. of Moselle dep., N.E. **France;** on R. Moselle 25 m. N. of Nancy; cultural and comm. ctr. of Lorraine; impt. iron mines; wines, preserved fruits; mediaeval bldgs.; birthplace of Verlaine; p. (1968) 107,537.

Meudon, t., Hauts-de-Seine, **France;** S.W. sub. of Paris; observatory; glass, linen, ammunition; p. (1968) 51,481.

Meurthe, R., N.E. France; rises in Vosges and joins Moselle N. of Nancy.

Meurthe-et-Moselle, dep., N.E. **France;** borders on Belgium and Luxembourg; cap. Nancy; a. 2,037 sq. m.; p. (1968) 705,413.

Meuse, dep., N.E. **France;** borders on Belgium; cap. Bar-le-Duc; a. 2,408 sq. m.; p. (1968) 209,513.

Meuse (Maas), R., France; rises in Haute-Marne, flows past Verdun into Belgium past Namur and Liége into the Neth. and joins the Waal, left arm of the Rhine; impt. routeway; 570 m. long.

Mexborough, t., South Yorks., **Eng.;** on R. Don, 10 m. above Doncaster; potteries; p. (1971) 15,946.

Mexicali, c., Baja Cal., **Mexico;** border resort; p. (1970) 390,411.

Mexican Plateau, central plateau, **Mexico,** between the branches of the Sierra Madre; highest point over 8,000 ft.; impt. landform and a. of human settlement.

Mexico, fed. rep., **Central America;** inc. 29 sts., 2 terrs., and fed. dist. of Mexico City; mtnous.; Sierra Madre covers most of rep.; variety of climate according to alt.; W. mostly desert; agr. requires irrigation; major world exporter of cotton, sisal, sulphur, silver; oil impt.; 14 oil refineries, new petrochemical complex at Cosoleacaque; rapid industl. expansion for consumer gds.; decentralisation of inds. from Mexico City; tourism for Americans; cap. Mexico City; a. 761,530 sq. m.; p. (1970) 48,377,363.

Mexico, st., Mexico; encircles fed. dist. of Mexico City; cap. Toluca; a. 8,267 sq. m.; p. (1969) 2,803,000.

Mexico City, c., cap. of Mexico; lgst c. in Latin America; on plain at 7,460 ft.; many noteworthy bldgs., cath., univ.; admin., comm. and industl. ctr.; nuclear reactor nearby; p. (1970) 3,025,564 (c.); (1969) 7,425,000 (met. a.).

Mexico, Gulf of, lge inlet of Atl. Oc. (1,000 m. E. to W. by 800 m. N. to S.) lying S. of USA and E. of Mexico; communicates by Florida strait with Atl. and by Yucatan strait with Caribbean Sea.

Mexico, Valley of, Meseta Central, Mexico; major industl. zone; over 60 per cent by value of Mexican mnfs. produced; wide range of inds.; major ctr. Mexico City; attempts to decentralise p. and economic activity throughout Mexico; once ctr. of Aztec p.

Meyrin, t., Switzerland; H.Q. of CERN, nr. Geneva.

Mezhdurechensk, t., RSFSR; W. Siberia, on R. Tom'; new coal-mng. ctr.; p. 55,000.

Mézières. *See* **Charleville-Mézières.**

Mezötur, t., Hungary; mkt., flour, pottery; p. (1966) 22,200.

Mezzogiorno, lge underdeveloped region, southern Italy; comprising Abruzzo and Molise, Campania, Basilicata, Apulia, Calabria and the Is. of Sicily and Sardinia; major govt. attempts to develop a.; agr. reforms and industl. growth, oil refining, iron and steel, petrochemicals; contains 40 per cent of p. of Italy, much emigration; p. (est. 1969) 19,000,000.

Miami, c., Fla., USA; on Biscayne Bay, at mouth of Miami R.; famous resort and recreational ctr.; varied inds.; international airport; M. beach across Biscayne Bay; p. (1970) 331,553 (c.), 1,259,176 (met. a.).

Miass, c., RSFSR; in Urals, 56 m. S.W. of Chelyabinsk; gold-mng. ctr.; cars; p. (1970) 132,000.

Michigan, st., USA; in valley of Gr. Ls.; industl.; cars, iron and steel gds., petroleum, minerals; some agr.; cap. Lansing; a. 58,216 sq. m.; p. (1970) 8,776,873.

Michigan City, t., Ind., USA; on L. Mich.; rly. wks., furniture, hosiery; p. (est. 1969) 39,500.

Michigan Lake, 3rd lgst of Gr. Ls. and the only one wholly in USA; in basin of St. Lawrence R., enclosed by two peninsulas of the st. of Mich. and by Wis., Ill., and Ind.; a. 23,900 sq. m.; discharges by Straits of Mackinac to L. Huron.

Michipicoten, R., Ont., Canada; flows 125 m. to L. Superior; iron ore deposits in valley.

Michoacan, st., Mexico; on Pac. Oc.; mtnous., rich in minerals; cap. Morelia; a. 23,200 sq. m.; p. (1969) 2,452,000.

Michurinsk, t., RSFSR; N.W. of Tambov; engin., textiles, food inds.; agr. exp. ctr.; p. (est. 1967) 91,000.

Micronesia, Is., S. Pac.; inc. the Carolines, Marshalls, Marianas, and Gilbert Is.; most are coral atolls.

Middleburg, t., cap. of Zeeland prov., Neth.; on Walcheren I. nr. Flushing; margarine, timber, optical instruments; cloth ctr. in mediaeval times; p. (1968) 28,416.

Middlesbrough, t., Cleveland, Eng.; expanded t.; pt. on S. side of Tees estuary; impt. iron and steel ind., heavy engin., chemicals.

Middlesex, former co., S.E. Eng.; N. of R. Thames; absorbed in Greater London 1964; a. 232 sq. m.; p. (1961) 2,230,093.

Middleton, mkt. t., Durham, Eng.; on R. Tees; civil airport projected; nearby waterfall.

Middleton, t., Gtr. Manchester, Eng.; in valley of R. Irk; textiles, engin., chemicals, foam rubber; p. (1971) 53,419.

Middleton, t., Ohio, USA; on Miami R. and canal; steel, paper; p. (est. 1969) 46,500.

Middlewich, t., Cheshire, Eng.; on Rs. Dane, Wheelock and Croco, 5 m. N. of Crewe; salt, chemicals, clothing; p. (1971) 7,783.

Mid Glamorgan, co., S. Wales; upland in N. dissected by deep R. valleys containing former coal-mng. settlements; lowland to S. borders Bristol Channel; a. 393 sq. m.; p. (1971) 530,639.

Midhurst, t., West Sussex, Eng.; on R. Rother; famous polo grounds; birthplace of Richard Cobden; p. (1971) 18,983 (dist.).

Midland, t., Texas, USA; oilfield ctr., cotton ginning, natural gas; p. (est. 1969) 61,500.

Midlands, region, Eng.; comprises non-met. cos. of Staffs., Derbys., Notts., Leics., Warwicks., Northants., and met. co. of West Midlands; impt. a. for lt. engin.

Midlothian, co., Scot.; dairying, coal mng., paper brewing, fishing; a. 362 sq. m.; p. (1971) 142,214.

Midnapore, t., W. Bengal, India; mkt. for agr. prods.; p. (1961) 59,532.

Midway Island, I., Pac. Oc.; calling-place on air-routes between San Francisco and Asia, midway between Asia and USA (to which it belongs).

Mieres, t., Oviedo prov., N. Spain; in Asturias; coal-mng. ctr., iron and steel inds.; p. (1967) 68,458.

Mihama, Fukui, Japan; nuclear reactor under construction 1968.

Mihoro, Gifu, Japan; power plant under construction.

Mikkeli, c., cap. of M. prov., Finland; L. pt. in Saimaa L. region; p. 19,000.

Milan, c., cap. of M. prov., N. Italy; route ctr. in Lombard plain; second lgst c. in rep.; ctr. of commerce and ind.; textiles, chemicals, printing, publishing, machin., cars, aircraft, porcelain; cath., univ.; p. (1969) 1,701,612 (met. a.).

Mildenhall, t., Suffolk, Eng.; on R. Lark; 13th cent. church; R.A.F. sta. nearby; expanded t.; p. (1971) 26,613 (dist.).

Minya, c., central Egypt; on Nile; cotton tr. ctr.; p. (est. 1970) 122,100.

Minya Konka, mtn., S.W. Szechwan prov., China; in Himalayas; highest peak in China; 24,891 ft.

Mirfield, t., West Yorks., Eng.; on R. Calder, 3 m. S.W. of Dewsbury; woollens; p. (1971) 16,871.

Miri, t., Sarawak, E. Malaysia; impt. oil ctr.; p. (1960) 13,350.

Mirzapur, t., Uttar Pradesh, India; on R. Ganges; carpets, brassware; p. inc. Vindhyachal (est. 1970) 250,126 (c.), 341,734 (met. a.).

Miskolc, c., N.E. Hungary; impt. industl. ctr.; iron ore, lignite nearby; varied inds., inc. textiles, porcelain, engin., bricks, refrigeration plants; p. (est. 1969) 172,000.

Mississippi, st., S. USA; in lower M. valley; bounded on S. by G. of Mexico; cotton, sweet potatoes, pecan nuts, rice, sugar-cane, sorghum-cane, fruit, livestock raising; petroleum, natural gas; cotton textiles, chemicals, fish-processing; cap. Jackson; a. 47,716 sq. m.; p. (1970) 2,158,872.

Mississippi, principal R. of USA; rises in N. Minn., nr. L. Itasca; drains circa 1,224,000 sq. m.; enters G. of Mexico in lge delta nr. New Orleans; navigable, flood control problems; length 2,350 m. (Mississippi–Missouri–Red Rock 3,860 m.).

Missolonghi, t., Greece, pt. on inlet of G. of Patras; fish, tobacco; Byron died here 1824; p. (1961) 11,266.

Missoula, t., Mont., USA; on Klark R.; univ.; rly. wks., agr., fruit, oil refinery; tourism; p. (1960) 27,090.

Missouri, st., central USA; dominated by Mississippi and Missouri Rs.; predominantly agr.; livestock, maize; coal, iron; transport equipment; cap. Jefferson City; ch. t. St. Louis; a. 69,674 sq. m.; p. (1970) 4,636,247.

Missouri, longest R. of USA; 2,464 m.; trib. of Mississippi R.; main headstream Jackson R.; flood, power and irrigation schemes.

Missouri Coteau, hill ridge, N. America; runs N.W. to S.E. across prairies of Saskatchewan (Canada), N. and S. Dakota (USA); rises abruptly from 1,600 to 2,000 ft.

Mistassini, L., Quebec, Canada; 100 m. long.

Misurata, t., Tripolitania, Libya; on cst. of Mediterranean, 110 m. E. of Tripoli; mkt. for local agr. produce; p. 5,000.

Mitau. *See* Jelgava.

Mitcham. *See* Merton.

Mitchelstown, t., Cork, R.o.I.; nr. Fermoy; dairy prods.; p. (1966) 2,617.

Mitidja, plain, Algeria; N. Africa; borders Mediterranean; intensive cultivation of vine; ch. ts. Algiers, Blida.

Mito, c., Honshu, Japan; cas., comm. ctr.; famous for lime trees; p. (est. 1969) 149,000.

Mittelland Canal, inland waterway system, W. Germany; system of canals and canalised Rs.; links Dortmund–Ems canal nr. Rheine through Minden, Hanover, Magdeburg, Berlin to R. Oder at Frankfurt-on-Oder; makes use of natural E.–W. troughs across the N. German plain.

Mittweida, t., Karl-Marx-Stadt, E. Germany; metallurgy, textiles; p. (1963) 20,592.

Miyazaki, c., Kyushu, Japan; famous shrine; ctr. of sandy plain with lagoons; p. (est. 1969) 214,000.

Mizoram ("Land of Highlanders"), new union terr. (1972), Assam, N.E. India; former Mizo Hills dist. of Assam; 80 per cent p. Christian; 44 per cent literate, higher proportion than any other a. except Kerala; a. 8,200 sq. m.; p. (est. 1971) 400,000.

Mjosa, lgst. L., Norway; 55 m. long.

Mladá Boleslav (Jungbunzlau), t., Bohemia, ČSSR; vehicles, agr. machin., textiles; once ctr. of Bohemian Brethren (followers of John Hus); p. (1961) 25,694.

Moanda, spt. at mouth of Zaïre R., Zaïre; oil refinery, aluminium smelter.

Mobutu Sese, L., (L. Albert), Zaïre, Uganda; on floor of Gt. Rift Valley; crocodile farming; tourism; main pt. Kasenyi; length 100m., width 20m., alt., 2,100 ft.; a. 2,064 sq. m.

Mobile, c., spt., Ala. USA; on R. M.; shipbldg., pt. inds.; exp. cotton; p. (1970) 129,009 (c.), 231,105 (met. a.).

Moçambique, Portuguese overseas prov., E. Africa; wide coastal plain rising inland to 7,000 ft.; crossed by Zambesi R.; few exp. inc. cashew nuts, cotton, sugar, tea; deposits of coal and bauxite; Beira and Lourenço Marques serve as impt. pts. for transit tr.; cap. Lourenço Marques; Cabora Basin dam project in Tete dist.; a. 298,000 sq. m.; p. (est. 1969) 7,376,000.

Moçambique Channel, strait, Indian Oc.; separates Malagasy Rep. from mainland of Africa; 1,000 m. long, 250–600 m. wide.

Moçambique Current, ocean current, flows N. to S. along E. cst. of Moçambique and Natal, E. Africa; relatively warm water.

Moçâmedes, pt., Angola, W. Africa; ore pier; linked by rail to Cassinga mines; fishing; p. 8,000.

Mocha or **Al-Mukha,** t., N. Yemen; S.W. Arabia; on Red Sea; formerly noted for exp. of coffee; p. 5,000.

Modane, t., S.E. Savoie, France; commands routes via Mont Cenis Pass and tunnel; electrometallurgy; p. (1962) 5,137.

Modena, t., cap. of M. prov., Italy; cath., univ.; textiles, leather, engin.; p. (1968) 167,310.

Modesto, t., Cal., USA; fruit (especially peaches), vegetable-processing; p. (est. 1969) 52,000.

Modica. t., S.E. Sicily, Italy; agr. ctr.; limestone grottoes, cave dwellings; Cava d'Ispica; p. (1961) 44,050.

Moffat, burgh, Dumfries, Scot.; in Annandale, 15 m. N.W. of Lockerbie; resort; p. (1971) 2,031.

Moffat Tunnel, Col., USA; carries trunk rly. from Chicago to San Francisco under Rocky mtns. between Denver and Salt Lake City; 6·4 m. long; alt. 9,094 ft.

Mogadishu, c., cap. of Rep. of Somalia; on Indian Oc.; modernised deep-sea pt., airport; p. (1967) 172,677.

Mogador. *See* Essaouira.

Mogi das Cruzes, t., São Paulo, Brazil; agr.; bauxite mng.; p. (est. 1968) 111,554.

Mogilev, c., Belorussiyan SSR, USSR; on R. Dnieper; industl.; rly. and route junc.; p. (1970) 202,000.

Mohács, t., S. Hungary; on Danube; impt. R.

pt.; strategic site; battle 1526; p. (est. 1967) 15,900.

Mohammedia, t., Morocco, N. Africa; oil refining; p. (1960) 35,010.

Mohawk, R., N.Y., USA; trib. of Hudson R.; followed by impt. road, rly. and canal routes across Appalachian mtns.; 175 m. long.

Mojave or **Mohave**, S. Cal., USA; desert region of mtns. and valleys; a. 15,000 sq. m.

Moji, spt., Kyushu, Japan; exp. coal, cement, timber. *See* Kitakyushu.

Mokpo, spt., W. cst. S. Korea; ctr. of food-processing and cotton-ginning; p. (1966) 162,322.

Mol, t., N.E. Belgium; nuclear energy research ctr.; p. (1962) 25,404.

Mold, t., Clwyd, N. Wales; on R. Alyn; chemicals roadstone; p. (1971), 8,239.

Moldau. *See* Vltava.

Moldavian SSR, constituent rep., USSR; fertile fruit growing a. especially for vines; inds. based on fruit; cap. Kishinev; a. 13,200 sq. m.; p. (1970) 3,372,000.

Mole, R., Surrey, Eng.; rises in central Weald, flows N. into R. Thames nr. Molesey; cuts impt. gap through N. Downs between Dorking and Leatherhead; 50 m. long.

Molenbeek-Saint-Jean, t., Belgium; nr. Brussels; lge mftg. ctr.; p. (est. 1967) 67,500.

Molesey, E. and W., t., Surrey, Eng.; at junc. of Rs. Mole and Thames; residtl.; p. 8,500.

Molfetta, spt., Apulia, Italy; olive oil, macaroni, wine; caths.; p. (est. 1967) 65,100.

Moline, t., Ill., USA; on Mississippi R.; agr. implements, ironwks., flour; p. (est. 1969) 49,000.

Mollendo, t., S.W. Peru; pt. on Pac. Oc.; former outlet for Arequipa; replaced by Matarani; wool textiles, fishing; p. (1961) 18,000.

Mölndal, t., S.W. Sweden; paper, textiles; margarine; p. (1968) 31,125.

Molotov. *See* Perm.

Molucca or **Spice Is.**, Indonesia; between Sulawesi and W. Irian; spices, sago, timber, pearls, rice, copra; ch. t. Ternate; a. 191,681 sq. m.; p (1961) 789,534.

Mombasa, spt., Kenya; ch. harbour, Kilindini; rly. terminus; oil refinery; exp. tropical produce (ivory, hides, rubber, etc.); p. (est. 1970) 255,400.

Mon, I., off cst. of Sjaelland, Denmark; a. 90 sq. m.; cap. Stege; p. (1960) 13,107.

Monaco, principality, on Mediterranean cst. between France and Italy, W. Europe; economy based on tourism; benefits from climate and amenities, inc. famous casino; tax laws attract p. and shortage of land causes M. to build out into sea; much revenue derived from transactional laws, sales of tobacco and postage stamps; cap. Monte Carlo; a. 360 acres; p. (1968) 23,035.

Monadhliath Mtns., Inverness, Scot.; between Spey R. and Loch Ness; highest peak Carn Mairg 3,987 ft.

Monadnock Mt., peak, 3,165 ft. high, N.H., USA; name used as term for the geomorphological feature of an isolated hill which has successfully resisted erosion.

Monaghan, co., R.o.I.; mainly pastoral and agr ; a. 500 sq. m.; p. (1966) 45,726.

Monaghan, co. t., Monaghan, R.o.I.; on the Ulster canal; cath.; p. (1966) 4,019.

Mona Passage, strait, Caribbean Sea; separates Hispaniola from Puerto Rico.

Monastir. *See* Bitolj.

Mönch, peak, Bernese Alps, Switzerland; 13,449 ft.

Monchegorsk, t., RSFSR; on L. Imandra; copper and nickel smelting; p. 46,000.

Mönchengladbach, t., N. Rhine–Westphalia, W. Germany; 16 m. W. of Düsseldorf; rly. ctr . textiles; p. (est. 1969) 152,200.

Monchique, t., Algarve, Portugal; spa; wine, oil, chestnuts; p. 10,000.

Moncton, t., N.B., Canada; rly. ctr., textiles; oil nearby; p. (1971) 47,781.

Mondego, R., Portugal; 130 m. long.

Monfalcone, t., N.E. Italy; on Adriatic; modern industl. t.; shipbldg., oil refining; p. (1961) 26,818.

Monferrato, low hills, Piedmont, N. Italy; S. and S.E. of Turin between valleys of Po and Tanaro; celebrated vineyards, produce Asti Spumante wines; alt. never exceeds 1,500 ft.

Monghyr, t., Bihar, India; on R. Ganges; mkt. ctr.; p. (1961) 74,000.

Mongla, pt., Bangladesh; on Pussur R.; shipping pt. under construction.

Mongolia, vast elevated plateau in heart of Asia between China and USSR. *See* Mongolian People's Rep. and Inner Mongolia.

Mongolia, Inner. *See* Inner Mongolia.

Mongolia, People's Rep. of (Outer Mongolia), central Asia; extensive plateau at 4,000 ft., bordering Gobi desert in S.; dry continental climate with extremely cold winters; pastoral agr. collectively organised for horses, sheep, camels, oxen, and goats; extensive state farms for cereals; 60 per cent of tr. with USSR; cap. Ulan Bator; a. 604,000 sq. m.; p. (1970) 1,227,000.

Monmouth, t., Gwent, Wales; at confluence of Rs. Wye and Monnow; mkt. ctr.; timber, crushed limestone, wrought ironwk.; p. (1971), 6,545.

Monmouthshire, former co., S. Wales; mostly inc. in Gwent; parts in South and Mid Glamorgan.

Monongahela, R., W. Va., USA; joins Allegheny R. at Pittsburgh to form Ohio R.; impt. waterway.

Monopoli, spt., Apulia, Italy; oil, wine, fruit, flour tr.; p. (1961) 37,095.

Monroe, t., La., USA; cotton ctr., natural gas, paper, printing ink; p. (1970) 54,647 (c.), 111,527 (met. a.).

Monrovia, c., cap. of Liberia, W. Africa; pt. on Atl. at mouth of St. Paul R.; exp. rubber, palm oil; ship registration; p. (1962) 80,992.

Mons, c., cap. of Hainaut prov., W. Belgium, nr. Fr. border; cath.; inds linked with Borinage coal-mng. dist.; varied mnfs.; scene of many battles; NATO (SHAPE) H.Q. nearby at Casteau; p. (1968) 27,680.

Montana, st., N.W. USA; in Rocky mtns. region; cap. Helena; lgst c. Great Falls; copper, silver, gold, zinc, lead, manganese; coal, petroleum, natural gas; pastoral agr.; Glacier Nat. Park, tourism; a. 145,736 sq. m.; p. (1970) 682,133.

Montauban, t., Tarn-et-Garonne dep., France; on R. Tarn; cath.; agr. prod., wines; p. (1968) 48,555.

Montbéliard, t., Doubs dep., France; S. of Belfort; textiles, watches, typewriters, vehicles; p. (1968) 23,908 (t.), 114,670 (met. a.).

Mont Blanc, mtn., Alps; on confines of Italy and France; alt. 15,782 ft.; longest road tunnel in world (opened to traffic 1965) linking Courmayeur (Italy) and Chamonix (France), length 7·5 m.

Montceau-les-Mines, t., Saône-et-Loire dep., France; coal, textiles, metal-working; p. (1962) 29,364.

Mont Cenis Pass, W. Alps; on bdy. between France and Italy; approached from W. by Isère–Arc valleys, from E. by Dora Riparia; alt. 6,876 ft.

Mont Cenis Tunnel, W. Alps; on bdy. between France and Italy; carries main rly. from Lyons to Turin under Col de Fréjus; approached from W. by Isère–Arc valleys, from E. by Dora Riparia; opened 1871; 7·5 m. long.

Montclair, t., N.J., USA; residtl. sub. of N.Y.; paper gds. mnfs.; p. (1960) 43,129.

Mont-de-Marsan, t., Landes dep., France; mkt. ctr.; p. (1962) 23,254.

Mont-Dore, spa, Puy-de-Dôme dep., France; 30 m. S.W. of Clermont-Ferrand; Puy de Sancy (6,187 ft.) highest peak of Mont-Dore mtn. gr.; p. 2,500.

Monte Bello Is., gr. off N.W. cst., Australia; about 85 m. N. of pt. of Onslow; first Brit. atomic weapon exploded here 3 Oct. 1952.

Monte Carlo, t., Monaco; tourist resort, casino; p. (1961) 9,516.

Monte Corno, mtn., Italy; in Central Apennines; alt. 9,583 ft.

Monte Cristo, Italian I., 26 m. S. of Elba, in Tyrrhenian Sea; famed by novel by Dumas.

Monte Gargano, peninsula, S. Italy; projects into Adriatic Sea nr. plain of Foggia; formed by limestone plateau, alt. over 3,000 ft.; pasture on upper slopes, woodland on lower slopes; a. 400 sq. m.

Montego Bay, spt., Jamaica; main ctr. for tourism; p. (1960) 23,471.

Montélimar, t., Drôme dep., **France**; bricks, tiles, nougat; hydroelectric barrage on R. Rhône; p. (1968) 27,483.

Montenegro, constituent rep., S.W. **Yugoslavia**; agr., pastoral; cap. Titograd; a. 5,333 sq. m.; p. (1961) 471,894.

Monterey, t., Cal., **USA**; S. of San Francisco, resort of artists and writers; sardine ind., fruit and vegetable canneries; p. (est. 1969) 26,500.

Montería, c., cap. of Cordoba prov., **Colombia**; tobacco, cacao, cotton, sugar; p. (1969) 167,446 (met. a.).

Monte Rosa, highest peak, 15,203 ft., Pennine Alps, on border of **Italy** and **Switzerland**.

Monte Rotondo, highest mtn., Corsica, **France** 9,071 ft.

Monterrey, t., cap. of Nuevo León prov., **Mexico**; third lgst c.; cath.; textiles, brewing, ironwks., minerals; thermoelec. plant; sheet metal; p. (1970) 830,336.

Monte Sant'Angelo, hilltop t., **Italy**; on Gargano promontory; notable ctr. of pilgrimage; p. 25,000.

Montevideo, c., cap. of **Uruguay**; major pt. on Rio de la Plata; dominates life of rep. as financial, comm. and industl. ctr.; fisheries, oil-refining, food-processing, tourism; cath., univ.; p. (1964) 1,203,700.

Montgomery, t., Powys, central Wales; in upper Severn valley, 8 m. N.E. of Newtown; agr. mkt.; cas.; p. (1971) 968.

Montgomery, t., W. Punjab, **Pakistan**; livestock; leather, cotton; p. (1961) 25,100.

Montgomery, c., cap. of Ala., **USA**; at head of Alabama R.; cotton, livestock, timber, dairying, fertilisers; hydroelec. power; p. (1970) 129,375 (c.), 194,522 (met. a.).

Montgomeryshire, former co., Central Wales. *See* **Powys**.

Montluçon, t., Allier dep., **France**; on R. Cher; terminus of Berry canal, linking Commentry coalfields with Loire; iron foundries, glass-making; cas.; p. (1968) 59,983.

Montmartre, dist., N. Paris, **France**; on Butte de M. (330 ft.), commands superb view S. over Paris; picturesque square, frequented by artists; basilica of Sacré Cœur.

Montparnasse, dist., Paris, **France**; on left bank of Seine R.; haunt of artists and writers.

Moscow, c., cap. of **USSR**, and of **RSFSR**; leading cultural, political, comm., industl. and route ctr. of USSR; on Moskva R.; served by several airpts., R. and canal pts.; contains Kremlin in c. ctr. with Red Square; caths., univs., palaces,

many famous theatres and art galleries; p. (1970) 6,942,000 (c.), 7,061,000 (met. a.).

Moscow Sea (Ucha Reservoir), artificial L., **RSFSR**; created behind dam on R. Volga at Ivankovo; supplies water to Moscow, maintains level on Moscow–Volga canal, and supplies water to 8 hydroelec. power-stas.; a. 127 sq. m.

Moscow–Volga Canal, RSFSR; links R. Volga at Ivankovo with Khimki sub. of Moscow; forms part of Leningrad–Moscow inland waterway; opened 1937; 80 m. long.

Moselle, dep., N.E. France; iron-ore, coal mng.; metal inds.; cap. Metz; a. 2,403 sq. m.; p. (1968) 971,314.

Moselle, R., France and Germany; trib. of R. Rhine; canalised between Thionville and Koblenz (168 m.); lower valley forms famous wine dist.; 328 m. long.

Moshi, t., N. Tanzania; on southern slope of Mt. Kilimanjaro; ctr. of coffee-growing dist.; airpt. at 2,801 ft. (S.W. of t.).

Mosi-oa-Toenja (Victoria Falls), on R. Zambesi, Zambia, discovered by Livingstone 1855; falls are 1,860 yds. wide and broken by islands and rocks.

Mosjoen, t., N. Norway; recent aluminium wks.

Moskva, R., central **RSFSR**; trib. of R. Oka; Moscow stands on its banks; linked with upper Volga by Moscow–Volga canal (80 m. long); 250 m. long.

Mosonmagyaróvár, t., **Hungary**; aluminium wks.; agr. machin.; p. (1966) 24,100.

Mosquito Cst., lowland, E. cst. **Nicaragua**; 250 m. N.–S., 120 m. E.–W.; lumbering, bananas; ch. t. Bluefields; sparse p.

Moss, spt., **Norway**; pulp, paper, machin., textile inds.; p. (1960) 20,461.

Mossamedes. *See* **Moçâmedes.**

Mossel Bay, pt. and seaside resort, Cape Prov., S. Africa; between Cape Town and Port Elizabeth; p. (1960) 12,178.

Mossley, t., Gtr. Manchester, **Eng.**; 3 m. E. of Oldham; mkt. t., textiles; p. (1971) 10,055.

Most, t., **ČSSR**; lignite, chemicals; Druzhba crude oil pipeline extended to chemical wks.; p. (1967) 56,000.

Mostaganem, t., **Algeria**; spt. on Mediterranean cst., E. of Oran; exp. wine and fruits; gas pipeline from Hassi Messoud; p. (1967) 64,000.

Mostar, t., Herzegovina, **Yugoslavia**; on R. Naretva; bauxite, lignite; developing inds., wine, food-processing, aluminium plant; p. (1961) 35,284.

Mosul, t., N. **Iraq**; on R. Tigris; in region producing cereals, citrus fruit, cattle; impt. oilfields nearby; metal work; impt. during crusades; p. (1965) 264,146.

Motala, t., on L. Vättern, **Sweden**; radio sta.; engin., woollen gds.; p. (1968) 27,887.

Motherwell and Wishaw, burgh, Lanark, **Scot.**; in Clyde valley, 15 m. S.E. of Glasgow; iron, steel, machin., engin., textiles; p. (1971) 73,658.

Moulins, c., cap. of Allier dep., **France**; on Allier R.; leather gds., clothing; cath., ruined château, art treasures; p. (1968) 27,408.

Moulmein, spt., **Burma**, on R. Salween; exp. teak, rice; p. (1966) 156,968.

Mountain Ash, t., Mid Glamorgan, **Wales**; in narrow valley 3 m. S.E. of Aberdare; coal-mng. a.; p. (1971) 27,806.

Mount Adams, mtn., S. Wash. **USA**; beautiful volcanic scenery in Cascade Range; pine forests; alt. 12,470 ft.

Mount Albert, bor., Auckland, **N.Z.**; p. (1972) 26,150.

Mount Alberta, mtn., W. Alberta, **Canada**; in Canadian Rockies and Jasper Nat. Park; alt. 11,874 ft.

Mount Assiniboine, mtn., Alberta, B.C., **Canada**; "Matterhorn" of Canadian Rockies; alt. 11,870 ft.

Mount Carmel, mtn., N.W. Israel; rises to 1,818 ft. and extends 12 m. as penin. into Mediterranean Sea, forming S. limit to Bay of Acre; ass. with prophets Elijah and Elisha.

Mount Eden, bor., Auckland, **N.Z.**; p. (1972) 20,061.

Mount Goldsworthy, t., W. **Australia**; new t. being developed in iron ore mng. a.

Mount Isa, t., W. Queensland, **Australia**; in Selwyn Range 80 m. W. of Cloncurry; copper mng.; p. (1972) 25,240.

Mount Lofty Range, mtn. range, S. **Australia**; forms barrier to routes leaving Adelaide; lower slopes support vineyards and outer suburbs of Adelaide; rises to over 3,000 ft.

Mount Lyell, Tasmania, **Australia**; impt. copper mines, and refinery.

Mount McKinley, Alaska, **USA**; in Alaska Range and Nat. Park; highest point in N. America, circa 20,300 ft.

Mountmellick, t., R.D., Laoighis, **R.o.I.**; p. (1961) 22,596 (R.D.).

Mount Newman, W. **Australia**; new t. built 1967 to exploit nearby iron ore.

Mount of Olives, Jordan; ridge (2,680 ft.), E. of Jerusalem; Garden of Gethsemane on lower slopes.

Mount Roskill, bor., Auckland, **N.Z.**; p. (1971) 33,842.

Mount's Bay, inlet, S. cst., Cornwall, **Eng.**; 20 m. wide; fishery grounds.

Mount Tom Price, t., W. **Australia**; new t., being developed in iron ore mng. a.

Mount Vernon, c., N.Y., **USA**; on Bronx R.; sub. of N.Y.; residtl.; takes name from George Washington's house on Potomac, Va., 15 m. S. of Washington D.C.; varied inds., notably electronic equipment; p. (1960) 76,010.

Mount Wellington, bor., Auckland, **N.Z.**; p. (1971) 20,178.

Mourenx, t., S.W. Aquitaine, **France**; nr. Lacq; new t. in oil dist.; p. (1966) 8,660.

Mourne Mtns., Newry and Mourne, **N. Ireland**; highest peak, 2,796 ft.

Mouscron, t., **Belgium**; textile ctr. nr. Fr. border; p. (1968) 37,746.

Moyle, l. gov. dist., **N. Ireland**; borders N.E. cst.; inc. Rathlin I., Giants Causeway; main t. Ballycastle.

Mozambique. *See* **Moçambique.**

Mühlhausen, t., Erfurt, E. **Germany**; on R. Unstrut; textiles, machin., tobacco; p. (1965) 46,135.

Mukden. *See* **Shenyang.**

Mulhacén, mtn., Sierra Nevada range, **Spain**; 11,420 ft. (highest peak Europe, outside Alps).

Mülheim-an-der-Ruhr, t., N. Rhine–Westphalia, **W. Germany**; on R. Ruhr; cas.; coal mng., iron, steel, tobacco, engin., elec., oil refining; airpt.; p. (est. 1969) 190,400.

Mulhouse, t., Haut-Rhin dep., **France**; impt. textile ctr.; potash deposits to N. supply chemical inds.; p. (1968) 116,336 (c.), 199,037 (met. a.).

Mull, I., Argyll, **Scot.**, included in Hebrides; a. 357 sq. m.; pastoral farming, fishing, tourism; ch. t. Tobermory; p. (1971) 1,569.

Mullet, The, peninsula, W. cst. Mayo, **R.o.I.**

Mullingar, co. t., Westmeath, **R.o.I.**; on Brosna R.; mkt., agr. ctr.; cath.; p. (1966) 6,453.

Mull of Galloway, S. point of Wigtown, **Scot.**

Multan, t., W. Punjab, **Pakistan**; on R. Chenab; carpets, silks, pottery; steel, thermal sta.; gas pipeline to Lyallpur; p. (est. 1969) 597,000.

Muncie, t., Ind. **USA**; on White R.; iron, steel, glass and paper; p. (1970) 68,066 (c.), 127,861 (met. a.).

Nazilli, t., S.W. **Turkey**; on R. Menderes; agr., especially olives; p. (1965) 41,121.

Ndola, t., **Zambia**; nr. bdy. with Zaïre, 110 m. by rail N. of Kabwe; ctr. of rich copper-mng. a., less impt. lead- and zinc-mng.; minerals despatched by rail E. to Beira and W. to Lobito Bay; oil refining nearby; international airpt. being built; p. (1964) 84,000 (c.); (1969) 150,800 (met. a.).

Neagh, Lough, L., N. **Ireland**; lgst freshwater L. in Brit. Is.; a. 153 sq. m.; drained by R. Bann.

Neath, t., West Glamorgan, **Wales**; 6 m. up R. Neath from Swansea Bay; coal, aluminium inds., oil refining; cas., abbey; p. (1971) 28,568.

Nebraska, st., **USA**; mainly prairie; cap. Lincoln; farming, meat-packing, wheat, maize, hay, potatoes, sugar-beet, apples, wool, livestock, petroleum, cement; a. 77,277 sq. m.; p. (1970) 1,468,101.

Neckar, R., **W. Germany**; rises between Swabian Jura and Black Forest; flows through Baden-Württemberg to Rhine at Mannheim; 240 m. long.

Neder Rijn, R., **Neth.**; more N. of two distributaries of R. Rhine; 40 m. long.

Needles, chalk stacks in English Channel, off W. cst. of I. of Wight, **Eng.**

Neftyne Kamni, t., **USSR**; built on piles over Caspian Sea for Russian oil workers.

Negapatam. *See* Nagapattinam.

Negev, desert, region, S. **Israel**; new a. of irrigated agr.; oil and natural gas; p. (1962) c. 33,000.

Negombo, t., S.W. **Sri Lanka**; at mouth of Negombo lagoon; ctr. of coconut belt; metalware, ceramics; p. (1963) 47,028.

Negril Beach, Jamaica; 25 m. W. of Montego Bay; new resort to further Jamaica's tourist tr.

Negri Sembilan, st., **W. Malaysia**; on Strait of Malacca; tin and rubber; cap. Seremban; a. 2,580 sq. m.; p. (1961) 430,227.

Negro Rio, R., **Argentina**; flows into G. of St. Mathias, Atl. Oc.; used for irrigation, partly navigable.

Negro Rio, R., **Brazil**; one of ch. tribs. of R. Amazon; rises in Colombia, joins Amazon nr. Manaus; c. 950 m. long.

Negro, Rio., **Uruguay**; flows from Brazil border to Uruguay R.; major multi-purpose project at Rincón del Bonete; 500 m. long.

Negros, I., **Philippines**; S. of Mindanao; impt. sugar producing I.; copper deposits; a. 4,905 sq. m.; p. (1960) 1,862,500.

Neheim-Hüsten, t., N. Rhine–Westphalia, **W. Germany**; at confluence of Rs. Möhne and Ruhr; lamps, metals, chemicals; p. (1963) 34,700.

Neikiang (Neijiang), c., Szechwan prov., **China**; on To R.; agr. ctr.; p. (1953) 190,200.

Neisse or **Nisa**, two tribs. of R. Oder, (1) Western or Glatzer Neisse, frontier between Poland and E. Germany, 140 m. long; (2) Eastern or Lausitzer Neisse, E. Silesia, Poland, 120 m. long.

Neiva, t., **Colombia**; at head of navigation of R. Magdalena; tr. in cattle and coffee; panama hats; p. (est. 1969) 111,727.

Nejd, dist., central **Arabia**; with Hejaz, forms kingdom of Saudi Arabia; mainly desert; impt. oil wells, horses, camels, dates, various fruits; cap. Riyadh; a. 420,000 sq. m.; p. (est.) 4,000,000.

Nellore, t., Andhra Pradesh, **India**; admin ctr.; p. (est. 1970) 137,720.

Nelson, R., **Canada**; drains L. Winnipeg to Hudson Bay; l. (with its gr. trib. the Saskatchewan) 1,450 m.

Nelson, t., Lancs., **Eng.**; on N. flank of Rossendale 3 m. N.E. of Burnley; cotton, iron and brick wks., lt. engin., paper; p. (1971) 31,225.

Nelson, t., S.I., N.Z.; pt. nr. head of Tasman Bay; fishing, fruit-packing, timber; coalfield; cath.; p. (1971) 29,270.

Nemunas (Pol. **Niemen**, Ger. **Memel**), R., Lithuanian SSR and Belorussiyan SSR, **USSR**; rises S.W. of Minsk and flows c. 580 m. into Kurisches Haff (Courland Lagoon), Baltic Sea, forming sm. delta.

Nenagh, mkt. t., U.D., Tipperary, **R.o.I.**; p. (1966) 4,542.

Nene, R., Northants., **Eng.**; rises nr. Naseby and flows 90 m. to the Wash.

Nepal, indep. kingdom, S.E. **Asia**; on S. slopes of Himalayas and inc. Mt. Everest; isolated from India by malarial forested zone of Terai; N. mostly tropical forest and jungle; home of Gurkhas; poor transport; only 1,000 m. of road; agr. in fertile valleys, rice, wheat, maize; cap. Katmandu; a. 54,600 sq. m.; p. (est. 1969) 10,845,000.

Nerbudda. *See* Narmada.

Ness, Loch, L., Inverness, **Scot.**; occupies N.E. end of Glenmore; forms link in Caledonian Canal; very deep; 22·75 m. long.

Neston, t., Cheshire, **Eng.**; on N. side of Dee estuary; residtl.; p. (1971) 16,848.

Nestos, R. *See* Mesta.

Netherlands, kingdom, N.W. **Europe**; bounded by N. Sea, Belgium and W. Germany; comprises 11 provs.; since second world war has taken advantage of location at mouth of Rhine, opposite Thames estuary, to develop lge-scale coastal inds., inc. iron and steel at IJmuiden, oil refining, petrochemicals at major European pt. complex of Rotterdam–Europort; similarly major industl. growth in conurbation of Randstad Holland in steering economy far away from formerly predominant agr. basis; agr. still impt. and major sea-flood control schemes around IJsselmeer and Rhine estuary are creating valuable land for intensive agr. in a densely populated cty.; recent discoveries of natural gas in Groningen have also turned cty. into major supplier of energy for European mkts.; practises advanced policy of social welfare; cap. Amsterdam; seat of govt. at The Hague; a. 13,967 sq. m.; p. (est. 1970) 12,957,621.

Netherlands Antilles (Curaçao), 2 gr. of Is. in Caribbean Sea, part of Lesser Antilles; main gr. off Venezuela inc. Curaçao, Bonaire and Aruba; 2nd gr. inc. volcanic Is. of St. Eustatius, Saba, and St. Maarten (S. part only); agr. of sm. importance as a result of low rainfall; benefits from Venezuelan oil ind.; oil refineries in Curaçao and Aruba; petrochemical inds.; cap. Willemstad; a. 394 sq. m.; p. (1969) 216,355.

Netze. *See* Notec.

Neubrandenburg, c., cap. of N. admin. dist., **E. Germany**; fibreglass, machin., chemicals; p. (1965) 37,934.

Neuchâtel, can., **Switzerland**; in Jura mtns.; forested with some pastures; cattle, cheese, wine; watches, cutlery, cottons, hosiery; asphalt from Val de Travers; a. 309 sq. m.; p. (1969) 167,000.

Neuchâtel cap. of Neuchâtel can., **Switzerland**; on N. slope of Lake Neuchâtel; cas.; univ.; watches, jewellery, condensed milk; p. (1969) 36,800.

Neuchâtel, L., Switzerland; at S.E. foot of Jura mtns.; drains N.E. to R. Aare; vineyards on S. facing slopes; remains of lake dwellings, anc. Celtic site of La Tène culture.

Neuilly-sur-Seine, sub., W. of Paris, Hauts-de-Seine, **France**; fine bridge and cas.; engin.; p. (1968) 71,215.

Neumünster, t., Schleswig-Holstein, **W. Germany**; rly. ctr.; leather, paper and textile inds.; p. (1963) 75,000.

Neunkirchen, t., Saarland, **W. Germany**; iron and steel mnfs.; coal mng.; p. (1963) 46,100.

Neuquén, t., cap. of N. prov., **Argentina**; at confluence of Rs. Limay and Neuquén, in ctr. of fruit-farming dist.; p. (1960) 17,500.

Neusalz. *See* Nowa Sól.

Neusandetz. *See* Nowy Sacz.

Neuss, c., N. Rhine–Westphalia, **W. Germany**; rly. junc., canal pt.; nr. Rhine, opposite Düsseldorf; metal gds., food-processing; p. (est. 1969) 116,500.

Neustadt, t., Rhineland-Palatinate, **W. Germany**; on R. Haardt; agr. machinery; impt. wine tr.; p. (1963) 30,800.

Neustadt. *See* Wiener-Neustadt.

Neutitschein. *See* Nový Jičin.

Neva, R., **RSFSR**, on which Leningrad stands; drains L. Ladoga to G. of Finland; navigable but liable to flooding; 46 m. long.

Nevada, st., **USA**; in Rocky mtns., continental climate; mng. basis of economy, gold, silver, copper tungsten, gypsum, iron, lead; livestock agr., timber; tourism; ts. inc. Las Vegas and cap. Carson City; a. 110,540 sq. m.; p. (1970) 481,893, grew rapidly during 1960s.

Nevers, c., cap. of Nièvre dep., **France**; on R. Loire; anc. iron and steel ind.; porcelain and faience; cath., historic bldgs.; p. (1968) 45,068.

Neves, t., Rio de Janeiro st., S.E. **Brazil**; sugar, coffee; p. (1960) 85,741.

Nevis, I., Leeward Is., **W.I.**; cotton, sugar; ch. t. Charlestown; desire for indep. from St. Kitts; a. 50 sq. m.; p. (1966) 15,072.

New Albany, c., Ind., **USA**; on R. Ohio; domestic glassware, furniture, leather, iron and steel, car bodies; p. (est. 1969) 38,000.

New Amsterdam, spt., **Guyana**; on Berbice R.; processes agr. prods. from surrounding lowland; p. (1962) 15,000.

New Amsterdam, t., Manhattan I., **USA**; taken by English from Dutch, 1664, and renamed New York.

Newark, mkt. t., Notts., **Eng.**; on R. Trent 17 m. N.E. of Nottingham; ball bearings, brewing and malting; cas.; p. (1971) 24,631.

Newark, c., N.J., **USA**; meat-packing, printing, elec. gds., paints, chemicals, cars, aircraft, leather; route ctr.; p. (1970) 378,222 (c.), 1,847,542 (met. a.).

New Bedford, c., spt., Mass., **USA**; on estuary of R. Acushnet; whale-fishery ctr.; mnfs. cottons, cordage, glass, shoes; resort; p. (1970) 101,262 (c.), 151,934 (met. a.).

Newbiggin-by-the-Sea, t., Northumberland, **Eng.**; sm. seaside resort; coal mng.; p. (1971) 10,661.

New Brighton, t., Merseyside, **Eng.**; at entrance to Mersey estuary; resid̄l. dist. of Wallasey resort.

New Brighton, t., S.I., seaside resort, nr. Christchurch, **N.Z.**; p. (1961) 10,219.

New Britain, lgst I., Bismarck Archipelago, **Papua–New Guinea**; volcanic mtns.; exp. copra, cacao; a. (with adjacent Is.) 14,600 sq. m.; p. (1966) 154,091.

New Britain, t., Conn., **USA**; iron and brass mnfs.; p. (1970) 82,685 (c.), 143,965 (met. a.).

New Brunswick, maritime prov., **Canada**; forest-clad mtns.; impt. timber inds.; fishing and fish-processing; many minerals; road and rail link with Prince Edward I.; cap. Fredericton; a. 27,985 sq. m.; p. (1971) 634,557.

New Brunswick, t., N.J., **USA**; on Raritan R.; chemicals, motor lorries, motor parts, leather hosiery and hardware; univ.; p. (est. 1969) 41,000.

Newburgh, burgh, Fife, **Scot.**; on S. side of F. of Tay, 8 m. E. of Perth; fish. pt.; linoleum; p. (1971) 2,062.

Newburn, t., Tyne and Wear, **Eng.**; on R. Tyne, 3 m. W. of Newcastle; pure graphite for nuclear reactors; p. (1971) 39,379.

Newbury, t., Berks., **Eng.**; on R. Kennet, 17 m. S.W. of Reading; engin., furniture, paper, cardboard boxmaking; mkt.; racecourse; p. (1971) 23,696.

New Caledonia, overseas terr. of France; volcanic I. in S. Pac. Oc.; nickel and chrome deposits; nickel processing; cap. Nouméa; a. 8,548 sq. m.; p. (1970) 100,579.

Newcastle, c., N.S.W., **Australia**; spt. at mouth of R. Hunter, exp. agr. prod.; second c. of st.; leading industl. ctr., iron and steel, engin., shipbldg., chemicals; p. (1972) 145,718 (c.), 351,010 (met. a.).

Newcastle, spt., on Dundrum Bay; Down, **N. Ireland**; resort; p. (1966) 4,336.

New Castle, t., Penns., **USA**; tinplate, glass, steel wire, iron, coal, limestone; p. (1960) 44,790.

Newcastle Emlyn, t., Dyfed, **Wales**; on R. Teifi; p. (1971) 654.

Newcastle-under-Lyme, t., Staffs., **Eng.**; 2 m. W. of Stoke-on-Trent, on Lyme Brook; coal mng.; brick and tile mnfs.; p. (1971) 76,970.

Newcastle upon Tyne, c., Tyne and Wear, **Eng.**; spt. on N. bank of Tyne R., 10 m. from N. Sea; shipbldg., heavy engin., iron and steel, chemicals; connected by bridges across Tyne to Gateshead; univ., cath., many fine public bldgs., partially preserved in redevelopment of c. ctr.; airport; p. (1971) 222,153.

New Delhi. *See* Delhi.

New England, N.S.W., **Australia**; dist. of N. Tablelands; pastoral cty. for sheep and beef; ch. ts. Armidale, Glen Innes, and Tenterfield.

New England, the six N.E. Atl. sts. of **USA**; Me., N.H., Vt., Mass., R.I., Conn.; humid-continental climate, infertile soils, poor agr. conditions; fishing; recent industl. metamorphosis as traditional inds. are replaced by modern science-based, high-value inds.; tourism; ch. t. Boston.

Newent, mkt. t., Glouc., **Eng.**; 8 m. S. of Ledbury; p. (1971) 9,376 (dist.).

New Forest, forest and heathland, Hants., Eng.; relic of Royal Forest; now partly owned by Forestry Commission; pasture, ponies, tourism; ch. t. Lyndhurst.

New Forest, Hants., **Eng.**; tourism; resid̄l.; rapid growth of p. since 1951; p. (1971) 70,673 (dist.).

Newfoundland, I., with Labrador, prov., of **Canada**; E. of the G. of St. Lawrence; in E. low; in W. rugged mtns., many Ls.; coniferous forest; fishing, cod, salmon, halibut, lobster, seal; lumber, wood-pulp, paper; iron ore, lead, zinc, copper, asbestos; hydroelec. power; climate is severe; cap. St. John's; a. prov. 156,185 sq. m. (I. 43,359 sq. m., Labrador 112,826 sq. m.); p. (1971) 522,104.

New Galloway, burgh, Kirkcudbright, **Scot.**; on R. Dee.; nearby Clatteringshaws hydro-electric sta.; p. (1971) 338.

New Guinea, I., S.W. Pac. Oc.; N. of Australia; equatorial climate; dense forest; central mtn. chain; lge a. of lowland in S.; divided politically between W. Irian in W. (Indonesia) and Papua–New Guinea in E. (admin. by Australia); economically underdeveloped; a. 321,000 sq. m. *See* **Papua-New Guinea, West Irian.**

Newham, outer bor. Greater London, **Eng.**; W. of R. Lea; contains Royal group of London docks; p. and industl. decentralization from a.; p. (1971) 235,700.

New Hampshire, st., New England, **USA**; borders on Canada; forested mtns.; agr., fruit-growing; paper and forest prods.; textiles, shoes; granite; cap. Concord; ch. spt. Portsmouth; ch. mftg. ctr. Manchester; a. 9,304 sq. m.; p. (1970) 722,753.

Newhaven, t., East Sussex, **Eng.**; on S. cst. at mouth of R. Ouse, 9 m. E. of Brighton; passenger pt. for Dieppe; boat-bldg. and lt. inds.; p. (1971) 9,977.

New Haven, c., pt., Conn., **USA**; on inlet of Long I. Sound; Yale Univ.; firearms, clocks, hardware, radiators, rubber gds.; p. (1970) 133,543 (c.), 848,424 (met. a.).

New Hebrides, Anglo-French condominion, S. Pac. Oc.; between New Caledonia and Fiji Is.; mostly subsistence agr.; few cash crops; ch. crop coconuts; no worked minerals; thickly forested; cap. Vila; a. 5,700 sq. m.; p. (1971) 86,084.

New Holland, v., rly. terminus, ferry pt. for crossing to Hull, Humberside, **Eng.**

New Ireland, volcanic I., Papua–New Guinea, in Bismarck archipelago; mtnous.; ch. pt. Kavieng; exp. copra; a. (with adjacent Is.) 3,800 sq. m.; p. (1966) 50,129.

New Jersey, st., **USA**; on Atl. cst. plain, adjacent to N.Y. c.; intensive agr., mkt. gardening; heavily industrialised; oil refining, glass sand, zinc, iron ore, clay, chemicals, motor vehicles; cap. Trenton; ch. cs. Newark, Jersey City; a. 7,836 sq. m.; p. (1970) 7,091,995.

Newmarket, t., Suffolk, **Eng.**; at foot of E. Anglian Heights; the "racing capital of England"; p. (1971) 12,934.

New Mexico, st., **USA**; N. of Mexico, S. of Col. st.; traversed by Rocky mtns.; dry climate; agr. dependent upon irrigation; dry farming, arable crops, livestock; uranium, potash salts, pumice, beryllium, copper, petroleum; ch. ts., Albuquerque and cap. Santa Fé; a. 121,666 sq. m.; p. (1970) 998,257.

New Milford, t., Milford Haven, Dyfed, **Wales**.

New Mills, industl. t., Derbys., **Eng.**; at W. foot of Pennines; textile printing, bleaching and dyeing; rayon, paper; confectionery; p. (1971) 9,165.

Newton-Stewart, burgh, Wigtown, Scot.; on R. Cree, 5 m. N. of Wigtown; mkt.; wool, creameries and agr. inds.; p. (1971) 1,883.

Newtown and Llanllwchaiarn, mkt. t. Powys, Wales; on R. Severn 8 m. S.W. of Montgomery; precision instruments, machine tools; plan for expansion as growth-pole for central Wales; p. (1971) 6,122.

Newtownards, spt., mkt., Ards, N. Ireland; 7 m. E. of Belfast; textile and engin. inds.; p. (est. 1971) 15,387.

New Waterway. *See* **Nieuwe Waterweg.**

New Westminster, t., B.C., Canada; spt. on estuary of R. Fraser; exp. timber; agr. ctr., food-processing and canning; fishing; oil refining; forms part of Vancouver met a.; p. (1971) 42,083.

New York, st., N.E. USA; one of 13 original sts., borders Canada on N., faces Atl. Oc. on S.; Adirondack mtns. in N., with lowland in E. alongside L. Ontario; Hudson valley impt. routeway; humid-continental climate; second lgst st. in p. size and despite p. movement to W., remains major a. of urbanisation (megalopolis) with comm. and industl. activity; ch. ts. inc. Buffalo, Rochester, Syracuse; st. cap. Albany, metropolis New York city; dairy farming and intensive agr. serve urban mkts.; a. 49,576 sq.m.; p. (1970) 17,979,712.

New York, c., spt., N.Y., USA; on N.Y. Bay at mouth of Hudson R.; lgst c. in USA and one of 3 lgst in world; comprises 5 bors., Manhattan, Bronx, Queens, Brooklyn, Richmond; originally founded by Dutch settlers as New Amsterdam on Manhattan I.; gr. comm. ctr. and cultural cap.; univ.; fine parks, bridges, skyscrapers, and deepwater harbour; varied inds., inc. clothing, food-processing, printing and publishing, shipbldg.; despite p. and industl. decentralisation concentration of socially needy in c. causing financial difficulties to c. govt.; 2 intern. airports; p. (1971) 7,895,000 (c.); (1970) 11,572,000 (met. a.).

New York State Barge Canal (Erie Canal), N.Y. st., USA; links Tonawanda on Niagara R. with Hudson R. via the Mohawk gap through Appalachian mtns.; provides through water route from N.Y. to Gr. Ls.; opened as Erie Canal 1825, improved 1918; length 339 m. (with branches 525 m.), depth 12 ft.

New Zealand, indep. sov. st. within Brit. Commonwealth, S. Pac. Oc.; 1,200 m. E. of Sydney, Australia; consists of two major Is., N.I. and S.I., separated by Cook Strait, and several smaller Is., inc. Stewart I. to S.; mtnous., glaciated, volcanic; landscapes with superb scenery; dependent upon pastoral prods., taking advantage of equable climate and excellent grass growing conditions, but mainly reliant on Brit. mkts.; economic diversification; expansion of lt. inds., inc. car assembly, pulp and paper, textiles; hydroelec. potential being developed; oil and natural gas recently discovered; advanced social services; cap. Wellington; ch. pt. Auckland; a. 103,740 sq. m.; p. (1971) 2,860,475 (inc. 223,300 Maoris); N.I., 2,050,208, S.I., 810,267.

Neyland, t., Dyfed, Wales; on Milford Haven; rly. terminus and sm. pt.; p. (1971) 2,633.

Ngami, L., Botswana, S.W. Africa; swamp, the remnant of a much larger L. [alt. 7,515 ft.

Ngauruhoe, mtn., N.I., N.Z.; an active volcano;

Niagara, R., forms part of boundary between Canada and USA; flows from L. Erie to L. Ontario; rapids and famous falls utilised by gr. hydroelectric power sta.; 35 m. long.

Niagara Falls, waterfall, Niagara R., on bdy. of USA and Canada; in two sections, American (167 ft. high) and Canadian (158 ft. high), separated by Goat I.; major tourist attraction and hydroelectric power sta.

Niagara Falls, t., Ontario, Canada; opposite the falls; hydroelectric power sta.; timber and agr. inds., tourism; p. (1971) 65,271.

Niagara Falls, c., N.Y., USA; extends along summit of cliff for 3 miles; paper, flour, aluminium, chemicals, hydroelectric power stas.; univ.; p. (est. 1969) 90,000; inc. in Buffalo met. a.

Niamey, t., cap. of Rep. of Niger, W. Africa; one of the termini (the other is Zinder) of the trans-Sahara motor routes; agr. tr. ctr.; p. (est. 1968) 79,991.

Nicaragua, rep., Central America; lies across isthmus with Pac. Oc. to W., Caribbean Sea to E.; sparsely populated; central mtn. range, marshy E. cst.; tropical rain forest and climate; limited a. of fertile soils but 70 per cent. p. farmers; main exps. coffee, cotton; industl. growth based on US investment, gold and silver mng.; politically unstable; cap. Managua; a. 57,145 sq. m.; p. (1969) 1,841,759.

Nicaragua, Lake, S.W. Nicaragua; lgst L. in Central America; 15 m. from Pac. Oc., but discharges into Caribbean via San Juan R.; fisheries; 100 m. N.W. to S.E., 42 m. S.W. to N.E.

Nicaraguan Depression, lowland, Nicaragua; contains Ls. Maragua and Nicaragua.

Nicastro, t., Calabria, Italy; W. of the Apennines; olives, wine; p. 24,869.

Nice, c., spt., cap. of Alpes Maritimes dep., France; on Mediterranean cst., at foot of Alps; pleasant climate and surroundings; adjoins anc. t. of Cimiez; ceded to France 1860 by Sardinia; resort; fruit and flower exp., perfume mftg.; attracting science-based inds.; major airport; p. (1968) 322,442 (c.), 392,635 (met. a.).

Nicobar Is. *See* Andaman and Nicobar Is.

Nicosia, c., cap. of Cyprus; agr. tr. ctr.; textiles, cigarettes, leather, pottery mnfs.; remains of Venetian fortifications; mosques; new airpt.; cap. of admin. dist. of N.; tourism; p. (est. 1969) 114,000.

Nidd, R., trib. of R. Ouse, North Yorks., Eng.; 50 m. long.

Nieder Sachsen. *See* Lower Saxony.

Niemen R. *See* Nemunas.

Nieuwe Waterweg, ship canal, S. Holland, Neth.; connects R. Lek 7 m. below Rotterdam with N. Sea cst. at Hook of Holland.

Nieuwveld Range, mtns., Cape Prov., S. Africa; part of S. terminal escarpment of African tableland; overlooks Gr. Karroo to its S.; forms impenetrable barrier to routes; mainly over 5,000 ft., max. alt. 6,276 ft.

Nièvre, dep., central France; traversed by Morvan mtns., forests, arable agr.; cap. Nevers; a. 2,659 sq. m.; p. (1968) 247,702.

Nigel, t., Transvaal, S. Africa; gold mng.; industl.; p. (1960) 33,896.

Niger, landlocked rep., W. Africa; 90 per cent p. dependent upon agr.; livestock (cattle, sheep, goats), cotton; exp. of groundnuts main source of wealth; rainfall diminishes to N. giving way to Sahara Desert; discovery and exploitation of uranium (1967); fishing in L. Chad; game hunting; close economic ties with France; cap. Niamey; a. 484,000 sq. m.; p. (est. 1970) 4,016,000.

Niger, R., W. Africa; rises nr. sea in outer mtn. zone of W. Africa as R. Tembi, sweeps round by Timbuktu to delta in G. of Guinea, on circuitous course of 2,600 m., receiving its gr. trib., the R. Benue, about 250 m. from the mouth; navigable for 1,000 m.; Kainji (Nigeria) hydroelectric plant and dam opened 1969.

Nigeria, fed. rep., W. Africa; within Brit. Commonwealth; federation of 12 sts.; climate, wet, tropical in S., increasingly dry to N.; main economic development in S.; exp. agr. prods., especially cocoa; recent rapid increase in oil exp. based upon coastal deposits and European demand; cap. Lagos, lgst c. Ibadan; a. 356,669 sq. m.; p. (est. 1970) 66,174,000.

Niigata, c., Honshu, Japan; pt. on W. cst. exp. locally produced petroleum; chemical inds.; p. (est. 1969) 382,000.

Niihama, c., N. Shikoku, Japan; on cst. of Inland Sea, 20 m. S.E. of Imabari; refines copper obtained from Besshi mines 12 m. to the S.; petrochemicals; p. (est. 1969) 126,000.

Nijmegen, c., E. Neth.; on R. Waal, nr. German bdr., 11 m. S. of Arnhem; Hanse t. in Middle Ages; historic bldgs., univ.; p. (est. 1969) 101,878 (c.), 201,280 (met. a.).

Nijni-Novgorod. *See* Gorki.

Nikko, t., Honshu, Japan; famous temples and shrines; tourist resort; p. (1966) 32,031.

Nikolayev, c., cap. of N. oblast, Ukrainian SSR, USSR; major spt. at head of Dnieper–Bug estuary on Black Sea; shipbldg. ctr.; exp. minerals, grains; founded 1784 as fortress; p. (1970) 331,000.

Nikolayevsk, Ige R. pt., Khabarovsk terr., RSFSR; on R. Amur; shipyards; fishing, canning, lumbering, oil refining; p. c. 36,000.

Nikopol, c., Ukrainian SSR, USSR; on R. Dnieper; manganese mng. ctr.; steel, machin.; p. (1970) 125,000.

Nikšic, t., Montenegro, Yugoslavia; N. of Cetinje; bauxite mng., growing industl. ctr.; p. (1960) 16,000.

Nile, longest R. in Africa (*see* White Nile/Bahr-el-Abiad) and Blue Nile (Bahr-el-Azrek)); flows through a longer stretch of basin (over 2,450 m. in a direct line) than any other R., and along all its windings measures 4,145 m.; on Upper Nile navigation is hindered by sudd (floating vegetation); R. rises April, overflows Sept.; formerly cultivation entirely dependent on annual floods, but now assisted by dams, at Asyût, Aswan, Sennar, for regulating flow and navigation; Aswan High Dam completed 1970, but complex problems of delta erosion and dam-lake silting. *See also* Egypt.

Nilgiri Hills, Tamil Nadu, S. India; tea-growing dist.; resort a.

Nîmes, c., cap. of Gard dep., S. France; in Cevennes; Roman antiquities, notably Maison Carrée; silk, cotton, carpets, wines; tourism; p. (1968) 123,292 (c.), 124,854 (met. a.).

Nineveh, celebrated anc. c., Iraq, stood on E. bank of upper R. Tigris, opposite modern Mosul.

Ningpo (Ningbo), c., spt., Chekiang, China; 100 m. from Shanghai; leading fish. pt., comm. and mnf. ctr.; exp. agr. and fish prods.; p. (1953) 237,500.

Ningsia Hui, aut. region, N.W. China; bounded on N. by Inner Mongolia; dry a. but modern irrigation projects allow growth of spring wheat and rice; coal reserves, salt; cap. Yinchwan; a. 25,640 sq. m.; p. (1957) 1,810,000.

Niobrara, R., USA; trib. of Missouri R.; flows from Wyoming to Nebraska; 450 m. long.

Niort, c., cap. of Deux-Sèvres dep., W. France; noted for mkt. gardens and leather gds. (gloves); birthplace of Mme de Maintenon; p. (1968) 50,079.

Nipigon, Lake, in Thunder Bay dist., Ont., Canada; 66 m. long, 46 m. wide; studded with Is.; discharges by Nipigon R. to L. Superior.

Nipissing, Lake, S. Ont., Canada; a. 330 sq. m.; drained by French R. to Georgian Bay.

Niš, t., Yugoslavia; on R. Nishava; rout ectr.; rly. engin., developing mftg.; p. (1961) 81,250.

Nišava, R., Yugoslavia; flows N.W. into R. Morava nr. Niš; valley used by trunk rly. from Belgrade to Istanbul; l. over 100 m.

Nishapur, mkt. t., N.E. Iran, S.W. of Mashhad; in fertile a.; cotton, fruits; famous turquoise mines nearby; birthplace of Omar Khayyám; impt. archaeological finds dating 9th and 10th cent.; p. (1966) 33,482.

Nishinomiya, c., S. Honshu, Japan; produces famous liquor called saké; machin., chemicals; p. (est. 1969) 366,000.

Niterói, t., cap. of Rio de Janeiro st. Brazil; shipbldg.; residtl. sub. of Rio de Janeiro c.; p. (est. 1968) 303,575.

Nith, R., S.W. Scot.; flows to Solway F., S. of Dumfries; followed by main rly. from Carlisle to Kilmarnock and Glasgow; 71 m. long.

Niue or Savage I., Pac. Oc.; one of Cook Is., but under separate admin.; belongs to N.Z.; ch. pt. Alofi; copra, plaited basketware, sweet potatoes; a. 100 sq. m.; p. (1970) 5,302.

Nivernais, former prov. of France, now forming Nièvre prov. and part of Cher.

Nizheudinsk, t., W. Irkutsk, RSFSR; new mftg. t.; p. 10,342.

Nizhni Novgorod. *See* Gorki.

Nizhniy Tagil, t., RSFSR; in Ural mtns.; metallurgical ctr. using ore from Mt. Visokaya; rly. cars, iron, and steel plants, chemicals; p. (1970) 378,000.

No, Lake, Bahr-el-Ghazal prov., Sudan; N.E. Africa; vast swamp a., 350 m. S.W. of Khartoum; flow of water blocked by papyrus reed and floating weed (sudd).

Nobeoka, t., Kyushu, Japan; on E. cst.; p. (est. 1969) 135,000.

Nobi Plain, S. Honshu, Japan; at head of Ise Bay; composed of: (1) low, badly drained alluvial plain on W. under intensive rice cultivation, (2) higher, drier, terraces on E. under mulberry, vegetables, pine-woods; very dense urban and rural p.; ch. textile and pottery mftg. a. in Japan; inc. cs. Nagoya, Gifu, Yokkaichi; a. 720 sq. m.; p. (1960) 5,400,000.

Nocera Inferiore, t., Italy; nr. Naples; vegetable-canning, textile mnfs.; p. (1961) 43,050.

Nogales, t., Sonora, N.W. Mexico; mng. and agr. mkt. ctr.; rly. terminus; p. (1960) 37,657.

Nogent-sur-Marne, S.E. sub. of Paris, Val de Marne dep., France; dep.; p. c. 24,000.

Noginsk, t., RSFSR; nr. Moscow; textiles, metals; natural gas pipeline from Central Asia projected; p. (1970) 104,000.

Nola, c., Italy; at foot of Vesuvius, 12 m. N.E. of Naples; ctr. of fertile arable agr. a. in

Campania plain; anc. c., home of Giordano Bruno; p. (1961) 24,523.

Nome, c., W. Alaska, **USA**; on Seward peninsula; gold rush (1900); now admin. and route ctr.; airport; tourism; p. (1960) 2,316.

Noord Brabant, prov., **Neth.**; cap. 's-Hertogenbosch; a. 1,920 sq. m.; p. (est. 1967) 1,700,866.

Noord Holland, prov., **Neth.**; a. 1,051 sq. m.; cap. Haarlem; natural gas in Schermer Polder nr. Alkmaar; p. (1967) 2,200,062.

Noordoostpolder, Overijssel, **Neth.**; land reclaimed from Zuider Zee, 1942; now used for intensive agr.; a. 185 sq. m.; p. (1967) 31,016.

Noordwijk, resort, W. cst., **Neth.**; p. (1967) 20,563.

Nord, dep., **N. France**; borders on Belgium and N. Sea; flourishing agr., mng, iron and coal, textile and chemical mnfs.; cap. Lille; a. 2,229 sq. m.; p. (1968) 2,417,899.

Nordenham, pt. on Lower Weser R., Lower Saxony, **W. Germany**; lead and zinc smelting; fishing; p. (1963) 27,100.

Norderney, one of the E. Frisian Is., **W. Germany**; low-lying sand-dunes; resort and fish. pt. at Nordseebad.

Nordhorn, t., Lower Saxony, **W. Germany**; nr. Neth. frontier; textiles; p. (1963) 40,200.

Nordkyn, Cape, northernmost pt. of European mainland, Finnmark prov., **N. Norway**, E. of North Cape.

Nordland, co., **N. Norway**; fjord cst.; p. on cst. lowlands; fishing, livestock; iron-ore, electrochemical and metallurgical inds. based on local hydroelectric power; spt. Narvik; a. 14,728 sq. m.; p. (1963) 240,314.

Nördlingen, t., Bavaria, **W. Germany**; historic walled t.; p. (est. 1967) 14,200.

Nore, The, sandbank, lightship, Thames estuary, Eng.

Norfolk, non-met. co., **E. Eng.**; low-lying, fens in W.; low sandy cst. suffers from erosion; intensive arable agr. on lge farms; wheat, barley, root crops; inds. based on agr. processing and provision of agr. requisites; tourism intensively developed on Norfolk Broads; cap. Norwich; a. 2,067 sq. m.; p. (1971) 624,000.

Norfolk, c., Va., **USA**; naval base on Hampton Roads; fine deepwater harbour; exp. coal, industl. prods.; shipbldg., car assembly, food-processing, timber inds., fertilisers; p. (1970) 268,331 (c.), 633,142 (met. a.).

Norfolk I., remote dependency of **Australia**; **Pac. Oc.**; 950 m. N.E. of Sydney; fertile agr., inc. citrus fruit; discovered by Cook 1774; penal settlement 1788–1853; tourism; a. 13 sq. m.; p. (1970) 1,240.

Norilsk, t., Krasnoyarsk terr., **RSFSR**; in N. Siberia; northernmost t. in Russia; mng. of coal, uranium, nickel, copper; natural gas pipeline from W. Siberia; p. (1970) 136,000.

Normandy, historic prov. of **France**; on English Channel; now divided into deps. Manche, Calvados, Eure, Seine-Maritime and part of Orne; Rouen was cap.; Channel Is. were part of the old duchy; conquered England 1066; allied invasion of Europe 1944.

Normanton, t., West Yorks., **Eng.**; 3 m. N.E. of Wakefield; coal mng., rly. wks.; p. (1971) 17,656.

Norman Wells, t., N.W. Terr., **Canada**; at confluence of R. Mackenzie and Gr. Bear R., 70 m. W. of Gr. Bear L.; ctr. of rich oil-field.

Norrbotten, prov., **N. Sweden**; rich iron deposits at Kiruna; ore exp. via ice-free Narvik on Norwegian cst.; many Ls. and Rs., highest peak in Sweden, Kebnekaise; cap. Pitea; a. 40,754 sq. m.; p. (1961) 261,672.

Norris Dam, Tenn., **USA**; across R. Clinch at confluence with R. Tennessee, N.W. of Knoxville; lgst dam Tenn. Valley Authority (TVA); built for flood control and hydroelectric power.

Norristown, bor., Penns., **USA**; textiles, metal gds.; p. (1960) 38,925.

Norrköping, c., S.E. **Sweden**; nr. inlet of Baltic Sea; industl. and shipping ctr.; textiles, margarine, paper, agr. machin.; ocean-going shipping through Lindö canal; p. (1968) 93,345.

Northallerton, mkt. t., North Yorks., admin. ctr., **Eng.**; in broad gap between Cleveland hills and Pennines; in dairy farming and agr. dist.; p. (1971) 10,508.

Northam, t., Devon, **Eng.**; nr. Bideford; inc. Westward Ho!; p. (1971) 8,082.

North America, northern continent of W. hemisphere; comprises Greenland (on N. American continental shelf), Canada, USA, Mexico; high W. Cordilleras, inc. Rocky mtns., run N. to S. from Alaska to Mexico; lower range of Appalachian mtns. in E. with vast interior basin, inc. Gr. Ls., Saskatchewan, St. Lawrence, and Miss.–Mo. R. systems; gr. variation in climate and vegetation from subtropical in S. and Mediterranean in W. to Arctic in N. and continental in interior: enormous endowment of natural resources provide basis for vast economies of USA and Canada, but contemporary public concern for natural environment of continent; formerly inhabited by Indians, now mainly occupied by a white p. with lge European minorities, and an African-based, black p.; p. (1969) 273,285,000.

Northampton, t., Northampton, **Eng.**; on R. Nene; footwear, engin., leather gds.; expanded t.; p. (1971) 126,608.

Northamptonshire, non-met. co., **Eng.**; E. Midlands; chiefly agr.; iron mng. and mftg.; footwear, engin., leather; co. t. Northampton; a. 914 sq. m.; p. (1971) 468,000.

North Atlantic Drift, drift of surface waters of Atl. Oc. N.E. from Gulf Stream towards Europe; relatively warm; supplies prevailing S.W. winds with warmth and moisture to modify climate of Brit. Is. and countries on N.W. margin of European Continent. *See* **Gulf Stream, L50.**

North Bay, t., Ont., **Canada**; on L. Nipissing; air base; tourism, route ctr.; p. (1971) 49,063.

North Berwick, royal burgh, E. Lothian, Scot.; on S. of F. of Forth, 20 m. E. of Edinburgh; seaside resort; golf course; fishing pt.; p. (1971) 4,392.

North Beveland, I., **Neth.**; in Scheldt estuary; arable agr.; a. 35 sq. m.

North Carolina, st., S.E. **USA**; bounded on E. by Atl. Oc.; one of 13 original sts.; sandy, indented cst., rising in W. to Appalachian mtns.; humid subtropical climate, modified by alt.; agr. impt., maize, cotton, tobacco; mica; textiles; ch. pt. Wilmington; cap. Raleigh; a. 52,712 sq. m.; p. (1970) 4,961,832.

North Channel, Brit. Is.; gives access from Atl. Oc. to Irish Sea between S.W. Scotland (Galloway) and N.E. Ireland (Larne); length 60 m.; narrowest width 15 m.

North China Plain, China; alluvial lowland of Hwang-ho basin; notorious floods but R. now controlled; wheat and millets; very dense p.

North Crimean Canal, USSR; links R. Dnieper with Black Sea and Sea of Azov, crossing steppes of S. Ukraine and Crimea, terminating at Kerch; first section (77 m. long) opened 1963; when completed will be 220 m. long, 125 m. of which will be navigable.

North Dakota, st., N.W. **USA**; rolling prairie, rising from E.-W.; drained by Missouri R., controlled by multi-purpose Garrison Reservoir; arable agr., mainly grains, but eroded "Badlands" in S.; coal mng., petroleum; a. 70,665 sq. m.; p. (1970) 610,648.

North Down, l. gov. dist., **N. Ireland**; borders Belfast Lough; main ts. Bangor, Holywood.

North Downs, Surrey/Kent, **Eng.**; chalk escarpment running E. to W. across S.E. Eng., flanking the Weald to N.; form "white cliffs of Dover"; followed in part by Pilgrim's Way; Box Hill 763 ft.

North-East China, formerly known as Manchuria, comprises nine provs.—Liaoning, Kirin, Heilungkiang, Liaopeh, Nunkiang, Hsingan, Sunkiang, Hokiang, and Antung; mtnous., N.W. and E.; drained to N. by Sungari and S. by Liao Rs.; forested; soya-beans, wheat, coal, iron; impt. a. for iron and steel; occupied by Japanese in second world war; p. (1957) 51,425,000.

North-East Frontier Agency. *See* **Arunachal Pradesh.**

North East Passage, along N. cst. Europe and Asia between Atl. and Pac. *See* **L84.**

Northern Ireland, part of **U.K.**; occupies N.E. a. of Ireland, consisting of 26 l. gov. dists.; mild, temperate climate, exploited by dairy farming using excellent grass; arable agr. inc. barley, potatoes; traditional inds. inc. linen, shipbldg.,

food-processing, tobacco; modern inds. encouraged by extensive government aid inc. artificial fibres, carpets, elec. and aero-engin.; heavily dependent upon Brit. mkt.; serious social disturbance since 1969, based upon long-standing religious differences between Roman Catholic and Protestant as a result of discrimination against minority; Stormont Parliament replaced by Assembly 1974; returns 12 members to Westminster Parliament; a. 5,452 sq. m.; p. (1971) 1,525,187. *See also* Section C, Parts I and II.

Northern Territory, st., N. Australia; variable rainfall decreasing inland from N. to S.; land rises generally N. to S. and reaches over 6,000 ft. in Macdonnell ranges; lge semi-nomadic Aboriginal p.; livestock agr. dependent upon rail, road access to mkts.; mng.; ch. ts. Darwin on N. cst., Alice Springs; a. 523,620 sq. m.; p. (1972) 85,519.

Northfleet, t., Kent, Eng.; on S. bank of R. Thames, adjoining Gravesend; cement, paper, rubber, tyres, cables; p. (1971) 26,679.

North Foreland, E. Kent cst., Eng.; chalk headland.

North Island, I., N.Z.; one of the two major Is. of N.Z.; separated from S.I. by Cook Strait; volcanic mtns.; Waikato R. drains L. Taupo; cap. Wellington, spt. Auckland; oil deposits on E. and W. csts.; a. 44,281 sq. m.; p. (1971) 2,050,208.

Northleach, t., Glouc., Eng.; in Cotswolds; once impt. woollen tr.; p. (1971) 7,092. (dist.).

North Little Rock, t., Ark., USA; agr. processing, engin.; p. (1960) 58,032.

North Ossetian ASSR, RSFSR; on N. slope of Gr. Caucasus; cap. Ordzhonikidze; agr. in valleys; lead, silver, zinc, and oil deposits with metallurgical and food-processing inds.; a. 3,100 sq. m.; p. (1970) 553,000.

North Platte, t., Nebraska, USA; on N. Platte R.; in irrigated region of the Gr. Plains; grain, livestock, processed meat; p. (1960) 17,184.

North Platte, R., USA; rises N. Col., flows 680 m. through Wyo., across W. Nebraska to join S. Platte at c. of North Platte; extensive power and irrigation developments.

North Providence. *See* Nassau.

North Rhine–Westphalia, *Land*, W. Germany; highly industrialized, coal mng., iron and steel, textiles; a. 13,153 sq. m.; p. (1967) 16,842,600.

North River (Pei-kiang), Kwangtung, S. China; rises in Nanling mtns., flows S. into Si-kiang delta; 300 m. long.

North Sea, arm of the Atl., E. of Gr. Brit., W. of Norway, Sweden, and N. Germany, and N. of Holland, Belgium, and France; length 600 m., width 400 m.; gd. fisheries; major natural gas and oil deposits; Ekofisk production plant.

North Sea Canal, ship canal, N. Holland, Neth.; connects Amsterdam to N. Sea at Ijmuiden; depth 46 ft., length 16 m.

North Shields, t., Tyne and Wear, Eng.; Tyne pt.; marine engines, chain cables, anchors, rope; mkt.

North Tonawanda, t., N.Y., USA; on Niagara R.; timber tr., paper mnfs.; p. (1960) 34,757.

Northumberland, non-met. co., N. Eng.; on border of Scot. along Cheviots and R. Tweed; drained by Tyne, Blyth, Coquet Rs.; pastoral agr., especially sheep; coal mng., with former impt. exp. to London and S.E. Eng.; industl. a. now inc. in Tyne and Wear met. co.; isolation and wild landscape increasingly attractive as a tourist resort; a. 1,943 sq. m.; p. (1971) 280,000.

Northumberland Straits, separates Prince Edward I. from Nova Scotia and New Brunswick; 9 m. combined road and rail tunnel, bridge and causeway to link provs. projected.

Northumbria, Anglo-Saxon kingdom stretching from the Humber to the Forth; conquered by the Danes 9th cent.

North Walsham, mkt. t., Norfolk, Eng.; 14 m. N. of Norwich; former wool-weaving ctr.; p. (1971) 6,857.

North-West Passage, between Atl. and Pac. along Arctic cst. of Canada; potentially of gr. importance as a W. outlet for Alaskan oil. *See* LS4.

Northwest Territories, N.W. region and terr. of Canada; N. of 60° Lat. N., between Yukon (W.) and Hudson Bay (E.); comprises 3 dists., Franklin, Mackenzie, Keewatin; varied physical geography, inc. vast areas of lowland with with some of highest peaks in E.N. America; tree-line marks physical bdy. between N. and S.; drained in W. by MackenzieR.; major inds., gold and silver mng. around cap. Yellowknife; petroleum, fur-trapping fisheries; a. 1,304,908 sq. m.; p. (1971) 34,807, (two-thirds Eskimos and Indians).

Northwich, t., Cheshire, Eng.; on R. Weaver; impt. chemical inds. based originally upon local salt deposits, now much subsidence in a. due to salt extraction; p. (1971) 18,109.

North York Moors, limestone plateau, North Yorks./Cleveland, Eng.; lies S. of estuary of R. Tees; heather moorland; some pastoral farming on lower slopes; alt. varies from 1,000 to 1,500 ft.; formerly impt. iron-ore quarrying along N. edge in Cleveland dist.; now potential for potash mng. threatening N.Y.M. Nat. Park.

North Yorkshire, non-met. co., N. Eng.; inc. much of former N. Riding; stretches from Pennines (W.) to Vale of York (centre), N. York Moors and Yorks. Wolds (E.); crossed by R. Ouse and tribs.; mainly rural, mixed agr.; major ctrs. of p. at York, cstal. resort of Scarborough and spa of Harrogate; a. 3,211 sq. m.; p. (1971) 629,000.

Norton, t., North Yorks., Eng.; on R. Derwent opposite Malton; p. (1971) 5,410.

Norton-Radstock, t., Avon, Eng.; footwear, sm. coalfield; p. (1971) 15,232.

Norwalk, t., Cal., USA; oil refining; p. (est. 1969) 96,000.

Norwalk, t., Conn., USA; gd. harbour on Long I. Sound; lt. inds., clothing; formerly impt. oyster ind. diminished by industl. pollution; p. (1970) 78,577 (t.), 118,968 (met. a.).

Norway, kingdom, W. Scandinavia, N. Europe; long fjord cst. stretches from Arctic to N. Sea; mtnous.; cool damp climate, influenced by prevailing W. winds; excellent conditions for hydroelectric power and electro-inds.; sm. p. makes N. heavily dependent upon foreign tr., especially exp. of aluminium, wood-pulp, paper, fish; now possesses lge deposits of petroleum in N. Sea; arable agr. limited to fjord lowlands and a. around cap. Oslo; pastoral transhumance in mtnous. interior; a. 124,556 sq. m.; p. (1969) 3,866,468.

Norwich, c., co. t., Norfolk, Eng.; on R. Wensum just above confluence with R. Yare; univ.; cath., cas.; cult. and agr. ctr.; food mnfs., footwear, printing; decentralization of office employment from London; p. (1971) 121,688.

Norwich, t., Conn., USA; sm. pt. on Thames R.; machin., textiles; p. (1960) 38,506.

Nossi-Bé, lgst. of sm. Is., off W. cst. Malagasy; sugar, perfumery oils; ch. t. Hellville, resort and cstl. tr.; a. 130 sq. m.; p. c. 26,000.

Notec (Netze), R., Poland; trib. R. Warta; partially navigable; 140 m. long.

Noto, t., S.E. Sicily, Italy; cath.; amid vineyards and orchards; p. 32,575.

Notodden, t., S. Norway; nr. Tinnfoss falls which provide hydroelectric power; iron smelting, nitrates; p. (1961) 7,383.

Nottingham, c., co. t., Nottinghamshire, Eng.; at bridging pt. over Trent R.; lace, hosiery, tobacco, pharmaceutical and cycle inds., all based upon local capital; univ., cas., lge mkt. square in c. ctr.; p. (1971) 299,758.

Nottinghamshire, non-met. co., Midlands, Eng.; contains part of productive E. Midlands coalfield serving many power stas. along Trent R.; urban growth concentrated mainly on coalfield; ch. and co. t. Nottingham; engin., hosiery; wheat, barley, cattle, roses; brilliantly characterised in writings of D. H. Lawrence; a. 836 sq. m.; p. (1971) 973,000.

Nouadhibar, new pt., Mauritania, W. Africa; mineral exp., international airport.

Nouakchott, t., cap. of Mauritania, W. Africa; comm. ctr. on caravan route; tr. in agr. prods.; p. (est. 1965) 15,000.

Nouméa (Port de France), t., cap. of Fr. New Caledonia; ch. pt. of Is.; exp. nickel, chrome; p. (est. 1969) 41,858.

Nouvelle Amsterdam, I., Indian Oc.; part of Fr. Southern and Antarctic Terrs.; volcanic; ctr. of meteorological research; a. 25 sq. m.

Nova Friburgo, t., Rio de Janeiro, Brazil; health resort; p. (1968) 93,364.

Nova Iguaçú, t., Rio de Janeiro, Brazil; steel, tyres, chemicals; p. (est. 1968) 478,319.

Nova Lima, t., Minas Gerais st., Brazil; in Serra do Espinhaço, 10 m. S. of Belo Horizonte; adjacent to impt. gold-mines of Morro Velho; p. (est. 1968) 32,336.

Nova Lisboa (Huambo), cap. of Angola, Africa; E. of Benguela; rly. repair shops; agr. comm. ctr.; p. (1960) 60,800.

Novara, c., cap. of N. prov., N. Italy; agr. and mnf. ctr., textiles, chemicals, cheese; Romanesque church; p. (1969) 99,647.

Nova Scotia, maritime prov., Canada; mainly fertile uplands and rich valleys with agr. aided by temperate maritime climate; fruit, livestock, dairying; forested uplands along cst. nr. Bay of Fundy give rise to impt. timber inds. with many pts. along indented cst.; fishing and fish-processing; local coal supplies iron and steel ind.; cap. Halifax; a. 21,068 sq. m.; p. (1971) 788,960.

Novaya Kakhovka, c., Ukrainian SSR, USSR; built (1951) on K. Sea nr. hydroelec. power sta. on Dnieper R.; tourism.

Novaya Zemlya, archipelago, Arctic Oc., USSR; 2 main Is.; lofty and rugged, severe climate; nuclear testing a.; a. 35,000 sq. m.

Novgorod, c., RSFSR; on Volkhov R. nr. exit from L. Ilmen; food and timber inds., engin.; in mediaeval times gr. comm. and cultural ctr., cap. of an indep. rep.; architectural monuments; damaged by Germans in second world war; p. (1970) 128,000.

Novi Sad, c., Yugoslavia; R. pt. on Danube R., formerly royal free c.; almost destroyed by Austrians 1849; tr. in fruit, wine, vegetables, corn; p. (est. 1969) 162,000.

Omsk, c., W. Siberia, **RSFSR**; at confluence of Irtysh and Om Rs.; major R. pt. on Trans-Siberian rly.; in agr. region; engin., chemicals, textiles, oil refining, food processing; cath.; founded as fortress 1716; p. (1970) 821,000 (c.); (1969) 832,000.

Omuta, t., W. Kyushu, **Japan**; on Amakusa Sea; local coal at Miike giving rise to chemical inds.; pt. exp. coal; p. (est. 1969) 188,000.

Onega, Lake, RSFSR; between L. Ladoga and White Sea; second lgst L. in Europe (L. Ladoga is lgst); a. 3,765 sq. m.; ch. c. Petrozavodsk; Onega canal forms part of Volga–Baltic waterway.

Onega, R., RSFSR; flows to G. of Onega; 400 m. long.

Onehunga, spt., bor., **N.I., N.Z.**; nr. Auckland; p. (1971) 15,597.

One Tree Hill, bor., Auckland, **N.Z.**; p. (1971) 12,963.

Onitsha, t., **Nigeria**; on R. Niger; agr. tr. ctr.; p. (est. 1969) 189,067.

Onstwedde, t., Groningen, **Neth.**; mnfs.; p. (1967) 27,666.

Ontario, prov., **Canada**; bounded on N. by Hudson Bay, on S. by Gr. Ls.; extreme continental climate in N., milder in S. peninsula; extensive coniferous forest in N.; temperate agr. in S.; leading mineral producer, nickel, uranium, copper, gold; well-developed inds. using plentiful hydroelectric power; agr.-processing, machin., engin.; cap. Toronto; contains fed. cap. of Ottawa; a. 412,582 sq. m.; p. (1971) 7,703,106 concentrated in S.E.

Ontario, L., N. America; smallest of the Gr. Ls. of the St. Lawrence basin, separating the Canadian prov. of Ont. from N.Y., USA; navigable, carries industl. raw materials; polluted waters; a. 7,500 sq. m.; depth 740 ft.

Ontario, t., Cal., **USA**; aircraft components; fruit comm. ctr.; p. (1960) 46,617.

Onteniente, t., Valencia, **Spain**; on R. Clariano; woollen gds., paper mills; p. c. 14,689.

Oosterhout, t., N. Brabant, **Neth.**; nr. Breda; footwear, tobacco; p. (1968) 29,625.

Ootacamund, t., Tamil Nadu, **India**; in Nilgiri hills, 7,000 ft.; summer H.Q. of st. govt.; sanatorium; p. (1961) 50,140.

Opatija (It. Abbazia), t., **Yugoslavia**; tourist resort, known as the Nice of the Adriatic; p. (1961) 7,974.

Opava (Troppau), t., N. Moravia, **ČSSR**; nr. Polish border; industl. ctr. in agr. a.; p. (1967) 46,000.

Opladen, t., N. Rhine–Westphalia, **W. Germany**; on R. Wupper; metals, textiles, chemicals; p. (est. 1967) 44,700.

Opland or Oppland, co., central **Norway**; mtnous. N. inc. alpine region of Jotunheimen; forestry prods.; a. 9,608 sq. m.; p. (1963) 166,823.

Opole (Oppeln), c., S. **Poland**; on R. Oder; R. pt., rly. junc.; cement, metals, furniture; 3 univ. schools; cap. Prussian prov. of Upper Silesia 1919–45; p. (1970) 86,500.

Oporto, c., spt., **Portugal**; second c. of rep., built high above Douro R.; ctr. of port wine tr.; cath., univ., historic bldgs.; sardine fisheries, cotton and wool textiles, sugar refining, distilling, oil refining; outer harbour at Leixões; p. (est. 1969) 325,400.

Oradea (Hung. Nagy Varad), t., W. **Romania**, on Crisul Repede R., nr. Hungarian border; rly. ctr.; baroque architecture; lge. Hungarian p.; p. (est. 1969) 135,400.

Öraefa Jokull, hgst. mtn., **Iceland**; alt. 6,409 ft.

Oran. *See* Ouahran.

Orange, historic t., Vaucluse, **France**; title

founded by Charlemagne passed to William the Silent of the house of Nassau; Roman amphitheatre; tourism; p. (1968) 25,630.

Orange, R., Cape Prov., S. Africa; flows from Lesotho to Atl.; part forms S. bdy. between Cape Prov. and Orange Free State; Verwoerd dam (1972) for power, irrigation, flood control; 1,300 m. long.

Orange Free State, prov., Rep. of S. Africa; plateau land Drakensberg to N.E., Rs. Orange, Vaal and Caledon; sheep, cattle, horses, wheat, maize, fruit, tobacco, coal, diamonds; cap. Bloemfontein; a. 49,647 sq. m.; p. (1970) 1,651,610.

Oranienburg, t., Potsdam, E. Germany; on R. Havel; industl.; chemicals, metals, machin.; p. (1963) 21,075.

Ord of Caithness, hill, headland, nr. Helmsdale, Scot.; alt. 1,200 ft.

Ordos, desert region, Inner Mongolia, China; lies S. of Yellow R.; mean alt. 3,300 ft.; dry cropping, especially millets; pastoral farming.

Ordu, spt., Turkey; on Black Sea; exp. manganese; p. (1965) 27,307.

Ordzhonikidze, c., cap. of N. Ossetian ASSR, RSFSR; on R. Terek at foot of Caucasus, ind. ctr., metallurgical inds.; natural gas pipeline to Tbilisi; hydroelec. power sta.; p. (1970) 236,000.

Örebro, c., cap. of Örebro prov., Sweden; on R. Svartå at entrance to Hjälmar L.; anc. t., cas.; footwear, biscuits; p. (1968) 87,430.

Oregon, st., N.W. USA; borders Pac. Oc.; ch. physical features, Coast ranges, Cascade mtn. region, Blue mtns., Columbia R. and tribs., Willamette valley; rainy cst., drier interior (agr. with irrigation); cereals, sugar-beet, fruit, cattle; gold, silver, copper, coal, uranium; fisheries, canning, meat-packing, timber, milling; cap. Salem; a. 96,891 sq. m.; p. (1970) 2,056,171.

Orekhovo-Zuyevo, t., RSFSR; E. of Moscow, on R. Klyazma; textile inds.; p. (1970) 120,000.

Orel, c., RSFSR; on R. Oka; univ.; rly. junc.; engin., textile mills, food prods.; birthplace of Turgenev; p. (1970) 232,000.

Orenburg (Chkalov), c., cap. of Orenburg oblast, RSFSR; on Ural R.; rly. junc.; food processing, agr. machin.; oil and natural gas in region; p. (est. 1967) 326,000.

Orense, t., cap. of Orense prov., Spain; on R. Minho; flour, leather, iron; p. (1967) 71,768.

Ore Sound, strait, between Sjaelland, Denmark, and S. Sweden; freezes occasionally.

Orford Ness, coastal sandspit, Suffolk, Eng.; cas. keep at Orford.

Oriente, prov., Cuba; contains mtns. of Sierra Maestra; sugar cane grown in lowlands; manganese mng.; a. 14,128 sq. m.; p. (est. 1962) 2,172,839.

Oriente, terr., Peru/Ecuador; for long in dispute between the two ctys., partially settled by treaty (1942); lies E. of Andes, between Putumayo and Marañon Rs.; mainly dense forest, reputedly rich in minerals.

Orihuela, t., Alicante, Spain; on R. Segura; leather, textiles, wine; univ., cath.; p. (1961) 44,830.

Orinoco, R., Venezuela; rises in Parima mtns., flows to Atl., connected to Rio Negro and Amazon; impt. industl. development on lower O., based on hydroelec. power and iron ore; experimental scheme to reclaim delta for agr.; 1,480 m. long.

Orissa, st., India; agr. with few ts.; Hirakud dam across Mahanadi R.; Paradeep being developed as pt.; rice; cap. Bhuvaneshwar; a. 60,164 sq. m.; p. (1961) 17,548,846.

Orizaba, t., Veracruz, Mexico; textiles, paper mills, breweries; resort; p. (est. 1965) 89,000.

Orizaba, mtn., Veracruz, Mexico; volcanic; called Citlatepetl in Aztec times; alt. 18,701 ft.

Orkney, co., Scot.; gr. of 68 Is. in N. Sea, inc. Pomona, Sanday, Westray; 29 inhabited; antiquarian remains, stone circles; farming, fishing; North Sea oil finds; cap. Kirkwall; total a. c. 360 sq. m.; p. (1971) 17,077.

Orlando, c., Fla., USA; winter resort; inds. based on citrus fruit and mkt. garden prods.; p. (1970) 97,565 (c.), 426,750 (met. a.).

Orléannais, region and former prov., France; inc. deps. of Loire-et-Cher, Loiret, and parts of Eure-et-Loire and Yonne.

Orléans, c., cap. of Loiret dep., France; on R. Loire; cath., univ.; regional tr. ctr.; wine, textiles, chemicals, farm implements; statue of Joan of Arc; p. (1968) 95,828 (c.), 167,515 (met. a.).

Orleans, I., Quebec, Canada; in St. Lawrence R., nr. Quebec; resort; a. 70 sq. m.

Ormoc. *See* MacArthur.

Ormskirk, t., Lancs., Eng.; 14 m. N.E. of Liverpool; in mkt. gardening a.; lt. engin., clothing; p. (1971) 27,618.

Orne, dep., N. France; agr., dairying, stock-keeping, fruit-growing, Camembert cheese; cap. Alençon; a. 2,372 sq. m.; p. (1968) 288,524.

Orontes, R., rises in Lebanon, flows through Syria past Hama into Turkey past Antioch to Mediterranean; unnavigable but used for irrigation; part of valley followed by rly.; irrigated areas intensively cultivated; c. 250 m. long.

Oroya, t., Peru; impt. mng. and refining ctr.; p. (1961) 15,000.

Orpington. *See* Bromley.

Orrell, t., Gtr. Manchester, Eng.; W. of Wigan; p. (1971) 12,069.

Orsha, c., Belorussiyan SSR, USSR; impt. industl. and transport ctr. on R. Dnieper; textiles, metal wks., food-processing; once a frontier fortress; p. (1970) 101,000.

Orsk, c., Bashkir ASSR, RSFSR; in Ural mtns. on Ural R.; inds. based on surrounding mng. a.; oil pipeline terminus; oil refining; hydro-electric power sta. nearby; p. (1970) 225,000.

Orta, L., Italy; W. of Lago Maggiore; a. 7 sq. m.

Orthez, t., Pyrénées-Atlantique, France; scene of Wellington's victory over Soult (1814); Bayonne hams; p. (1962) 8,829.

Oruro, t., Bolivia; cap. of O. prov. at alt. 12,160 ft.; once impt. ctr. for silver mng.; now other minerals impt.; p. (1967) 91,911.

Oruwala, t., Sri Lanka; steel rolling mill.

Orvieto, t., Umbria, Italy; on R. Paglia; cath. Etruscan antiquities; wines, olive oil, cereals; pottery; p. (1961) 25,088.

Osaka, c., Honshu, Japan; ctr. of Kinki plain; built on delta in shallow O. Bay; comm. ctr.; banking, heavy industry, metals, machin., clothing; p. (1970) 2,980,409.

Osasco, t., São Paulo st., Brazil; industl. ctr.; p. (est. 1968) 135,576.

Osh, t., S.W. Kirghiz SSR, USSR; textiles, food-processing; one of oldest ts. in central Asia; p. (1970) 120,000.

Oshawa, t., Ont., Canada; pt. on L. Ont.; motor vehicles; p. (1971) 91,113.

Oshima, I., Tokyo Bay, Japan; lgst and most N. of Izu-shichito gr.; site of volcanic Mt. Mihara (2,477 ft.).

Oshkosh, t., Wis., USA; on Fox R.; meat packing, flour, motors; p. (est. 1969) 52,500.

Oshogbo, t., Nigeria; comm. and educational ctr.; serves agr. dist.; cotton-ginning; p. (1969) 242,336.

Osijek, t., Croatia, Yugoslavia; on Drava R.; growing industl. ctr. for textiles and leather; p. (1961) 73,125.

Osinniki, t., RSFSR; W. Siberia; new ctr. of coal mng.; thermal power sta.; p. 68,000.

Osipenko. *See* Berdyansk.

Oslo (Christiania), c., cap. of Norway; at head of Oslo Fjord; ch. spt., comm., industl., and cultural ctr.; ice-free harbour; cath., univ.; exp. timber, fish, matches; wood pulp, paper; occupied by Germans 1940–5; p. (est. 1969) 487,846 (c.); (1967) 685,000. (met. a.).

Padstow, mkt. t., Cornwall, **Eng.**; on W. side of Camel estuary in which silting has caused pt. of P. to decline; lt. inds.; seaside resort; p. (1971) 17,799 (inc. Wadebridge dist.).

Padua (Padova), c., cap. of P. prov., N.E. Italy; cath., arcades, anc. bridges; univ. founded 1222 (Galileo taught here); flourished as artistic ctr.; birthplace of Livy; machin., chemicals, cloth, distilling; agr. ctr.; p. (1969) 226,244.

Paducah, c., Ky., **USA**; pt. on Ohio R.; saw-mills, tobacco, railway wks.; atomic energy plant; p. (1960) 34,470.

Paestum, anc. c., S. Italy; S.E. of Salerno; founded by the Greeks 600 B.C.; ruins of temples, Roman forum and amphitheatre.

Pagan, ruined c., central **Burma**; on Irrawaddy R.; founded circa 849, sacked 1299; in ctr. of a. covered with pagodas, place of Burmese pilgrimage; lacquer work.

Pago Pago, spt., cap. of American **Samoa**, S. Pac.; on Tutuila I., magnificent harbour; US naval and radio sta.; airport; p. (1970) 2,491.

Pahang, st., **Malaysia**, central Malaya; isolated from rest of Malaya, less economically developed; largely covered with forest; some rubber production, gold, tin mng.; cap. Kuala Lipis; a. 13,280 sq. m.; p. (1967) 425,552.

Pahlevi. *See* Bandar-e-Pahlevi.

Paignton, t., S. Devon, **Eng.**; incorporated in Torbay; resort.

Painted Desert, Arizona, **USA**; a. of bare multicoloured shale and sandstones; arid; a. c. 7,500 sq. m.

Paisley, burgh, Renfrew, **Scot.**; 5 m. W. of Glasgow; anc. abbey; shipbldg., chemicals, engin., preserves, car bodies, cotton thread; p. (1971) 95,357.

Paita, pt., **Peru**; exp. cotton, wool, flax, panama hats; lge whaling sta. to S.; p. 37,000.

Pakistan, Islamic Rep. of, forms part of Indian subcontinent, **S. Asia**; formerly split into two separate units, E. Pakistan (cap. Dacca) and W. Pakistan (cap. Lahore), 1,000 m. apart; politically separate since 1972; W. part now forms Pakistan, E. part indep. st. of Bangladesh; dry semi-desert, irrigated by Indus R. and tribs.; cash crops, sugar, wheat, cotton; natural gas fields; new cap. Islamabad; main spt. Karachi; a. 310,403 sq. m.; p. (1972) 64,890,000 (+51 per cent. in 12 years).

Paknampoh, t., **Thailand**; on R. Menam, at upper limit of steam navigation; terminus of private rly.; fish breeding in L. created from swamp.

Pakokku, t., Upper **Burma**; pt. on Irrawaddy R.; shipping ctr. for a. producing sugar, tobacco, peanuts, teak, petroleum; Yenangyaung oilfields nearby; p. 23,115.

Paktia, prov., **Afghanistan**; mtnous., forested; difficult to govern, inhabited by sm. and indep. tribes, but sparse p.; livestock basis of agr.; timber exp.; a. c. 5,000 sq. m.; p. (est. 1962) 729,763.

Palau Is., archipelago, Pac. Oc.; volcanic and coral Is.; exp. agr. prods., dried fish; p. (1968) 11,904.

Palawan I., Philippines; elongated I., rising to 5,675 ft.; coffee, resin, timber; sparse p.; a. 4,550 sq. m.; p. (1960) 104,500.

Palembang, cap. of S. Sumatra prov., **Indonesia**; R. pt. on Musi R., 50 m. from sea; terminus of S. Sumatran rly. systems; exp. coffee and petroleum prods. from nearby oilfields; inds. based on agr. processing and oil refining; p. (1961) 474,971.

Palencia, t., cap. of P. prov., N.W. **Spain**; industl. ctr.; rly. engin.; cath.; p. (1960) 48,216.

Palermo, spt., Sicily, **Italy**; cath., univ.; ship-repairing; processes agr. prod. from surrounding fertile Conca d'Oro; p. (1969) 659,177.

Palestine or **The Holy Land**, historic region, bounded by Syria and Lebanon on the N., Jordan on the E., the Egyptian prov. of Sinai on the S., and the Mediterranean on the W.; a. when under Brit. mandate 10,429 sq. m.; p. (est. 1948) 782,000. *See* Israel.

Palghat, t., Kerala, **India**; commands Palghat gap through W. Ghats; p. (1961) 77,620.

Palitana, t., Gujarat, **India**; t. of Jain temples inhabited by priests and their servants; p. (1961) 24,581.

Palk Strait, India; separates India from Sri Lanka.

Palma de Mallorca, spt., Mallorca I. **Spain**; cath., palaces, varied inds.; agr. exp.; well-known tourist resort; p. (est. 1969) 177,089.

Palm Beach, t. Fla. **USA**; Atl. coastal resort; permanent p. (1960) 6,055.

Palmerston North, pt. and t. N.I. **N.Z.**; rly. junc. at ctr. of Manawatu R. lowlands; sheep and dairy prod.; univ.; p. (1971) 51,859.

Palmira, t., **W. Colombia**; agr. ctr. in Cauca valley; p. (est. 1969) 164,394.

Palm Springs, Cal., **USA**; resort; p. (1960) 13,468.

Palmyra, anc. c. in Syrian desert, 120 m. N.E. of Damascus; Bible name Tadmor = city of palms; extensive ruins.

Palmyra Is. *See* Line Is.

Palo Alto, t., sub. development 30 m. S.E. San Francisco, **USA**; attractive wooded site of variable relief; on shore of San Francisco Bay peninsula; Stanford Univ.; science-based inds.; p. (1960) 52,287.

Palomar, Mount, peak, 6,126 ft. high, S. Cal., **USA**; observatory with 200-inch reflecting telescope.

Palos de la Frontera t., Huelva, S.W. **Spain**; on Rio Tinto; starting point for Columbus in 1492; pt. now silted up; p. 1,900.

Palua, pt., **Venezuela**; pt. of shipment for iron mines at El Pao; nearby Caroni hydroelec. plant built to serve steel wks. and aluminium plant.

Pamir Mtns., high mtn. plateau ("roof of the world"), Tadzik SSR, **Central Asia**; Mt. Communism (24,590 ft.) climbed by Russo-British team 1962; name derives from high mtn. valleys known as "Pamirs."

Pampas, Argentina; vast plains stretching from the Rio Negro on the S. to the Gran Chaco in the N., and E. from the Andes to the Atl.; woodless, level country; rich pastures in E., supporting countless numbers of sheep and cattle, a major influence upon the Argentinian economy, source of livestock exps.; W. mostly barren.

Pampilla, t., **Peru**; on cst. N. of Callao; oil refinery.

Pamplona, t., Norte de Santander, **Colombia**; agr., comm. and tr. ctr.; inds. based on agr. processing; p. c. 22,800.

Pamplona, c., cap. of Navarre, N. **Spain**; at foot of Pyrenees, anc. Basque c.; cath., fortress, univ.; industl. ctr. with varied mnfs.; p. (est. 1968) 122,005.

Panama, rep., Central America; narrow strip of terr. at S. end of isthmus separating N. and S. America; mtnous. and tropical, thickly forested; split by Canal Zone from which rep. earns 25 per cent of revenue; shipping registration impt.; subsistence agr.; exp. bananas, rice, maize; sea fisheries; poor communications; cap. Panama City; a. 28,575 sq. m.; p. (est. 1969) 1,417,000.

Panama Canal Zone, Panama; strip of land 51 m. long 10 m. wide on either side of Canal, leased to USA for military base; a. 647 sq. m.; p. (est. 1970) 51,400.

Panama City, c. spt. cap. of **Panama**; harbour at S. entrance to Canal; cath.; oil refining, steel.

rolling mill, cement plant, lt. inds.; contains 25 per cent p. Panama rep.; p. (est. 1969) 389,000.

Panama City, t., Fla., **USA**; pulp and paper mill; resort; p. (est. 1970) 418,013.

Pan American Highway, international road project, not yet fully complete, from Alaska to Chile, down W. csts. of continents; section between USA and Mexico is called Central American Inter-American Highway.

Panay, I., Philippines; between Negros I. and Mindoro I.; coconuts, maize grown in E., fertile lowland; ch. t. Iloilo; a. 4,446 sq. m.; p. (1960) 1,746,600.

Pančevo, t., N.E. Serbia, **Yugoslavia**; agr. ctr. for grain growing a., flour-milling; developing industl. ctr., fertilizers, oil refining; p. (1961) 46,679.

Pandharpur, t., Maharashtra, **India**; on R. Bhima; temple, pilgrimages; p. (1961) 45,421.

Pangalanes Canal (Canal Des Pangalanes), Malagasy Rep.; follows E. cst. from Farafangana to Tamatave, through series of lagoons; 300 m. long.

Panipat, t., Punjab, N.W. **India**; on Jumna R.; on route from Afghanistan to central India; scene of battles; p. (1961) 67,026.

Panjim, cap. of Goa, **India**; pt.; old cap. (Velha Goa) in ruins; p. (1961) 32,000.

Panjsher Valley, Afghanistan; silver and mica mines.

Pannonian Basin, major structural depression, N. and E. **Yugoslavia**.

Pantelleria, volcanic I., Mediterranean, **Italy**; midway between W. Sicily and Tunisia; figs, raisins, vines, capers, cereals; fishing; a. 58 sq. m.; ch. t. P.; p. 10,000.

Pantin, N.E. sub., Paris, Seine-St. Denis, **France**; glasswks., sugar refining, tobacco factories, chemicals, leather, tallow; p. (1962) 46,401.

Paoki (Baoji), c., Shensi prov., **China**; ctr. of arable agr. a.; cotton weaving; nearby gorge on Hwang-Ho used for multi-purpose dams; p. (1953) 130,100.

Paoting (Baoding), c., Hopeh prov., **China**; on the Yungting R.; p. (est. 1957) 265,000.

Paotow (Baotou), c., Inner Mongolia, **China**; on left bank of Hwang-Ho, on road and rly. routes to E. China; airfield; terminus of caravan routes through Gobi desert and Tarim basin to Turkestan; tr. in non-perishable livestock prods., cereals; modern steel ind.; p. (1953) 149,400.

Papakura, bor., N.I., **N.Z.**; p. (1971) 17,208.

Papoloa, R., Mexico; agr. and industl. development; Papaloan project for flood control and electricity generation.

Papal States, Italy; areas ruled by the Pope until 1870; comprised Latium, Umbria, the Marches, and Emilia-Romagna.

Papatoetoe, t., N.I., **N.Z.**; p. (1971) 21,804.

Papeete, t., pt., **Tahiti I.**, Pac. Oc.; cap. Tahiti and of Fr. Settlements in Oceania; exp. copra, vanilla, phosphates and mother-of-pearl; p. (est. 1970) 28,000.

Paphos, admin. dist., W. cst. **Cyprus**; anc. c.; Old P. dates from 3000 B.C., New P. impt. spt.; rich deposits of copper and iron pyrites, sulphur in Vretsia a.; p. (est. 1970) 11,800 (t.).

Papua New Guinea, E. New Guinea, **S.E. Asia**; self-gov. terr. (1973); Australia retains control over foreign affairs; mtnous., thickly forested; under-developed; copra, rubber and timber prods.; cap. Pt. Moresby; a. 183,540 sq. m.; p. (1970) 2,522,890.

Pará, st., Brazil; densely forested; rubber, fruits, cacao, Brazil nuts; cap. Bélem; a. 474,155 sq. m.; p. (est. 1968) 1,959,756.

Paraguay, landlocked rep., **S. America**; undulating cty.; swamps, forest; hot summers, warm winters, high but seasonal rainfall; sm. densely populated areas, lge areas with no p.; most economically developed in E.; in and around cap. Asunción 25 per cent p.; economy based on agr., cereals, livestock, fruit, cotton, oilseeds, but food imported; aid from USA for rural development; few fuel resources (a few oilfields in the Chaco Boreal) and low energy consumption; hydroelectric plants on Paraná, Paraguay Rs. and at Guaira Falls; some agr.-based inds.; a. 157,000 sq. m.; p. (est. 1970) 2,386,000.

Paraguay, R., S. America; rises in plateau of Mato Grosso, flows S. and joins R. Paraná nr. Corrientes; forms bdy. between Brazil and Bolivia, Brazil and Paraguay; impt. navigable waterway to Cáceres (Brazil); 1,200 m. long.

Paraíba, st., N.E. Brazil; livestock, cotton, sugar cane; tin, scheelite; cap. João Pessoa; a. 21,800 sq. m.; p. (est. 1968) 2,252,636.

Paraíba do Sul, R., S. Brazil; rises in São Paulo st., and flows between Rio de Janeiro and Minas Gerais to Atl. N.E. of Rio de Janeiro; forms routeway between São Paulo and Rio de Janeiro; 650 m. long.

Paramaribo, spt., cap. of **Surinam**; on Surinam R.; exp. bauxite, timber, rubber, rice, fruit; t. built on grid pattern with canals and tree-lined streets; p. (1964) 110,867 (c.), 182,100 (met. a.).

Paraná, c., cap. of Entre Ríos prov., **N.E. Argentina**; pt. on Paraná R. for grain, cattle, sheep; road tunnel to Santa Fé; p. (1960) 107,551 (c.), 175,124 (met. a.).

Paraná, R., S.W. Brazil; formed by junc. of Rs. Rio Grande and Paranaíba; flows W. between Paraguay and Argentina; flows into Rio de la Plata; navigable to Brazil frontier nr. Iguaçu Falls; forms part of international inland waterway system; hydroelectric power; 2,050 m. long.

Paraná, st., S. Brazil, between Paraná R. and Atl. Oc.; extensively forested; maté, timber, coffee; cap. Curitiba; a. 77,717 sq. m.; p. (est. 1968) 7,216,582.

Paranaguá, spt., Paraná st., **Brazil**; ch. pt. for Paraná; in lagoon harbour; modern highway links with Asunción (Paraguay); p. (1960) 27,728.

Paradubice, t., ČSSR; univ., cath.; rly. junc., industl. ctr.; distilling, oil refining; p. (1967) 66,000.

Paricutín, Mt., Michoacán, Mexico; volcano formed between 1943 and 1952, 8,200 ft. high; of great interest to scientists.

Paris, c., cap. of France; dominates rep. politically, economically, and socially, partly as result of extreme centralisation of political power in cap.; on R. Seine, 110 m. from mouth, in ctr. of Paris Basin; forms major ctr. of communications; planning of Haussmann gives spacious appearance, 12 boulevards radiate from Arc de Triomphe; many historic bldgs., especially on and around Île de la Cité, an I. on R. Seine, site of cath. of Nôtre Dame; major cultural and tourist ctr.; univs.; comprises 20 admin. arrondissements; major ctr. of inds. with concentration of modern science-based inds. hindering planned attempts at decentralisation; p. (1968) 2,590,771 (c.), 8,196,746 (met. a.), representing 16 per cent of Fr. p.

Paris Basin, concentric limestone escarpments form saucer-shaped depression with Paris at ctr.; impt. agr. dist., wheat, dairy prod. and wines.

Parkersburg, t., W. Va., **USA**; on Ohio R.; iron- and steel-wks., oil and natural gas, coal, glassware, rayon, porcelain; p. (est. 1969) 47,000.

Parkes, t., N.S.W., Australia; mkt.; rly. junc.; radio telescope; p. (1966) 8,431.

Parma, c., cap. of P. prov., **Italy**; between Apennines and Po R.; tr. ctr., rly. junc.; food-processing, wine, Parmesan cheese, precision instruments, agr. machin.; Roman remains, many historic bldgs., univ., cath.; p. (1969) 172,341.

Parma, t., Ohio, **USA**; motor vehicle parts; residtl.; p. (1960) 82,845.

Parnaíba, spt., Piauí, **Brazil**; agr. comm. ctr., cotton, cattle; exp. agr. prods.; p. (1960) 39,951.

Parnaíba, R., rises in Brazil; flows into N. Atl. Oc., forms bdy. between Maranhão and Piauí; 750 m. long.

Parnassós, mtn. ridge, **Greece**; 83 m. N.W. of Athens, nr. the anc. Delphi, the modern Liakhura; highest peak Licoreia 8,068 ft.

Parnu or Pyarnu, spt., S.W. Estonian SSR, **USSR**; on G. of Riga; exp. timber, flax; health resort; p. (1962) 36,300.

Páros, I., Grecian Archipelago; W. of Naxos; source of Parian marble; cap. P.; a. 63 sq. m.; p. (1961) 7,800.

Parramatta, c., N.S.W., Australia; pt. nr. head

of Parramatta R. (spanned by lgst concrete bridge in world) in met. a. of Sydney; chemical and engin. inds.; p. (1966) 107,006.

Parrett, R., Somerset, Eng.; flows to Bristol Channel, nr. Bridgwater; 35 m. long.

Pasadena, c., Cal., USA; N. of Los Angeles; in fruit-growing region, base of San Gabriel mtns.; 200-inch telescope on Mt. Palomar; famous for its carnival; p. (1960) 116,407; inc. in met. a. of Los Angeles.

Pasco, t., Wash., USA; on Snake R.; atomic energy plant; p. (1960) 14,522.

Pasco. *See* Cerro de Pasco.

Pas-de-Calais, dep., N. France; impt. heavy industl. a. based upon local extensive coal deposits; heavy inds. inc. iron and steel, but many ts. in decline as importance of coal diminishes; prosperous agr. based on arable farming; N. cst. faces English Channel and inc. pts. of Calais and Boulogne; severe devastation in both world wars; cap. Arras; a. 2,606 sq. m.; p. (1968) 1,397,159.

Passaic, c., N.J., USA; rubber gds., springs, steel cabinets, tin cans; p. (1960) 53,963.

Passage West, U.D., Cork, R.o.I.; declining pt., fishing; p. (1961) 2,000.

Passau, c., W. Germany, at confluence of Rs. Danube, Inn and Ilz, nr. Austrian frontier; trans-shipment base, inds. inc. leather, porcelain, tobacco and brewing; cath., picturesque tourist ctr.; p. (1963) 31,200.

Passchendaele, t., Belgium; strategic point in first world war; battle 31 July–6 Nov. 1917; p. (1962) 3,115.

Passero I., Mediterranean Sea; off S.E. cst. of Sicily, Italy.

Passy, residtl. part of W. Paris, France; between Bois de Boulogne and right bank of Seine; residence of Balzac.

Pasto, t., cap. of Narino dep., Colombia; on flank of Pasto volcano; univ.; agr. comm. ctr.; gold nearby; p. (est. 1969) 123,153.

Patagonia, extensive region, E. of Andes, Argentina/Chile; elevated plateau, arid, sterile; prin. Rs. Colorado, Río Negro, and Chubut; impt. source of oil at Commodoro Rivadavia; lge tracts of grazing for livestock; much of p. Welsh descendants.

Patan, Gujarat, India; impt. ctr. of Buddhism; gold and silver gds.; p. (1961) 50,264.

Patani or Pattani, pt., S. Thailand; on E. cst. of Malay peninsula; spices, rubber, coconuts; tin mng.; former Malay sultanate; p. c. 281,500.

Paterno, t., Sicily, Italy; N.W. of Catania; cath., cas.; mineral springs, wines; p. (1961) 42,935.

Paterson, c., N.J., USA; on Passaic R. whose falls provide hydroelectric power for gr. silk muf. ind.; now inds. diversified; in addition to textiles and textile machin., aeroplane engines, metallurgical inds., electronic equipment; p. (1970) 142,819 (c.), 1,369,374 (met. a.).

Patiala, t., Punjab, India; metal gds., flour; univ.; p. (est. 1970) 157,920.

Patino Mines. *See* Uncia.

Pátmos, I., one of the Dodecanese, Greece; in Aegean Sea; a. 13 sq. m.; p. (est.) 3,000. (According to Rev. 1. 9. the exiled St. John wrote the Revelation here.)

Patna, c., cap. of Bihar, India; univ.; rly. junc.; agr. tr., rice, oilseeds, cotton; handicraft inds.; p. (est. 1970) 459,717 (c.), 461,941 (met. a.).

Patras (Pátrai), spt., cap. of Akhaia, Greece; citadel and cas., exp. currants, raisins, figs, olive oil; inds. based on agr. processing; p. (1961) 95,364; 102,244 (met. a.).

Pau, c., cap. of Pyrénées-Atlantique dep., France; on Gave-de-Pau; impt. mkt. and regional ctr.; summer and winter resort; linen, chocolate, hams, wine; natural gas nearby; p. (1968) 74,005 (c.), 110,377 (met. a.).

Pauillac, t., Gironde dep., France; pt. on Gironde estuary; ships wines, timber; oil refinery, natural gas; p. (1962) 5,725.

Paulo Affonso, falls, São Francisco R., Brazil; 260 ft.; Tres Marias dam and power sta. opened 1960; in Nat. Park.

Pavia, c., prov. cap., N. Italy; on R. Ticino; route ctr. and agr. mkt. in Po valley; olives, wine, Parmesan cheese; oil refining at Spineto; walled c.; battle 1525; birthplace of Lanfranc; p. (1969) 85,080.

Pavlodar, pt., Kazakh SSR, USSR; on R. Irtysh; chemicals, sulphates, agr. machin., locomotives, aluminium, oil processing; food prod.; p. (1970) 187,000.

Pawtucket, c., R.I., USA; on Pawtucket R. at head of navigation; first water-power cotton spinning factory in USA 1790; textiles remain most impt. ind.; p. (est. 1969) 76,000.

Paysandú, dep., W. Uruguay; rich pastoral a.; ranching, cattle, sheep; arable agr., cereals, mkt. gardening around c. of P.; a. 5,176 sq. m.; p. (est. 1962) 103,111.

Paysandú, cap. of P. dep., W. Uruguay; pt. on Uruguay R. with meat-packing, soap and footwear inds.; p. (1964) 60,000.

Pazardzhik, t., Bulgaria; on main rly. line to Istanbul; industl., hemp spinning and weaving; p. c. 40,000.

Paz de Rio, t., Boyacá, Colombia; iron and steel wks.; iron ore, coal, limestone nearby; hydro-elec. sta. projected.

Peace, R., Canada; one of ch. headstreams of Mackenzie R.; rises in Rocky mtns., and flows generally N. to Gr. Slave R. nr. L. Athabaska; a. of very mild climate in lower course, fertile agr. valley; 1,050 m. long.

Peak Dist., Pennine hill dist., mid-Eng.; extends from Chesterfield to Buxton, and Ashbourne to Glossop; composed of limestone with typical karst features; within P.D. Nat. Park, tourist and recreation a. for cities to E. (Sheffield) and W. (Manchester); limestone quarrying for cement; Kinder Scout 2,080 ft.

Pearl Harbor, landlocked harbour, Oahu I., Hawaiian Is., one of finest natural harbours in E. Pac.; US naval base; attacked by Japanese without warning 7 Dec. 1941.

Pearl Is., archipelago, G. of Panama; sea fishing, pearls.

Pearl R. *See* Chu-kiang.

Pechenga (Petsamo), spt., RSFSR; on inlet of Barents Sea; formerly Finnish, ceded to USSR Sept. 1944; ice-free throughout year,; exp. nickel, timber, cobalt.

Pechora, dist., RSFSR; E. of Urals; one of 4 main coalfields of USSR; coking coal; ch. ts., Vorkuta and Inta.

Pechora, R., RSFSR; rises in Urals and flows N. into Arctic Oc.; 700 m. navigable between June and Sept. for transport of timber from its basin; fishing; 1,120 m. long.

Pecos, R., N.M. and Texas, USA; trib. of Rio Grande; water control schemes provide irrigation for lge a.; 926 m. long.

Pécs, c., S.W. Hungary; on Yugoslav border; one of oldest and most pleasantly situated ts. of Hungary; cath., univ., airport; in coal-mng. a.; coke, chemicals, majolica, leather gds., engin., brewing; p. (est. (1969) 144,000.

Peebles, royal burgh, Peebles, Scot.; on upper course of R. Tweed; woollen cloth, knitwear; mkt., tourist ctr.; p. (1971) 5,884.

Peeblesshire, co., Scot.; hilly, Broad Law, 2,754 ft.; sheep; woollen cloth, knitwear; a. 346 sq. m.; p. (1971) 13,676.

Peel, t., I. of Man, Eng.; resort, fishing pt. midway along W. cst.; cas., cath.; p. (1961) 2,487.

Peel Fell, mtn., Northumberland, Eng.; 1,964 ft.

Pegu, c., Pegu prov., S. Burma; R. pt., rly. junc.; many temples, notably Shwe May Daw Pagoda; once cap. of Burmese kingdom; came under Brit. rule 1852; p. 48,000.

Pegu Yoma, mtns., Burma; between valleys of Rs. Irrawadi and Sittang; thickly forested with teak which is comm. exploited and forms impt. exp.

Peine, t., Lower Saxony, W. Germany; N.W. of Brunswick; iron, furniture, textiles; p. (1963) 30,300.

Peipus, Lake, Estonian SSR, RSFSR; drained by Narva R. into G. of Finland; Pskov lies to S.; scene of Alexander Nevsky's victory over the Germans 1242; a. 1,400 sq. m.

Pekalongan, t., N. cst. Java, Indonesia; exp. sugar, rubber; p. (1961) 102,380.

Peking (Beijing), c. and mun., cap. of China; cultural ctr. and c. of gr. architectural beauty; for hundreds of years seat of Chinese emperors (Mongol, Ming, Manchu regimes); surrounded by 22 m. of towering walls, broken by 16 gates; univ.; many sm. factories; textiles, synthetic fibres, machin., precision instruments, printing,

publishing; route ctr., rly. junc., airpt.; a. 3,386 sq. m.; p. (est. 1971) 7,570,000.

Pelagi, gr. of Italian Is., inc. Lampedusa and Linosa, between Malta and Tunisian cst.

Pelagonia, terr., S. Yugoslavia; fertile agr. R. basin.

Pelée, mtn., Martinique; active volcano, devastated town of St. Pierre 1902, loss of over 30,000 lives, later eruption caused further 2,000 deaths; alt. 4,400 ft.

Pella, dep. of Macedonia, Greece; mtnous.; cotton, wheat, tobacco; cap. Edessa; a. 1,082 sq. m.; p. (1961) 133,128.

Peloponnesus (Peloponnisos), peninsula, S. Greece; separated from mainland by G. of Corinth, but joined in N.E. by Isthmus of Corinth; mtnous.; livestock agr., drought-resistant sheep and goats; ch. ts., Kalamata, Tripolis; a. 8,356 sq. m.; p. (1961) 1,096,390.

Pelotas, t., Rio Grande do Sul, Brazil; pt. on lagoon S.S.W. Pôrto Alegre; meat-packing and industl. ctr.; p. (est. 1968) 208,672.

Pemba, I., part of Tanzania; cloves, copra, coconuts; exp. mangrove bark for tannin; a. 380 sq. m.; p. (1967) 164,243.

Pembroke, mkt. t., Dyfed, Wales; on S. side of Milford Haven; sm. pt.; dock facilities; cas., ruins of Monkton priory; p. (1971) 14,092.

Pembroke Dock, Dyfed, Wales; site of government dockyard (1814) with consequent growth of a new t.

Pembrokeshire, former co., Wales. *See* Dyfed.

Penang, I., st. W. Malaysia; cap. Georgetown, pt. for N. Malaya handling rubber and tin; paper mill; the first Brit. Straits Settlement (*q.v.*); a. 400 sq. m.; p. (1967) 752,059.

Penarth, t., South Glamorgan, Wales; sm. pt. on Severn estuary, 2 m. S. of Cardiff; ship-repairing, seaside resort; p. (1971) 23,965.

Penge. *See* Bromley.

Pengpu (Bengbu), c., Anhwei, China; on Kwo-Ho, 105 m. N.E. of Nanking; on Tientsin–Nanking rly.; p. (est. 1958) 330,000.

Penicuik, burgh, Midlothian, Scot.; on R. Esk; paper; p. (1971) 10,066.

Penistone, t., South Yorks., Eng.; on R. Don; steel; mkt.; p. (1971) 8,182.

Penki (Benqi), c., Liaoning prov., China; metallurgical ctr.; p. (1953) 449,000.

Penmaenmawr, t., Gwynedd, Wales; 4 m. S.W. of Conway; resort; p. (1971) 3,998.

Pennine Alps, Switzerland; div. of Alpine system; ch. peaks; Matterhorn (14,782 ft.), Weisshorn (14,804 ft.), Mischabelhörner (14,942 ft.); winter sports.

Pennine Range, mtn. range, "backbone of England," extends 140 m. southwards from Cheviot hills to Derbyshire; limestone, millstone grit; moorland sheep, dairying in valleys, quarrying, tourism; inc. Peak Dist. Nat. Park and Pennine Way long distance route; water supply, forestry; Cross Fell, 2,930 ft.

Pennsylvania, st., USA; originally proprietary colony of Penn family, later one of the 13 original sts. in the Union; traversed N.E. to S.W. by Appalachians; ch. Rs.: Delaware, Susquehanna, Allegheny, and Monongahela; major industl. st.; iron and steel, coal (bituminous and anthracite), natural gas, petroleum; maize, wheat, oats, rye; textiles, machin., motor cars, tobacco; cap. Harrisburg; ch. ts.: Pittsburgh, Philadelphia; a. 45,333 sq. m.; p. (1970) 11,663,301.

Penrhyn, dist., Gwynedd, Wales; nr. Bethesda; slate quarries.

Penrith, t., N.S.W., Australia; in Sydney met. a.; ctr. for mkt. gardening; p. (1966) 35,970.

Penrith, mkt. t., Cumbria, Eng.; at N. foot of Shap Fell, 18 m. S.E. of Carlisle; agr. mkt.; tourist ctr.; p. (1971) 11,299.

Penryn, t., Cornwall, Eng.; on R. Fal estuary; sm. pt., boat repairs; once ctr. of granite quarrying; p. (1971) 5,082.

Pensacola, t., Fla., USA; on N. shore of P. Bay; originally a Spanish settlement, retaining much Spanish influence in squares, bldgs., street names; fishing, sea food inds.; naval air training school; p. (1970) 65,422 (t.,) 237,995 (met. a.).

Rideau Canal, Ont., Canada; from Ottawa R. at Ottawa to Kingston on L. Ontario; 132 m. long.

Riesa, t., Dresden, E. Germany; R. pt. on Elbe R. nr. Meissen; steel, rubber; p. (1965) 41,014.

Riesengebirge, mtn. range, between Silesia (Poland) and Bohemia (CSSR); highest peak Schneekoppe (Czech Snežka, Polish Sniezka), 5,258 ft.

Rieti, Latium, Italy; an anc. Sabine c. with mediaeval townscape, in fertile Apennine basin; route ctr. and cap. of R. prov.; chemicals, sugar refinery, textiles; p. (1969) 39,108.

Riff or Rif, mtns., Morocco, N.W. Africa; extend along N. African cst. for 200 m. from Straits of Gibraltar; inaccessible and economically unattractive, terr. of semi-nomadic tribes; rise to over 7,000 ft. in many places.

Riga, cap. of Latvian SSR, USSR; Baltic pt.; exp. wheat, flax, hemp, dairy produce; industl. ctr., diesel rly. engin., furniture; univ.; local bathing beaches; p. (1970) 733,000.

Rigi, mtn., nr. L. Lucerne, Switzerland; famous view-point, reached by a rack and pinion rly.; alt. 5,905 ft.

Rijeka-Susak, c., Croatia, Yugoslavia; formerly Fiume, ceded to Yugoslavia by Italy after second world war; rival pt. to Trieste on Adriatic Sea; oil refining, shipbldg., tobacco, chemicals; hydroelectric power; p. (est. 1971) 133,000.

Rimac, R., Lima dep., Peru; rises in W. cordillera of Andes and flows W. to Pac. Oc.; provides water for irrigation and for c. of Lima; 75 m. long.

Rimini, c., Emilia-Romagna, Italy; on Adriatic cst. at junc. of Via Emilia and Via Flamina; mkt. for fertile agr. a.; sm. inds.; bathing resort; p. (est. 1969) 115,573.

Ringerike, t., Buskerud, Norway; new t. 25 m. N.W. of Oslo and inc. former t. of Hönefoss; p. (1965) 27,900.

Ringsted, t., Sjaelland, Denmark; tr. ctr. for agr. dist.; Benedictine monastery; p. c. 10,000.

Riobamba, t., Chimborazo, Ecuador; on R. St. Juan; woollens, cotton gds., cement, ceramics; Inca palace ruins; p. (1966) 61,393.

Rio Branco, R., flows c. 350 m. from Guiana Highlands through Brazil to join Rio Negro.

Rio Branco, t., cap. of Acre st., Brazil; p. (est. 1968) 70,730.

Rio Cuarto, t., Cordoba prov., Argentina; agr. ctr.; p. (1960) 70,000.

Rio de Janeiro, c., spt., S.E. Brazil; cap. of Guanabara st., on G. Bay, Atl. Oc.; former fed. cap.; beautiful natural harbour, many fine bldgs., Sugar Loaf mtn., Copacabana beach; flourishing tr. and inds.; mnfs. inc. textiles, foodstuffs, pharmaceutics, china, sheet glass; oil refining; p. (est. 1970) 4,296,782.

Rio de Janeiro, st., S.E. Brazil; on Atl. Oc.; consists of cst. plain, central Sero do Mar escarpment, fertile Paraíba R. basin in W.; coffee, sugar, fruit; ctr. of heavy ind.; cement,

textiles, sugar refineries at Campos, steel wks. at Volta Redonda; cap. Niterói; a. 16,500 sq. m.; p. (est. 1968) 4,505,938.

Rio de la Plata. *See* Plata, Rio de la.

Rio Gallegos, cap. of Santa Cruz prov., Argentina; sm. agr. pt. at mouth of Gallegos R.; refrigeration wks.; p. c. 15,000.

Rio Grande, headstream of R. Paraná., Brazil; Furnas dam, Estreito dam for hydroelec. power; 650 m. long.

Rio Grande, R., flows from st. of Col. through N.M. to G. of Mexico; forms bdy. between Texas, USA and Mexico; Elephant Butte, Caballo, and Falcon multi-purpose dams; known also as Rio Grande do Norte and Rio Bravo; c. 1,885 m. long.

Rio Grande do Norte, st., N.E. Brazil; cst. plain rising to S. plateau; climate semi-arid; cotton, sugar, salt, scheelite; cap. Natal; a. 20,478 sq. m.; p. (est. 1968) 1,291,195.

Rio Grande do Sul, st., S. Brazil; grassy plains, rolling plateaux; cool climate; stock-raising, meat-processing, wheat, wine, wool; lge coal deposits at São Jeronimo; cap. Pôrto Alegre; a. 103,353 sq. m.; p. (est. 1968) 6,560,504.

Rioja, region, N. Spain; upper Ebro valley; famous for wines and orange groves; ch. ctr. Logroño.

Riom, t., Puy-de-Dôme dep., France; former cap. of Auvergne; old bldgs. built of lava; p. (1962) 15,416.

Río Muni, terr., Equatorial Guinea; former Spanish terr., on cst. between Cameroon and Gabon, inc. offshore Is. of Corisco, Elobey Grande, Elobey Chico; with Fernando Po forms Equatorial Guinea; equatorial forest; exp. tree prods. of cacao, coffee, hardwoods; ch. t. Bata; a. 10,040 sq. m.; p. (1968) 183,000.

Rion, R., Georgian SSR, USSR; flows from Caucasus to Black Sea; lower half navigable; hydroelec. sta. at Kutais. (In Greek mythology the R. Phasis of the Argonauts.)

Río Negro, prov., Argentina; in N. Patagonia; irrigated agr. in R. valley, fruits, grain crops; elsewhere stock-raising; cap. Viedma; a. 77,610 sq. m.; p. (1970) 193,848.

Rio Negro, dep., Uruguay; livestock fattening from N. Uruguay; grain crops; ch. t. and cap. Fray Bentos; a. 3,269 sq. m.; p. (1963) 46,741.

Rio Tinto, t., Spain; at W. end of Sierra Morena 40 m. N.E. of Huelva; major world ctr. of copper production.

Riouw-Lingga Archipelago, I. gr., Indonesia; S. of Malaya; Bintan lgst. I. where bauxite mng.; pepper and rubber cultivation; a. 2,280 sq. m.; p. (1961) 278,966.

Ripley, mkt. t., Derbys., Eng.; 7 m. N.E. of Derby; coal, iron, heavy engin., bricks, agr. implements; p. (1971) 17,825.

Ripon, c. North Yorks., Eng.; on R. Ure; cath.; old mkt. square; old custom of wakeman; tourism; p. (1971) 10,987.

Ripponden, t., West Yorks., Eng.; nr. Halifax; p. (1971) 4,782.

Risca, t., Gwent, Wales; on R. Ebbw; former coal-mng. dist.; limestone quarrying; bricks, plastics; p. (1971) 15,799.

Risdon, t., Tasmania, Australia; oldest settlement in Tasmania, opposite Hobart; electrometallurgy.

Rishton, t., Lancs., Eng.; at N. foot of Rossendale Fells, 4 m. N.E. of Blackburn; p. (1971) 6,010.

Rive-de-Gier, t., Loire dep., France; on R. Gier, nr. Lyons; coal mng., iron and steel, glass; p. (1962) 16,677.

Rivera, dep., Uruguay; on Brazilian border; noted for cattle and sheep ranches; cap. R.; a. 3,793 sq. m.; p. (1963) 75,826.

Rivera, t., cap. of R. dep., Uruguay; on Brazilian frontier opposite Santa Ana; agr. mkt.; p. (1964) 40,000.

Riverina, pastoral cty., N.S.W., Australia; between Lachlan-Murrumbidgee and Murray Rs.; sheep, agr. with irrigation; gold, coal; ch. ts., Wagga Wagga, Albury; a. 26,600 sq. m.

River Rouge, t., Mich., USA; ctr. of Ford car mnf.; many heavy inds.; rapidly growing t. p. (1960) 18,147.

Riverside, t., Cal., USA; ctr. for citrus fruit packing and tr.; resort; p. (1971) 139,217.

Riviera, the belt of cst. between the Alps and the Mediterranean from Spezia to Hyères, France and Italy; picturesque scenery, sheltered, mild climate; fashionable health resorts.

Riyadh, t., cap. of Saudi Arabia; 230 m. inland from Persian G.; palace; univ.; route and tr. ctr., linked by rail with pt. of Zahran; p. (est 1965) 225,000.

Rizaiyeh (Urmia), c., cap. of Azerbaijan prov., Iran; nr. L. Urmia; comm. ctr.; birthplace of Zoroaster; p. (1966) 110,749.

Rizal, prov., central Luzon, Philippines; rapidly growing prov. in fertile Central Plain; new inds. developing; cap. Pasig; a. 791 sq. m.; p. (1960) 1,456,362.

Rize, t., Turkey; nr. Trabzon, on Black Sea; ctr. of Turkish tea inds.; p. (1965) 27,069.

Road Town, spt., Tortola; cap. of the Brit. Virgin Is.; tr. in fish, poultry; p. (1960) 900.

Roanne, t., Loire dep., France; on R. Loire; château ruins; textiles; p. (1968) 54,748.

Roanoke, R., Va., and N.C., USA; flows into Albemarle Sound; hydroelec. power; 410 m. long.

Roanoke, c., S.W. Va., USA; between Blue Ridge and Allegheny mtns.; rly. junc.; engin. p. (1970) 90,955 (c.), 179,352 (met. a.).

Roanoke I., off cst. N.C., USA; attempted settlement of colony by Raleigh.

Roaring Creek, Belize, Central America; site of new cap. 50 m. inland, at junc. of W. highway with Hummingbird highway.

Robben I., at entrance of Table Bay, Cape Prov., S. Africa; penal settlement and former leper colony.

Robin Hood's Bay, v., North Yorks., Eng.; picturesque site in inlet; tourism, fishing.

Robson, Mt., Canada; on B.C. and Alberta border; alt. 12,972 ft.; in Nat. Park.

Rocha, dep., Uruguay; borders Atl. Oc.; a. of cattle and sheep rearing; cap. R.; a. 4,280 sq. m.; p. (1960) 96,100.

Rochdale, t., Gtr. Manchester, Eng.; at S. foot of Rossendale Fells, on R. Roch; textiles, textile engin., elec. engin.; co-operative movement started here 1844; p. (1971) 91,344.

Rochefort, t., Charente-Maritime dep., France; fishing pt.; former impt. naval base; p. (1968) 34,780.

Rochelle, La, t., cap. of Charente-Maritime dep., France; on Bay of Biscay; fishing pt.; shipbldg.; pt. tr. declining; p. (1968) 75,498.

Rochester, c., Kent, Eng.; on R. Medway, adjoining Chatham; cath., cas.; aeronautical, elec. and mechanical engin., paint, varnish, cement; p. (1971) 55,460.

Rochester, t., Minn., USA; famous for Mayo clinic, and Mayo medical research ctr.; p. (1960) 40,663.

Rochester, c., N.Y., USA; on Genesee R.; univ.; cameras, films, optical instruments, thermometers, electronic equipment; hydroelec. power; p. (1970) 293,695 (c.), 875,636 (met. a.).

Roche-sur-Yon, La, t., cap. of Vendée dep., France; on R. Yon; built by Napoleon I; p. (1968) 38,249.

Rock, R., Wis., Ill., USA; formerly home of native Indians; focus of white settlement since 1830; 285 m. long.

Rockall, sm. I., N. Atl. Oc.; lies 200 m. W. of Outer Hebrides; forms hgst. part of submarine bank which forms gd. fishing-ground; uninhabited; annexed by Britain 1955; formally incorporated into Inverness-shire (1972) to ensure control of suspected oil and natural gas deposits; rock samples aged 1,000 million years place it with some Canadian rocks.

Rockall Deep, submarine trench, N. Atl. Oc.; between N.W. Ireland and Rockall I.; suspected oil and natural gas reserves.

Rockford, c., Ill., USA; serves agr. dist.; agr. machin., machin. tools; p. (1970) 144,707 (c.), 269,829 (met. a.).

Rockhampton, t., pt., Queensland, Australia; on R. Fitzroy; comm. cap. of central Queensland; meat-preserving; fruit-canning; cotton-ginning; rly. wks.; p. (1972) 48,188.

Rock Island, c., Ill., USA; on R. Mississippi; former site of US arsenal; agr. machin., timber and agr. processing; p. (est. 1969) 52,000.

Rocky Mount, t., N.C., USA; ctr. of tobacco tr. and processing; p. (1960) 32,147.

Rocky Mtns., vast mtn. chain, N. America; extend from Alaska, through Canada, USA to

Mexico; made up of several parallel ranges separated by intermontane basins and plateaux; barrier to spread of settlers to W. cst. in 19th cent.; climatic barrier; extensive snow and glacier fields in N.; dry, desert landscapes in S.; many Nat. Parks; sparse p.; hydroelectric power; highest peak Mt. Logan (19,850 ft.); length 3,200 m.

Rodez, t., cap. of Aveyron dep., France; on R. Aveyron; cath.; woollens; p. (1962) 24,352.

Rodopi (Rhodope) Mtns., range, S. Bulgaria; rise to 10,200 ft.

Rodosto. *See* Tekirdag.

Rodriguez, I., Brit. dependency of Mauritius, Indian Oc.; 350 m. N.E. of Mauritius; mainly agr. and fishing; cap. Port Mathurin; a. 42 sq. m.; p. (est. 1968) 20,000.

Roermond, t., Limburg prov., Neth.; on R. Maas; minster; textiles; p. (1968) 37,011.

Roeselare, t., W. Flanders, Belgium; on R. Lys, nr. Kortrijk, textile ctr.; p. (1968) 40,091.

Rogerstone, t., Gwent, Wales; on R. Ebbw; lge. aluminium wks.

Roman, t., Romania; on R. Moldava; cath.; agr. processing; p. (1963) 45,930.

Romania (Rumania), Socialist Rep. of, S.E. Europe; bounded by USSR, Hungary, Yugoslavia, Bulgaria, and Black Sea; Carpathian mtn. arc., Transylvanian Alps, wide Walachian plain, Moldavian plateau; drained by Danube and its tribs.; climate predominately continental with cold winters and hot summers; since second world war transformation of economy from agr. to industl. basis, although agr. still impt., contributing many exps., especially timber, wine, fruit; major pt. Constanta on Black Sea; oilfields at Ploiesti; cap. Bucharest; ch. tr. partners USSR and E. Europe; Danube used for navigation; Iron Gates power and navigation system being constructed in co-operation with Yugoslavia; tourism from W. Europe and N. America encouraged; a. 91,671 sq. m.; p. (1970) 20,040,000.

Rome (Roma), cap. of Italy, and of Latium and Rome prov.; on R. Tiber, 15 m. from sea; founded by Romulus 753 B.C.; once cap. of anc. Roman empire; inc. Vatican c., ctr. of Roman Catholic Church; situated on original "seven hills," and along the R.; leading cultural ctr.; St. Peter's church, Colosseum, Pantheon; univ.; admin. ctr.; tourism; created cap. of United Italy 1871; p. (est. 1970) 2,778,872.

Romford. *See* Havering.

Romney. *See* New Romney.

Romney Marsh, coastal marsh, Kent, Eng.; formed by blocking of R. Rother by shingle spit of Dungeness which extends from Rye to Hythe; largely drained; pastures for special Romney Marsh breed of sheep; a. 50 sq. m.

Romsey, t., Hants., Eng.; on R. Test, 8·5 m. N.W. of Southampton; mkt. ctr.; Norman abbey; p. (1971) 10,057.

Ronaldshay, North, most N. of Orkney Is., Scot.; p. (1971) 134.

Ronaldshay, South, most S. of Orkney Is., Scot.; p. (1971) 991.

Roxburgh, co., S. Scot.; in S.E. of S. Uplands drained by Rs. Tweed, Teviot, and Liddel; sheep-rearing a. and wool-based inds.; cap. Jedburgh; a. 670 sq. m.; p. (1971) 41,959.

Royal Leamington Spa. *See* Leamington.

Royal Oak, t., Mich., USA; residtl.; Detroit zoological park here; p. (1960) 80,612.

Royston, mkt. t., Herts., Eng.; at N. foot of E. Anglian Heights, 7 m. N.E. of Baldock; p. (1971) 8,272.

Royston, t., South Yorks., Eng.; in coal-mng. dist.; p. (1971) 8,839.

Royton, t., Gtr. Manchester, Eng.; 4 m. N.E. of Manchester; textiles; p. (1971) 20,319.

Ruanda-Urundi. *See* Rwanda and Burundi.

Ruapehu, highest mtn., N.I., N.Z.; volcanic peak at S. extremity of central volcanic dist.; alt. 9,175 ft.

Rubicon, R., central Italy; flows to Adriatic; crossed by Julius Caesar and his armies 49 B.C.; has been identified with the Fiumicino or the Uso. There is also a R. Rubicon (It. Rubico) a few m. N. of Rimini and S. of Cervia.

Rubtsovsk, t., W. Siberia, RSFSR; agr. engin.; p. (1970) 145,000.

Ruby Mines, dist., Mandalay, Upper Burma; hilly region of Shan plateau, once famous for rubies.

Ruda Slaska, t., Katowice, Poland; coal-mng. ctr.; iron and steel wks.; p. (1970) 142,400.

Rudnyy, t., Kazakh SSR, USSR; new t. 30 m. S.W. of Kustanay; iron-ore mng. and dressing plant supplying Magnitogorsk; p. (1965) 100,000.

Rudolf, L., N.W. Kenya; in Great Rift Valley; a. 3,500 sq. m.; ctr. of semi-arid region.

Rudolph I., N. of Franz Josef Land, Arctic Oc.; Russian naval base; met. sta.

Rudolstadt, t., E. Germany; on R. Saale, in former st. of Thuringia; seat of counts of Schwarzburg-Rudolstadt (1584–1918); tourism; porcelain; p. (1965) 30,087.

Rueil Malmaison, sub. of Paris, France; château; tomb of the empress Josephine; p. (1968) 62,933.

Rufiji, R., Tanzania; E. Africa; flows to Indian Oc.; 450 m. long.

Ruijsque, t., Senegal; sm. spt. nr. Dakar; growing industl. ctr. for consumer gds.; p. (1965) 48,300.

Rugby, mkt. t., Warwicks, Eng.; on R. Avon, 11 m. E. of Coventry; famous public school; elec. and gen. engin., motor and aircraft patterns; p. (1971) 59,372.

Rugeley, mkt. t., Staffs., Eng.; on R. Trent, 9 m. S.E. of Stafford; coal, iron, tanning; expanded t.; p. (1971) 22,234.

Rügen, I., E. Germany; in Baltic Sea, off Stralsund; ch. t. Bergen; pt. Sassnitz, terminus of train ferry; steamer services to Trelleborg, Sweden.

Ruhr, industl. dist., W. Germany; lies to E. of R. Rhine, on either side of R. Ruhr; rich coalfield; impt. iron and steel, heavy engin. inds. based on local coal and iron ore from Luxembourg, Spain, Sweden; water communications to N. Sea along R. Rhine and Dortmund–Ems Canal; ch. ts. Essen, Duisburg, Düsseldorf, Dortmund, Bochum.

Ruhr, R., W. Germany; trib. of Rhine; flows S. of Ruhr conurb.; 145 m. long.

Ruislip-Northwood. *See* Hillingdon.

Rukwa, L., E. Africa; between L. Tanganyika and L. Malawi in the rift valley; 30 m. by 12 m. a. increasing.

Rum, I., Inner Hebrides, Argyll, Scot.; nature reserve, highland ecology; a. 65 sq. m.

Rumaila, Iraq; oilfield; pipeline links to the Zubair–Fao system.

Rumania. *See* Romania.

Rum Jungle, N.T., Australia; 70 m. S.E. of Darwin; uranium mng.; silver, lead and copper deposits.

Runcorn, t., Cheshire, Eng.; on S. side of Mersey estuary; new t. (1964); chemicals; pipeline carrying petrochemical feedstocks from Teesside; new Runcorn–Widnes bridge over Mersey and Manchester Ship Canal opened 1961 (lgst span arch in Europe); p. of new t. (1971) 35,646.

Rungis, Paris, France; site of major new mkt. to replace Les Halles; nr. Orly airpt.

Ruse, t., Bulgaria; on R. Danube, opposite Giurgiu in Romania; univ.; Roman t.; agr. processing; p. (1968) 142,894.

Rushden, t., Northants., Eng.; 3 m. E. of Wellingborough; shoes; p. (1971) 20,156.

Rüsselsheim, t., W. Germany; impt. car factory; p. (1965) 50,000.

Russian Soviet Federated Socialist Republic (RSFSR), constituent rep., USSR; lgst. rep. by a. and p.; economic development; inds. centred on Leningrad and Moscow with new inds. being developed in Urals and Kuznetz basin; extends from Baltic to Pac. Oc. (5,000 m.), from Arctic to Caspian Sea (2,500 m.); part of N. European plain in W. and Siberian plain in E., separated by Ural mtns.; major Rs. Volga, Don, Ob, Yenisey, Lena, Amur; gr. variety in climate and p. density; major agr. region for wheat, sugar-beet, livestock; vast mineral deposits have aided economic growth; oil around Volga valley; metallic ores from Urals and Black Sea; hydroelectric power from Volga, Yenesey, and Ob Rs.; cap. Moscow; a. 6,501,500 sq. m.; p. (1970) 130,090,000.

Rustavi, t., Georgian SSR, USSR; new t. 20 m. S.E. Tbilisi; iron and steel; lge metallurgical plant; p. (est. 1969) 102,000.

Rustenburg, t., Transvaal, S. Africa; on N.W. edge of High Veld, 60 m. W. of Pretoria; local mkt. for agr. produce; agr.-processing; p. (1970) 52,657.

Rutbah, t., Iraq; on oil pipeline from Iraq to Haifa; impt. ctr. on trans-desert routes.

Rutherglen, royal burgh, Lanark, Scot.; on R. Clyde, S.E. of Glasgow; chemicals, tubes, paper, wire ropes, bolts; p. (1971) 24,732.

Ruthin, t., Clwyd, Wales; Vale of Clwyd, 8 m. S.E. of Denbigh; p. (1971) 4,331.

Rutland, former Midland co., Eng.; sm. co. of 152 sq. m., now part of Leics.

Ruwenzori mtn. range, on Uganda-Zaire border; overlooking W. arm of Gt. Rift Valley, midway between L. Albert and L. Edward; highest peaks, Mt. Margherita (16,798 ft.), Mt. Alexandra (16,750 ft.); lower slopes covered in equatorial rain forest, coffee plantations on middle slopes above 5,000 ft.

Rwanda, indep. rep., Central Africa; former kingdom of Ruanda, part of UN trust terr. of Ruanda-Urundi under Belgian admin. (until 1962); sm., landlocked st., S. of equator, consisting of upland plateau at 4,000 ft.; mainly subsistence agr.; coffee (ch. exp.), cotton, pyrethrum, cattle; tin-mng. impt.; little ind.; cap. Kigali; a. 10,169 sq. m.; p. (est. 1969) 3,667,000.

Ryazan, c., cap. of R. oblast, RSFSR; on Oka R.; food inds., agr. machin., footwear, chemicals; mediaeval architecture; p. (1970) 351,000.

Rybinsk, c., major R. pt., RSFSR; on upper Volga; tr. and shipping ctr. since 16th cent.; site of hydroelectric power sta.; shipbldg., engin.; p. (1970) 218,000.

Rybinsk Sea (Rybinsk Reservoir), RSFSR; artificial L.; created behind dams on R. Volga and R. Sheksna at Rybinsk; part of scheme to regulate flow of R. Volga and to incorporate it in a vast inland waterway system; opened 1945; a. 1,500 sq. m.

Rybnik, t., Katowice prov., S.W. Poland; ctr. of coal-mng. dist.; p. (1970) 43,400.

Rydal Water, L., nr. Ambleside, Cumbria, Eng.; adjacent v. contains Rydal Mount, home of Wordsworth.

Ryde, t., I. of Wight, Eng.; on N.E. cst.; yachting ctr. and seaside resort; boat and yacht bldg.; steamer connection across Spithead to Portsmouth; p. (1971) 23,171.

Rye, t., East Sussex, Eng.; at mouth of R. Rother to W. of Dungeness; one of the Cinque pts.; Ypres cas.; tourist ctr.; p. (1971) 4,434.

Ryton, t., Tyne and Wear, Eng.; on R. Tyne, W. of Newcastle; p. (1971) 14,831.

Ryuku Is., archipelago, between Kyushu I., Japan, and Taiwan; ch. t. Naha on Okinawa I.; following second world war Is. S. of Lat. 30° N. occupied by USA; Amami and Tokara grs. returned to Japan 1953; American military installations on Okinawa withdrawn 1972; lge. Is. mtnous., volcanic; sweet potatoes, sugarcane, pineapples; 3 lge. oil refineries; a. 848 sq. m.; p. (1969) 977,000.

Rzeszów, c., cap. of R. prov., S.E. Poland; at foot of Carpathian highlands; route ctr.; growing industl. t.; p. (1970) 82,200.

Rzhev, c., RSFSR; on Volga R.; rly. ctr. on main line to Moscow; agr. processing; p. (est. 1967) 59,000.

S

Saale, R., E. Germany; rises in Fichtelgebirge flows N. through Thuringia to Elbe; attractive, well wooded valley; irrigation; hydroelec. power; 225 m. long.

Saalfeld, t., Gera, E. Germany; on R. Saale; famous cas., iron-mng.; machin., chocolate; p. (1965) 31,048.

Saarland, *Land*, W. Germany; heavy inds. based on lge coalfields; drained by R. Saar; cap. Saarbrücken; admin. by League of Nations 1919–35, returned to Germany after plebiscite; economic attachment to France after second world war; reunited politically with W. Germany 1957; a. 991 sq. m.; p. (1970) 1,127,000.

Saarbrücken, c., cap. of Saarland, W. Germany; on R. Saar, nr. Fr. border; cas.; rich coalfield; iron and steel wks., textiles, leather, paper, oil refining at Klarenthal nearby; p. (est. 1970) 130,765.

Saaremaa (Osel), I., Baltic Sea; at entrance to G. of Riga, Estonian SSR; low plateau, bleak and barren; ch. t. Kingisepp (Kuressaare); a. 1,050 sq. m.

Sari, c., cap. of Mazandaran prov., Iran; p. (1967) 206,463.
Sark, I., Channel Is.; 6 m. E. of Guernsey; picturesque scenery; tourist ctr.; farming; a. 1,274 acres; p. (1971) inc. Brechou 590.
Sark, R., forms extreme W. bdy. between Scot. and Eng.
Sarnia, c., and pt., Ont., Canada; on St. Clair R.; connected to Port Huron by rly. tunnel; oil refineries, petrochemical inds., agr. tr.; p. (1971) 56,727.
Sarno, t., Campania, Italy; spa at foot of mtns. on E. edge of fertile Sarno plain; agr. mkt., textile ctr.; cas.; p. c. 31,000.
Sar Planina, t., Yugoslavia; nr. Skopje; impt. chrome deposits; attractive site, ctr. of mtn. tourism.
Sarpsborg, t., Norway; on R. Glommen; lgst pulp and paper concern in kingdom; hydro-electric power sta.; p. (est. 1960) 13,500.
Sarreguemines, t., Moselle dep., France; in Lorraine; potteries based on local clay; coal mng.; p. (1962) 23,248.
Sarthe, dep., N.W. France; undulating surface; farming, apples, livestock; coal, linen, potteries; cap. Le Mans; a. 2,412 sq. m.; p. (1968) 461,839.
Sarthe, R., France; trib. of R. Loire; 165 m. long.
Sasebo, spt., Kyushu, Japan; ctr. of coalfield; engin., shipbldg.; p. (est. 1969) 266,000.
Saskatchewan, prov., Canada; coniferous forests and plains; Rs. Saskatchewan and Churchill; many lge Ls.; extreme climate; hydroelec. power; gr. wheat prov.; livestock, dairying; oil, copper, uranium, helium plants, furs, fisheries; cap. Regina; a. 251,700 sq. m.; p. (1971) 926,242.
Saskatchewan, R., Canada; flows from Rocky mtns. through L. Winnipeg and thence by R. Nelson to Hudson Bay; 1,450 m. long.
Saskatoon, c., Saskatchewan, Canada; grew rapidly after arrival of rly. (1890); comm. ctr. for grain producing a.; meat packing and tr.; varied inds., cement, oil refining; univ.; p. (est. 1969) 129,000.
Sasolburg, t., O.F.S., S. Africa; oil from coal production; gas pipeline to Germiston a. p. (1960) 12,557.
Sassari, t., Sardinia, Italy; nr. G. of Asinara; cath., univ., palaces; tobacco and macaroni wks., cheese; p. (1969) 107,308.
Sattahip, pt., Thailand; new pt. inaugurated 1967.
Satu-Mare, t., N.W. Romania; agr. machin., handicraft inds. based on local prods., food-processing; cath.; p. (1963) 63,656.
Saudi Arabia, kingdom, Arabian peninsula, S.W. Asia; mainly desert, agr. in oases and S.W. upland region of Asir; lgst producer of oil in Middle East; oil sales account for 85 per cent govt. revenue; steel inds. and oil refinery at Jidda, petrochemicals developing at Dammam; Moslem holy cs. Mecca and Medina; cap. Riyadh (royal), Mecca (religious); main pt. King Faisal Port.; a. 927,000 sq. m.; p. (est. 1969) 7,200,000.
Sauerland, dist., N. Rhine–Westphalia, W. Germany; plateau, alt. from 500 to 1,500 ft., E. of Rhine; agriculturally poor, largely forested; crossed by R. Wupper, with which are associated industl. ts. Wuppertal (textiles), Solingen and Remscheid (cutlery and special steel); supplies hydroelectric power to Ruhr.
Sault Ste. Marie, t., Ont., Canada; pt. on St. Mary's R., opposite Sault Ste. Marie, Mich., to which it is connected by bridge; pulp, paper, iron and steel; tourist ctr. for L. and forest region; p. (1971) 78,175.
Sault Ste. Marie, t., Mich., USA; pt. on St. Mary's R.; opposite Sault Ste. Marie, Ont.; calcium carbide; tourist ctr. for fishing, hunting a.; p. (1960) 18,722.
Sault Ste. Marie Canals ("Soo"), Canada and USA; twin canals on Canadian and American side of shallow channel linking L. Superior and L. Huron; traversed by all wheat and iron-ore traffic from L. Superior pts.; length (Canadian) 1 m.; depth 18 ft.
Saumur, t., Maine-et-Loire dep., France; on R.

Loire, 30 m. S.W. of Tours; sparkling wines, brandy; flower, vegetable mkt.; cas.; p. (1968) 23,175.

Sauternes, v., Gironde, **France**; name applied to white wines of dist.

Sava, R., Slovenia, Yugoslavia; joins Danube at Belgrade; used for hydroelectric power; agr. in valleys; transport axis; 580 m. long.

Savage or Niue, Cook Is., **Pac. Oc.**; under N.Z.; ch. exp. native plaited ware, bananas, copra, and sweet potatoes; ch. pt. Alofi; a. 100 sq. m.; p. (1968) 5,240.

Savaii I., lgst of Samoan gr., **Pac. Oc.**; volcanic, mtnous., fertile; exp. bananas, copra, cocoa; a. 703 sq. m.; p. c. 30,000.

Savannah, c., Ga., **USA**; spt. nr. mouth of Savannah R.; rly., fishing and comm. ctr. for Sea Is., Savannah valley and surrounding plantations; mkt. for naval stores; sugar refining, paper, oil refining, diverse mnfs.; tourist ind. stimulated by mild climate; p. (1970) 114,155 (c.), 182,959 (met. a.).

Savannah, R., USA; flows between Ga. and S.C., to Atl. Oc.; used for hydroelectric power; 450 m. long.

Saverne, Col de, low pass, N.E. **France**; carries trunk rly. from Paris to Strasbourg and the East between Vosges and Hardt mtns.; gradual approach from W., steep descent to E. into Rhine valley.

Savoie (Savoy), dep., **France**; borders Italy in Savoy Alps; part of former duchy; dairying and vineyards; hydroelectricity forms basis of metallurgical inds.; first Fr. National Park (Vanoise Park); cap. Chambéry; a. 2,389 sq. m.; p. (1968) 288,921.

Savona, spt., Genoa, **Italy**; cath.; iron, shipbldg., glass and tinplate wks.; exp. preserved fruits and tomatoes; imports coal, oil, iron ore; p. (1969) 78,748.

Savonlinna, t., Mikkeli, E. **Finland**; in Saimaa L. region; route ctr.; timber inds.; p. c. 15,000.

Sawankalok, t., **Thailand**; impt. teak collecting ctr.

Sawbridgeworth, t., Herts., **Eng.**; on R. Stort, 4 m. S. of Bishops Stortford; malting, fruit preserving; p. (1971) 7,083.

Saxham, t., Suffolk, **Eng.**; agr. machin.

Saxmundham, mkt. t., Suffolk, **Eng.**; 18 m. N.E. of Ipswich; p. (1971) 1,700.

Saxony, region, E. **Germany**; turbulent political and territorial history, now comprises admin. dists. of Leipzig, Dresden, Karl-Marx-Stadt, Halle and Magdeburg; inc. Erzgebirge in S., Vogtland in W. and N. European plain; drained by N. flowing Rs. Elster, Pleisse, Mulde, Elbe, Neisse, Spree; kaolin deposits basis for porcelain ind. at Meissen; industrialised in 19th and 20th cent. with notable textile ind.; coal mng. nr. Zwickau; inds. concentrated around Karl-Marx-Stadt; cap. Dresden; comm. ctr. at Leipzig; a. 6,562 sq. m.

Sayan Mtns., range of mtns.; between Rs. Yenisey and Angra, **RSFSR**; form part of Sino-Soviet border; mineral resources.

Scafell Pike, mtn., Cumbria, **Eng.**; in N. Pennines; highest in Eng.; alt. 3,210 ft.

Scalby, t., North Yorks., **Eng.**; 3 m. N.W. of Scarborough; p. (1971) 8,672.

Scalloway, Shetlands, Scot.; on W. cst. of Mainland; the anc. cap.; ruined cas.; fish. pt.

Scalpay, I., off E. cst. of Skye, **Scot.**

Scalpay, I., Harris, Outer Hebrides, **Scot.**

Scandinavia, name given to lge peninsula in N.W. **Europe**; comprises kingdoms of Sweden and Norway; sometimes inc. Denmark, Finland and Iceland; rugged a. of anc. peneplained rocks; climate varies from arctic (N.) to humid maritime (S.W.); rich in timber and mineral ores, esp. iron and copper; W. cst. waters valuable fishing grounds.

Scapa Flow, strait, N. **Scot.**; between Pomona and Hoy, Orkney Is.; surrendered German fleet scuttled 1919; Brit. battleship *Royal Oak* sunk at anchor 1939.

Scarba, I., Argyll, **Scot.**; off N. end of Jura, red deer in woods and moorlands.

Scarborough, t., North Yorks., **Eng.**; on E. cst.; seaside resort; cas.; former spa; p. (1971) 44,370.

Scarpanto. *See* Karpathos.

Schaffhausen, most. N. can., **Switzerland**; on R. Rhine; pastoral, forested; cereals, fruit, vegetables, wine; hydroelectric power from S. falls on Rhine; cap. S.; a. 115 sq. m.; p. (1969) 73,000.

Schaffhausen, c., cap. of S. can., **Switzerland**; on Rhine below L. Constance; falls to S.W. of c.; hydroelectricity supplies power for electrochemical ind. and aluminium wks.; p. (1969) 38,900.

Schaumburg-Lippe, former st., between provs. of Hanover and Westphalia, **Germany**, now part of Lower Saxony, **W. Germany**; farming, coal mng.

Schefferville, t., **Canada**; 360 m. N. of St. Lawrence estuary and connected to it (at Seven Islands) by rly.; ctr. of iron-ore mines in Quebec-Labrador trough; p. (1966) 3,086.

Scheldt (Dutch Schelde, French Escaut), R., **France, Belgium, Neth.**; rises in Aisne, France, flows to N. Sea forming extensive delta with Rhine (Rijn) and Meuse (Maas) in Netherlands; navigable; 270 m. long; network of canals.

Schenectady, c., N.Y., **USA**; on Mohawk R., N.W. of Albany; electrical plants, locomotive wks.; p. (est. 1969) 71,000.

Scheveningen, seaside resort, **Neth.**; 2 m. N.W. of The Hague; fish. pt.

Schiedam, t., Neth., on Nieuwe Maas, 2·5 m. downstream from Rotterdam; forms part of Rotterdam–Europort; diverse pt.-based inds.; gin; p. (1968) 82,596.

Schiehallion, mtn., Perth, **Scot.**; alt. 3,547 ft.

Schio, t., Veneto, **Italy**; at foot of Alps on Leogra R.; woollens, textiles, machin.; p. c. 30,000.

Schlei, narrow inlet of Baltic, Schleswig-Holstein, **W. Germany**; 25 m. long.

Schleswig, t., Schleswig-Holstein, **W. Germany**; fish. pt. on Schlei inlet; lt. inds.; p. (1963) 33,600.

Schleswig-Holstein, *Land*, **W. Germany**; occupies S. part of Jutland peninsula; a. disputed between Denmark and Prussia in 19th cent.; mainly agr.; many sm. pts.; crossed by Kiel Canal; cap. Kiel; a. 6,048 sq. m.; p. (1968) 2,499,700.

Schneidemühl. *See* Piła.

Schönebeck, t., Magdeburg, **E. Germany**; pt. on R. Elbe; metals, chemicals, machin.; p. (1965) 44,302.

Schoonebeek, v., Drenthe, **Neth.**; S. of Emmen; lge oilfield; p. (1967) 7,473.

Schouten I., W. Irian, Indonesia; in Geelvink Bay; p. 25,487.

Schouwen-Duiveland, I., Zeeland prov., **Neth.**; cap. Zierikee; formerly 2 separate Is.

Schuylkill R., Penns., USA; flows into Delaware R.; navigable; l. 130 m.

Schwäbish-Gmünd, t., Baden-Württemberg, **W. Germany**; at foot of Swabian Jura, E. of Stuttgart; clocks, glass, optical, precious metal and jewellery inds.; mediaeval and baroque bldgs.; p. (1963) 40,500.

Schwarzwald (Black Forest), forested mtn. range, Baden-Württemberg, **W. Germany**; highest peak Feldberg 4,905 ft.; tourism; famous for clock and toy inds.

Schwechat, t., **Austria**; nr. Vienna; oil refining; pipeline to Trieste; p. (1961) 13,403.

Schwedt, t., Frankfurt, **E. Germany**; on R. Oder; lge oil refinery; pipeline from Mozyr' (USSR); paper, fertilisers; p. (1965) 23,000.

Schweinfurt, t., Bavaria, **W. Germany**; on R. Main, N.E. of Würzburg; metals, machin., ball bearings, dyes, brewing; p. (1965) 59,000.

Schwelm, t., N. Rhine–Westphalia, **W. Germany**; E. of Wuppertal; metals machin., textiles; p. (1963) 34,200.

Schwenningen, t., Baden-Württemberg, **W. Germany**; clocks, precision instruments, optical apparatus; p. (1963) 32,600.

Schwerin, c., cap. of Schwerin, **E. Germany**; on Schwerin L., surrounded by smaller Is.; comm. and industl. ctr. of agr. dist.; food processing, engin., furniture; cath., cas.; p. (1965) 91,210.

Schwyz, can., **Switzerland**; mtnous. in S.; forested; dairying impt.; original member of confederation; cap. S.; a. 350 sq. m.; p. (1969) 85,500.

Schwyz, c.,. of Schwyz can., **Switzerland**; tourist ctr. nr. Lucerne; p. (1969) 12,500.

Sciacca, sm. pt., Sicily **Italy**; nr. Agrigento; mineral springs; p. (1961) 31,365.

Scilly Is., archipelago, 30 m. S.W. of Land's End,

Cornwall, Eng.; early flowers and vegetables benefit from mild winter climate; tourism; p. (1971) 2,428.

Scioto, R., Ohio, USA; joins Ohio at Portsmouth; 250 m. long.

Scone, par., Perth, Scot.; place of residence and coronation of early Scottish kings; from here Edward I. removed Stone of Destiny to Westminster Abbey 1297; tourist ctr.; civil aerodrome.

Scoresby Sound, E. Greenland; lgst fjord system in the world; l. 190 m.; fishing and hunting.

Scotland, Brit. Is., N. part of Gt. Britain; 33 cos.; home affairs admin. by Dept. of Secretary of State for Scot.; physically divided into 3 parts: (1) the Highlands and Is., an upland a. suffering from depopulation, economically reliant on stock-rearing, tourism, hydroelectric power, whisky and fishing; (2) the Central Lowlands, containing most p., based in industl. ts. on sm. coalfields, inc. lgst c. Glasgow and cap. Edinburgh; (3) the S. Uplands, a stock-rearing a. bordering Eng.; a. 29,798 sq. m.; p. (1971) 5,228,963.

Scranton, c., Penns., USA; on Lackawanna R.; anthracite ctr.; chemicals, shoes, textiles; univ.; p. (1970) 102,294 (c.), 231,433 (met. a.).

Scunthorpe, t., Humberside, Eng.; on Lincoln Edge, 6 m. S. of Humber; iron, limestone mng. and major iron and steel ind.; p. (1971) 70,880.

Scutari. *See* Shkodër.

Scutari (Turkey). *See* Usküdar.

Seaford, t., East Sussex, Eng.; 3 m. E. of Newhaven; seaside resort; declined as a pt. with shift of Ouse R. channel to Newhaven; p. (1971) 16,196.

Seaforth Loch, Lewis, Outer Hebrides, Scot.; 14 m. long.

Seaham, spt., Durham, Eng.; Seaham Harbour, on E. cst. 4 m. S. of Sunderland; modern colly. workings extend under sea; p. (1971) 23,410.

Sea Islands, USA; chain of Is. off Atl. cst. of S.C., Ga. and Fla.; formerly impt. for sea island cotton but since 1919 infested with boll weevil.

Seathwaite, v., Cumbria, Eng.; 7 m. from Keswick, close to Styhead (1,430 ft.); exceptionally heavy annual rainfall (above 150 in.).

Seaton, t., S. Devon, Eng.; on Lyme Bay at mouth of R. Axe; seaside resort; freestone quarries; p. (1971) 4,134.

Seaton Carew, t., Cleveland, Eng.; C.B.; site for nuclear power sta. nr. mouth of R. Tees; seaside resort.

Seaton Valley, t., Northumberland, Eng.; nr. Blyth; coal mng.; expanded t.; p. (1971) 32,011.

Seattle, c., Wash., USA; spt. between Puget Sound and L. Wash.; S.E. is Mt. Rainier, N.E. Mt. Baker; tr. with Far East and Alaska from wooded, agr. hinterland; fishing and fish exp.; lgst c. of Wash., a major industl. and comm. ctr.; aircraft (home of Boeing), shipbldg., food processing; univs., cath.; p. (1970) 524,263 (c.), 1,404,432 (met. a.).

Secunderabad, t., Andhra Pradesh, India; now incorporated within Hyderabad; comm. ctr. rly. junc.; p. (1961) 78,412.

Sedan, t., Ardennes dep., France; on R. Meuse; machin., metal ware, woollens, flour; Napoleon III surrendered to Prussians 1870; p. (1968) 24,499.

Sedbergh, mkt. t., Cumbria, Eng.; woollen ind., public school; p. (1971) 3,547 (dist.).

Sedgefield, t., S.E. Durham, Eng.; in fertile agr. a.; cattle mkt.; racecourse; p. (1971) 35,017 (dist.).

Sedgley. *See* Wolverhampton.

Ségou, t., R. pt., Mali; W. Africa; on R. Niger; ctr. of irrigation scheme; cotton, hides, cattle; once cap. of former kingdom.

Ségou Canal, Mali, W. Africa; leaves R. Niger 4 m. below Bamako, extends 130 m. N.E. to Ségou; irrigates 3,000 sq. m. on right bank of Niger and assists navigation.

Segovia, c., cap. of S. prov., Old Castile, Spain; on rocky hill above Eresma R.; flour milling, tanning, pottery, handicrafts; Roman aqueduct, cath.; p. (1961) 33,360.

Segovia, R., rises in N.W. Nicaragua, flows N.E. to Caribbean; forms part of S. limit of Mosquito cst., and bdy. between Honduras and Nicaragua; 300 m. long.

Segre, R., Lérida, N.E. Spain; rises in E. Pyrenees, flows S.W. into R. Ebro; water irrigates the a. around Lérida, the lgst block of irrigated land in Spain; c. 170 m. long.

Segura, R., Spain; flows to Mediterranean at Guardamar; 180 m. long.

Seibersdorf, Austria; ENEA experimental food irradiation project.

Seikan Tunnel, Japan; links Honshu with Hokkaido under Tsugaru strait; 23 m. long.

Seim, R., Ukrainian SSR, USSR; trib. of R. Desna; 300 m. long.

Seine, R., France; rises in Côte d'Or dep., and flows past Paris and Rouen to English Channel at Havre; navigable, part of French waterway network; 473 m. long.

Seine-et-Marne, dep., N. France; agr., stock-raising, dairying; impt. source of food for Paris mkts.; Brie cheese; cap. Melun; a. 2,275 sq. m.; p. (1968) 604,340.

Seine-Maritime, dep., N. France; undulating and fertile; grain, dairying; heavy inds. at cap. Rouen; oil refineries; beach resorts; p. (1968) 1,113,977.

Seine-Saint Denis, dep., N.E. Paris, France; mkt. gardens; cap. Bobigny; p. (1968) 1,251,792.

Seistan and Baluchistan, twin prov., Iran; co. ts. Zabol, Zahedan (rly. terminus Pakistan rly. from Quetta through Mirjaveh, the customs post on Iranian frontier).

Sekondi-Takoradi, t., S.W. Ghana; spt. on G. of Guinea; developed after construction of rly. (1903) to tap mineral, agr. and forest wealth of hinterland; deepwater harbour at Takoradi constructed 1928; fisheries, saw milling; p. (est. 1968) 128,200 (c.), 209,400 (met. a.).

Selangor, st., central Malaya, W. Malaysia; former sultanate; economically well developed; chemicals, rubber, tin, coal, pineapples; ch. pt., Pt. Swettenham; fisheries; new st. cap. designated at Klang to relieve congestion of Kuala Lumpur; p. (1967) 1,408,881.

Selby, mkt. t., North Yorks., Eng.; on R. Ouse, 13 m. S. of York; anc. abbey church; flour milling, flax, oil-cake; rich coal deposit recently found; p. (1971) 11,610.

Sele, R., S. Italy; rises in S. Apennines, flows W. into G. of Salerno; headwaters carried E. through gr. Apennine tunnel (7 m.) to irrigate plateau of Apulia in S.E. Italy.

Selenga, Asiatic R., rises in Mongolia, enters USSR nr. Kiachta from where it is navigable to its delta in L. Baykal; c. 700 m. long.

Selkirk, royal burgh, co. t.; Selkirk, Scot.; on Ettrick Water; 4 m. S. of Galashiels; mkt. t.; tartans, tweeds; p. (1971) 5,684.

Selkirk Mtns., B.C. Canada; run N.W. to S.E. parallel with Rocky mtns.; anc. rocks, highly mineralised; rise to over 9,000 ft.

Selkirkshire, co., S.E. Scot.; mtnous. (Broad Law 2,723 ft.); sheep, oats, woollens; cap. Selkirk; a. 267 sq. m.; p. (1971) 20,868.

Selma, t., Ala., USA; on Alabama R., in cotton, dairying, lumbering region; food processing, fertilisers; p. (1960) 28,385.

Selsey, t., West Sussex, Eng.; on Selsey Bill. 7 m. S. of Chichester; coastal resort; fishing.

Selsey Bill, peninsula between Bognor Regis and Portsmouth, West Sussex, Eng.

Selukwe, t., Rhodesia; alt. 4,734 ft.; gold mng., chrome ore, molybdenum; ranching.

Selwyn Range, mtns., Queensland, Australia; extend 350 m. W. from Gr. Dividing Range.

Semarang, spt., Java, Indonesia; exp. sugar, tobacco, tapioca, kapok; shipbldg., rly. repairs, cement, sawmills, tyres, elec. equipment; univ.; p. (1961) 503,153.

Semipalatinsk, t., Kazakh SSR, USSR; on R. Irtysh; lge meat-packing plant; textiles, engin.; rich gold deposit found in a. 1965; p. (1970) 236,000.

Semmering Pass, low pass, Austria; provides route across E. Alps for rly. from Vienna to Venice; scenic resort; alt. below 3,000 ft.

Semnan, t., Central Prov., Iran; comm. ctr. for tobacco growing region; p. (1966) 31,058.

Sena, t., Moçambique; on R. Zambesi; iron ore mng.

Sendai, t., Honshu, Japan; cas.; univ.; metallurgy, food processing, lacquer ware; p. (est. 1969) 520,000.

Senegal, rep., W. cst. Africa; flat savannah; tropical climate with long dry season; agr. main occupation, groundnuts accounting for

72 per cent exp.; groundnut and agr. processing provide industl. basis; bauxite, phosphate, titanium, zirconium mng.; oil refinery at cap. Dakar; a. 76,104 sq. m.; p. (est. 1969) 3,800,000.

Senegal, R., W. Africa; flows from Kong mtns. W. and N.W. to Atl. at St. Louis, above Cape Verde; lower valley forms fertile agr. land; partially navigable; plans for economic development of valley (1972); 1,000 m. long.

Senftenberg, t., Cottbus, E. Germany; inds. based on local lignite deposits; glassware, tiles; p. c. 21,000.

Senigallia, t., Italy; resort and spt. on Adriatic; fishing and agr. ctr., food processing, agr. machin.; p. (1961) 35,337.

Senlis, t., Oise dep., France; Gallo-Roman wall; tourist ctr. in forested region, 27 m. N.E. of Paris; mkt. t., furniture, rubber gds.; p. (1968) 11,169.

Sennar, t., Sudan; on Blue Nile, on rly. route to Khartoum, Suakin, Pt. Sudan; dam for irrigation, flood control and hydroelectric power; p. c. 8,000.

Sens, t., Yonne dep., France; on R. Yonne; known to Romans as Agedincum; Gothic cath.; agr. tr., food processing, farm implements, boots, chemicals, cutlery; p. (1968) 24,563.

Sensuntepeque, t., E. Salvador; pottery, distilling; p. (1960) 27,070.

Senta, t., Yugoslavia; pt. on Tisa R.; agr. ctr.; food processing, agr. machin., chemicals; p. (1961) 25,062.

Seoul, c., cap. of S. Korea; in Han R. valley; food processing, textiles, rly. engin.; univs., anc. walls; international airport, connected by rly. to outport of Inchon; p. (est. 1971) 5,536,000.

Sepik, R., N. New Guinea; flows E. to Bismarck Sea; drains vast mtn. a.; very fast flow; navigable by shallow craft; 500 m. long.

Sept Isles (Seven Islands), pt., on St. Lawrence, Quebec, Canada; iron brought by rail from Schefferville; airline service but no highway.

Sequoia National Park, Cal., USA; sequoia trees.

Seraing, t., Liége, Belgium; on R. Meuse; coal mng.; iron and steel heavy inds.; seat of famous Cockerill ironwks. (1817) and glasswks. (1825); p. (1968) 40,850.

Seram (Ceram), I., Moluccas, Indonesia; W.-E. mtn. range rising to 11,007 ft.; tobacco, sago; a. 6,621 sq. m.; p. (1961) 73,453.

Serampore, t., W. Bengal, India; former Danish settlement; cotton and silk weaving, pottery, jute- and paper-mills; p. (1961) 91,521.

Serbia, constituent rep., N.E. Yugoslavia; lgst and most impt. rep., "bread basket" of Yugoslavia; grain, fruit; mng. copper and antimony; cap. Belgrade; a. 33,930 sq. m.; p. (1961) 7,642,227.

Seremban, t., cap. of Negri Sembilan st., W. Malaysia; on Linggi R.; linked by rly. to Pt. Dickson; comm. ctr. for rubber and tin a.; p. c. 52,000.

Sereth, R., rises in Carpathians, W. Ukrainian SSR, USSR, and enters Romania to join Danube above Galatl; 450 m. long.

Sergipe, cst. st., Brazil; sandy cst. rising to undulating plateau in interior; est. well wooded and cropped for sugar, cotton; drier interior devoted mainly to stock-raising; oil deposits; a. 8,129 sq. m.; p. (est. 1968) 850,603.

Sergo. *See* Kadiyevka.

Seria, t., Brunei; coastal t., protected from sea by 5 m. dyke; oil ctr., linked by pipeline with Lutong; p. c. 20,000.

Serov, t., RSFSR; in Urals; iron and steel; natural gas pipeline from Ingrim; p. (1970) 100,000.

Serowe, t., Botswana, S.W. Africa; seat of Bamanguato tribe; mkt. ctr.; p. (1964) 34,182.

Serpukhov, t., R. pt., RSFSR; on R. Oka, planned canal link to Moscow; p. (1970) 124,000.

Serra da Mantiqueira, mtn. range, hgst. in Brazil.

Serra do Espinhaco, mtns., Brazil; highest peak, Itambe, 6,705 ft.; iron-ore deposits.

Serra do Mar, mtns., Brazil; form steep E. edge of Brazilian Plateau S. from Rio de Janeiro.

Serrai (Seres), dep., Macedonia, N. Greece; N. mtns. form frontier with Bulgaria in gorge of Struma R. valley; lower Struma R. basin fertile agr. a., producing cotton, tobacco; mkt. ctr. at cap. Serrai; a. 1,565 sq. m.; p. (1961) 248,041.

Sertão, semi-arid hinterland, N.E. Brazil; stock-raising, but drought causes migration to Amazon basin; hydroelectric power and irrigation schemes; focus of social unrest documented in Brazilian novels.

Sesto San Giovanni, sub., Milan, Italy; machin., glass, chemicals, plastics; p. (1961) 71,384.

Sète, spt., Hérault dep., France; on Med. cst.; chemicals, fisheries; exp. oysters, brandy, wine; oil pipeline under sea to Frontignan; importance originally based upon canal network, now supplanted by rlys.; tourism of growing importance; p. (1968) 41,044.

Setesdal (Saetersdal), Aust-Agder, S. Norway; remote valley retaining traditional social customs; arable pastoral agr.

Sétif, cap. of Sétif dep., N.E. Algeria; agr. ctr. for surrounding plateaux; grain, livestock; phosphates in a.; p. (1967) 98,000.

Seto, t., central Honshu, Japan; porcelain ctr. (since 13th cent.); based on local deposits of kaolin; p. (1960) 82,101.

Setouchi, dist., S.W. Honshu, Japan; rice, mandarin oranges, reeds, salt, textiles; part of Japan's industl. belt.

Setté Cama, spt., Gabon, Equatorial Africa; open roadstead, landing difficult owing to swell; exp. timber; oil nearby.

Settle, mkt. t., North Yorks., Eng.; on R. Ribble in heart of Craven dist.; tourist ctr. for limestone cty. of N. Pennines; textiles; p. (1971) 13,994 (dist.).

Settsu Plain, S. Honshu, Japan; at head of Osaka Bay at E. end of Inland Sea; intensively cultivated alluvial lowlands, ch. crops, rice, vegetables, oranges; gr. industl. belt extends along cst. through Kobe, Osaka, Kishiwada; engin., chemicals, textiles; a. 500 sq. m.

Setubal, t., Estremadura, S. Portugal; impt. pt. on Sado R. estuary; exp. cork, wine, oranges; fishing, fish processing, shipyds.; p. (1960) 44,435.

Sevan (Gokcha), lge L., Armenian SSR, USSR; alt. 6,340 ft.; never freezes; surrounded by high barren mtns.; drained by Razdan R.; several hydroelectric power stas.

Sevastopol, spt., Ukrainian SSR, USSR; built on ruins left after famous siege 1855; Black Sea resort; rebuilt after second world war; one of most beautiful Crimean cs.; p. (1970) 229,000.

Sevenoaks, mkt. t., Kent, Eng.; in Vale of Holmesdale; residtl.; agr., lt. inds.; Knole Park; public school founded in 1432; p. (1971) 18,240.

Severn, R., Ont., Canada; flows to Hudson Bay; tr. post at mouth; 350 m. long.

Severn, R., W. of Eng. and N. Wales; rises in Powys and flows to Bristol Channel; suspension bridge at estuary opened 1966; several proposals for major economic development around shores of estuary; 215 m. long.

Severn Tunnel, Eng.; under estuary of R. Severn between Pilning (Avon) and Severn Tunnel Junction (Gwent); carries main rly. from London to S. Wales; longest main-line rly. tunnel in Brit. Is.; 4·4 m. long.

Severodvinsk, t., RSFSR; on Dvina Bay, White Sea; metals, bldg. materials; p. (1970) 145,000.

Seville, c., cap. of Seville prov. and of Andalusia, Spain; spt. on Guadalquivir R., canal link with Atl. Oc.; exp. agr. prod., imports industl. raw materials; major industl., comm. and cultural ctr.; diverse mnfs.; beautiful c. with Moorish influence, prominent in narrow streets of ctr. a.; Gothic cath.; bull-fighting, popular tourist ctr.; p. (est. 1970) 650,000.

Sèvres, t., Hauts-de-Seine, dep., N. France; S.W. sub. of Paris on Seine R.; celebrated porcelain mnfs.; headquarters of International Bureau of Weights and Measures; p. (1968) 20,288.

Seward, t., S. Alaska, USA; rly. terminal, airfield and ice-free harbour make it an impt. supply ctr. for interior Alaska; p. (1960) 1,891.

Seychelles Is., Brit. col., Indian Oc.; consists of 92 Is., lgst. I. Mahé; cap. Victoria; exp. prods. of coconut palm, phosphate, essential oils and spices; famous for species of nut; total a. 156 sq. m.; p. (1968) 49,981.

Seyne, or La Seyne-sur-Mer, t., Var dep., France; nr. Toulon; shipbldg.; p. (1962) 34,270.

Sfax, spt., Tunisia; admin. ctr.; exp. phosphate, olive oil, salt, esparto grass, cereals, dates, hides; imports food, coal, textiles, soap; sponges; fishing; natural gas found in a.; surrounded by irrigated gardens and olive groves; p. (1966) 79,595 (c.), 215,836 (met. a.).

Sgurr Mor, mtn., Ross and Cromarty, Scot.; alt. 3,637 ft.

Shaba (Katanga), prov., Zaire; many varied mineral deposits inc. copper, tin, iron-ore, cobalt, radium; cap. Lubumbashi; a. 180,000 sq. m.; p. 1,853,000.

Shaftesbury, mkt. t., N. Dorset, Eng.; Saxon hilltop t., abbey ruins; ctr. for agr. a.; p. (1971) 3,976.

Shahjahanpur, t., Uttar Pradesh, India; on Deoha R.; agr. mkt. t. and rly. junc.; grain, sugar tr. and processing; p. (est. 1970) 122,381 (c.), 131,179 (met. a.).

Shakhty (Alexandrovsk Grushevski), t., RSFSR; anthracite mng. in Donets Basin; leather, textiles, metal wkg., food inds.; p. (1970) 205,000.

Shamaldy-Say, t., Kirghiz SSR, USSR; new t. on site of Uch-Kurgan hydroelectric power sta.

Shandakan Tunnel, N.Y. st., USA; carries water under Catskill mtns to augment water supply of c. of N.Y.; 18 m. long.

Shanghai, c. and mun., Kiangsu, China; major spt. on left bank of Hwangpu (main waterway of Yangtze delta); despite marshy site its strategic location developed, largely by Brit. businessmen (1843); handles major share of Chinese shipping, but much dredging required; in part a modern W. style c., but distinctively Chinese in original Chinese site; inds. developed in response to location at transit point for major economic region of China in Yangtze basin; major educational ctr.; world's most populous c.; a. 2,239 sq. m.; p. (est. 1971) 10,820,000.

Shanhaikwan, c., N.E. Hopei, China; on double-track rly. to N.E. China; p. (est. 1957) 598,000.

Shanklin. *See* Sandown-Shanklin.

Shannon Airport, Clare, R.o.I.; N.W. of Limerick; on main transatlantic air route; ctr. of customs-free industl. estate.

Shannon, R., Ireland; separates Connaught from provs. of Leinster and Munster, flows to Atl. at Loop Head; hydroelectric power sta. at Ardnacrusha; 224 m. long.

Shansi (Shanxi), prov., N. China; bounded W. and S. by Hwang-Ho (Yellow R.); mainly high plateaux; fertile loess deposits, but drought conditions limit agr. potential; dry crops and livestock; coal, iron ore, petroleum; cap. Taiyuan; a. 60,394 sq. m.; p. (1957) 15,960,000.

Shan State, div., Burma; elevated plateau through which flows Salween R.; impt. mng. dist., lead, zinc, silver at Bawdwin, smelters at Namtu; also tungsten, tin, antimony, manganese; home of Shan people; former Shan and Wa sts.; cap. Taunggyi; a. 60,155 sq. m.

Shantung, coastal prov., N. China; S. of fertile plain of Hwang-Ho; dense p. but agr. potential limited by dry climate; wheat, millet, maize, soyabeans, cotton, hemp, fruits; E. mtns. contain coal, iron, bauxite, kaolin; iron and steel inds. and cotton mills at main industl. ts. of Tsinan and Tsingtao; birthplace of Confucius at foot of sacred peak Tai; cap. Tsinan; a. 56,447 sq. m.; p. (1957) 54,030,000.

Shaohing (Shaoxing), c., N. Chekiang prov., S.E. China; agr. ctr. on Hangchow Bay; rice, wheat, cotton; p. (1953) 130,600.

Shaoyang, c., Hunan prov., China; coal and iron mng.; timber; p. (1953) 117,700.

Shap, mkt. t., Cumbria, Eng.; nearby is Shap Fell 914 ft., an impt. pass traversed by rly. and by a main road; granite quarries.

Shapinsay, Orkney Is., Scot.; p. (1971) 346.

Shari, R., central Africa; formed by several headstreams in Central African Rep., flows across Chad Rep. into L. Chad in wide delta; navigable.

Shārjah, emirate, member of the United Arab Emirates (1971), Persian Gulf; international airport at cap. Shārjah (p. 25,000); natural harbour at Khawr Fakhan; oil exploration, fishing; p. (est. 1970) 40,000.

Sharon, plain, Israel; citrus fruits, vines, poultry.

Shasi, t., S. Hupei prov., China; agr. mkt. ctr. and canalised R. pt.; tr. in cotton, grain; flour milling, textiles; p. c. 131,000.

Shasta Dam, Cal., USA; dams water of Rs. Pit, McCloud, Sacramento for hydroelectric power; irrigation, flood control and reclamation of lower Sacramento valley.

Shatt-al-Arab, R., Iraq; formed by union of Tigris and Euphrates, flows thence to head of Persian G.; swampy delta in rich agr. a.; 120 m. long.

Shawinigan Falls, c., Quebec, Canada; pulp and paper, chemicals, aluminium inds., powered by hydroelectric power from falls on St. Maurice R.; p. (1966) 30,777.

Shawnee, c., Okla., USA; rly. and tr. ctr. for rich agr. a.; electronics, aircraft components; p. (1960) 24,326.

Sheaf, R., South Yorks., Eng.; rises in S.E. Pennines, flows N.E. to join R. Don at Sheffield; 11 m. long.

Shebelinka, natural gas fields nr. Kharkov, Ukrainian SSR, USSR; pipelines to Kharkov-Bryansk and Dnepropetrovsk–Odessa.

Sheboygan, t., Wis., USA; on L. Michigan; ctr. for dairy farming and resort a.; cheese, leather gds., hardware; p. (1960) 45,747.

Shechem. *See* Nablus.

Sheerness, Kent, Eng.; on I. of Sheppey at entrance to estuary of R. Medway; former royal dockyard and garrison; deepwater comm. pt.; electronics, furniture, coach bldg.; p. (1961) 14,123.

Sheffield, c., South Yorks., Eng.; on cramped site at confluence of Rs. Sheaf and Don; univ.; heavy engin. ctr., famous for high quality steels, cutlery, tools; major post-war redevelopment of c. ctr. with ambitious and imaginative housebldg. programme by a socially conscious local council, taking advantage of hilly site, has turned S. into a very attractive modern c.; p. (1971) 519,703.

Sheksna, R., RSFSR; rises in L. Beloye and flows S. to Rybinsk Reservoir; forms part of Volga–Baltic waterway; 100 m. long.

Shellhaven, oil refineries, Essex, Eng.; on N. side of Thames estuary, nr. Standord-le-Hope.

Shenandoah National Park, Va., USA; extends along forested Blue Ridge mtns.; views of Shenandoah valley and Alleghenny mtns.

Shenandoah, R., Va., USA; trib. of Potomac R.; picturesque valley noted for rich apple orchards and pastures; scene of several campaigns in Civil War; 170 m. long.

Shendi, t., Sudan; on R. Nile; ctr. of Jaalin tribe; p. c. 15,000.

Shensi, prov., N. China; Great Wall runs nr. N. border with Inner Mongolia; from N.–S. four main regions: (1) dry, fertile loess plateau, notorious famine region, but increasingly irrigated; (2) fertile Wei R. valley, ctr. of p. and agr.; (3) Tsinling divide; (4) agr. a. of upper Han R.; grain, livestock; coal, petroleum; developing transportation network aiding economic development; cap. Sian; a. 72,919 sq. m.; p. (1957) 18,130,000.

Shen-yang (Mukden), c., cap. of Liaoning prov., N.E. China; on Hun R. in narrowest part of lowland with hilly country on both sides; impt. rly. junc. with main routes N. to Harbin and Trans-Siberian rly., S. to Peking, Luta and into Korea; comm. and educational ctr.; impt. textile ctr., heavy inds., cement, chemicals, machin.; agr. tr.; p. (1957) 2,411,000.

Shepperton, t., Victoria, Australia; ctr. of vegetable and orchard a.; fruit canning, metal and brick wks.; p. (1972) 19,409.

Sheppey, I. of, Kent, Eng.; in Thames estuary E. of mouth of R. Medway; cereals, sheep-raising; new steel wks.; ch. t., Sheerness; a. 45 sq. m.

Shepshed, t., Leics., Eng.; 3 m. W. of Loughborough; hosiery; p. (1971) 8,456.

Shepton Mallet, mkt. t., Somerset, Eng.; at foot of Mendip Hills, 5 m. S.E. of Wells; old woollen ctr.; bacon curing, brewing; p. (1971) 5,910.

Sherborne, mkt. t., Dorset, Eng.; 4 m. E. of Yeovil; famous abbey and school; Norman cas. ruins; glass fibre; p. (1971) 7,265.

Sherbrook, t., S.E. Quebec, Canada; comm. and mkt. ctr. for surrounding agr. region; inds. based on local sources of hydroelectric power from Magog R.; textiles, paper mills, machin.,

flour milling; deposits of asbestos nearby; p. (1966) 75,960.

Sheringham, t., Norfolk, Eng.; on E. cst. 4 m. W. of Cromer; seaside resort; fishing; p. (1971) 4,666.

Sherwood Forest, anc. royal woodland, Notts., Eng.; now restricted to infertile Bunter Sandstone cty.; inc. several estates and parks, notably the Dukeries.

Shetland Is., Scot.; in Zetland co., 50 m. N.E. of the Orkneys; about 100 in gr., ch. I., Mainland; lge number of rainy days, but climate mild and tourism attracted by isolation, scenery and wildlife; Fair Isle famous for knitted clothes; fishing, livestock, agr., potatoes; offshore oil exploration; lge. elderly p. due to attractions as a retirement a.; ch. t. Lerwick; a. 551 sq. m.; p. (est. 1971) 17,327.

Shibin el Kôm, Menûfiya, Egypt; rly. and mkt. ctr. in agr. a. of Nile delta; tobacco, textiles; p. (1960) 55,000.

Shigatze, t., Tibet, China; on R. Tsangpo; tr. ctr. on main caravan routes; p. c. 20,000.

Shihkiachwang (Shijiazhuang), c., Hopeh prov., China; cotton milling, glass mftg.; grew rapidly with coming of rly.; p. (est. 1957) 598,000.

Shikarpur, t., N. Sind, Pakistan; tr. ctr. for grain, precious stones; engin., food processing; p. c. 63,000.

Shikoku, I., Japan; S. of Honshu; smallest of Japan's 4 main Is.; sparsely populated, mtnous. interior, heavily forested; arable agr. in lowlands; ch. cs., Matsuyama, Kochi, Tokushima; a. 7,248 sq. m.; p. c. 4,200,000.

Shildon, t., Durham, Eng.; 3 m. S. of Bishop Auckland; rly. wks.; p. (1971) 14,499.

Shilka, R., E. Siberia, RSFSR; trib. of R. Amur; 345 m. long.

Shillelagh, v., R.D., Wicklow, R.o.I.; oak forest, gave its name to oak or blackthorn cudgel.

Shillong, c., cap. of Assam, India; at alt. 4,500 ft. in Khasi hills; ctr. of impt. tea-growing dist.; admin., technical education; pleasant climate attracts summer tourists; p. (est. 1967) 84,269 (c.), 130,195 (met. a.).

Shimizu, spt., Japan; exp. tea, oranges; fishing; p. (est. 1969) 232,000.

Shimoda, spt., Honshu, Japan; between Nagoya and Yokohama; fishing; p. (1965) 63,498.

Shimoga, t., Karnataka, India; on Tunga R.; cotton-ginning, rice-milling; p. (1961) 63,764.

Shimonoseki, spt., Honshu I., Japan; at extreme S.W. of I.; tunnel links island of Kyushu; rly. ctr.; engin., chemicals based on local coal; fishing; p. (est. 1969) 267,000.

Shin, Loch, Sutherland, Scot.; 16·5 m. long; drained by R. Shin to R. Oykell.

Shipka Pass, Bulgaria; over the Balkan mtns., 47 m. N.E. of Plovdiv.

Shipley, t., West Yorks., Eng.; on R. Aire, 8 m. N.W. of Leeds; worsted mnfs.; inc. model v. of Saltaire, built by Titus Salt (1851) to house his alpaca mill workers; p. (1971) 28,444.

Shiraz, c., cap. of Fars prov., Iran; beautifully sited in vine-growing dist.; textiles, rugs, metalwk., lt. elec. ind.; tourist ctr.; tombs of Saadi and Hafez (brothers of Imam Riza); known as "city of roses and nightingales"; pleasant winter climate; univ., airpt.; oil refinery projected; p. (1966) 269,865.

Shire, R., flows out of L. Malawi south through Malawi and Moçambique to Zambesi; 370 m. long.

Shirwa or Chilwah, shallow L., Malawi; 40m. long, 14 m. wide; has 4 Is.

Shizuoka, c., cap. of S. pref., Honshu, Japan; pt. on Suruga Bay; impt. ctr. for tea and oranges; lacquerware, textiles; p. (est. 1969) 414,000.

Shkodër (Scutari), c., N. Albania; stands at foot of L. Scutari, 16 m. from Adriatic; mkt. ctr., tobacco, cement, textiles; enjoyed greatest comm. prosperity after Ottoman conquest; several mosques; p. (1967) 50,000.

Shkodër (Scutari), L., on borders of Montenegro (Yugoslavia) and Albania; outlet via R. Boyana into Adriatic, 29 m. long.

Shoeburyness, t., Essex, Eng.; on N. side of Thames estuary, 3 m. E. of Southend; p. (1961) 10,855.

Sholapur, c., Maharashtra, India; between Hyderabad and Poona; rly. junc., impt. textile ctr.; p. (est. 1970) 406,349.

Shoreditch. *See* Hackney.

Shoreham-by-Sea, t., West Sussex, Eng.; at mouth of R. Adur, 4 m. E. of Worthing; spt. and mkt. t.; oil jetty; boat bldg., chemicals, soap, preserves; p. (1971) 18,804.

Shoshone Falls, on Snake R., Idaho, USA; height 200 ft., used for irrigation projects.

Shott el Jerid, Algeria and Tunisia; deep depression in the desert.

Shotts, plateau, N. Africa; upland region with salt Ls., within Atlas mtns.

Shreveport, c., La., USA; industl. ctr. in cotton-growing dist.; petroleum; p. (1970) 178,061 (c.) 289,909 (met. a.).

Shrewsbury, co. t., Shrops., Eng.; on R. Severn 12 m. above Ironbridge gorge between the Wrekin and Wenlock Edge; agr. and dairy equipment, machin., elec. gds.; cattle and sheep mkt.; public school; p. (1971) 56,140.

Shropshire (Salop), non-met. co., Eng.; on Welsh border; crossed by R. Severn; fine pastoral cty. with hills and woodland, agr. and dairying; iron; industl. activity at co. t. Shrewsbury; a. 1,347 sq. m.; p. (1971) 336,934.

Shumen (Kolarovgrad), t., Bulgaria; S.E. of Ruse; mnfs. clothing, leather, metal-ware; tr. in cereals, wine; p. (1965) 59,362.

Shusha, t., Azerbaydzhan SSR, USSR; health resort; silk spinning, rug making; Armenian p. massacred by Tatars 1926; p. c. 6,000.

Shustar, t., Iran; carpets, woollens, pottery; shallow-draught boats can reach Shallili, nr. S. by R. Karun; p. 20,000.

Sialkot, t., Pakistan; N.E. of Lahore; sports gds., musical and surgical instruments, paper; agr. tr. and processing ctr.; p. (est. 1969) 167,000.

Siam. *See* Thailand.

Siam, G. of, lge inlet, S. China Sea; sheltered, with shallow water; l. 385 m. N.W. to S.E.

Sian (Xian), cap. of Shensi prov., China; impt. route and industl. ctr.; food processing and tr., flour, grain, tea, tobacco, iron and steel, textiles, chemicals; p. (est. 1957) 1,310,000.

Siangtan (Xiangtan), c., Hunan prov., China; on navigable Siang R.; regional tr. ctr., tea, cotton; electrical gds., machin., textiles; Mao Tse-tung born nearby; p. (1953) 188,600.

Siauliai, t., Lithuanian SSR, USSR; 115 m. N.W. of Vilna; impt. rly. junc.; food and leather inds. p. c. 60,000.

Sibenik, t., Croatia, Yugoslavia; Adriatic spt.; exp. timber, bauxite; aluminium, chemical and textile inds.; p. (1961) 26,253.

Siberia, terr., USSR; extends from Urals to Sea of Okhotsk and Bering Strait, bounded by Arctic on N. and by Mongolia and Turkestan on S.; climate mostly severe; ch. ts., Novosibirsk (cap. W. S.) and Irkutsk (cap. E. S.); rich in coal, iron, minerals; oil and gas in W. Siberian lowland; resources not yet fully known but Soviet economic policy is to develop S. in order to use its natural resources to the full; p. and economic activity clustered around rlys., esp. Trans-Siberian rly.; a. c. 5,000,000 sq. m.

Sibiu, t., central Romania; picturesque site at foot of Transylvanian Alps; retains mediaeval character despite being an impt. industl. ctr.; textiles, agr. machin., chemicals, leather; lge German minority p.; caths.; p. (est. 1969) 118,893.

Sibu, t., Sarawak, E. Malaysia; 80 m. up R. Rejang; comm. ctr. at head of ocean navigation; airport; p. (1960) 29,630.

Sicily, lgst I., Mediterranean Sea; former kingdom and now aut. region of Italy; pleasant climate, mtnous.; fertile lowlands, especially plain of Catania, but agr. hampered by primitive methods, absentee landlords and need for irrigation; lge range of Mediterranean crops; fishing; sulphur; petroleum reserves, refining and petrochemical inds.; volcanic Mt. Etna erupted in 1971; a. 9,926 sq. m.; p. (1969) 4,876,624.

Sidi-bel-Abbès, t., W. Algeria; old fortress t., became H.Q. of Fr. Foreign Legion; agr. mkt. ctr. for region producing grain, grapes, olives, livestock; cement, furniture mnfs.; p. (1967) 101,000.

Sidlaw Hills, low mtn. range, Angus, Perth, Scot.; max. alt. 1,492 ft.

Sidmouth, mkt. t., Devon, Eng.; on S. cst., 15 m.

S.E. of Exeter; seaside resort; retirement ctr.; p. (1971) 12,039.

Sidon. *See* Saïda.

Siebengebirge, sm. wooded range of seven hills, W. Germany; of volcanic origin rising to 1,500 ft. on right bank of Rhine; famous for Drachenfels association with the Siegfried saga.

Siedlce, t., Poland; 55 m. E. of Warsaw; rly. junc.; agr. inds.; p. (1970) 39,000.

Siegburg, t., N. Rhine–Westphalia, W. Germany; on R. Sieg; Benedictine abbey; dyes, iron, ceramics; p. (1963) 34,100.

Siegen, t., N. Rhine–Westphalia, W. Germany; on R. Sieg; 2 cas.; ironmng. and smelting, machin., leather; p. (1965) 50,000.

Siemianowice Slaskie, t., Poland; nr. Katowice; ctr. of mng., industl. region; iron and steel, machin.; cas.; p. (1970) 67,300.

Siena, hill-town, Tuscany, Italy; 32 m. S. of Florence; spreads over three hilltops with Piazza del Campo in between where celebrated Palio festival (horse-races) are held; 13th- and 14th-cent. arch., cath.; agr. mkt., tanning, glass, textiles, bricks; *panforte* confectionery; tourist ctr.; p. (1969) 66,084.

Sierra Leone, rep., W. cst. Africa; mangrove swamps on cst., high plateau, with peaks over 6,000 ft. in interior; climate hot, humid; economy based on agr. and mng.; palm kernels, coffee, cocoa, rice, timber, iron ore; main exp. diamonds, notorious smuggling problem; fishing along cst.; cap. Freetown; a. 27,925 sq. m.; p. (est. 1970) 2,500,000.

Sierra Madre Occidental, mtn. range, Mexico; volcanic, forms W. edge of Mexican plateau; average alt. 7,000 ft.

Sierra Madre Oriental, mtn. range, Mexico; limestone, forms E. edge of Mexican plateau; average alt. 8,000 ft.

Sierra Maestra, mtn. range, Oriente prov., S.E. Cuba; rises abruptly from cst.; rich in minerals.

Sierra Morena, mtn. range, Spain; between Guadalquivir and Guadiana basins, highest point 5,500 ft.; rich in minerals.

Sierra Nevada, mtn. range, Granada, Spain; highest summit Mulhacén 11,421 ft.

Sierra Nevada, mtn. chain, Cal., USA; highest peak Mt. Whitney 14,898 ft.; nat. parks.

Sierra Nevada de Mérida, mtn. range, W. Venezuela; extends N.E. from San Cristóbal to Barquisimeto; extension of E. range of Andes, alt. over 16,000 ft.; impt. coffee plantations from 3,000 to 6,000 ft. on slopes.

Sierra Pacaraima, mtn. range, Brazil, Venezuela; forms part of international bdy. and watershed between Amazon and Orinoco basins.

Sighet, frontier t., N. Romania; on R. Tisa, on border with USSR; extreme, continental climate; timber, agr. and livestock tr.; cotton textiles; p. (1963) 27,528.

Siglufjörd, spt., N. Iceland; impt. herring fisheries; p. (1962) 2,625.

Sigtuna, t., Stockholm, Sweden; on Mälaren L.; first cap. of Sweden; educational ctr., tourist resort; p. c. 3,300.

Sihanoukville. *See* Kompong Som.

Sikang, region, S.W. China; mtnous., mostly above 12,000 ft.; E. part in Szechwan prov., W. part in Chamdo region, Tibet; deep gorges of Salween, Mekong, Yangtze, and Hwang-ho provide severe obstacles to E.–W. communications; highest summit Minya Gonka 25,250 ft.

Sikhote-Alin, mtn. range, S.E. Asiatic RSFSR; rises to 6,000 ft. and extends for 750 m. parallel to Pac. cst.; hinders access to W. basins; forestry, minerals.

Si-Kiang, ch. R., S. China; headstreams rise in Yunnan plateau, form main R. nr. Sunchow; R. then flows E., enters S. China Sea through Ige delta nr. Hong Kong; lower valley intensively cultivated, rice, sugar-cane, tea; tropical climate permits continuous cultivation of most crops through year; valley very densely populated; c. 1,250 m. long.

Sikkim, kingdom, protectorate of India; on S. slopes of Himalayas; smallest of Himalayan kingdoms; forest covered; economically underdeveloped; scene of rivalry between India and China; cap. Gangtok; a. 2,745 sq. m.; p. (est. 1968) 187,000.

Sila, La, massif, Calabria, S. Italy; granite mass occupying full width of peninsula; alt. over 3,500 ft., max. 6,327 ft.

Silchester, par., Hants, Eng.; between Basingstoke and Reading; ruins of Roman t., Calleva Atrebatum; impt. ctr. of Roman communications network.

Silesia (Polish Śląsk, Czech Slezsko, German Schlesien), geographical region, Central Europe; since 1945 divided between Poland, ČSSR and E. Germany; extends along both banks of Oder R.; bounded in S. by Sudeten mtns.; forested mtns., fertile arable agr. in lowlands; major concentration of economic activity based on coalfield of Upper Silesia (ceded to Poland 1922); complex territorial history; now forms highly urbanised industl. conurb. mainly in Poland, admin. by Katowice, Opole, Wrocław, Wrociaw (c.), and part of Zielona Góra; ČSSR portion forms part of N. Moravia; E. Germany retains sm. part of Lower Silesia W. of Neisse R.; total a. 18,000 sq. m.

Silistria, t., Bulgaria; on Danube opposite Romanian t. of Calarasi; cereals and timber tr.; mnfs. foodstuffs, ceramics, furniture; mosques; p. c. 21,000.

Silkeborg, t., Jutland, Denmark; tourist resort in beautiful forest and lake region; p. (est. 1965) 27,000.

Silloth, resort, on Solway Firth, Cumbria, Eng.

Silsden, t., West Yorks., Eng.; wool textiles; p. (1971) 5,588.

Silvermines, v., Co. Tipperary, R.o.I.; 5 m. S.W. of Nenagh; lead and zinc.

Silver Spring, t., Md., USA; sub. N. of Washington, D.C.; science-based inds. and research laboratories; p. (1960) 66,348.

Simcoe, L., S. Ont., Canada; several resorts; boating, fishing; 30 m. by 26 m.

Simeulue, I., S.W. of Sumatra, Indonesia; primitive islanders; fishing and shifting cultivation.

Simferopol, t., Ukrainian SSR, USSR; on R. Salghir nr. Sevastopol; industl. ctr. in rich agr. a., fruit-canning, tobacco, machin.; p. (1970) 250,000.

Simla, t., Punjab, India; famous hill-station c. 7,075 ft. high on forested ridge of Himalayas, 175 m. N. of Delhi.

Simonstown, W. Cape Prov., S. Africa; naval sta., docks; p. (est. 1963) 10,220.

Simplon, mtn., Switzerland; alt. 11,695 ft.; the pass over the Simplon (alt. 6,594 ft.) from Domodossola, Italy, to Brig in the Rhône valley, Switzerland, was originally made by Napoleon I. The Simplon rly. tunnel leads from Brig on the Swiss side to Iselle in the Val di Vedro on the Italian and is the longest in the world, 12·25 m.

Simpson Desert, Australia; S.E. of Alice Springs, N.T., extends into S. Australia.

Sinai, peninsula, easternmost part of Egypt; between Gs. of Aqaba and Suez, at head of Red Sea; mainly desert in N., granitic ridges in S. rising to 8,500 ft. at Jebel Katrun; Jebel Musa or Mt. Sinai (7,359 ft.) is one of numerous peaks; mineral resources; coalmine at Maghâra; occupied by Israeli troops, Nov. 1956–March 1957, and since June 1967; a. 11,055 sq. m.

Sinaia, t., S. Romania; health and winter sports resort in Transylvanian Alps; until 1947 summer residence of Romanian kings; palaces; p. c. 10,000.

Sinaloa, st., Mexico; on G. of Cal.; agr. and mng., rich in gold, silver, copper, iron and lead; cereals on uplands; sugar, cotton on lowlands; cap. Culiacán; a. 22,580 sq. m.; p. (1969) 1,185,000.

Sind, prov. (revived 1970), Pakistan; lower Indus valley; dry climate; E. part reaches edge of Thar desert; agr. depends on irrigation; irrigated by Sukkur and Kotri systems; wheat, rice, cotton, oilseeds, sugar-cane, fruits; handicraft inds. in ts.; ch. ts., Karachi, Hyderabad, Sukkur, Shikarpur; a. 50,000 sq. m.; p. (1972) 13,965,000.

Singapore, rep., S.E. Asia; I. separated from Malaysian mainland by Johore Strait and linked by causeway; equatorial climate; cap. Singapore on S. cst. has fine natural harbour; major entrepôt tr. for Malaysia and S.E. Asia; world ctr. of rubber and tin mkts.; tr. in rubber, tin, petroleum, imported foodstuffs; growing industl. estates; oil refining, shipbldg.; only 20 per cent land cultivated; fruit, mkt. gardening; offshore fishing; reduc-

tion in Brit. military presence from base on N. cst. of I.; a. 224 sq. m.; p. (1970) 2,074,507 (rep.); (est. 1969) 2,016,800 (c.).

Singhbhum, dist., Bihar, **India**; iron- and steel-wks. based on local iron mng.; a. 5,191 sq. m.; p. (1961) 2,049,911.

Sinhailien (Xinhailion), c., Kiangsu, **China**; formed by merger of Sinput, Tunghai and Lienyienkang; agr. comm. ctr., tr. in cereals, cotton; p. (1953) 207,600.

Sining (Xining), cap. of Chinghai prov., **China**; ctr. of spring wheat a.; woollen mills, iron and steel; p. (est. 1957) 300,000.

Sinkiang-Uighur (Xinjiang), aut. region, N.W. **China**; borders on USSR and Kashmir; very dry climate; remote until new roads and rlys. penetrated a.; pastoral agr., sheep, goats; new st. arable farms, wheat, maize, millet; lge oil reserves; cap. Urumchi; a. 635,830 sq. m.; p. (1957) 5,640,000.

Sinop, cap. of S. prov., **Turkey**; sm. pt. with gd. harbour on Black Sea but poor communications with hinterland; p. (1960) 9,899.

Sintra (Cintra), t., **Portugal**; summer resort, 18 m. from Lisbon; p. c. 8,000.

Sinuiju, c., W. **N. Korea**; spt. at mouth of Yalu R. on Yellow Sea; linked by bridge to Antung (China); industl. ctr.; chemicals, aluminium inds., using power from Supung Dam; p. c. 200,000.

Sinyang, t., S. Honan, **China**; regional ctr. for S. Honan and N. Hupei; p. c. 75,000.

Sion, t., cap. of Valais can., **Switzerland**; on R. Rhône; built on two castled hills; cath.; horticultural mkt. ctr.; hydroelectric power stas. and coal mines nearby; p. (1969) 21,600.

Sioux City, Iowa, **USA**; on R. Missouri; meat-packing, foundries, elec. gds. cement; p. (1970) 83,626 (c.). 113,929 (met. a.).

Sioux Falls, t., S.D., **USA**; on Big Sioux R.; in rich wheat region; machin., cars, farming implements; nuclear reactor; p. (1960) 65,466.

Siret, R., Romania, USSR; flows E. from Carpathians to Danube; steep forested left bank, fertile terraced right bank; hydroelectric power and irrigation schemes; 280 m. long.

Sisak, t., Croatia, **Yugoslavia**; developing industl. ctr. and R. pt.; iron and steel, oil refining.

Sistan and Baluchistan, twin prov., **Iran**; bounded by Afghanistan and Pakistan; cap. Zahedan; much desert land; arid, very hot; p. (1967) 456,435.

Sitapur, t., **Uttar Pradesh, India**; rly. junc.; agr. tr. ctr.; eye hospital; p. (1961) 53,884.

Sitra, I., Persian G.; forms part of st. of Bahrain, 3 m. long and 1 m. wide; oil pipeline and causeway carrying road extends out to sea for 3 m. to deep-water anchorage.

Sittang, R., Burma; rises in Pegu Yoma, flows S. to G. of Martaban through delta; valley intensively cultivated, delta forested; irrigation project; 610 m. long.

Sittard, mkt. t., Limburg, **Neth.**; tanning; p. (1968) 33,804.

Sittingbourne and Milton, mkt. t., Kent, **Eng.**; on Milton Creek, 9 m. E. of Chatham; paper-mills, brick-wks.; cement; insecticides; ctr. of fruit-growing dist.; p. (1971) 30,861.

Sivas, c., cap. of S. prov., **Turkey**; impt. tr. and agr. ctr. in Kizil Irmak valley; cement, rugs; copper mng. nearby; foundations of modern Turkey laid here by Atatürk 1919; p. (1965) 108,320 (c.), 169,964 (met. a.).

Sivash Sea or Putrid Sea, lagoon on N.E. cst. of Crimea, **USSR**; 20 per cent salt; a. 1,000 sq. m.

Siwa, oasis, **Egypt**; in Libyan Desert, c. 300 m. S.W. of Alexandria; dates, olives; remains of temple of Zeus Ammon (visited by Alexander the Great); 20 m. long, 1 m. wide; p. c. 5,000.

Sizewell, Suffolk, **Eng.**; nuclear power sta.

Sjaelland, I., Denmark; lgst I., separated from Fyn I. by the Gr. Belt; fertile glacial clays but rapidly spreading ts.; ch. c. Copenhagen; a. 2,840 sq. m.; p. (1965) 2,055,040.

Skagerrak, arm of N. Sea, giving access to the Kattegat, between Norway and Denmark, 70–90 m. wide.

Skagway, sm. spt., Alaska, **USA**; at head of Lynn Canal inlet, 400 m. N.W. of Prince Rupert; linked by rly. to Whitehorse on upper R. Yukon; boomed in gold rush (1898), p. 15,000, subsequently declined; p. (1960) 659.

Skåne (Scania), peninsula, extreme S. of Sweden; corresponds approx. to cos. Malmöhus, Kristianstad; most favoured part of Sweden in relief, soil, climate; intensive farming, wheat, barley, sugar-beet, fodder crops, dairy cattle; ch. ts. Malmö, Lund, Hälsingborg; a. 4,000 sq. m.

Skaraborg, co., **Sweden**; between Ls. Väner and Vätter; dairy agr.; a. 3,269 sq. m.; p. (1961) 250,180.

Skara Brae, prehistoric v., Mainland, Orkneys, Scot.; v. excavated from under sand dunes.

Skarzysko-Kamienna, t., Kielce, **Poland**; ctr. of developing metallurgical ind.; p. (1970) 39,200.

Skaw The (Grenen), C., at extreme N. of **Denmark**.

Skeena, R., B.C., **Canada**; rises in N. Rocky mtns., flows S.W. to Pac. Oc. at Prince Rupert; lower valley used by Canadian National Rly.; 400 m. long.

Skegness, t., Lincs., **Eng.**; on E. cst.; resort; lt. engin.; p. (1971) 13,557.

Skellefteå, t., N. **Sweden**; on Bothnia G.; growing since discovery of Boliden ores nearby; iron and copper ore smelting; p. (1968) 61,949; (1961) 22,000.

Skelmersdale and Holland, t., Lancs., **Eng.**; coal, bricks, drainpipes; new t. (1961); p. (1971) 26,681.

Skelton and Brotton, t., Cleveland, **Eng.**; at N. foot of Cleveland hills, 10 m. E. of Middlesbrough; steel flooring; p. (1971) 15,083.

Skibbereen, mkt. t., Cork, **R.o.I.**; cath.; knitwear; p. (1966) 2,028.

Skiddaw, mtn., Cumbria, **Eng.**; E. of Bassenthwaite L.; alt. 3,054 ft.

Skien, spt., Bratsberg, Norway; on R. Skien; saw-mills, timber tr.; birthplace of Ibsen; p. (1968) 44,213.

Skikda (Philippeville), t., spt., **Algeria**; exp. prods. from Saharan oases; oil pipeline to Mesdar; p. (1967) 85,000.

Skipton, t., North Yorks., **Eng.**; on R. Aire; cotton and rayon inds.; cas.; p. (1971) 12,422.

Skopje, t., cap. of Macedonia, **Yugoslavia**; anc. Scupi, one of oldest ts. in Balkans; oriental appearance; destroyed by earthquake (1963); food processing, iron and steel wks.; new oil refinery; airpt., route ctr.; p. (est. 1971) 388,000.

Skövde, t., **Sweden**; between Ls. Vänern and Vättern; garrison t., chemicals, cement; p. (1968) 28,028.

Skye, I., lgst of Inner Hebrides, Inverness, **Scot.**; mtnous.; sheep-farming and fisheries; tourism; only t. Portree; a. 547 sq. m.; p. (1971) 7,364

Skyros, I., Sporades, Greece; in Aegean Sea; mainly agr.; a. 77 sq. m.; p. (1961) 2,882.

Slagelse, t., Sjaelland, **Denmark**; food inds.; iron wks.; 11th cent. church; p. (1960) 20,562.

Slask. *See* **Silesia.**

Slave Coast, name given to the Guinea cst. of W. Africa between the Volta and Niger deltas where slaves were shipped from 16th to 19th cent.

Slave, R., N.W. Terr., Canada; flows into Gr. Slave L.; l. 260 m.

Slavonia, historic region, **Yugoslavia**; between Drava R. (N.) and Sava R. (S.); now part of rep. of Croatia; ch. t. Osijek.

Slavyansk, t., Ukrainian SSR, **USSR**; in Donets basin; chemicals, engin.; p. (1970) 124,000.

Sleaford, mkt. t., Lincs., **Eng.**; 12 m. N.E. of Grantham; agr. and agr. implements; p. (1971) 7,975.

Sleat, Sound of, Inverness, Scot.; separates I. of Skye from the mainland; 7 m. wide.

Slezsko. *See* **Silesia.**

Sliema, t., **Malta**; E. of Valletta; resort; p. (1971) 21,887.

Slieve Bloom, hill range, Offaly and Laoghis cos., **R.o.I.**; highest point 1,733 ft.

Slieve Donard, mtn., **N. Ireland**; highest of the Mourne mtns.; alt. 2,796 ft.

Sligo, co., Connacht, **R.o.I.**; borders Atl. Oc.; rises to Ox Mtns. over 2,000 ft.; pastoral agr., fishing; co. t. S.; a. 737 sq. m.; p. (1966) 51,078.

Sligo, co. t., Sligo, **R.o.I.**; on S. Bay; pt., exp. agr. prods.; abbey ruins; cath.; p. (1966) 13,297.

Slioch, mtn., Ross and Cromarty, **Scot.**; 3,217 ft.

Sliven, t., **Bulgaria**; in Balkan mtns.; impt. woollen mnf. ctr.; carpets; p. (1965) 68,331.

Slough, t., Berks., Eng.; on river terrace N. of R. Thames, 23 m. W. of London; many lt. inds.; p. (1971) 86,757.

Slovakia (Slovak Socialist Rep.), ČSSR; extends from Carpathians to Danube valley; prosperous agr.; cap. Bratislava; with Czech Socialist Rep. forms Fed. Rep. of Czechoslovakia; a. 18,902 sq. m.; p. (1961) 4,175,017.

Slovenia, constituent rep., Yugoslavia; mtnous., but many minerals inc. coal; highly developed region; cap. Ljubljana; a. 6,266 sq. m.; p. (1961) 1,591,523.

Slupsk (Stolp), t., N.W. Poland (since 1945); formerly in Pomerania; on R. Stupia, nr. Baltic Sea; cas.; wood, metal, food processing; p. (1970) 68,300.

Småland, historic prov., S. Sweden; barren upland a. S. of L. Vättern; moorland, deciduous forest; contrasts greatly with remainder of S. Sweden.

Smederevo, t., Serbia, Yugoslavia; nr. Belgrade; pt. on R. Danube; walled t.; steel wks.; p. (1971) 27,182.

Smethwick. *See* Warley.

Smolensk, c., cap. of S. oblast, RSFSR; on upper Dnieper; anc. c. damaged in many wars; route ctr.; vehicles, machin., food processing; p. (1970) 211,000.

Smyrna. *See* Izmir.

Snaefell, highest mtn., I. of Man; alt. 2,034 ft.

Snake R. or **Lewis Fork**, trib. of Columbia R., flows from Wyo. to Wash., USA; gorges; hydroelectric power; 1,050 m. long.

Sneek, t., Friesland, Neth.; butter, cheese mkt.; yachting ctr.; p. (1967) 24,464.

Sneeuwbergen, mtn. range, Cape Prov., S. Africa.

Snöhetta, mtn., highest in Dovrefjell range, Norway; alt. 7,565 ft.

Snowdon, mtn., Gwynedd, Wales; highest in Eng. and Wales, alt. 3,560 ft.; forms part of Snowdonia Nat. Park.

Snowy Mtns., N.S.W., Australia; part of Australian Alps; rise to over 7,000 ft.; S.M. scheme (1950) diverts water from headstreams in tunnels through mtns. to provide water for irrigation and hydroelectric power; completed 1972.

Snowy, R., N.S.W. and Victoria, Australia; rises in Mt. Kosciusko, flows S. into Bass strait 80 m. W. of C. Howe; part of Snowy Mtn. scheme; 270 m. long.

Soar, R., Leics., Notts., Eng.; rises S. of Leics., flows N.W. to join R. Trent; 43 m. long.

Sobat, R., Sudan and Ethiopia; made up of several sm. Rs.; trib. of White Nile; 500 m. long.

Soche. *See* Yarkand.

Sochi, t., RSFSR; on Black Sea at foot of main Caucasian range; health resort with subtropical climate and sulphur springs; developed since 1933; p. (1970) 224,000.

Society Is., Fr. Polynesia, S. Pac. Oc.; comprise Windward Is. (Tahiti, Moorea, Mehetia, etc.) and Leeward Is. (Huahune, Raiatea, etc.); discovered by Captain Cook; main prods. phosphate and copper; cap. Papeete; a. 636 sq. m.; p. (1967) 61,519.

Socotra, I., G. of Aden, Indian Oc.; since 1967 part of Democratic Rep. of Yemen; under Brit. protection 1886–1967; lofty tableland; myrrh, frankincense, aloes; cap. Tamrida; a. 1,400 sq. m.; p. (est.) 12,000.

Sodbury, t., Avon, Eng.; former coal-mng. ctr.; expanded t.; p. (1971) 67,040 (dist.).

Söderhamn, spt., Sweden; on G. of Bothnia, N. of Gavle; timber, wood-pulp; p. (1961) 13,010.

Södermanland, co., Sweden; between Baltic cst. and L. Mälar; cattle-rearing; mng.; a. 2,634 sq. m.; p. (1961) 227,615.

Södertälje, t., Sweden; on S. canal linking L. Mälar with Baltic cst.; vehicles, chemicals, tobacco; p. (1968) 52,503.

Soest, c., N. Rhine–Westphalia, W. Germany; one of oldest ts., member of Hanseatic league; suffered heavily in second world war; soap, textile machin., engin.; p. (1963) 34,200.

Soest, t., Utrecht, Neth.; residtl., agr. ctr.; p. (1968) 33,190.

Sofia, c., cap. of Bulgaria; Roman Serdica, and Triaditsa of Byzantine Greeks; nr. Yugoslav border; impt route ctr. and ch. industl. ctr. of rep.; machin., textiles, chemicals, elec. engin.; cath., univ., and many historic bldgs.; p. (est. 1969) 858,140 (c.); (1967) 923,400 (met. a.).

Sogne Fjord, Norway; longest fjord in Norway; length 110 m.; tourism.

Sogn og Fjordane, prov., W. Norway; borders Atl. Oc., indented by Sogne Fjord; lge hydroelectric power resources; tourism; a. 7,135 sq. m.; p. (1963) 100,467.

Sohag, t., Egypt; on R. Nile; cotton processing; p. (1960) 62,000.

Soho, dist., London, Eng.; settled by Fr. Huguenots 16th cent.; high proportion of foreign residents, sometimes known as London's "Latin quarter"; night-clubs, theatres, restaurants, film-company offices.

Soissons, t., Aisne dep., France; anc. Augusta Suessionum; commands N.E. approaches to Paris; cath.; agr. tr.; p. (1968) 27,641.

Sokoto, t., Nigeria, W. Africa; founded 1809 as cap. of native st. of S., p. mainly Hausa and Fulani; tr. ctr.; p. (1963) 89,817.

Solent, The, strait separating I. of Wight from Hampshire mainland, Eng.

Solihull, t., West Midlands, Eng.; 5 m. S.W. of Birmingham; residtl.; motor vehicles, chemicals; p. (1971) 106,968.

Solikamsk, t., RSFSR; on R. Kama; chemicals from local potash; rapidly growing t.; p. (1965) 87,000.

Solingen, t., N. Rhine–Westphalia, W. Germany; 15 m. E. of Düsseldorf; cutlery ctr.; p. (est. 1969) 175,200.

Solnechnyy. *See* Gornyy Snezhnogorsk.

Solomon Is., S. Pac. Oc.; archipelago of volcanic Is.; N. Is. (inc. Bougainville) form part of Trust Terr. of Papua–New Guinea; remainder Brit. prot.; copra, ch. exp., threatened by insect pests; plantations damaged in second world war; fishing; a. 11,500 sq. m.; p. (1966) 221,290 (mostly Melanesian).

Solothurn (Soleure), can., N.W. Switzerland; crossed by Jura mtns., and R. Aare; 97 per cent cultivated; dairying; many industl. ts.; cap. S.; a. 306 sq. m.; p. (1969) 228,000.

Solothurn (Soleure), t., cap. of S. can., Switzerland; on R. Aare; anc. t.; cath.; watches, motor mnf.; p. (1969) 19,100.

Solway Firth, arm of Irish Sea, between Dumfries, Kirkcudbright, Scot., and Cumberland; 4 m. long.

Somalia (Somali Democratic Rep.), E. cst. Africa; narrow cst. plain in N., widens in S., interior plateau reaching c. 8,000 ft.; dry, hot climate; 75 per cent. p. nomadic; livestock herding; permanent agr. in irrigated R. valleys; sugar, banana plantations in Webi Shebeli and Juba Rs. in S.; potential for mineral exploitation; cap. Mogadishu; a. 246,200 sq. m.; p. (est. 1969) 2,730,000.

Somaliland, French. *See* Afars and Issas.

Sombor, t., Serbia, Yugoslavia; cattle, grain tr.; textiles; p. (1961) 37,802.

Somersby, v., Lincs., Eng.; birthplace of Tennyson.

Somerset, non-met. co., S.W. Eng.; inc. part of Exmoor, Mendips, Quantocks and Blackdown hills; to N. is drained marshland of Somerset levels; dairying; coastal resorts; co. t. Taunton; a. 1,335 sq. m.; p. (1971) 387,000.

Somme, dep., N. France; borders Eng. Channel; crossed by R. Somme; low-lying agr. a.; textile inds.; cap. Amiens; a. 2,443 sq. m.; p. (1968) 512,113.

Somme, R., France; flows in deps. Aisne and Somme to English Channel; scene of battles 1916; linked to Rs. Oise and Scheldt by canal; 116 m. long.

Somport Tunnel, on bdy. France–Spain; carries main rly. from Pau to Zaragoza under Pyrenees; 5 m. long.

Sönderborg, spt., S. Jutland, Denmark; older part of c. on Als I.; palace; textiles; p. (est. 1965) 23,000.

Sondrio, t., cap. of S. prov., Italy; commands the Adda valley, impt. routeway through Alps; agr. mkt.; textiles; p. (1969) 22,792.

Songkhla, t., Thailand; most S. t.; ctr. of rubber growing dist.; third t. of cty.; p. 40,602.

Song-koi (Red R.), R., rises in Yunnan plateau, S.W. China, flows S.E. through N. Vietnam, enters G. of Tongking; Hanoi is nr. head of delta; Haiphong nr. one of R. mouths; lower valley densely populated and intensively cultivated; c. 800 m. long.

Sonora, st., Mexico; on G. of Cal.; crossed by Sierra Madre Occidental; irrigated agr.; ch. producer of wheat, cattle; fish exp.; cap. Hermosillo; a. 70,477 sq. m.; p. (1969) 1,249,000.

Sonoran Desert, Arizona, USA; alt. 3,000 ft.; enclosed basins and salt marshes.

Sonsonate, t., El Salvador; old t. with cath.; comm. ctr. of richest agr. region of rep., famed for coffee and dairy prod.; nr. Isalco volcano; p. (1961) 35,851.

" Soo " Canals. *See* **Sault Ste. Marie Canals.**

Soochow (Suzhou), c., Kiangsu, China; nr. Shanghai; former treaty pt.; textile ctr.; p. (1957) 633,000.

Sopot, spt., Poland; on Gdansk Bay; resort, spa; part of Trójmiasto; p. (1970) 47,600.

Sopron, t., N.W. Hungary; on R. Hunte; nr. Austrian border; textiles, chemicals; p. (1966) 44,700.

Sorau. *See* **Zary.**

Soria, t., cap. of prov. of Soria, Spain; on R. Duero at 3,000 ft.; agr.-processing; retains mediaeval appearance; p. (1961) 19,301.

Sorocaba, t., São Paulo st., Brazil; rly. wks.; textiles, cement, footwear wines, fertilisers; p. (est. 1968) 142,835.

Sorrento, cst. t., S. Italy; nr. S. extremity G. of Naples; popular resort, celebrated for its wines in anc. times; p. (1961) 29,000.

Sosnowiec, t., Katowice prov., Poland; coal-mng. ctr., iron wks.; metal and textile inds.; cas.; p. (1970) 144,700.

Soufrière, volcano, St. Vincent, W.I.; alt. 4,048 ft.

Sound, The, channel between Kattegat and Baltic, 3 m. across at narrowest part; proposed tunnel between Denmark and Sweden.

Sousse (Susa), spt., Tunisia; exp. olive oil, phosphates; resort; p. (1966) 82,666.

South Africa, Republic of, lies in most S. part of Africa between Atl. and Indian Ocs.; comprises 4 provs., Cape Prov., Natal, O.F.S., Transvaal; narrow cst. plain, several interior plateaux (2,000–6,000 ft.) with upland grasslands (Veld) and fringed by escarpments; climate warm and sunny; most highly developed cty. in Africa, based on mineral resources of gold and diamonds, and more recent successful economic diversification; coal in Witbank and Vryheid dists. serves iron and steel ind. at Pretoria; growing textile, food-processing inds. at pts. Cape Town, Durban and rubber at Pt. Elizabeth; agr. dependent upon water supply; rich fruit growing a. around Cape Town, extensive grain growing and pastoral areas extended by irrigation; enforces practice of apartheid; caps. Pretoria (admin.), Cape Town (legislative), Bloemfontein (judicial); a. 472,685 sq. m.; p. (1970) 21,300,000 (inc. 3,800,000 whites).

Southall. *See* **Ealing.**

South America, S. continent of Western Hemisphere; inc. all ctys. S. of Panama. *See* **Latin America.**

Southampton, c. spt., Hants., Eng.; at head of Southampton Water on peninsula between estuaries of Rs. Test and Itchen; univ.; extensive docks for passenger-liners; container facilities; ship repairing, oil refining, cable mkg., electronics, synthetic rubber; p. (1971) 214,826.

Southampton Water, inlet, Hants., Eng.; comprises drowned estuaries of Rs. Itchen and Test; gives access from Solent and Spithead to spt. of Southampton; l. 9 m., width 1–1·5 m.

South Australia, st. of the Australian Commonwealth; the " desert state "; undulating interior forms part of central plateau of continent but inc. mtns. in S. and S.E. and L. Eyre basin 39 ft. below sea level; Nullarbor Plain in S.W.; sheep in S.E., intensive agr. in Murray R. valley; some interior mng. inds. but st. cap. of Adelaide contains most inds. and 60 per cent p.; a. 380,070 sq. m.; p. (1972) 1,172,774.

South Bend, c., Ind., USA; on St. Joseph R.; ctr. of fruit and dairy region; motorcars, aircraft, agr. machin.; p. (1960) 132,445 (c.); (1968) 275,000 (met. a.).

Southborough, t., Kent, Eng.; 2 m. N. of Tunbridge Wells; residtl.; p. (1971) 9,750.

South Carolina, st., USA; level in E., mtns. in W.; sub-tropical climate; part of cotton belt; pigs and maize also impt.; cotton textiles; cap. Columbia; a. 31,055 sq. m.; p. (1970) 2,522,881.

South Dakota, st., USA; lies in Gt. Plains; crossed by R. Missouri; irrigated agr.; part of spring wheat belt, but now more diversified crops; agr. processing; cap. Pierre; a. 77,047 sq. m.; p. (1970) 661,406 (inc. 25,000 Indians).

South Downs, chalk escarpment, East and West Sussex and Hants., Eng.; stretch from Chichester to Eastbourne; rise to over 800 ft.

Southend-on-Sea, t., Essex, Eng.; on N. side of Thames estuary; varied lt. inds.; air ferry terminal; resort; dormitory for London; p. (1971) 162,326.

Southern Alps, mtns., S.I., N.Z.; alt. 10,000 ft.

Southern Ocean, surrounds Antarctica; pack ice.

Southern Uplands, region, S. Scot.; broad belt of hilly cty., N. part bleak moorland, S. part deeply cut by glens; sheep-rearing; dairying in valleys.

Southgate. *See* **Enfield.**

South Georgia, Brit. I., S. Atl. Oc.; dependency of Falkland Is.; former whaling ctr.; a. 1,600 sq. m.; p. (1967) 22.

South Glamorgan, co., S. Wales; mostly lowland, borders Bristol Channel; inc. lge industl. ts. and pts. of Cardiff and Barry; a. 161 sq. m.; p. (1971) 389,916.

South I., lge. I., N.Z.; inc. S. Alps (highest Mt. Cook 12,349 ft.), Canterbury Plains, impt. sheep-rearing dist.; cool climate; considerable hydroelectric power resources; tourism; a. 58,093 sq. m.; p. (1971) 810,267.

South Kensington, dist., W. London, Eng.; contains Victoria and Albert Museum, Geological and Science Museums, British Museum of Natural History, Commonwealth Institute, Albert Hall.

Southland, prov., S.I., N.Z.; part of provincial dist of Otago; S. plains, an impt. mixed farming a.; tourism; coalfields; a. 11,170 sq. m.; p. (1971) 106,084.

South Orkney Is., Antarctica; S.W. of S. Georgia; p art of Brit. Antarctic Terr. (1962); meteorological sta.

South Ossetian, aut. oblast, Georgian SSR, USSR; in Caucasus mtns.; goat and sheep rearing dist.; a. 1,505 sq. m.; p. (1971) 100,000.

Southport, t., Merseyside, Eng.; on S. side of Ribble estuary; 18 m. N. of Liverpool; seaside resort; residtl.; p. (1971) 84,349.

South Sandwich Is., Antarctica; dependency of Falkland Is.; sm. volcanic Is.; a. 130 sq. m.

South Shetland, archipelago, S. Atl. Oc.; 400 m. S. C Horn; part of Brit. Antarctic Terr. (1962).

South Shields, t., Tyne and Wear, Eng.; on S. bank at mouth of R. Tyne; coming holiday resort; marine engin., new lt. inds.; p. (1971) 100,513.

Stuttgart, c., cap. of Baden-Württemburg, **W. Germany**; on Neckar R.; cas., cath., rly. junc.; industl. and comm. ctr.; publishing, science-based inds.; oil refinery nearby; p. (est. 1969) 621,000.

Styria, prov., **Austria**; borders Yugoslavia on S.; mtnous. with forests and pastures; lignite and iron mng., inds. around cap. Graz; grain, wine, fruit, stock-rearing; tourism; p. (1961) 1,137,865.

Suakin, former pt., **Sudan**, N.E. Africa; on Red Sea; now used only for pilgrim traffic to Jeddah; replaced by Pt. Sudan; plans for new pt.

Suanhwa (Xuanhua), c., Hopeh prov., **China**; iron mng.; p. (1953) 114,000.

Subotica, t., Serbia, **Yugoslavia**; univ.; agr. ctr. with Hungarian culture; agr. processing; expanding industl. ctr.; p. (1961) 75,036.

Suceava, t., S. Bukovina, N.E. **Romania**; mkt. t. on Suceava R.; once the residence of Moldavian princes; p. (1968) 40,441.

Suchow (Suzhou), c., Kiangsu, **China**; at junc. of N. China plain and Yangtse R. basin; impt. rly. junc.; p. (est. 1957) 676,000.

Sucre, c., cap. of Chuquisaca dep. and *de jura* cap. of **Bolivia (La Paz is *de facto* cap.)**; in valley of Andes at 8,500 ft.; agr. ctr., oil refining, cement plant; univ. and cath.; p. (1965) 58,359.

Sucre, st., Venezuela; on Caribbean cst.; coffee and cacao; fishing impt.; fish canning at cap. Cumaná; a. 4,556 sq. m.; p. (1961) 401,992.

Sudan, The, rep., N.E. **Africa**; climatic transition from N. desert to rainy equatorial S.; mainly plateaux, dissected by Nile R. system; sporadic conflict between N. and S. (1955–1972); long staple cotton, grown in irrigated areas, provides most valuable exp.; gum arabic from lge. forest areas; food processing; dams under construction on Atbara and Blue Nile Rs.; cap. Khartoum; a. 977,000 sq. m.; p. (1970) 15,503,000.

Sudbury, t., Ont., **Canada**; nickel, copper mng.; refining; univ.; p. (1971) 89,898. (c.), 172,458 (met. a.).

Sudbury, t., Suffolk, **Eng.**; on R. Stour, 12 m. N.W. of Colchester; p. (1971) 8,183.

Sudene, terr., N.E. Brazil; government sponsored economic development.

Sudetenland, region of ČSSR bordering Germany, until 1945 German-speaking; annexed by Hitler 1938, recovered by ČSSR 1945; named after Sudeten mtns.; contains 20 per cent of p. of ČSSR.

Sudeten Mtns. or **Sudetes**, mtn. range along border of **ČSSR** and **Poland**; separating Bohemia and Moravia from Silesia; mineral resources.

Suez, spt., **Egypt**; the anc. Arsinoë; at head of G. of Suez (arm of Red Sea) and S. entrance of Suez canal, which crosses the isthmus of Suez to the Mediterranean at Port Said; Port Tewfiq adjoining has quay and docks; oil refining, fertilisers; p. (est. 1970) 315,000.

Suez Canal, ship canal, **Egypt**; connects Mediterranean Sea (Pt. Said) with Red Sea (Suez) through Ls. Manzala, Timsah, and Bitter; length 101 statute m.; closed since Arab–Israeli war of June 1967.

Suez, G., Red Sea; N.W. arm of Red Sea between Arabian desert and Sinai peninsula, **Egypt**; southern approach to Suez canal; length 190 m., width varies from 12 to 25 m.

Suffolk, non-met. co., E. Anglia, **Eng.**; bounded on E. by N. Sea, drowned coastline; rises to 300 ft. in E. Anglian Heights in W.; impt. agr. a., lge farms, mixed farming; inds. based on agr.; many expanded ts. in S.; formerly divided into 2 admin. parts; co. t. Ipswich; a. 1,467 sq. m.; p. (1971) 537,000.

Suhl, admin. dist., **E. Germany**; inc. Thuringian Forest; expanding inds. based on local potash and iron ore; a. 1,497 sq. m.; p. (1964) 548,949.

Suhl, t., Suhl, **E. Germany**; once famous for armaments; motor-cycles; p. (1965) 28,177.

Sui, Baluchistan, **Pakistan**; natural gas; pipeline to Karachi.

Suir, R., R.o.I.; flows E. to Waterford harbour; 85 m. long.

Sukhumi, spt., Georgian SSR, **USSR**; agr. processing, saw milling; resort; p. (1970) 102,000.

Sukkur, t., **Pakistan**; major bridging point of R. Indus; 230 m. N.E. of Karachi; dam for irrigation; thermal sta.; p. (est. 1969) 131,000.

Sulaiman, mtns., **Pakistan**; range bounding the Punjab and Baluchistan.

Sulaimaniya, t., **Iraq**; in hill dist. nr. Iran border; p. (1965) 131,000 (met. a.).

Sula Is., I. gr. in Molucca Sea, E. of Sulawesi, **Indonesia**; little developed.

Sulawesi (Celebes), I., **Indonesia**; mtnous., lge forests; copra, coffee, gold, nickel, copper, asphalt; ch. pts. Menado, Makasar; a. 73,160 sq. m.; p. 7,079,349.

Sultanabad. *See* **Arak**.

Sulu Is., Philippines; archipelago between Borneo and the Philippines; inc. over 400 volcanic Is. and coral islets; a. 950 sq. m.; under US control 1899–1940.

Sumatra, I., Indonesia; relatively underdeveloped; sparse p.; main development in Cultuurgebied, rubber, oil palm, sisal, tobacco; impt. oil deposits and new oil refineries; a. 182,860 sq. m.; p. (1967) 18,300,000.

Sumba or Sandalwood I., S. of Flores, **Indonesia**; horse-breeding; rice, maize, tobacco, timber, cinnamon; cap. Waingapu; a. 4,305 sq. m.; p. (1961) 251,126.

Sumbawa, I., Indonesia; between Flores and Lombok; wet climate, sparse p.; a. (inc. nearby Is.) 5,240 sq. m.; p. 314,843.

Sumgait, t., Azerbaydzhan SSR, **USSR**; on Caspian Sea; 25 m. N.W. of Baku; metallurgical ind.; chemicals; p. (1970) 124,000.

Sumy, t., Ukrainian SSR, **USSR**; engin., chemicals, textiles, agr. processing; p. (1970) 159,000.

Sunbury-on-Thames, t., Surrey, **Eng.**; W. of London; residtl., water wks., gravel pits; petrol research establishment; p. (1971) 40,035.

Sunda Is., Indonesia; between S. China Sea and Indian Oc.; form two grs., Greater Sunda Is., inc. Java, Sumatra, Borneo, Sulawesi, Banka, and the Lesser Sunda Is. (renamed Nusa Tenggara 1954) inc. Bali, Lombok, Sumbawa, Timor.

Sundarbans, The, tract of forest and swamps, fringing the delta of the Ganges, India/Bangladesh; 81 m. wide; rice grown in N.; tigers and crocodiles found in S.

Sunda Strait, between Java and Sumatra, **Indonesia**; 13 m. wide, contains the volcanic I. of Krakatao.

Sunday I., lgst of Kermadec Is., N.Z.; 20 m. in circuit and with a p. of 10 is the only one of the Kermadec Is. that is inhabited; meteorological and radio sta. established on I.

Sundbyberg, t., **Sweden**; adjoins Stockholm; chemicals, paper; p. (1968) 28,661.

Sunderland, spt. Tyne and Wear, **Eng.**; at mouth of R. Wear; precision and aero-engin., clothing, glass, shipbldg.; p. (1971) 216,892.

Sundsvall, spt., Västernorrland, **Sweden**; on a wide bay of the Baltic nr. Hernösand; timber and wood-pulp inds.; p. (1968) 62,278.

Sungari, R., N.E. China; trib. of R. Amur; inc. the Nonni, length 1,150 m.; used for hydro-electric power.

Sunnyvale, t., Cal., **USA**; ctr. of fruit-growing a.; lt. inds.; p. (1960) 52,898.

Superior, t., Wis., USA; at head of L. Superior; tr. in grain, timber, coal; shipbldg. and flour mills; oil refining; p. (1960) 33,563.

Superior, L., N. America; lgst sheet of fresh water in the world; lies between Canada and USA; one of chain of gr. Ls. in St. Lawrence system; outlet to L. Huron by St. Mary's R., receives waters of St. Louis, Pigeon and Nipigon; impt. waterway; a. 32,000 sq. m.

Surabaya, spt., Java, Indonesia; ch. naval base; handles nearly half Indonesia's tr.; shipbldg., oil refining, food processing; p. (1961) 1,007,945.

Surakarta (Solo), Java, Indonesia; on Solo R.; tr. ctr. for agr. region; former sultan's palace; p. (1961) 367,626.

Surat, c., Gujarat, India; on R. Tapti; textile ctr.; notable as first English trading post 1612; p. (est. 1970) 393,915.

Surbiton, Surrey, Eng.; on R. Thames, inc. in Royal Borough of Kingston-upon-Thames; residtl.; lt. engin., bricks, tiles, elec. components; p. (1961) 62,940.

Suresnes, t., Hauts-de-Seine dep., France; sub. of Paris; cars, chemicals; p. (1968) 41,263.

Surinam (Dutch Guiana), self-gov. terr. of Neth., S. America; sub-tropical climate; p. concentrated on cst. where rice, sugar, and citrus fruits grown; main exp. bauxite (86 per cent of total exp.); cap. Paramaribo; a. 62,500 sq. m.; p. (1967) 345,000.

Surinumu Dam, 30 m. from Port Moresby, Papua-New Guinea; part of hydroelectric scheme; opened 1963.

Surrey, non-met. co., S. Eng.; S. of R. Thames inc. part of N. Downs; serves as dormitory a. and recreational dist. for London; mkt. gardening, dairying; co. t. Guildford; a. 639 sq. m.; p. (1971) 981,000.

Susa. *See* Sousse.

Susquehanna, R., N.Y., Penns., and Md., USA; flows to Chesapeake Bay through highly industl. a.; routeway W. from Philadelphia and Baltimore across Appalachian mtns.; not navigable; hydroelectric power; 422 m. long.

Sussex. *See* East Sussex, and West Sussex.

Susten Pass, alpine road, alt. 7,296 ft., between Hasli Tal and Reuss valley, links Bernese Oberland with Gotthard road, Switzerland.

Sutherland, co., Scot.; N.W. Moray Firth, washed by Atl. Oc. and N. Sea; grazing and forest land, most sparsely p. region in Scot.; mtns., with many lochs; co. t. Dornoch; a. 2,102 sq. m.; p. (1971) 13,055.

Sutlej, R., Pakistan; rises in the Himalayas and flows to the R. Indus; used for lge scale irrigation; 1,000 m. long.

Sutton, outer bor., Greater London, Eng.; inc. former bors. of Beddington and Wallington, Sutton and Cheam, and Carshalton; residtl.; p. (1971) 168,775.

Sutton Coldfield, t., West Midlands, Eng.; 6 m. N.E. of Birmingham; residtl.; hardware, plastics; p. (1971) 83,130.

Sutton-in-Ashfield, t., Notts., Eng.; 3 m. S.W. of Mansfield; lt. engin.; hosiery; coal-mng. dist.; p. (1971) 40,725.

Suva, c., cap. of Fiji Is.; on Viti Levu I.; fine harbour; exp. coconut prods., sugar; international airport; p. (1966) 54,157 (c.), 80,248 (met. a.).

Suwalki, t., N.E. Poland; nr. Lithuanian bdy.; timber, grain, woollens; p. (1970) 25,400.

Suwannee, R., Fla., and Ga., USA; flows to G. of Mexico; known as "Swanee River," 250 m. long.

Svendborg, spt., Fyn, Denmark; exp. dairy prods.; textiles, machin.; p. (1965) 23,729.

Sverdlovsk (Ekaterinburg), c., cap. of S. oblast, RSFSR; on R. Iset in E. foothills of Ural mtns.; on Trans-Siberian rly.; industl. expansion during second world war; heavy machin., metallurgical and chemical plants; univ.; p. (1970) 1,026,000 (c.); (1969) 1,028,000 (met. a.).

Svir, R., USSR; flows between L. Onega and L. Ladoga; hydroelectric power; navigable; 125 m. long.

Svishtov (Sistova), t., N. Bulgaria; R. pt. on Danube in vine-growing dist., nr. Romanian bdr.; cath., univ.; p. (est. 1963), 22,111.

Swabia, historic region, mediaeval duchy, Germany; now forms part of Baden–Württemberg and Bavaria; contains Black Forest.

Swabian Alps, mtns., Baden–Württemberg, W. Germany; inc. the Swabian Jura range between valleys of Neckar and Danube.

Swadlincote, t., Derbys., Eng.; 3 m. E. of Burton-on-Trent; potteries, engin., clothing, coal-mng. ctr.; p. (1971) 20,235.

Swaffham, mkt. t., Norfolk, Eng.; fruit canning; p. (1971) 4,270.

Swale, R., North Yorks., Eng.; joins R. Ure to form R. Ouse, 60 m. long.

Swanage, mkt. t., Dorset, Eng.; on bay, E. cst. I. of Purbeck; seaside resort; stone quarries; p. (1971) 8,550.

Swanland, region, W. Australia; consists of extreme S.W. corner of W. Australia; forests of Karri and Jarrah; vines, citrus and deciduous fruits, wheat; highest p. density in W. Australia; ch. ts. Perth, Fremantle, Bunbury.

Swanscombe, t., Kent, Eng.; 3 m. W. of Gravesend; cement and paper mnfs.; p. (1971) 9,184.

Swansea, c., spt., West Glamorgan, Wales; on Swansea Bay; univ.; grew with exp. of coal; now imports minerals; copper and zinc refining; steel, aluminium, wire, plastics; p. (1971) 172,566.

Swatow (Shantou), c., spt., S.E. Kwangtung prov., China; at mouth of Han R.; mftg. and exp. tr.; sugar refineries; p. (1957) 676,000.

Swaziland, indep. kingdom, S. Africa; within Brit. Commonwealth (1968), bordered by S. Africa on S., W., and N. and by Moçambique on E.; four north–south regions: high, middle, low veld and Lebombo escarpment; rainfall increases with alt.; agr. basis of economy and sugar impt. exp., but iron ore major exp.; asbestos mng., food processing inds.; cattle raising main internal activity; cap. Mbabane; a. 6,704 sq. m.; p. (1970) 451,000.

Sweden, kingdom, Scandinavia, N.W. Europe; divided for admin. purposes into 24 cos.; cap. c. Stockholm; mtnous. in N. and S. with central lowland belt containing major agr. a. and lge proportion of p.; sm. home mkt. makes for dependency on exps., especially of minerals; inc. high-grade iron ore from Kiruna and Malmberget, N. of Arctic circle; development of high-value science-based inds.; furniture, porcelain and glass mnfs. have international reputation; social democratic st. since 1932; remained neutral in second world war; highly advanced system of social security; a. 173,665 sq. m.; p. (1970) 8,013,696.

Swidnica (Schweidnitz), t., Poland (since 1945); formerly in Lower Silesia; ctr. of agr. dist.; metals, elec. machin., leather, textiles; p. (1970) 47,500.

Swilly, Lough, N.E. Donegal, R.o.I.; arm of Atl. Oc. between Fanad Point and Dunaff Head; extends 25 m. inland.

Swindon, t., Wilts., Eng.; in upper Thames Valley (Vale of White Horse), 27 m. S.W. of Oxford; impt. rly. junc.; mkt. for local dist.; heavy engin., textiles, tobacco; expanded t.; p. (1971) 90,830.

Świnoujście (Swinemünde), spt., N.W. Poland (since 1945); formerly in Pomerania; on I. of Usedom (Uznam), Baltic Sea; spt. for Szczecin; spa and summer resort; fishing; p. (1971) 27,900.

Swinton, t., South Yorks., Eng.; in Don valley, 3 m. N.E. of Rotherham; potteries, bricks and tiles; p. (1971) 14,897.

Swinton and Pendlebury, ts., Gtr. Manchester, Eng.; 5 m. W. of Manchester; cotton spinning, coal, engin., accumulator mftg.; p. (1971) 40,124.

Switzerland, confederation, central Europe; landlocked mtnous. st. with major physical features dominated by Alpine mtn. system; divided into 25 cantons and half-cantons for purposes of govt.; 3 official languages: German (72 per cent), French (20 per cent), Italian (6 per cent) in addition to Romansch; like Norway, major natural resource is water power; industl. specialisation on precision engin., especially watch and clock mnfs.; agr. in valleys with impt. output of dairy prod., transhumance between mtn. pastures and valley bottoms; tourism provides valuable source of income; cap. Berne; a. 15,950 sq. m.; p. (1970) 6,269,783.

Sydney, c., cap. of N.S.W., Australia; on shore of Pt. Jackson Bay; many beautiful bldgs. and parks, stretching S. to Botany Bay; lge comm.

and active inds.; magnificent bridge, harbour and docks; ch. pt. of Australia; 2 caths., univ., oil refining, consumer gds.; wool tr.; p. (1972) 61,940 (c.), 2,799,634 (met. a.).

Sydney, spt., Cape Breton I., Nova Scotia, Canada; coal mng. and exp.; steel, chemicals; p. (1971) 32,459.

Syktyvkar, c., Komi ASSR, **RSFSR**; R. pt. on Vychegda R.; shipyds., sawmilling, engin.; cultural ctr. of Komi people; p. (1970) 125,000.

Sylhet, t., Bangladesh; on Surma R. in tea growing dist.; fertilisers; p. (1961) 37,740.

Syracuse, c., S.E. Sicily, Italy; old t. on Ortygia I., off E. cst., modern t. on mainland, connected by bridge; founded c. 734 B.C.; ctr. of anc. Greek culture; exp. olive oil, oranges, lemons, wine; chemicals at Priolo; many Greek and Roman remains; p. (1969) 104,862.

Syracuse, c., N.Y., **USA**; on Erie Barge canal; impt. industl. ctr. for chemicals, electronics, machin.; formerly salt-producing ctr.; univ.; p. (1970) 192,529 (c.), 629,190 (met. a.).

Syr Dar'ya, one of main Rs. of central Asia; formed in Ferghana Valley in Uzbek SSR, **USSR**, flows through Tadzhik SSR and Kazakh SSR to Aral Sea; not navigable but used for irrigation and hydroelectric power; 1,500 m. long.

Syria (**Syrian Arab Rep.**), S.W. **Asia**; on E. cst. Mediterranean; much of a. mtnous. and semi-desert; climate hot, but cold winters in highland interior; c. 70 per cent p. engaged in agr. which provides 30 per cent nat. income; mainly pastoral, but grains, fruit and cotton grown in well watered Euphrates R. valley and along cst.; oil exp. since 1968; textiles, food processing in Aleppo and cap. Damascus; a. 71,210 sq. m.; p. (1970) 6,294,000.

Syriam, t., **Burma**; nr. Rangoon; main oil refining ctr. of cty.

Syros or **Syra**, I., one of Cyclades, Aegean Sea, S. **Greece**; heath-covered; most populous of Cyclades; ch. t. Hermoupolis; p. c. 33,000.

Syzran, c., **RSFSR**; impt. R. pt. on Volga nr. confluence with Syzran R.; rly. ctr.; engin., oil refining; p. (1970) 174,000.

Szazhalombatta, t., **Hungary**; on Danube, 15 m. S. of Budapest; lgst oil refinery in rep.; oil supplied through Druzhba pipeline.

Szczecin (**Stettin**), c., N.W. **Poland** (since 1945); formerly cap. of Prussian prov. of Pomerania; impt. spt. at mouth of R. Oder; deep-sea fishing base; shipbldg., metallurgy, engin., chemicals, technical univ.; p. (1970) 337,200.

Szczecin, prov., **Poland**; borders Baltic Sea; drained by R. Oder; mainly agr.; a. 12,100 sq. m.; p. (1970) 897,000.

Szechwan (**Sichuan**), prov., S.W. **China**; mostly occupied by Yangtse R., known as Red basin because of colour of its sandstone; fertile a. with mild climate; rice, tea, citrus fruit, tobacco, sugar-cane; lge coal reserves; exp. tung oil; silk-producing a.; most populous prov.; cap. Chengtu; a. 219,690 sq. m.; p. (1957) 72,160,000.

Szeged, t., **Hungary**; nr. confluence of Rs. Tisza and Maros; anc. R. pt. destroyed by floods 1879, since rebuilt; univ.; tr. in cereals, paprika; textiles; p. (est. 1969) 117,000.

Szekesfehérvár, t., **Hungary**; nr. Budapest; mkt. t., with aluminium and metal inds., food processing; known since Roman times; once cap. of Hungarian kings; p. (1968) 68,000.

Szeping (**Siping**), c., Kirin prov., **China**; agr. distributing ctr.; cement; p. (1953) 125,900.

Szolnok, t., **Hungary**; pt. on R. Tisa, E. of Budapest; route ctr.; machin., paper, cellulose, chemicals; p. (1968) 59,000.

Szombathely, t., W. **Hungary**; rly. ctr.; agr. machin., textiles, shoes; birthplace of St. Martin of Tours (c. A.D. 316); p. (1968) 60,000.

T

Tabasco, coastal st., **Mexico**; on Bay of Campeche; low-lying; rapid development with drainage of swamps; cash crops of cacao, coffee, sugar, tobacco; petroleum deposits aiding industl. development; cap. Villa Hermosa; a. 9,782 sq. m.; p. (1969) 691,000.

Table Bay, inlet of Atl., cst. of C. of Good Hope, S. Africa; site of Cape Town.

Table Mountain, Cape Prov., S. Africa; nr. Cape Town; alt. 3,549 ft.

Tabor, t., **CSSR**; S. of Prague, on R. Luznice; rly. junc.; textiles, tobacco; p. (1961) 20,142.

Tabora, t., central **Tanzania**; E. Africa; at junc. of rlys. from Dar es Salaam and L. Victoria; p. (1960) 15,350.

Tabriz, c., **Iran**; cap. of Azerbaijan; metal inds., carpets, leather, soap; famous blue mosque; univ.; p. (1966) 403,413.

Tachira, st., **Venezuela**; mtnous. inland st. bordering Colombia; coffee; cap. San Cristobal; a. 4,286 sq. m.; p. (1961) 399,163.

Tacna, t., cap. of Tacna prov., Peru; in fertile valley of mtnous. region; agr. t.; p. (1961) 18,000.

Tacna, prov., **Peru**; mtnous. and arid, some irrigated valleys; transferred from Chile by treaty 1929; cap. T.; subject to earthquakes; a. 4,930 sq. m.; p. (1961) 69,176.

Tacoma, spt., Wash., **USA**; on Puget Sound; shipping, fishing; grew with Alaskan and Pac. tr.; port inds. and agr. processing; p. (1960) 147,970 (t.); (1968) 400,800 (met. a.).

Tacuarembo, dep., **Uruguay**; N. of Rio Negro R., which provides hydroelectricity; mainly agr.; cap. T.; a. 6,105 sq. m.; p. (1963) 19,658.

Tadmor. *See* **Palmyra**.

Tadoussac, t., Quebec, **Canada**; on R. Saguenay, where it enters St. Lawrence R.; tourist ctr.; oldest settlement in Canada 1599; p. (1966) 1,059.

Tadzhik (**Tadzhikistan**) **SSR**, constituent rep., **USSR**; borders China and Afghanistan; mainly mtnous., inc. Pamirs and Turkestan and part of highly cultivated Ferghana Valley; cattle breeding; cotton main cash crop; impt. oil and hydroelec. power resources; cap. Dushanbe; a. 55,700 sq. m.; p. (1970) 2,900,000

Taegu, c., S. **Korea**; textiles, agr. processing; p. (1966) 845,073.

Taejon, t., S. **Korea**; S. of Seoul; fish, petroleum, p. (1966) 315,094.

Taff, R., Powys, South and Mid Glamorgan, Wales; rises in Brecon Beacons, flows S.E. across coalfield to Bristol Channel at Cardiff; 40 m. long.

Tafilalet, Morocco, N. Africa; oasis of the Sahara, E. of Atlas; dates.

Taganrog, c., **RSFSR**; spt. on Sea of Azov; iron and steel, engin.; site of fortress founded by Peter the Great 1698; birthplace of Chekhov; p. (1970) 254,000.

Tagliamento, R., N.E. **Italy**; rises in Carnic Alps, flows S. into Adriatic Sea; 100 m. long.

Tagus, R., Spain and **Portugal**; rises in E. Spain and flows across the Meseta to Atl. Oc. at Lisbon where there is a magnificent new bridge; its estuary forms one of the finest harbours in Europe.

Tahiti, ch. I., Society Is., **Fr. Polynesia**; contains Papeete, main admin. ctr. of Fr. Oceania; fertile alluvial belt; exp. copra, phosphates, vanilla; tourism; a. 402 sq. m.; p. (1967) 61,519.

Taichow (**Taizhou**), c., Kiangsu prov., China; rice ctr.; p. (1953) 159,800.

Taichung, t., Taiwan; agr. mkt.; food processing; p. (est. 1969) 428,426.

Taif, t., Hejaz, Saudi Arabia; 50 m. W. of Mecca; 5,900 ft. a.s.l.; summer resort; p. (est. 1963) 54,000.

Tai Hu, L., Kiangsu, China; focus of intensive system of small canals and waterways, 60 m. N. of Shanghai; a. c. 100 sq. m.

Taimyr Peninsula, N. cst., Siberia, **USSR**; terminates with C. Chelyuskin; occupies most of Taimyr National Area, inhabited by nomadic Samoyeds; p. (1970) 38,000.

Tainan, t., S.W. cst. of Taiwan; former cap.; univ.; p. (est. 1969) 461,838.

Taipei, c., cap. of Taiwan; on cst. plain in N. Taiwan; nucleus of major industl. a.; ma^{j}or transport ctr., international airpt.; 2 univs.; p. (est. 1969) 1,712,108.

Taiwan (**Formosa**), I., off cst. of S.E. China; beautiful I. with intensive agr.; most densely populated cty. in the world; part of Japan 1895–1945; returned to China 1945; occupied by Nationalist government of Chiang Kai-Shek

since 1949 with US protection (now to be withdrawn); cap. Taipei; a. 13,890 sq. m.; p. (1971) 14,833,012.

Taiyüan, c., cap. of Shansi prov., N. China; on Fen R.; walled c.; univ.; ctr. of rapid industl. development; integrated iron and steel plant; chemicals, textiles; p. (1957) 1,020,000.

Taiz, t., Yemen Arab Rep.; in fertile valley; former cap.; p. c. 80,000.

Takamatsu, t., Japan; N. cst. Shikoku; ferry terminal; univ.; tourism; p. (est. 1969) 270,000.

Takaoka, t., Honshu, Japan; ctr. of rice tr.; lacquer wk.; cars; p. (est. 1969) 159,000.

Takasaki, t., Honshu, Japan; radiation chemistry research ctr.; textiles; p. (est. 1969) 188,000.

Taklamakan, desert, W. China; basin of inland drainage; home of the Turko people; surrounded by a ring of oases.

Takoradi. *See* **Sekondi-Takoradi.**

Talara, t., N. Peru; on C. Pariñas; spt.; ctr. of petroleum refining; p. (1961) 40,000.

Talaud I., Indonesia; N.E. of Sulawesi; copra; underdeveloped; a. 494 sq. m.

Talavera, t., Toledo prov., central Spain; on Tagus R.; ceramics; scene of battle 1809; p. (1960) 31,900.

Talca, prov., Chile; predominantly agr.; various irrigated crops; livestock; cap. T.; a. 3,721 sq. m.; p. (1961) 226,052.

Talca, t., cap. of Talca prov., Chile; S. of Santiago; lge mftg. ctr.; matches, footwear, paper, and flour mills, foundries; p. (1966) 72,000.

Talcahuano, spt., Chile, nr. Concepción; naval sta.; steel plant at Huachipato; fish processing, oil refining; p. (est. 1969) 112,087.

Talien. *See* **Luta.**

Tallahassee, t., Fla., USA; univ.; timber-based inds.; p. (1970) 71,763 (t.), 102,530 (met. a.).

Tallin, spt., cap. of Estonian SSR USSR; on G. of Finland; diverse inds. inc. radio equipment; mediaeval architecture; p. (1970) 363,000.

Tamale, t., cap. of Northern Region, Ghana, W. Africa; admin. ctr.; cotton milling, shea-nut processing; p. (1960) 49,223.

Tamar, R., Tasmania, Australia; formed at confluence of N. Esk and S. Esk at Launceston, flows into Bass Strait nr. Georgetown.

Tamar, R., Devon and Cornwall, Eng.; flows S. to Plymouth Sound; 45 m. long.

Tamatave, t., Malagasy Rep.; ch. spt. on Indian Oc.; exp. graphite, rice, chromite ore; car assembly, oil refining; p. (1965) 49,387.

Tamaulipas, st., Mexico; on G. of Mexico, S. of Texas; petroleum is main resource; fishing along lagoon cst.; cotton, livestock; cap. Ciudad Victoria; a. 30,731 sq. m.; p. (1969) 1,487,000.

Tambov, c., cap. of Tambov oblast, RSFSR; on Tsna R.; regional ctr. serving agr. dist.; engin.; p. (1970) 229,000.

Tamil Nadu (formerly Madras) st., India; on S.E. cst. of peninsula; home of Tamils; crossed by R. Cauvery; dry crops; ch. ts. Madras, Madura; a. 50,331 sq. m.; p. (1961) 33,686,935.

Tampa, c., Fla., USA; popular winter resort, cigar factories, phosphates, electronics; fruit growing and canning; p. (1970) 274,359 (c.), 999,613 (met. a.).

Tampere (Tammerfors), t., S. Finland; on rly. between Helsinki and Vaasa; textiles, leather, paper, based on local hydroelec. power; cath.; p. (est. 1968) 151,278 (t.), 211,995 (met. a.).

Tampico, spt., Mexico; on R. Panuco, 9 m. from G. of Mexico; exp. petroleum; oil refining, fish processing, chemicals; tourism; p. (1970) 196,147.

Tampico, spt., Mexico; on R. Panuco, 9 m. from G. of Mexico; exp. petroleum; oil refining, fish processing, chemicals; tourism; p. (1969) 155,292.

Tamworth, t., Staffs., Eng.; on R. Tame, 5 m. S.E. of Lichfield; anc. cas.; lt. engin.; expanded t.; p. (1971) 40,254.

Tana, lge freshwater L., N.W. Ethiopia, nr. Gondar; source of Blue Nile, surrounded by marsh, papyrus swamp.

Tana, R., Kenya; rises nr. Mt. Kenya and flows to Indian Oc.; impt. elephant habitat in valley; 500 m. long.

Tanana, R. and R. pt., Alaska, USA; valley used for agr. and forestry; l. of R. 475 m.

Tananarive, t., cap. of Malagasy Rep.; ctr. of commerce and communications; airport; lge meat preserving factories, plastics, radios, car assembly, shoes, knitted gds., rice mills; univ.; p. (est. 1969) 339,233.

Tandil, t., Argentina; resort; granite quarried in surrounding hills; p. (1960) 70,000.

Tanga, spt., Tanzania, E. Africa; on plateau overlooking Tanga Bay; rly. terminus; new plywood plant; p. (1960) 38,000.

Tanganyika, gr. L., E. Central Africa; lies in Gt. Rift Valley; c. 420 m. long, 15–20 m. wide; lgst L. in Africa and except for L. Baykal deepest L. in world; c. 2,700 ft. a.s.l.; discovered by Burton and Speke 1858, explored by Livingstone and Stanley 1871.

Tangier, free pt., Morocco, N. Africa; on Strait of Gibraltar; no longer internationalised zone but integral part of kingdom of Morocco; summer cap.; shipyard; cigarettes, fishing; p. (est. 1970) 170,000.

Tangshan, c., Hopeh prov., China; impt. industl. ctr.; steel, machin.; textiles, cement, oil refining; p. (1957) 800,000.

Tanimbar Is., Indonesia; gr. of Is. in Banda Sea, S. Moluccas; forests, swamps; maize, rice, coconuts, sago; p. (est. 1965) 50,000.

Tanta, t., Lower Egypt; 55 m. N. of Cairo; impt. rly. junc.; religious fairs; cotton processing; p. (est. 1970) 253,600.

Tanzania, rep., E. cst. Africa; inc. Is. of Zanzibar and Pemba, united since 1964; narrow coastal plain rises to inland plateau (Mt. Kilimanjaro, 19,340 ft., hgst. peak in Africa); climate varies with alt., tropical in Zanzibar, temperate inland; predominantly subsistence agr., maize, millet, groundnuts, livestock; comm. crops inc. sisal, sugar, cotton, coffee; cloves on Is., especially Pemba; food processing, textile inds.; 5-year planning system to assist economic development; cap. Dar es Salaam; a. 362,821 sq. m.; p. (est. 1969) 12,926,000.

Taormino, resort, E. Sicily, Italy; 750 ft. above sea at foot of Mt. Etna; magnificent scenery and anc. ruins.

Tapachula, c., Chiapas st., S. Mexico; on Pac. cst. lowlands; comm. ctr. for agr. dist.; p. c. 42,700.

Tapti, R., W. India; flows W. to G. of Cambay at Surat from Betul dist., Madhya Pradesh; 450 m. long.

Tarai, marshy, jungle tract at foot of Himalayas, India, Nepal; barrier to economic development of Nepal, now much modified and reduced in area by human occupation.

Taranaki, prov., N.I., N.Z.; impt. stock rearing and dairying a.; offshore oil and gas fields; a. 3,750 sq. m.; p. (1971) 100,668.

Taranto, t., Lecce, Italy; on G. of Taranto, inlet of Ionian Sea; maritime arsenal with gr. comm. and industl. interests; strong cas.; steel wks.; cement; oil refinery; famous for its oyster and mussel fisheries; p. (1969) 219,484.

Tarapacá, prov., N. Chile; hot, arid desert; nitrate deposits; a. 21,340 sq. m.; p. (1960) 133,775.

Tarascon, t., Bouches-du-Rhône dep., France; connected by bridges with Beaucaire on opposite bank of R. Rhône; old cas. famous festival; p. (1968) 10,857.

Tarawera Mtn., volcanic peak, N.I., N.Z.; 1,000 ft.; in Hot Springs dist.; eruption 1866 destroyed L. Rotomahana (water later returned to form bigger and deeper L.).

Tarbat Ness, promontory, N. side of Moray Firth, Ross and Cromarty, Scot.

Tarbes, t., cap. of Hautes-Pyrénées dep., France; on R. Adour; cath.; p. (1968) 59,432.

Taree, t., N.S.W., Australia; dairying, agr., fishing, timber and fibre-boards; p. (1972) 11,914.

Targul-Mures, c., Romania; on R. Mures; ch. t. of Magyar aut. region in Transylvania; old fort, Gothic Calvinist cath.; agr. tr. and processing; p. (1968) 92,104.

Tarifa, t., Spain; on Gibraltar Strait; most S. point of mainland of Europe; fish tr., cereals, oranges, wines; p. (1961) 17,469.

Tarija, prov., Bolivia; part of Gran Chaco rising to W.; extensive agr. and forests; cap. T.; a. 24,786 sq. m.; p. (est. 1962) 142,600.

Tarija, t., cap. of T. prov., Bolivia; alt. 6,250 ft.; cath., univ.; mkt. t.; p. (1967) 26,787.

Tarim Basin, depression, Sinkiang, China; desert with oases; crossed by Silk Road; anc.

civilisation; state farms for wheat, millet, maize, cotton.

Tarn, dep., S. **France**; watered by Tarn and its tribs.; between Central Massif and basin of Aquitaine; mainly agr.; cap. Albi; a. 2,232 sq. m.; p. (1968) 332,011.

Tarn, R., **France**; trib. of R. Garonne; rocky gorge 31 m. long in its upper course; 235 m. long.

Tarn-et-Garonne, dep., W. **France**; alluvial plain formed by Rs. Tarn, Garonne and Aveyron; mainly agr.; cap. Montauban; a. 1,440 sq. m.; p. (1968) 183,572.

Tarnow, t., **Poland**; E. of Kraków; industl. ctr.; lge nitrogen factory; synthetic fibres, metallurgy; cath.; p. (1970) 85,500.

Tarpon Springs, t., Fla., **USA**; pt.; main source of sponges in USA.

Tarragona, prov., **Spain**; on Mediterranean; vineyards and agr.; cap. Tarragona; a. 2,426 sq. m.; p. (1961) 362,679.

Tarragona, spt., cap. of T. prov., **Spain**; at mouth of R. Francoli; exp. agr. prod. of Ebro valley; cath.; many Roman remains, inc. aqueduct; liqueur; p. (1967) 64,192.

Tarrasa, t., Barcelona, **Spain**; textile ctr.; p. est. (1967) 127,814.

Tarsus, anc. c., S. **Turkey**; nr. Adana; orange and citrus groves; ruined Roman temple; birthplace of St. Paul; exp. cotton, wool, hides; p. (1965) 57,035.

Tartary or **Tatary**, region, **Central Asia**; now divided into Chinese or E. Turkestan, and W. Turkestan, USSR.

Tartu, c., Estonian SSR, **USSR**; pt. on Emayygi R.; rly. junc.; famous univ. founded 1632; agr. machin., tobacco processing; p. (1964) 77,000.

Tashkent, c., cap. of Uzbek SSR, **USSR**; cultural, industl. and scientific ctr. of central Asia; on Trans-Caspian rly. in fertile Ferghana valley; univ.; diverse inds.; terminus of gas pipeline; p. (1970) 1,385,000.

Tasman Bay, lge inlet, S.I., **N.Z.**; penetrates N. cst., between Separation Point and D'Urville I.; enclosed by mtns., sheltered, fertile, coastal fringe; ch. ts. Nelson, Motueka.

Tasman Glacier, S.I., **N.Z.**; one of the lgst in the world.

Tasmania (formerly **Van Diemen's Land**), I., st., **Australia**; plateau with fertile valleys; temperate climate; forest and grasslands, grain, fruit, cattle-raising; aluminium, copper, zinc, lead, tin, silver; electro-metallurgical inds.; cap. Hobart; a. 26,215 sq. m.; p. (1972) 389,874.

Tasman Sea, Australia; part of Pac. Oc. between Australia and Tasmania.

Tatabánya, t., N. **Hungary**; lignite mng. ctr.; aluminium refining, chemicals; p. (1968) 63,000.

Tatar ASSR, **USSR**; in middle Volga valley; wooded steppeland; extensive oil deposits and natural gas fields; cap. Kazan; a. 26,250 sq. m.; p. (1970) 3,131,000.

Tatra Mtns., highest mtn. gr. of W. Carpathians, on border of **ČSSR** and **Poland**; highest peak Gerlach in Slovakia, 8,735 ft.; mountaineering and winter sports.

Tatung (Datong), c., Shansi prov., **China**; impt. coalfield; steam and diesel locomotives; p. (1953) 228,500.

Taubaté, t., São Paulo st., **Brazil**; industl. ctr.; p. (1960) 64,863.

Taunton, co. t., Somerset, **Eng.**; on R. Tone at W. end of Vale of Taunton; old cas.; clothing tr., engin., plastics; p. (1971) 37,373.

Taunton, t., Mass., **USA**; cotton, iron foundries, machin., plastics; p. (1960) 41,132.

Taunus, mtn. range, Hesse, W. **Germany**; between Rs. Lahn and Rhine and Main; forests, vineyards, and spas.

Taupo, L., N.I., **N.Z.**; lgst L. in N.Z.; geysers, hot springs in vicinity; 25 m. by 17 m.

Tauranga, t., N.I., **N.Z.**; spt. on Bay of Plenty; tourism; fishing; p. (1971) 28,126.

Taurus Mtns., range, S. **Turkey**; rise to over 12,000 ft.

Tavastehus. *See* Hämeenlinna.

Tavistock, mkt. t., Devon, **Eng.**; on R. Tavy; anc. stannary t.; Drake born nearby; p. (1971) 24,310 (dist.).

Tavoy, t., **Burma**; on Tenasserim cst.; exp. tin to Singapore; p. c. 40,000.

Taw, R., Devon, **Eng.**; flows from Dartmoor to Barnstaple Bay; 50 m. long.

Taxco, t., **Mexico**; alt. 5,600 ft.; gold- and silver-mng.; tourist ctr.; anc. Aztec t.; p. (1960) 10,076.

Taxila, ruined c., **Pakistan**; nr. Rawalpindi; anc. seat of learning; ruins of Buddhist univ.; heavy machin. wks. projected.

Tay, R., Scot.; flows S.E. from Loch Tay in Perthshire to Firth of Tay; longest R. in Scot., 118 m.; salmon fisheries.

Tay, Firth of, lge inlet, E. cst. Scot.; extends inland almost to Perth.

Tayeh, t., Hupeh, **China**; lies to S. of Yangtze R., 42 m. S.E. of Wuhan; impt. iron-ore deposits; supplies Hwangshih; iron and steel inds., heavy engin.

Tayport, burgh, Fife, **Scot.**; at entrance to Firth of Tay; opposite Broughty Ferry; linen, jute; p. (1971) 2,897.

Tbilisi (**Tiflis**), c., Georgian SSR, **USSR**; route ctr. on Kura R.; major admin., economic and cultural ctr. of Transcaucasia; machin., textiles, tanneries, furniture, food processing; power from hydroelectric power stas.; anc. tr. ctr.; some mediaeval fragments in c. ctr.; p. (1970) 889,000.

Tczew (**Dirschau**), t., Gdansk prov., N. **Poland**; pt. on Vistula; rly. junc.; agr. implements; p. (1970) 40,800.

Team Valley, Tyne and Wear, **Eng.**; impt. trading estate has been developed here.

Tebessa, t., N.E. **Algeria**; in Atlas mtns., at 2,789 ft.; mkt.; carpets; phosphate deposits nearby; p. (1960) 26,622.

Teddington, S.W. sub. of London, **Eng.**; inc. in Greater London outer bor. of Richmond-upon-Thames; Nat. Physical Laboratory; p. (1961) 13,455.

Tees, R., N. **Eng.**; rises on Cross Fell, Cumbria, flows E. to N. Sea between Hartlepool and Redcar; heavy inds. in lower section; 70 m. long.

Teesport, oil refinery, between Redcar and Middlesbrough, Cleveland, **Eng.**

Teesside, dist., Cleveland, **Eng.**; inc. Middlesbrough, Redcar, Thornaby-on-Tees, Stockton-on-Tees, Billingham, and Eston; p. (1971) 395,477.

Tegal, spt., Java, **Indonesia**; textiles, sugar refining; lge dam nearby; p. (1961) 89,016.

Tegucigalpa, c., cap. of **Honduras**; on R. Choluteca at 3,200 ft.; inter-ocean highway connects with Caribbean and Pac. Oc.; former ctr. of silver mng.; inc. Comayagüela, the modern part of c., where the nat. univ. is situated; p. (est. 1970) 232,276.

Tehran (**Teheran**), c., cap. of **Iran**, 70 m. S. of Caspian Sea; mftg. and comm. ctr.; modern bldgs.; gas pipeline to USSR; international airpt.; univ.; car assembly, textiles, chemicals, glass; new oil refinery; p. (1970) 3,150,000.

Tehuacán, t., Puebla, **Mexico**; at alt. 5,500 ft.; mineral springs, resort; p. 32,000.

Tehuantepec, Isthmus of, separates G. of Mexico from Pac. Oc. at narrowest point of **Mexico**; width 125 m.

Teifi, R., S. **Wales**; rises in Cambrian mtns., flows S.W. to Cardigan Bay; 94 m. long.

Teign, R., Devon, **Eng.**; flows to sea at pt. of Teignmouth from Dartmoor; picturesque estuary; 30 m. long.

Teignmouth, t., Devon, **Eng.**; at mouth of R. Teign, 13 m. S. of Exeter; resort; revival of pt. with ball clay exp.; p. (1971) 12,554.

Tekirdag, t., **Turkey**; on Sea of Marmara, W. of Istanbul; former Greek settlement; p. (1965) 26,964.

Tel Aviv-Jaffa, c., **Israel**; on Mediterranean; lgst. c. of cty.; financial and cultural ctr.; univ.; founded by Zionists 1909; p. (est. 1969) 382,900.

Telemark, co., **Norway**; borders Skagerrak; mtnous., lake-covered, much forested; hydro-electric power forms basis for electrochemical inds.; a. 5,837 sq. m.; p. (1963) 152,073.

Telford, new t. (1963), Shropshire, **Eng.**; 20 m. W. of Wolverhampton; p. (1971) 75,579.

Tellicherry, t., spt., Kerala, **India**; exp. pepper; lge college; furniture; p. (1961) 44,763.

Telok Betong, spt., Sumatra, Indonesia; exp. pepper, agr. products; p. (1961) 133,904.

Tema, pt. (opened 1962), nr. Accra, **Ghana**; deepwater harbour, oil refinery, aluminium smelter; impt. industl. development.

Teme, R., on border of Wales and Hereford and Worcs., Eng.; trib. of R. Severn; 70 m. long.

Temir-Tau, c., Kazakh SSR, USSR; on Nura R.; industl. ctr.; iron, steel, synthetic rubber, soda; lge thermal power sta.; p. (1970) 167,000.

Templemore, mkt. t., U.D., Tipperary, R.o.I.; on R. Suir; p. (1966) 2,031.

Temuco, c., cap. of Cautin prov., Chile; cath.; tr. in cereals, apples, timber; Araucanian Indian mkt.; p. (est. 1969) 100,973.

Tenasserim, div., lower Burma; on Thailand border; extends along Isthmus of Kra; tin and rubber; a. 35,886 sq. m.; p. c. 2,111,000.

Tenby, mkt. t., Dyfed, Wales; on W. side of Carmarthen Bay, Bristol Channel; seaside resort; walled cas. t.; p. (1971) 4,985.

Tenerife, I., Canary Is.; volcanic landscapes and mild climate attract tourists; mkt. gardening; cap. Santa Cruz; a. 782 sq. m.; p. (1962) 394,466.

Tennessee, R., Tenn., Ky., USA; lgst and most impt. branch of Ohio R.; its valley once liable to flooding, now controlled by dams, and land improved by the Tenn. Valley Authority; 782 m. long.

Tennessee, st., USA; rises to Appalachians in E., crossed by Tennessee R. and tribs.; a. of heavy rainfall and severe soil erosion necessitated the Tenn. Valley Authority scheme of conservation, dam bldg., and afforestation; cheap hydroelectric power attracting new inds., many reservoirs attract tourists; cap. Nashville; a. 42,244 sq. m.; p. (1970) 3,838,777.

Tenterden, mkt. t., Kent, Eng.; 8 m. N. of Rye; church with famous 140 ft. tower; p. (1971) 5,922.

Teófilo Otoni, t., Minas Gerais, Brazil; semi-precious stone polishing; p. (est. 1968) 134,476.

Tepic, c., cap. of Nayarit st., Mexico; comm. ctr. for agr. dist.; nr. Sanguaney volcano; p. (1970) 111,344.

Teplice, wat. pl., ČSSR; N.W. of Prague; textile and hardware inds.; mineral springs; p. (1967) 52,000.

Teramo, c., cap. of T. prov., Italy; 15 m. from Adriatic; route and agr. ctr.; cath.; textiles; the anc. Interamnium; p. (1969) 47,083.

Terek, R., N. Caucasia, RSFSR; flows to Caspian Sea; used for irrigation and hydroelectric power in lower course; 370 m. long.

Teresina, t., cap. of Piauí st., Brazil; comm. ctr.; lt. inds.; p. (est. 1968) 184,836.

Terezopólis, t., Rio de Janeiro, Brazil; health resort; textiles; p. (est. 1968) 69,636.

Ternate I., Moluccas Is., Indonesia; volcanic, wooded; p. 33,000.

Terneuzen, t., Neth.; on W. Schelde R.; pipeline to be constructed to carry ethylene from Pernis; p. (1967) 20,029.

Terni, t., Perugia, Italy; among the Apennines; iron and steelwks., arms factory; cath.; p. (1969) 106,062.

Ternopol (Tarnopol), t., Ukrainian SSR, USSR; E. of Lvov; rly. junc., mkt.; agr. machin., food inds.; p. (1963) 61,000.

Terre Adélie, name given to Fr. terr. and I. in Antarctic; est. a. 160,000 sq. m.

Terre Haute, t., Ind., USA; coal, natural gas, flour, paper, glass, foundries; p. (1970) 69,247 (t.), 172,710 (met. a.).

Terreón, t., Coahuila, Mexico; ctr. of comm. agr.; oil pipeline connects to Chihuahua; thermo-elec. plant; p. (1969) 243,234.

Terschelling, one of the W. Frisian Is., Neth.

Teruel, t., cap. of Teruel prov., Spain; on R. Turia; walled t., cath.; p. (1961) 19,706.

Tete, t., central Moçambique; on R. Zambesi; ctr. of coalfield; iron ore, graphite, radioactive materials.

Tetovo, t., Macedonia, Yugoslavia; chemicals, electro-metallurgy, textiles.

Tettenhall, West Midlands, Eng.; N.W. of Wolverhampton.

Tetuan, ch. spt., Morocco, N. Africa; walled t., former cap. of Spanish Morocco; p. (est. 1970) 125,000.

Teviot, R., Roxburgh, Scot.; trib. of R. Tweed; 37 m. long.

Tewkesbury, mkt. t., Glouc., Eng.; on R. Avon, 1 m. above confluence with R. Severn; milling, lt. engin.; Norman abbey; p. (1971) 8,742.

Texarkana, t., Texas and Ark., USA; bdy. passes down middle of main street; timber and cotton region; total p. (1960) 50,006.

Texas, st., S.W. USA; second lgst st. by a.; borders Mexico; dry plains in W., humid cst. in E.; problems of soil erosion yet leading agr. st.; leading producer of petroleum and natural gas; cap. Austin; a. 267,339 sq. m.; p. (1970) 10,989,128.

Texas City, spt., Texas, USA; petroleum, chemicals; p. (1960) 32,065.

Texel, one of the W. Frisian Is., Neth.; scene of several naval battles; p. (1967) 11,003.

Thailand (Siam), kingdom, S.E. Asia; 4 main regions: parallel N.–S. hill ranges (8,000 ft.) and valleys in N. producing teak; rice growing, fertile plain of Chao Phraya R. in ctr.; thinly populated E. plateau, drained by Mekong; S. coastal strip on G. of Siam; monsoon climate; predominantly agr., accounting for over 80 per cent p. and 30 per cent nat. income; lgst world exporter of rice; forestry, fisheries, mng., especially tin, wolfram; oil exploration; industl. development based on processing of Thai raw materials; cap. Bangkok; a. 200,418 sq. m.; p. (est. 1969) 34,738,000.

Thal Desert, Pakistan; W. of Punjab; now irrigated for wheat and cotton.

Thame, mkt. t., Oxford, Eng.; on R. Thame, 7 m. S.W. of Aylesbury; p. (1971) 5,940.

Thames, R., Eng.; rises in Cotswold hills and flows past Oxford, Reading, Windsor, and London to the Nore; tribs. inc. Windrush, Cherwell, Thame, Kennet, Colne, Lea, and Roding; estuary impt. industl. a. with many oil refineries; flood barrier to be built at Silvertown in Woolwich; 210 m. long.

Thameshaven, lge. oil refinery, Essex, Eng.; on N. cst. of Thames estuary 8 m. below Tilbury.

Thana, t., Maharashtra, India; textiles, chemicals, matches; p. (est. 1970) 161,185 (c.), 171,577 (met. a.).

Thanet, I. of, lge. promontory, N.E. extremity of Kent, Eng.; formed by bifurcation of R. Stour; contains Margate, Ramsgate, and Broadstairs.

Thanjavur, t., Tamil Nadu, India; silks, carpets, jewellery, inlaid metals; impt. Brahman ctr.; p. (est. 1970) 121,831.

Thar Desert, on bdy. of India and Pakistan; covers slopes between N.W. Deccan and R. Indus; barren, lack of Rs. or level land prevents irrigation; crossed by caravan routes.

Thebes, c., of Boeotia, in anc. Greece; Mycenaean site; destroyed by Alexander the Great 335 B.C.; modern c. of Thivai occupies site.

Thebes, c. of anc. Egypt; on banks of Nile; site now partly occupied by vs. Karnak and Luxor; archeological discoveries in Valley of the Kings 1922, inc. tomb of Tutankhamun.

Theddlethorpe, v., Lincs., Eng.; proposed N. Sea gas terminal.

Theiss. *See* Tisa.

Thermopylae, celebrated pass between Mt. Oeta and the sea, N.E. Greece; heroic battle between Spartans and Persians 480 B.C.

Thessaloniki, c., Greece; spt. at head of G. of T.; with fiscal free zone; second c. of Greece; impt. route and industl. ctr.; univ.; p. (1961) 250,920 (c), 378,444 (met. a.).

Thessaly, prov., central Greece; fertile plain drained by R. Pinios; mainly agr.; a. 5,208 sq. m.; p. (1961) 695,385.

Thetford, t., Norfolk, Eng.; on Little Ouse; industl. estate for London overspill; fruit and vegetable canning, pulp mftg., engin.; p. (1971) 13,706.

Thetford Mines, t., Quebec, Canada; asbestos mng. ctr.; p. (1966) 21,614.

Thienen (Tirlemont), t., Brabant prov., Belgium; ctr. of Belgian beet-sugar refining; captured by Marlborough 1705; p. (1962) 22,766.

Thiès, t., Senegal, W. Africa; rly. ctr. and wkshps.; aluminium, phosphate quarrying; p. (1965) 69,000.

Thimbu, t., Bhutan; hydroelectric plant; 110 m. road link to Phuntsholing (Sikkim) 1968.

Thionville, t., Moselle dep., N. France; in Lorraine ironfield conurb.; metallurgical and chemical inds.; p. (1968) 37,079 (c.), 136,474 (met. a.).

Thira (Santorine), volcanic I., Cyclades, Greece; wine prods.; max. alt. 1,860 ft.; a. 29 s.q m.; p. c. 10,000.

Thirlmere, L., Cumbria, Eng.; 3 m. long; furnishes part of water supply of Manchester.

Thirsk, mkt. t., North Yorks., Eng.; in wide gap between Pennines and Cleveland hills, 7 m. S.E. of Northallerton; racecourse; p. (1971) 14,383 (dist.).

Thompson, R., B.C., Canada; trib. of R. Fraser; forms impt. routeway through Rocky mtns.; 280 m. long.

Thonburi, c., Thailand; on R. Menam opposite Bangkok; second c. of T.; former cap.; "Temple of Dawn"; lt. inds.; p. (1968) 540,300.

Thorez, (Chistyakovo), Ukrainian SSR, USSR; coalmng.; p. (est. 1967) 95,000 (c.), 300,000 (met. a.).

Thornaby-on-Tees. *See* Teesside.

Thornbury, mkt. t., Avon, Eng.; 10 m. N. of Bristol; aircraft mftg.; expanded t.; p. (1971) 42,992 (dist.).

Thornton Cleveleys, t., Lancs., Eng.; 4 m. N.E. of Blackpool; resort; p. (1971) 26,869.

Thórshavn, c., cap. of Faroe Is.; on Stromo I.; fish. pt.; anc. fortress; lighthouse; p. (1966) 9,738.

Thousand Isles, gr. of over 1,500 Is. in St. Lawrence R. which extend up-river for c. 30 m. from Brockville to Gananoque, at junc. of L. Ont. and St. Lawrence R.; partly in N.Y. st. and partly in Canada.

Thrace, anc. name of terr. in S.E. Europe, part of which has been added to Greece; successively under Macedonian, Roman, Byzantine, and Turkish rule, before passing to Greece; tobacco; a. 3,315 sq. m.; p. (1961) 356,555.

Thule, N.W. Greenland; 1,000 m. from N. Pole; American air base and site of ballistic missile early warning sta.; spt. open 2–3 months per annum.

Thumba, Kerala, India; space science and technological ctr.

Thun, L., Berne can., Switzerland; occupies valleys of R. Aare where it leaves Alpine region; separated from L. Brienz by deltaic neck of land on which is Interlaken; a. 38 sq. m.

Thun, t., Berne, Switzerland; on N.W. end of L. Thun; cas. on hill above t.; tourism; p. (1969) 36,000.

Thunder Bay, t., Canada; formed from Port Arthur and Port William; pt. on N.W. cst. of L. Superior; grain exp. ctr.; p. (1971) 106,000 (t.), 111,492 (met. a.).

Thurgau, can., N.E. Switzerland; on L. Constance, bordered by R. Rhine; prosperous agr. a.; inds. ass. with textiles; cap. Frauenfeld; a. 388 sq. m.; p. (1969) 187,000.

Thuringia, former st., E. Germany; bordered by Bavaria, Saxony-Anhalt, Lower Saxony, and Hesse; drained by Rs. Saale and Werra; crossed by Thüringer Wald and extending to Harz mtns.; fertile arable agr. a.; now comprises dists. of Erfurt, Suhl and Gera.

Thuringian Forest or Thüringer Wald, forested range of hills, **E. Germany,** rising to 3,220 ft. in Beerberg; famous for romantic scenery and legends; resorts.

Thurles, mkt. t., Tipperary, R.o.I.; on R. Suir; agr. processing; cath., cas.; p. (1966) 6,743.

Thurrock, t., Essex, Eng.; on Thames, nr. Tilbury; oil refining, metal refining, cement, paper board; p. (1971) 124,682.

Thurso, burgh, Caithness, Scot.; nr. Dounreay; anc. stronghold of Vikings; p. (1971) 9,087.

Tiaret, t., W. Algeria; N. Africa; in strategic pass; walled; agr. mkt.; cereals, wool, cattle; p. 22,344.

Tiber, R., Italy; flows from Apennines to Mediterranean, passing through Rome; 220 m. long.

Tiberias, t., Israel; on Sea of Galilee (L. Tiberias); agr. ctr.; health resort with medicinal springs; p. (1961) 19,800.

Tibesti, mtns., on bdy. between Libya and Chad, Equatorial Africa; barren in spite of slight rainfall; mainly above 6,000 ft. max. alt. 11,155 ft.

Tibet, aut. region, China; lofty plateau, called "the roof of the world," its lowest plains being 12,000 ft. a.s.l.; semi-desert; network of roads being built, inc. one across Himalayas to Katmandu; pastoral agr., sheep; arable agr. in R. valleys, especially Tsangpo valley, wheat, barley, fruit, vegetables; tr. of wool, musk, gold, skins, drugs traditionally carried by yaks which can stand intense cold; salt, alluvial gold, radioactive ores; cap. Lhasa; a. 470,003 sq. m.; p. (1957) 1,270,000.

Ticino, R., Switzerland and Italy; trib. of Po; forms S. approach to St. Gotthard Pass; irrigation in lower course; l. 150 m.

Ticino, can., Switzerland; on S. slopes of central Alps, bordering Italy; contains parts of Ls. Maggiore and Lugano; mainly pastoral agr., but wine, corn, tobacco in valleys; industl. a. in S. based on hydroelectric power, chemicals, metallurgy; many tourist resorts, inc. Locarno, Lugano; cap. Bellinzona; a. 1,086 sq. m.; p. (1969) 242,000.

Tickhill, t., South Yorks., Eng.; cas.; p. (1971) 3,257.

Ticonderoga, v., N.E. N.Y., USA; resort between Ls. George and Champlain; L. George falls provide hydroelectric power for paper mill; local graphite used in pencil ind.; p. (1960) 3,568.

Tideswell, t., Derbys., Eng.; tourist ctr.; limestone quarrying in a.; ige 14th cent. church known as "cath. of the Peak." p. c. 1,500.

Tidore I., Moluccas, Indonesia; volcanic; densely populated; coffee, tobacco, spices, fruit; a. 30 sq. m.; p. (est. 1960) 70,000.

Tien Shan (= Celestial Mtns.), mtn. chain, central Asia, along **China–USSR** border; highest peak 24,000 ft.; source of Syr-Dar'ya, Chu, Ili and many other Rs.

Tientsin (Tianjing), c., Hopeh prov., China; 70 m. S.E. of Peking; impt. pt. using poor harbour on Hai R.; industl. ctr., textiles, elec. instruments, steel rolling mills, machine tools, chemicals, tobacco, food processing; p. (est. 1970) 4,280,000.

Tierra del Fuego, archipelago, southernmost part of S. America; separated from Patagonia by Strait of Magellan; divided politically between Chile and Argentina; timber, pastoral agr., sheep; oilfield at Rio Grande; mng.; a. c. 18,500 sq. m.

Tigre, st., Ethiopia; formerly an independent kingdom; cap. Adua.

Tigris, R., S.W. Asia; rises in Taurus mtns., S. Turkey, flows through Iraq where it is joined by the Euphrates and proceeds to Persian G.; comm. routeway; dam projected 35 m. N. of Mosul; many of the earliest cs. located in valley; 1,150 m. long.

Tijuana, t., Baja Cal. st., Mexico; tourist resort catering for Americans; casinos, race-tracks, bull-fights; p. (1970) 335,125.

Tiksi, t., USSR; Arctic spt., at mouth of Lena R.; local coal deposits; linked by air and R. to Yakutsk.

Tilburg, c., N. Brabant, Neth.; nr. Breda; woollens, textiles, tobacco, leather; p. (est. 1969) 151,897 (c.), 201,253 (met. a.).

Tilbury, pt., Essex, Eng.; on N. bank of R. Thames 20 m. E. of London; within Port of London; major container terminal; p. (1961) 18,387.

Tillicoultry, burgh, Clackmannan, Scot.; on Devon R.; woollen and worsted fabrics, paper; p. (1971) 4,026.

Tilsit. *See* **Sovetsk.**

Timaru, t., S.I., N.Z.; E. cst. spt., exp. frozen foods; fishing; regional ctr. for S. Canterbury; p. (1971) 28,327.

Timbuktu, Mali, W. Africa; nr. Niger R. on border of Sahara; salt tr., handicraft inds.; flourished as comm.; mart and Moslem ctr. 14th–16th cent.; p. (1967) 9,000.

Timisoara, c., W. Romania; comm., industl. and educational ctr.; univ., 2 caths., cas.; once a frontier fortress; p. (est. 1969) 189,264.

Timmins, t., Ont., Canada; gold mng. declining; vast deposits of copper, zinc, silver, discovered 1964; timber inds., brewing; p. (1966) 29,303.

Timok Basin, Serbia, Yugoslavia; industl. region; coal mng., copper smelting, chemicals, glass, food processing; arable agr., vines.

Timor, lgst. of Lesser Sunda Is., E. Indies; politically divided between Indonesia and Portugal; Port. T. (a. 7,330 sq. m.; p. c. 566,000; cap. Dili); Ind. T. (a. 5,700 sq. m.; p. c. 425,000; cap. Kupang); coffee, sandalwood, copra, wax.

Timor Sea, that part of the Indian Oc. N.W. of W. Australia, and S. of Timor I.

Timsah, L., Egypt; sm. L. midway along Suez

Canal; formerly used for recreational purposes by Brit. garrison in Canal zone.

Tinogasta, t., Catamarca prov., **Argentina**; in E. foothills of Andes, 120 m. N.W. of Catamarca; impt. copper mines.

Tintagel, v., Cornwall, **Eng.**; ruined Norman cas.; reputed birthplace of King Arthur; tourism.

Tintern, v., Gwent, **Wales**; Cistercian abbey.

Tinto, R., Huelva prov., S.W. **Spain**; in Andalusia; flows W. to Atl. Oc.; gives its name to Rio Tinto copper mng. region which it crosses; 65 m. long.

Tipperary, inland co., Munster, **R.o.I.**; drained by Rs. Suir and Shannon; mtnous., Knockmealdown and Galty mtns.; fertile Golden Vale in S.W.; dairying, sugar-beet; divided into N. and S. Ridings; p. (1966) 53,832 (N.R.), 68,946 (S.R.).

Tipperary, t., Tipperary, **R.o.I.**; 29 m. S.E. Limerick; dairy processing; p. (1966) 4,507.

Tipton. *See* Dudley.

Tiranë, t., cap. of Albania; rapid growth since becoming cap. 1920; many new inds.; agr. processing, engin., clothing, glass; univ.; airport; p. (1967) 169,300.

Tiraspol, c., S.E. Moldavian SSR, **USSR**; on R. Dniester; agr. processing ctr.; heat and power sta. recently constructed; p. (1970) 106,000.

Tiree, I., Inner Hebrides, **Scot.**; off cst. of Mull; 14 m. long, up to 6 m. wide; sm. freshwater lochs and prehistoric forts; p. (1971) 1,019 (inc. Coll).

Tiruchirapalli (Trichinopoly), c., Tamil Nadu, S.E. **India**; on R. Cauvery; rly. ctr.; textiles, cigars, goldsmithery; p. (est. 1970) 282,819.

Tirunelveli (Tinnevelly), c., Tamil Nadu, S.E. India; agr. tr. ctr. with sugar refinery; p. (1961) 87,988.

Tisa (Tisza), R., **E. Europe**; rises in E. Carpathians, W. Ukraine, flows across Hungary into Yugoslavia where it joins the Danube 45 m. below Novi Sad; ch. tribs. Koros and Mures; length c. 600 m.; navigable in part.

Tiszapalkonya, t., **Hungary**; new t.; chemical ctr.

Titicaca, L., S. America; between two ranges of Andes, on borders of Bolivia and Peru; 12,500 ft. a.s.l.; highest lge L. in world; max. depth 900 ft.; crossed by steamers; fishing; a. c. 3,200 sq. m.

Titograd (Podgorica), t., cap. of Montenegro, S. Yugoslavia; nr. Albanian frontier; anc. t. but now mainly modern with growing industl. activity; agr. processing, aluminium smelting; airport; p. (1961) 30,657.

Titov Veles, t., central Montenegro, **Yugoslavia**; on R. Vardar, and main rly. to Belgrade; recent industl. growth; textiles; p. (1960) 25,100.

Tiverton, mkt. t., Devon, **Eng.**; 14 m. N. Exeter; once famous for lace; textiles, engin.; p. (1971) 15,548.

Tivoli, the anc. Tibur, nr. Rome, **Italy**; on Aniene R., magnificent situation; hydroelec. power; resort; remains of Hadrian's villa; p. (1961) 24,067.

Tjirebon (Cheribon), spt., Java, **Indonesia**; on N. cst. 120 m. E. of Djakarta; rice, tea, coffee tr.; ctr. of irrigation scheme; oil refining; p. (1961) 158,299.

Tlaxcala, smallest st., **Mexico**; on Mesa Central; dense p.; mainly agr.; cap. T.; a. 1,555 sq. m.; p. (1969) 454,000.

Tlemcen, t., cap. of T. dep., N.W. **Algeria**; picturesque mediaeval t.; agr. ctr. in fertile region; textiles, furniture, handicrafts; p. (1967) 80,000.

Tobago, southernmost I., Windward Is., **W.I.**; volcanic, forested, picturesque, irregular topography; resorts utilising pleasant climate; exp. coconuts, copra, cacao, limes; ch. t. Scarborough; a. 116 sq. m.; p. (1960) 33,333. *See* Trinidad and Tobago.

Tobata. *See* Kitakyushu.

Tobermory, burgh, Argyll, **Scot.**; on I. of Mull at N. entrance to Sound of Mull; fish. pt., resort; p. (1971) 641.

Tobol, R., W. Siberia, **RSFSR**; trib. of R. Irtysh; navigable in lower course; 500 m. long.

Tobolsk, t., W. Siberia, **RSFSR**; R. pt. on Irtysh R.; shipbldg., sawmilling, fishing; p. (1962) 45,000.

Tobruk, spt., **Libya**, N. Africa; on cst. 220 m. E. of Benghazi; exp. oil, served by pipeline from Libyan oilfields; p. c. 5,000.

Tocantins, R., central Brazil; rises in Goiás prov., flows N. across plateau of Brazil through Pará estuary to Atl. Oc.; navigation interrupted by rapids 200 m. above Pará; ch. trib. Araguaya R.; 1,600 m. long.

Toce, R., N. Italy; rises in Lepontine Alps, flows S. and S.E. into L. Maggiore; valley used by trunk rly. from Milan to Berne as S. approach to Simplon Tunnel; 54 m. long.

Tocopilla, spt., **Chile**; exp. nitrate, copper ore, sulphates, iodine; p. (1960) 22,244.

Todmorden, mkt. t., West Yorks., **Eng.**; nr. source of R. Calder, 6 m. N.E. of Rochdale; cottons, machin.; p. (1971) 15,150.

Togliatti (Tol'yatti), c., **RSFSR**; on R. Volga 35 m. W.N.W. of Kuybyshev; engin., motor wks., natural gas pipeline to Moscow; chemicals; p. (1970) 251,000.

Togo, Rep. of, W. Africa; narrow strip between Ghana (W.) and Dahomey (E.); N. and S. lowlands separated by mtns. (3,000 ft.); climate hot and humid, but drier savannah conditions in N.; coffee on slopes of central mtns., cacao, copra in S., maize in N.; phosphate mng., major iron ore deposits in N. now form ch. exp.; developing food-processing inds.; cap. Lomé; a. 21,220 sq. m.; p. (1970) 1,956,000.

Tokaido, Japan, one of gr. feudal highways, along S. cst. Honshu, now forms main line of modern communications network.

Tokaimura, v., Ibaraki, Japan; nuclear reactor and lge nuclear power sta.

Tokaj, t., Hungary; at confluence of Bodrog and Tisa Rs.; nearby slopes of Hegyalja produce Tokay wine; p. (1960) 5,031.

Tokat, t., cap. of T. prov., Turkey; copper refining, leather mnfs.; p. (1965) 38,006.

Tokelau or Union Isles, gr. of 3 coral atolls, S. Pac., N. of W. Samoa, belonging to N.Z.; Fakaofo, Nukunono and Atafu; natives are Polynesians; subsistence economy; copra; a. 4 sq. m.; p. (1970) 1,687.

Tokoroa, co. t., N.I., N.Z.; kraft paper, pulp, and sawn timber; p. (1971) 15,174.

Tokushima, t., Shikoku, Japan; spt. on E. cst.; mkt. ctr., cotton mnfs.; p. (est. 1969) 228,000.

Tokyo, c., cap. of Japan; spt. with deepened harbour handling mainly S. coastal tr.; major industl. ctr. with diverse mnfs. and major problems of pollution; built on marshy site with much expensive reclamation from sea; planned decentralisation of p. and economic activity in progress; with Osaka–Kobe–Kyoto conurbs. (300 m. long ribbon development) spoken of as Tokaido (*q.v.*) megalopolis; major educational ctr. with many univs.; p. (est. 1971) 8,841,000 (c.); 11,403,744 (met. a.).

Tolbukhin, t., N.E. Bulgaria; comm. and agr. ctr. of Dobruja; food-processing, textiles, furniture, agr. machin.; formerly Dobrich, renamed in honour of Russian soldier who took it from Germans 1944; p. (1965) 55,111.

Toledo, prov., Spain; mtnous.; agr., vineyards, stock-raising; a. 5,925 sq. m.; p. (1961) 521,637.

Toledo, anc. c., cap. of T. prov., Spain; in New Castile; on hill above Tagus R.; Gothic, Moorish, and Castillian architecture; picturesque narrow streets; famous Alcázar palace citadel; associated with El Greco; sword-mkg. still flourishes; sm. arms; tourism; p. (1961) 40,651.

Toledo, c., Ohio, USA; rly. ctr. and L. pt. with natural harbour on Maumee R.; exp. mnfs., oil, coal, agr. prod.; imports iron ore; glass-mkg., shipbldg., car components and many varied mnfs.; p. (1970) 379,104 (c.), 635,455 (met. a.).

Tolentino, t., in the Marches, central Italy; on R. Chienti; mediaeval walls and houses; cath.; sm. handicraft inds.; spa and tourist ctr.; p. c. 16,000.

Tolosa, t., Guipúzcoa prov., Spain; in the Basque cty.; mediaeval bldgs., and armour; paper mills; p. (1960) 16,281.

Tolpuddle, v., Dorset, Eng.; 7 m. N.E. of Dorchester; famous for "Tolpuddle martyrs," agr. labourers condemned to transportation for trying to form a trade union (1834).

Toluca, c., cap. of Mexico st., central Mexico;

stands at 8,760 ft.; brewing, flour, cottons, pottery; especially noted for basket weaving; p. (1970) 220,195.

Tom, R., Siberia, RSFSR; flows through Kuznetsk Basin and joins R. Ob; 440 m. long.

Tomaszow Mazowieki, t., Lodz prov., central Poland; industl. t. on Pilica R., surrounded by forests; textile ind., artificial silk; p. (1970) 54,900.

Tombigbee, R., Miss., USA; flows S. to join Alabama R., to form Mobile and Tensaw Rs.; navigable, partially canalised; l. 409 m.

Tomsk, c., cap. of marshy T. oblast, RSFSR; one of few lge ts. in N. Siberia; major pt. on R. Tom; rly. junc. on Trans-Siberian rly.; educational ctr.; univ., cath.; engin., chemicals; p. (1970) 339,000.

Tonawanda, t., N.Y. st., USA; on Niagara R. at terminus of Erie Barge Canal; steel, plastics, chemicals; power from Niagara Falls, adjacent to N. Tonawanda; p. (1960) 21,561.

Tonbridge, t., Kent, Eng.; on R. Medway; food processing; lt. inds., inc. cricket balls; Norman cas. gatehouse; public school; p. (1971) 31,006.

Tone, R., Honshu, Japan; flows E. across Kanto Plain to Pac. Oc., N. of Tokyo; longest R. in Japan.

Tonga, I. gr., S. Pac. Oc.; Polynesian kingdom, gained independence 1970; 158 coral and volcanic Is.; 50 per cent. p. on Tongatabu I.; exp. copra, bananas; fishing; oil discovered 1969; airport; cap. Nuku'alofa; a. 270 sq. m.; p. (1969) 83,630.

Tongariro, volcanic peak, N.I., N.Z.; nat. park in ctr. of volcanic dist.; crater L. at summit; alt. 6,458 ft.

Tongeren (Tongres), t., Limburg prov., N.E. Belgium; mkt. ctr. for fertile Hesbaye region; historic bldgs.; p. (1962) 16,240.

Tonkin, region, N. Vietnam; mtns. in N. and W., alluvial plain in E. around delta of Red R., containing most p. and lge cs.; fertile agr.; ch. t. Hanoi; ch. pt. Haiphong; a. 40,530 sq. m.

Tonle Sap, L., Khmer Rep.; major comm. fishing a.; L. acts as natural reservoir to control floods of Mekong R.

Tönsberg, c., Vestfold prov., S.E. Norway; one of oldest Norwegian cs., on Skagerrak at entrance to Oslo fjord; ctr. of whaling fleet; oil mills; p. (est. 1960) 12,500.

Toowoomba, t., Queensland, Australia; rly. ctr. and mkt. t. for wheat, pastoral and dairy dist.; food processing, iron foundry using local coal; p. (1972) 57,543.

Topeka, c., cap. of Kansas st., USA; on Kansas R.; impt. tr. ctr. in rich agr. region; food processing, rly. ctr. and engin.; p. (1970) 123,043.

Torbay, C.B., S. Devon, Eng.; formed by amalgamation of Torquay, Paignton, and Brixham; located around Tor Bay; tourism; p. (1971) 108,888.

Torcello, I., with anc. Byzantine cath., on lagoon nr. Venice, Italy.

Torgau, t., E. Germany; R. pt. on Elbe; industl. ctr.; American and Soviet armies met here 1945; p. c. 20,000.

Torne, R., N. Europe; rises in Sweden, drains L. Tornetrask and flows S.W. to G. of Bothnia, forming Finno–Swedish bdy.; rich in salmon; 320 m. long.

Toronto, c., cap. of Ont. prov., Canada; major Gt. Ls. pt., on L. Ont.; spacious harbour; exp. lge quantities of wheat; comm., financial, industl. and educational ctr.; many varied mnfs., univ.; notable bldgs., parks; a. 240 sq. m.; p. (1971) 698,634 (c.), 2,609,638 (met. a.).

Torpoint, t., Cornwall, Eng.; on Plymouth Sound; p. (1971) 4,782.

Torquay, t., S. Devon, Eng.; incorporated in Torbay; on N. side of Tor Bay; seaside resort with all-year season.

Torre Annunziata, Campania, Italy; at foot of Vesuvius; spt., spa, bathing resort on Bay of Naples; arms factory, pasta mnf.; p. (1961) 58,400.

Torre del Greco, t., Campania, Italy; spt. and resort on Bay of Naples at foot of Vesuvius; coral fishing; pasta mnf.; p. (1961) 77,576.

Torremolinos, cst. resort, Spain; S. of Malaga.

Torrens, L., S. Australia; 180 m. long, 20 m. wide; varies from brackish lake to salt marsh.

Torreón, c., Coahuila, N. Mexico; developed rapidly after growth of cotton in surrounding Laguna dist.; cotton mills, rubber, smelting, food processing; rly. connection with ts. in S. Mexico; p. (1970) 257,045.

Torres Strait, between C. York, Queensland, Australia, and New Guinea; 90 m. wide, dangerous navigation.

Torridge, R., Devon, Eng.; flows from Hartland dist. to a confluence with the Taw at Bideford Bay; 53 m. long.

Torrington. *See* Great Torrington.

Tortona, t., Piedmont, N. Italy; on Scrivia R.; textiles, metallurgy, engin., wines; cath.; the Roman Dertona; p. c. 25,000.

Tortosa, c., Tarragona prov., N.E. Spain; pt. on Ebro R., 22 m. from mouth; food processing, soap, pottery; cath.; impt. Moorish t.; p. (1961) 43,267.

Tororo, t., Uganda; lge chemical wks., cement, fertilisers.

Tortuga or Ile de la Tortue, I., Caribbean Sea; off N. cst. **Haiti;** provides shelter from N.E. tr. winds for Port-de-Paix; private development to convert I. into free pt. with tax incentives for inds.; scenic attractions being tapped to develop tourist tr.; airport under construction; subsistence agr., fishing; a. c. 25 sq. m.

Torun (Ger. Thorn), c., Bydgoszcz prov., Poland; rly. junc., pt. on Vistula; industl. ctr.; chemicals, elec. gds., clothing, metallurgy, engin., food processing; univ. bears name of Copernicus who was born here; p. (1970) 129,200.

Tory I., off N.W. cst., Donegal, R.o.I.; lighthouse; fishing; p. c. 200.

Totnes, t., Devon, Eng.; on R. Dart, 6 m. N.W. of Dartmouth; mediaeval t.; agr. mkt., food processing; p. (1971) 5,771.

Tottenham. *See* Haringey.

Tottington, t., Gtr. Manchester, Eng.; textiles; p. (1971) 9,740.

Tottori, t., Honshu, Japan; spt. on Sea of Japan, exp. lumber, raw silk, fruit; industl. ctr.; p. (est. 1969) 116,000.

Touggourt or Tuggurt, t., S. Algeria; on edge of Sahara; rly. terminus; dates; p. (1961) 26,000.

Toul, t., Meurthe-et-Moselle dep., N.E. France; in Lorraine, on Moselle R.; agr. ctr.; p. (1962) 15,031.

Toulon, c., Var dep., S.W. France; in Provence, on Mediterranean cst.; base of Fr. navy; fine natural harbour; comm. pt. and industl. ctr.; many fine bldgs.; Port-Cros Nat. Park nearby; p. (1968) 174,746 (c.), 340,021 (met. a.).

Towy, R., S. Wales; flows S.W. of Carmarthen Bay; l. 65 m.

Toyama, c., Honshu, **Japan**; on Etchu plain to E. of Noto peninsula; regional admin. and comm. ctr.; patent medicines, aluminium smelting, machin.; p. (est. 1969) 267,000.

Toyohashi, t., Honshu, **Japan**; food processing, textiles; p. (1969) 256,000.

Trabzon or **Trebizond**, spt., **Turkey**; on Black Sea; exp. tobacco, food prods., carpets; once a gr. tr. ctr. on caravan route between Persia and Europe; founded 8th cent. B.C. by Greek colonists.

Trafalgar, C., S.W. cst., Cadiz, **Spain**; Nelson's famous victory 1805.

Trail, t., B.C., **Canada**; lgst metallurgical smelter in Commonwealth, using local non-ferrous metals; chemicals; p. (1971) 10,843.

Tralee, mkt. t., spt., Kerry, **R.o.I.**; on R. Lee; exp. grain, butter; p. (1966) 11,211.

Tranent, burgh, E. Lothian, **Scot.**; 10 m. E. of Edinburgh; p. (1971) 6,281.

Trani, spt., N. Apulia, **Italy**; on Adriatic; mkt. t. for tertile coastal a.; fishing, food processing; cath., cas.; p. (1961) 38,129.

Transbaykal, region, Siberia, **RSFSR**; E. of L. Baykal; mineral wealth; ch. t., Chita.

Transcaucasia, region between the Black Sea and the Caspian Sea, **USSR**; comprising the constituent reps. of Georgia, Armenia, and Azerbaydzhan; ch. t., Tbilisi.

Transkei, Bantu Terr. Authority, E. Cape, S. Africa; cereals, fruits, cattle, sheep; limited Bantu self-gov., p. mainly employed in mines in Transvaal and Orange Free State; cap. Umtata; a. 16,544 sq. m.; p. (1970) 1,751,327.

Transvaal, prov., **Rep. of S. Africa**; high veld plateau (3,000–4,000 ft.) with Kruger Nat. Park in N.E.; hot summers, temperate winters; livestock on grasslands, grains, citrus fruits and temperate crops on irrigated land; lge mineral wealth, especially gold in Witwatersrand; diamonds, uranium, platinum; inds. in ch. cs., Johannesburg and cap. Pretoria; a. 110,450 sq. m.; p. (1970) 6,385,762.

Transylvania, historic region and prov., central **Romania**; high plateau surrounded by Carpathians; forested; mineral wealth not yet fully realised; arable agr. in vallevs; ch. ts., Cluj, Brasov.

Transylvanian Alps, range of mtns., **Romania**; continuation of Carpathians.

Trapani, t., cap. of T. prov., W. Sicily, **Italy**; spt. on promontory, sheltering natural habour; exp. wine, pasta, tuna fish caught locally; p. (1969) 76,679.

Traralgon, t., Victoria, **Australia**; lignite mng. nearby; p. (1972) 14,624.

Trasimeno, L., Umbria, central **Italy**; occupies lge extinct volcanic crater; drained S. to R. Tiber; a. c. 60 sq. m.

Trás-os-Montes e Alto-Douro, prov., N. **Portugal**; high, bleak plateau, cultivated valleys; climate cold except in S.; port wine cty. of Douro R.; remote, sparsely populated; a. 4,569 sq. m.; p. (1960) 667,054.

Trawsfynydd, Gwynedd, **Wales**; within N. Wales Nat. Park; nuclear power sta.

Trebizond. *See* Trabzon.

Tredegar, t., Gwent, **Wales**; in narrow valley 3 m. W. of Ebbw Vale; engin.; home of Aneurin Bevan; p. (1971) 17,976.

Treforest, t., Mid Glamorgan, **Wales**; on R. Taff; lge trading estate established in 1930s to alleviate unemployment in primary inds. of S. Wales; aircraft accessories, electronics, chemical, pharmaceutical, rayon, metal wks.

Trelleborg, spt., S. **Sweden**; on Baltic Sea; most impt. rubber factory in cty.; p. (1961) 19,209.

Tremadoc Bay, N. **Wales**; N. part of Cardigan Bay formed by Lleyn penin., Gwynedd.

Trengganu, st., **Malaysia**; N.E. Malaya; rice, rubber, coconuts; tin, iron; cap. Kuala Trengganu; a. 5,050 sq. m.; p. (1967) 378,738.

Trent, R., Eng.; rises in N. Staffs, flows round S. Pennines and joins the Ouse to form estuary of the Humber; many power stas. along its banks; polluted waterway, especially between Humber and Nottingham; 150 m. long.

Trentino-Alto Adige, aut. region, N.E. **Italy**, between Austrian and Swiss Frontiers and L. Garda; embraces provs. Trento and Bolzano; cap. Trento; formerly called Venetia Tridentina; a. 5,250 sq. m.; p. (1969) 889,625.

Trento, t., cap. of Trento prov. and ch. t. of Trentino-Alto Adige, N. **Italy**; on R. Adige and route to Brenner Pass; chemicals, cement, elec. engin.; picturesque t.; cath.; p. (1969) 89,410.

Trenton, c., cap. of N.J. st., **USA**; on Delaware R.; transport and industl. ctr.; noted for its wire-rope and pottery inds., established mid-19th cent.; crockery, machin., metal and rubber gds.; p. (1970) 102,211 (c.), 299,919 (met. a.).

Tres Arroyos, t., E. **Argentina**; agr. and livestock ctr.; p. (1960) 40,000.

Trèves. *See* Trier.

Treviso, c., cap. of T. prov., Venetia, N.E. **Italy**; on R. Sile; agr. ctr. on fertile Venetian plain; silk mills, paper, furniture, fertilisers, pottery; p. (1969) 89,267.

Triberg, t., Baden-Württemberg, **W. Germany**; resort in Black Forest; clocks, wood-working; p. c. 6,000.

Trichinopoly. *See* Tiruchirapalli.

Trichur, t., Kerala, **India**; comm. and educational ctr.; p. (1961) 73,038.

Trier (**Trèves**), c., Rhineland-Palatinate, **W. Germany**; on R. Moselle; Roman origin, cath., Porta Nigra; wine cellars, tobacco, leather, textiles, machin., brewing; birthplace of Marx; p. (est. 1969) 104,100.

Trieste, spt., cap. of T. prov., Friuli-Venezia Giulia, N.E. **Italy**; shipbldg., fishing, oil refining; pipeline to Schwechat, nr. Vienna; cath., cas., Roman antiquities; univ.; p. (1969) 278,370.

Trieste Free Territory, former free st. on the Adriatic; constituted by Peace Treaty with Italy, 1947, as compromise conflicting Yugoslav and Italian claims; a. 287 sq. m.; Zone A handed over to Italy, Zone B to Yugoslavia, 1954.

Trikkala, t., cap. of T. dep., W. Thessaly, N. **Greece**; mkt. t. for pastoral prods.; damaged by earthquake 1954; p. (1961) 27,876.

Trim, co. t., U.D., Meath, **R.o.I.**; mkt. t. on R. Boyne; anc. seat of Irish Parliament; p. (1966) 1,467.

Trincomalee, t., N.E. cst. **Sri Lanka**; excellent natural harbour; formerly a British naval base; p. c. 33,000.

Tring, mkt. t., Herts., **Eng.**; in gap through Chiltern hills, 9 m. N.W. of Hemel Hempstead; p. (1971) 9,155.

Trinidad, t., cap. of Beni dep., **Bolivia**; exp. beef by air, but development hampered by isolation; p. (1962) 14,505.

Trinidad, I., W.I.; N. of Venezuela; climate warm and humid; oil, natural gas, asphalt, sugar, rum, coconut oil, molasses, citrus fruits; tourism; cap. Port of Spain; a. 1,864 sq. m.; p. (est. 1970) 1,010,000. *See* Trinidad and Tobago.

Trinidad, t., central **Cuba**; picturesque old t. of colonial period, declared a national monument; p. c. 18,000.

Trinidad and Tobago, indep. sov. st. within Commonwealth (1962), **W.I.**; main exps. crude oil and petroleum prods. which together with natural asphalt represent over 20 per cent national income; oil refining; tropical crops and food processing; sugar, molasses, rum, fruits, textiles; cap. and major spt. Port of Spain; a. 1,980 sq. m.; p. (est. 1970) 1,044,000.

Trinity, R., Texas, **USA**; flows S.E. to Galveston Bay; much used for reservoirs; valley contains lge p. and much economic activity; 500 m. long.

Trino, Piedmont, N. **Italy**; 11 m. S.S.W. of Vercelli; nuclear power sta.

Tripoli, c., **Lebanon**; spt. on Mediterranean; admin. ctr. for N. Lebanon; terminus of oil pipeline from Iraq; oil refining; exp. agr. prods.; p. (est. 1964) 127,611.

Tripoli, c., joint cap. of **Libya** (with Benghazi), on Mediterranean; stands on edge of palm-oasis, site of anc. Oea; tourist, comm. and mnf. ctr.; gd. harbour; p. (est. 1968) 247,365.

Tripura, new st. (1972), **India**; N.E. Ganges delta, bordering Assam and Bangladesh; cap. Agartala; rice, jute, cotton, sugar-cane; a. 4,000 sq. m.; p. (est. 1971) 1,556,822.

Tristan da Cunha, sm. gr. of Is., S. Atl. Oc.; dependency of Brit. col. St. Helena; ch. I. Tristan; evacuated 1961 (volcanic eruption) but resettled 1963; a. 45 sq. m.; p. (1970) 280.

Trivandrum, c., cap. of Kerala st., S.W. India; pt. on Arabian Sea; textiles, coconut processing; univ.; p. (est. 1970) 359,580 (c.), 451,500 (met. a.).

Trnava, c., W. Slovakia, **ČSSR**; mkt. t. in fertile agr. region on Váh R.; food processing, steel wks.; cath., monasteries, called "little Rome"; p. (1967) 36,000.

Trnovo or Tirnovo, c., **Bulgaria**; on Jantra R.; food processing, textiles, leather; anc. cap. of Bulgaria; p. c. 25,000.

Trogir, t., S. Croatia, **Yugoslavia**; sm. pt. and seaside resort, partly sited on I. of Čiovo; mediaeval bldgs., inc. cath., palaces; p. c. 20,000.

Trois Rivières, t., Quebec, **Canada**; industl. ctr. on St. Lawrence R.; noted for newsprint; hydroelectric power from St. Maurice R.; p. (1966) 57,540.

Trojmiasto (Tri-City), **Poland**; name given to the three municipalities of Gdansk, Gdynia, and Sopot, a loosely-knit conurb.

Trollhättan, t., S.W. **Sweden**; on Göta R., nr. T. falls which generate power for metallurgical and chemical inds.; car and aircraft components; p. (1968) 40,803.

Trombay, I., off Bombay, **India**; oil refining; atomic reactor; zirconium metal produced; fertilisers.

Troms, prov., N. **Norway**; deep fjords, offshore Is.; fishing, livestock, boat-bldg.; cap. Tromsö; a. 10,006 sq. m.; p. (1963) 129,219.

Tromsö, t., cap. of Troms prov., N. **Norway**; spt. on sm. I. of T. in Norwegian Sea; arctic fishing, sealing; fish processing; p. (1968) 36,340.

Trondheim, c., spt., **Norway**; on W. cst. on S. side of T. fjord; shipbldg., engin.; exp. timber and wood-pulp, butter, fish, copper; anc. cath., burial place of early Norwegian kings and place of coronation of recent sovereigns; p. (est. 1969) 124,870.

Troon, burgh, Ayr, **Scot.**; on F. of Clyde, 6 m. N. of Ayr; gd. harbour and graving docks; shipbldg., hosiery; seawater distillation research ctr. project; resort; p. (1971) 11,318.

Troppau. *See* **Opava**.

Trossachs, **Perth, Scot.**; picturesque wooded glen; tourist resort.

Troste, nr. Llaneily, **Wales**; steel strip mill, tin plate.

Trouville, t., Calvados dep., **N. France**; popular seaside resort and fishing pt. on Normandy cst.; p. (1968) 6,577.

Trowbridge, mkt. t., Wilts., **Eng.**; cloth wks., bacon curing, dairying, engin.; p. (1971) 19,245.

Troy, c., N.Y., **USA**; at confluence of Rs. Hudson and Mohawk; gr. shirt-mftg. ctr.; p. (1960) 67,492.

Troyes, c., cap. of Aube dep., N.E. **France**; on R. Seine; once cap. of Champagne; hosiery, textile machin., food processing; magnificent cath.; site of mediaeval fairs which standardised Troy weight; p. (1968) 74,898 (c.), 114,209 (met. a.).

Trucial States. *See* **United Arab Emirates**.

Trujillo, c., N.W. **Peru**; comm. and mkt. ctr. for irrigated agr. region, on Moche R., in foothills of Andes; sugar, cocaine; univ., cath.; p. (est. 1969) 149,000.

Trujillo, t., cap. of T. st., W. **Venezuela**; on Transandean highway at 2,640 ft.; agr. mkt. for region producing coffee, cacao, tobacco, maize; p. (1961) 19,358.

Truro, t., Nova Scotia, **Canada**; on Salmon R.; hosiery, lumber mills, printing, metallurgy, machin.; p. (1971) 12,968.

Truro, c., Cornwall, **Eng.**; at confluence of Rs. Kenwyn and Allen; mkt. t. and sm. pt.; admin. ctr. of Cornwall; cath.; p. (1971) 14,830.

Tsaidam, depression, Chinghai prov., **China**; a. of salt marsh and Ls.; rich deposits of oil; st. farms for intensive animal husbandry.

Tsamkong (Zhanjiang), c., Kwantung prov., **China**; spt. on Luichow peninsula; cotton milling, leather mnfs.; p. (1953) 166,000.

Tsangpo, R., Tibet, **China**; one of the headstreams of the R. Brahmaputra; 850 m. long.

Tschenstokov. *See* **Czestochowa**.

Tselinograd, c., Kazakh SSR, **USSR**; cap. Virgin Lands terr.; on Ishim R., nr. Karaganda coalfield; chemicals, agr. machin.; p. (1970) 180,000.

Tsinan (Jinan), c., cap. of Shantung prov., China; on S. bank of Hwang-Ho, 100 m. from G. of Chihli; agr. ctr.; mnfs. glass, textiles, precious stones, trucks; p. (1957) 862,000.

Tsinghai. *See* **Chinghai**.

Tsinling Shan, mtn. range, central **China**; rises to over 6,000 ft.; watershed between Hwang-Ho and Yangtze R. basins; impt. climatic divide between temperate N. China and tropical S. China.

Tsingtao (Qingdao), c., Shantung prov., **China**; spt. with excellent harbour at head of Kiaochow Bay; exp. soya beans, groundnuts; mnfs. locomotives, cement, textiles, machin., chemicals; p. (1957) 1,121,000.

Tsitsihar (Qiqihar), c., Heilungkiang prov., N. China; on Vladivostok portion of Trans-Siberian rly.; food processing and tr., chemicals; potential oilfield; p. (1957) 668,000.

Tskhinvali, c., N. Georgian SSR, **USSR**; elec. prods., lumber mills, fruit canning; p. (1970) 30,000.

Tsu, t., Honshu, **Japan**; textiles; p. (est. 1969) 123,000.

Tsugaru Strait, Japan; separates Is. Hokkaido and Honshu; links Sea of Japan with Pac. Oc.; 45 m. long, 15–20 m. wide.

Tsuruga, spt., **Japan**; on W. cst. Honshu; rayon textiles, cotton, atomic power plant; p. (1965) 32,343.

Tuam, mkt. t., R.D., Galway, **R.o.I.**; sugar refining; p. (1961) 25,676 (R.D.); (1966) 3,621 (t.).

Tuamotu, coral archipelago, **Fr. Polynesia, S. Pac. Oc.**; pearl fisheries; p. of gr. (1962) 7,097.

Tuapse, c., S. Krasnodar terr., **RSFSR**; at foot of Caucasus on Black Sea; major petroleum pt. at W. end of pipeline from Baku and Makhachkala; oil refineries; p. (est. 1967) 49,000.

Tubarao, t., Santa Catarina st., **S. Brazil**; on E. cst., 175 m. N.W. of Pôrto Alegre; coal mines; p. (1960) 29,615.

Tübingen, t., Baden-Württemberg, **W. Germany**; on R. Neckar; 15th cent. univ., cas.; mediaeval c. ctr.; birthplace of Hölderlin, p. (1963) 53,300.

Tubuai, archipelago, Fr. Polynesia. **S. Pac. Oc.**; a. 63 sq. m.; p. (1962) 4,371.

Tucson, c., S.E. Arizona, **USA**; mkt. and distribution ctr. on Santa Cruz R.; cultural ctr. and winter resort based on Spanish heritage and warm dry climate; food processing, missile components; p. (1970) 258,303 (c.), 344,904 (met. a.).

Tucumán. *See* **San Miguel de Tucumán**.

Tudela, t., Navarre, N. Spain; mkt. ctr. for fertile fruit-growing dist. and I. of La Majana in Ebro R.; fine cath., Roman bridge; p. (1960) 16,456.

Tula, c., cap. of T. oblast, **RSFSR**; mnf. ctr. in Moscow industl. region; local iron and lignite mng.; Yasnaya Polyana, home of Tolstoy, nearby; p. (1970) 462,000.

Tulare, L., S. Cal., **USA**; ctr. of inland drainage 40 m. S. of Fresno; streams feeding it used for irrigation; in drought years L. dries up completely; a. 90 sq. m.

Tullamore, mkt. t., U.D., Offaly, **R.o.I.**; on Grand Canal; farming, distilling, brewing; p. (1966) 6,650.

Tulle, t., cap. of Corrèze dep., **France**; firearms, textiles; p. (1968) 21,324.

Tulsa, c., Okla., **USA**; impt. oil ctr., based on lge local deposits; machin., aeroplanes; well laid out with many parks; p. (1970) 327,956 (c.), 471,743 (met. a.).

Tumaco, t., S.W. **Colombia**; spt. on Pac. Oc., on sm. I. off cst.; exp. agr. prods.; climate hot and humid; p. c. 49,000.

Tummel, R., Perth, Scot.; trib. of R. Tay; used by Perth to Inverness rly. as S. approach to Drumocheter Pass; hydroelectricity scheme nr. Pitlochry; 55 m. long.

Tunbridge Wells (officially **Royal Tunbridge**

Wells), t., Kent, Eng.; on border of East Sussex; chalybeate waters; attractive 17th cent. promenade known as "The Pantiles"; p. (1971) 44,506.

Tunghwa, c., S.W. Kirin, China; rly. junc.; soyabean processing; local iron and coal reserves; p. (1953) 129,000.

Tung Ting Hu, lge L., Hunan, China; on S. margin of Yangtze R. plain; receives waters of Yuan and Siang Rs., drains N. to Yangtze R.; surrounded by flat, intensively cultivated land; rice, sugar, mulberry; size varies with season; max. (in late summer) 2,500 sq. m.

Tunguska, Upper, Stony and Lower, Rs., Siberia, USSR; all rise in Sayan mtns. nr. L. Baykal and flow N.W. through forested cty. into R. Yenisey.

Tunguska Basin, coalfield between Yenisey and Lena Rs., RSFSR; main ts., Norilsk, Igarka, Yeniseysk.

Tunis, c., cap. of Tunisia, N. Africa; spt. on inlet of Mediterranean; exp. raw materials; base for fishing fleets; univ., notable mosques; tourist ctr.; ruins of anc. Carthage to N.E.; p. (1966) 468,997 (c.), 647,640 (met. a.).

Tunisia, indep. st., N. Africa; bounded by Algeria on W., by Libya on E., indented Mediterranean cst.; Atlas mtns. penetrate into N.; temperate cst. climate, hot and dry in S. desert; agr. and mng. basis of economy; wheat, olive oil, wine, fruits, limited to wetter coastal areas and irrigated valleys; phosphates around Ghafsa; iron ore and lead in N.W.; steelwks. at Menzel Bourguiba; chemical and paper inds. based on local phosphates; cap. Tunis; a. 63,362 sq. m.; p. (1966) 4,533,351.

Tunja, c., cap. of Boyacá dep., Colombia; route and agr. tr. ctr.; p. c. 65,000.

Turda, t., Transylvania, Romania; local salt mines and quarrying aid chemical and ceramic inds.; p. (1963) 63,421.

Turfan, depression, E. Sinkiang prov., China; on S. slopes of Tien Shan mtns.; desert a. irrigated by wells and canals for animal husbandry, fruit, cotton, grain; 900 ft. below sea level; ch. t. Turfan; archaeological finds.

Turgutlu (Kassaba), t., Manisa prov., Turkey; 30 m. E.N.E. of Izmir; lignite, cotton, melons; p. (1965) 35,079.

Turin or **Torino**, c., cap. of T. prov., N. Italy; on R. Po at confluence with the Dora Riparia; former cap. of Piedmont and kingdom of Sardinia; univ., cath., many historic monuments; headquarters of Italian motor ind.; clothing, machin., furniture, chemicals; oil refinery nearby; p. (1969) 1,177,039.

Turkestan E., terr. included in Sinkiang, China; separated from W. or former Russian Turkestan by Pamir plateau; mainly desert.

Turkestan W., terr. of USSR; inc. Turkmen SSR, Uzbek SSR, Tadzhik SSR, Kirghiz SSR, and part of Kazakh SSR.

Turkey, rep., S.W. Asia; occupies mtnous. Anatolian penin.; equable climate on coastal margins, continental severity in interior; economy predominantly agr. but hampered by poor land resources; grain grown on Anatolian plateau and a Mediterranean variety of crops around cst.; noted for tobacco; industl. development based on mng. resources and oil in S.E.; cap. Ankara; a. 301,382 sq. m.; p. (1970) 35,666,549.

Turkmen (Turkmenistan), SSR, constituent rep., USSR; borders on Afghanistan, Iran, and the Caspian Sea; much of a. in Kara-Kum desert; agr. based on irrigation; fruit, cotton, wool; sulphates, petroleum; p. concentrated in oases and industl. ctrs. of cap. Ashkhabad, Mary, Chardzhou, along Trans-Caspian rly; a. 189,603 sq. m.; p. (1970) 2,158,000.

Turks and Caicos, Is., Caribbean Sea, W.I.; about 30 sm. Is., geographically S.E. continuation of Bahamas; dry climate, poor limestone soil; exp. salt, crawfish; cap. Gran Turk; a. 166 sq. m.; p. (est. 1965) 6,272.

Turku (Åbo), spt., S.W. Finland; on Baltic Sea; ctr. of fertile agr. a.; exp. agr. prods.; industl. ctr.; shipbldg., steel, machin., textiles; Finnish and Swedish univs.; p. (1968) 149,078 (c.); (1967) 194,464 (met. a.).

Turnhout, t., N.E. Belgium, nr. Antwerp, on Campine canal; textiles, lace, printing; p. (1968) 37,803.

Turnu Severin, c., S.W. Romania; R. pt. on Danube below Iron Gate cataracts; grain, salt, petroleum tr., shipbldg.; p. (1968) 46,010.

Turriff, burgh, Aberdeen, Scot.; nr. R. Deveron; mkt. t.; engin.; p. (1971) 2,858.

Turton, t., Lancs., Eng.; 4 m. N. of Bolton; p. (1971) 21,500.

Tuscaloosa, c., Ala., USA; on Black Warrior R.; rly. and industl. ctr. based on local coal, iron, cotton, timber; univ.; p. (1970) 61,933 (c.), 110,915 (met. a.).

Tuscany, region, central Italy; inc. provs. Arezzo, Firenze, Livorno, Siena, Grosseto, Lucca, Pisa, Massa and Carrara, Pistoia; mainly mtnous., drained by Arno R. system; wines, olive oil, cereals; iron ore from Elba, marble from Apuan Alps around Carrara; pt. at Livorno (Leghorn); cap. Firenze (Florence); a. 8,876 sq. m.; p. (1961) 3,267,324.

Tuticorin, t., Tamil Nadu, S.E. India; on G. of Manaar; fertiliser plant; declining cotton and tea pt.; p. (est. 1970) 153,958.

Tuttlingen, t., Baden-Württemberg, W. Germany; on R. Danube; surgical instruments; footwear; p. (1963) 25,200.

Tuva ASSR, RSFSR; bounded by Siberia and Mongolia; mtn. basin, forested; timber inds., coal mng., asbestos, pastoral agr.; cap. Kyzyl; a. c. 64,000 sq. m.; p. (1970) 231,000.

Tuxtla Gutiérrez, c., cap. of Chiapas st., Mexico; in fertile valley at 1,500 ft.; ctr. for sisal, tobacco, coffee, cattle; on Inter-American Highway; Mayan ruins nearby; p. (1969) 41,000.

Tuy Hoa, t., S. Vietnam; fertilisers, tyres, sugar mill.

Tuz, L., Turkey; salt L.; a. 625 sq. m. in winter, much reduced in summer.

Tuzla, t., Bosnia-Hercegovina, Yugoslavia; salt, lignite, coal; hydroelectric power in a.; agr. mkt. ctr.; textiles; p. (1961) 53,008.

Tweed, R., S.E. Scot.; rises in Peebles, and reaches sea at Berwick; salmon fisheries; 97 m.

Twelve Pins, star-shaped mtn. range, Galway, R.o.I.; Benbaum, 2,395 ft.

Twickenham. *See* Richmond-upon-Thames.

Tychy, t., Katowice prov., Poland; on edge of Upper Silesian industl. a.; surrounded by forest; brewing; p. (1970) 71,400.

Tyldesley, t., Gtr. Manchester, Eng.; 4 m. S. of Bolton; p. (1971) 21,163.

Tyler, c., Texas, USA; oil ctr. on E. Texan field; agr. ctr. for local mkt. gardening; famous for rose growing; p. (1960) 51,230.

Tyne, R., Tyne and Wear, Durham and Northumberland, Eng.; formed by confluence of N. Tyne and S. Tyne at Hexham; flows E. to sea at Tynemouth and S. Shields; valley gives easy route across mtns. from Newcastle to Carlisle; lower course forms harbour (with shipbldg. and other wks.) from Newcastle to Tynemouth; road tunnel between Wallsend and Jarrow; 80 m. long.

Tynemouth, t., Tyne and Wear, Eng.; fishing pt. on N. bank of Tyne R.; aluminium smelter; shipbldg., engin.; ruined priory and cas.; residtl., resort; p. (1971) 68,861.

Tyne and Wear, met co., N.E. Eng.; mainly industl. a. around lower T. and W. Rs.; inc. Newcastle-upon-Tyne, Tynemouth, Gateshead, South Shields and Sunderland; traditionally ass. with shipbldg. and coal-mng., but inds. incr. diversified; p. (1971) 1,209,000.

Tyre (Sur), Lebanon; anc. Phoenician c. and spt., founded c. 15th cent. B.C.; now sm. comm. t., tr. in cotton, tobacco; p. 12,000.

Tyrol, Alpine region, Europe; falls within Austria and Italy, linked by Brenner Pass; embraces highest peaks of Austrian Alps, culminating in Ortler Spitz; two-fifths forest, timber inds.; mtn. pasture; tourism; cap. Innsbruck; a. 4,884 sq. m.; p. c. 470,000.

Tyrone, former co., N. Ireland; now replaced by Strabane, Omagh, Dungannon and Cookstown l. gov. dists.

Tyrrhenian Sea, part of Mediterranean between Italy and Corsica, Sardinia and Sicily.

Tyumen, c., RSFSR; one of oldest Siberian ts., rly. ctr. on Trans-Siberian rly., R. pt. on Tura R.; many heavy inds.; ctr. of oil and natural gas region; p. (1970) 269,000.

Tywyn, mkt. t., Gwynedd, Wales; on cst. of Cardigan Bay, 3 m. N.W. of Aberdovey; p. (1971) 3,818.

Tzekung (Zigong), c., Szechwan, **China**; petroleum, natural gas, salt wks.; p. (1953) 291,000.
Tzepo (Zibo), c., Shantung, **China**; formed by merging 1950 coal mng. ts. of Tzechwan and Poshan and 1954 addition of Changchow; p. (1957) 806,000.

U

Ubangi, major R., **Central Africa**; trib. of R. Zaire; rises on bdr. of Central African Rep. and Zaire, flows W. and S. to join Zaire R. at Irebu; partially navigable; 1,400 m. long.
Ube, spt., S. Honshu, **Japan**; coal mng. and industl. ctr.; machin., synthetic petroleum; p. (est. 1969) 150,000.
Ubede, t., Jaén prov., **Spain**; on plateau between Guadalquivir and Guadalimar; food processing, olive oil, soap; p. (1960) 28,956.
Uberaba, t., Minas Gerais, **Brazil**; ctr. of cattle rearing and arable agr. region; sugar milling, mnfs. lime; p. (1968) 100,634.
Ucayali, R., **Peru**; headstream of R. Amazon; over 1,400 m. long, navigable for 1,000 m.
Uckfield, mkt. t., East Sussex, **Eng.**; 8 m. N.E. of Lewes; a. ctr. of former Sussex iron ind.; p. (1971) 54,518 (dist.).
Udaipur, c., Rajasthan, N.W. **India**; in picturesque valley at 2,500 ft. a.s.l.; cap. of former princely st. of U.; maharajah's palace; p. (est. 1970) 136,000.
Uddevalla, spt., S. **Sweden**; N. Göteborg; shipyds., prefab. houses, timber, granite quarrying, textiles; p. (1968) 36,480.
Udi, t., S. **Nigeria**, W. Africa; 100 m. N. of Pt. Harcourt; impt. mng. ctr. on Enugu coalfield; linked by rail to Kaduna and Pt. Harcourt.
Udine, c., cap. of U. prov., Friuli-Venezia Giulia, N.E. **Italy**; between Alps and G. of Venice; route and industl. ctr. in agr. region; textiles, chemicals, engin., leather, woodwork; cath., many attractive bldgs., piazzas; p. (1969) 96,694.
Udmurt ASSR, RSFSR; part of Urals industl. a.; two-fifths forested, timber inds.; arable agr., flax; steel inds. at cap. Izhevsk, Votkinsk, Sarapul; p. (1970) 1,417,000.
Udokan Khrebet, mtns., **RSFSR**; world's lgst. reserve of copper.
Ufa, c., cap. of Bashkir ASSR, **RSFSR**; in Urals industl. a., at confluence of Rs. Belaya and Ufa; machin., oil refineries, sawmills; p. (1970) 773,000.
Uganda, rep., E. Africa; equatorial cty., climate modified by alt.; forms part of E. African plateau (4,000 ft.); well-developed economy; coffee, tea, tobacco, cotton for exp.; developing pastoral economy, fishing on L. Victoria; copper at Kilembe, tin; hydroelectric power from Owen Falls, second project at Murchison Falls; savannah areas contain abundant wildlife in Nat. Parks and Game Reserves; cap. Kampala; a. 91,076 sq. m.; p. (est. 1970) 9,764,000.
Uist, N. and **S.**, Is., Outer Hebrides, N.W. **Scot.**; indented csts.; N. Uist boggy in E., hilly in W.; S. Uist smaller but mtnous.; crofting, fishing; p. (1971) 1,726 (N.), 3,872 (S.).
Uitenhage, t., Cape prov., **S. Africa**; fruit, wool, rly. wks., tyres, car assembly, textiles; summer resort; p. (1970) 69,048.
Ujiji, t., in sm. terr. same name (a. 920 sq. m.) on E. shore L. Tanganyika, **Tanzania**; where Stanley found Livingstone 1871; p. c. 14,000.
Ujiyamada, t., **Japan**; sacred c. of Shintoism.
Ujjain, t., Madhya Pradesh, **India**; sacred c. and formerly cap. of Malwa; univ.; p. (est. 1970) 159,000.
Ujpest, industl. sub., Budapest, **Hungary**; elec. engin., leather, shoes, textiles, furniture pharmaceuticals; p. 76,000.
Ujung Pandang (Makasar), c., Sulawesi, Indonesia; in dist. of rich volcanic soils; major spt. and airpt., entrepot tr.; p. (1961) 384,159.
Ukhta, t., **RSFSR**; ctr. of natural gas field in Pechora Basin; p. c. 50,000.
Ukrainian SSR, constituent rep., **USSR**; in Eastern Europe; of dominating importance in Soviet economy; drained by Rs. Dnieper, Dniester, S. Bug, Donets; Pripet Marshes in N., wooded steppes in ctr., fertile black-earth a. in S.; major wheat-growing a. of Europe; highly mineralised, many industl. raw materials and ctrs. of metallurgical and heavy inds.; cap. Kiev; a. 225,000 sq. m.; p. (1970) 47,126,000.
Ulan Bator, c., cap. of Mongolian People's **Rep.**; in stock-raising region; industl. ctr. of cty.; woollen gds., saddles, knitwear; new industl. ctr. at Darkhan nearby; rly. link to China and USSR; contains one-quarter of p. of rep.; p. (1966) 250,000.
Ulan-Ude (Verkhneudinsk), t., Siberia, **RSFSR**; major route and mnf. ctr.; pt. on R. Ude, junc. on Trans-Siberian rly., linked by rail to Peking; engin., textiles, glass, leather; p. (1970) 254,000.
Uleåborg. *See* **Oulu**.
Ullapool, v., Ross and Cromarty, **Scot.**; sm. fish. pt. (herring landings), on L. Broom, 45 m. N.W. of Inverness; attractive mtn. and cst. scenery in a.
Ullswater, L., Cumbria, Eng.; 8 m. long; supplies water to Manchester; attractive tourist a.
Ulm, c., Baden-Württemberg, **W. Germany**; route ctr. at limit of barge navigation on Danube, although navigable limits being extended by canalisation; food-processing, metal gds., textiles, cement; p. (1965) 93,000.
Ulsan, t., **South Korea**; oil refining, fertilisers; p. (1966) 112,858.
Ulster. *See* **Northern Ireland**.
Ulúa-Chamelecón, R. basin, N. cst. **Honduras**; major banana region of Central American cst.
Ulva, I., Argyll, Scot.; off W. cst. of Mull; 5 m. long.
Ulverston, mkt. t., Cumbria, **Eng.**; nr. Morecambe Bay; antibiotics, elec. gds., tanning; p. (1971) 11,888.
Ul'yanovsk (Simbirsk), c., cap. of U. oblast, **RSFSR**; industl. ctr. of middle Volga region; birthplace of Lenin whose real name was Ulyanov; p. (1970) 351,000.
Uman, c., Ukrainian SSR, USSR; at confluence of Kamenka and Umanka Rs.; rly. junc.; agr.-processing; p. c. 50,000.
Umanak, t., W. Greenland; hunting and fishing base on arm of Baffin Sea; marble mng.; p. c. 1,000.
Umbria, region, central **Italy**; comprising provs. of Perugia and Terni, crossed by Apennines and upper Tiber; agr. mainstay of economy; inds. based on hydroelectric power at Terni; chemicals; developing tourist tr.; cap. Perugia; a. 3,271 sq. m.; p. (1969) 783,048. [l. 250 m.
Ume, R., Sweden; flows S.E. to the G. of Bothnia;
Umeå, c., cap. of Västerbotten prov., N.E. **Sweden**; on G. of Bothnia at mouth of Ume R.; cultural ctr.; woodpulp; p. (1968) 51,952.
Umm-al-Quaywayn, emirate, member of **United Arab Emirates**; p. (est. 1968) 8,000.
Umtali, t., **Rhodesia**; comm. ctr. for rich agr. a.; oil refinery at Feruka; pipeline to Beira; p. (1968) 53,500.
Umtata, t., Cape Prov., **S. Africa**; admin. ctr. for Transkei terrs.; cath.; p. (1960) 12,287.
Uncia, t., Oruno dep., **Bolivia**; alt. 13,000 ft. in E. Cordillera of Andes, 60 m. S.E. of Oruro; site of impt. Patino tin mines.
Ungava Bay, arm of Hudson Strait, projecting into Labrador, N.E. **Canada**; minerals abundant, recent exploitation of impt. medium and low-grade iron deposits.
Union of South Africa. *See* **South Africa, Rep. of.**
Union of Soviet Socialist Republics (USSR), E. **Europe, N. Asia**; major world economic and political power; ctr. of European communist bloc; extends over 6,000 m. W.–E., 3,000 m. N.–S.; continental climate with marked regional variations; comprises 1 fed. rep. and 14 constituent reps.; centrally planned economy emphasising development of heavy inds. at major sources of natural resources, and development of new resources in E.; timber inds. and textiles impt. with more recent developments in consumer inds.; lge-scale, mechanised agr. with planned prod. reflecting regional variations in physical conditions; transport emphasis on rlys. to open up remote E. regions, but more recent road bldg. programme; 27 major pts. inc. Leningrad, Arkhangelsk, Riga, Murmansk, Odessa, Baku, Vladivostok; cap. Moscow; a. 8,599,341 sq. m.; p. (est. 1973) 248,600,000.

United Arab Emirates (Trucial Sts.), indep. sov. st. on Persian G., S.W. Asia; formed (1971) from Trucial Sts. (Abū Dhabi, Ajmān, Dubai, Al Fujayrah, Ra's al Khaymah, Shārjah, Umm-al-Quaywayn) after withdrawal of Brit. forces and termination of special defence treaty (1820–1971); p. immigration from Middle and Far East as oil-based economic growth proceeds, esp. in Abū Dhabi; a. 32,000 sq. m.; p. (est. 1970) 130,000 (mainly nomadic).

United Kingdom, cty., N.W. **Europe**; separated from continent of Europe by English Channel; consists of Gr. Britain (Eng., Wales, Scot.) and N. Ireland; a. 94,500 sq. m.; p. (1971) 55,347,000.

United States of America, fed. rep., **N. America**; world's major economic power and one of the 3 political "super powers"; variety of climatic and physical conditions (*see* **N. America**); economically self-supporting, but imports petroleum, coffee, machin., textiles; extremely diversified mnfs.; consists of 50 sts. and Dist. of Columbia, co-extensive with cap. of Washington; outlying dependencies inc. Puerto Rico, U.S. Virgin Is., Panama Canal Zone, Guam, American Samoa, Trust Terr. of the Pac. Is.; a. 3,615,123 sq. m.; p. (est. 1971) 207,006,000.

Unst, I., Shetlands, Scot.; most N. of gr.; length 12·5 m.; p. (1971) 1,127.

Unterwalden, can., Switzerland; divided into Obwalden and Nidwalden; dairying, fruit and livestock; cap. Stans; a. 296 sq. m.; p. (1969) 50,600.

Upernavik, t., W. Greenland; on sm. I. in Baffin Bay; sealing and whaling base; meteorological sta.; p. c. 600.

Upper Austria, prov., Austria; borders on W Germany and CSSR; hilly and forested; drained by Danube R. system; inc. Salzkammergut resort a.; agr., forestry; inds. centred on Linz (cap.), Steyr and Wels; a. 4,625 sq. m.; p. (est. 1968) 1,201,600.

Upper Hutt., c., N.I., N.Z.; p. (1971) 20,003.

Upper Volta (Voltaic Rep.), W. **Africa**; landlocked st.; hot dry climate, humid in S.; wooded savannah; agr. basis of economy; most of p. farmers and nomadic herdsmen; permanent agr. in irrigated R. valleys and oases, sorghum, millet, maize, yams, beans; inds. based on local handicrafts; economy hampered by landlocked location; one of poorest economies in world; rly. outlet to sea via Abidjan (Ivory Cst.); cap. Ouagadougou; a. 105,839 sq. m.; p. (est. 1970) 5,437,000.

Uppingham, mkt. t., Leics., **Eng.**; 16th cent. school; p. (1971) 6,576 (dist.).

Uppsala, c., cap. of U. prov., Sweden; on R. Sala, 45 m. from Stockholm; historic ctr. of anc. Sweden; cultural ctr., famous univ. (Linnaeus taught there); cath.; lt. inds.; p. (1968) 97,172.

Ur, anc. Chaldean c. **Iraq**; 130 m. W.N.W. of Basra; ruins; flourished about 3,000 B.C.

Ural, R., **RSFSR**; flows S.W. and S. to Caspian Sea; used for domestic and industl. water supply; navigable; 1,500 m. long.

Ural Mts., **USSR**; mtn. system, forms bdy. between Europe and Asia and separates Russian plain from W. Siberian lowlands; extends N.–S. for 1,500 m.; highest peaks Narodnaya and Telpos-Iz; rich mineral resources have given rise to huge ctrs. of heavy ind., inc. Sverdlovsk, Chelyabinsk, Magnetogorsk.

Uralsk, N.W., Kasakh SSR; **USSR**; on R. Ural; grain-trading and cattle-mart ctr.; flour, leather, woollens, iron-ware; p. (1970) 134,000.

Uranium City, N. Saskatchewan, **Canada**; nr. N. shore of L. Athabasca, ctr. of Beaverlodge uranium-mng. a.; founded 1951; p. (1960) 3,349.

Urawa, t., Honshu, **Japan**; sub. of Tokyo; p. (est. 1969) 258,000.

Urbino, t., in the Marches, central **Italy**; agr. mkt. and route ctr.; picturesque tourist ctr.; cath., univ., palace; p. c. 20,000.

Ure, R., North Yorks., **Eng.**; flows E. and S.E. to the Swale to form the Ouse; upper part of valley known as Wensleydale; 50 m. long.

Urfa, t., **Turkey**; nr. Syrian bdr.; handicrafts, local agr. tr.; p. (1967) 72,873.

Urgench, t., cap. of Khorezm oblast, W. Uzbek SSR, **USSR**; pt. on Amu Dar'ya R. in Khiva oasis; cotton, food-processing; p. (est. 1967) 65,000.

Uri, can., **Switzerland**; S. of L. of Lucerne; forest and mtns.; traversed by St. Gotthard rly. and R. Reuss; sparse p., German speaking; cap. Altdorf; a. 415 sq. m.; p. (1969) 34,000.

Urmia, L., nr. Tabriz, N.W. **Iran**; 85 m. by 30 m.; salt and shallow; no outlet.

Urmston, Gtr. Manchester, **Eng.**; residtl. sub. of Manchester; inc. part of Trafford Park industl. estate; p. (1971) 44,523.

Uruapan, t., Michoacán, W. **Mexico**; mkt. ctr. for semi-tropical mtnous. a.; famous handicrafts; parks, gardens; p. (1970) 104,475.

Urubamba, R., **Peru**; rises in E. Cordillera of Andes; forms one of headstreams of R. Amazon; l. 350 m.

Urubupunga, t., Brazil; new. t. for 10,000, at site of hydroelectric power sta.

Uruguaiana, t., **Brazil**; on R. Uruguay; cattle ctr.; jerked beef, soap, candies; p. (1960) 48,358.

Uruguay, rep., **S. America**; smallest of S. American reps.; situated on N. bank of Rio de la Plata estuary; low hills in N.; temperate climate; 60 per cent land a. devoted to livestock rearing, especially cattle, sheep, based on extensive natural grasslands; arable land in S., grains; ch. t. Montevideo, cap. and main ctr. of inds.; food processing, leather, metallurgy, textiles, rubber; a. 72,172 sq. m.; p. (est. 1970) 2,886,000.

Uruguay, R., **S. America**; rises in S. Brazil, flows 850 m. to Rio de la Plata; forms bdy. between Argentina and Uruguay and part of bdy. between Argentina and Brazil.

Urumchi (Wulumuchi), c., cap. of Sinkiang prov., N.W. **China**; admin., comm. and industl. ctr.; iron and steel, cement, textiles, nitrogenous fertilisers, agr. machin.; local coal, tin, silver mng.; p. (est. 1957) 275,000.

Usak, t., **Turkey**; connected by rail with Izmir; noted for pile carpet-weaving; p. (1965) 88,815.

Usambara, mtns., N.E. **Tanzania**; scene of early European settlement (1902); lumber, tea, coffee produced on slopes; max. alt. 8,400 ft.

Usedom (Uznam), I., Baltic Sea; off mouth of R. Oder; since 1945 E. part belongs to **Poland**, W. (the larger part) to **E. Germany**; a. 172 sq. m.; p. 45,000.

Ushant, I., off cst. of Finisterre, **France**; at entrance to English Channel; it was off Ushant that Lord Howe gained his gr. naval victory on the "glorious first of June" 1794; lighthouse, fishing; p. 2,000.

Ushuaia, t., **Argentina**; most S. t. in world; sheep farming, timber, furs; freezing plant; p. 6,000.

Usk, mkt. t., Gwent, **Wales**; 13th cent. cas.; p. (1971) 2,028.

Usk, R., Gwent, S. Wales; flows S. past Newport to Bristol Channel; picturesque, gd. fishing; 57 m. long.

Usküdar (Scutari), t., **Turkey**; on Bosporus, opposite Istanbul; mkt. ctr.; new bridge to European side of Bosporus; Crimean memorial cemetery for Brit. troops; Muslim cemeteries; p. (est. 1960) 85,000.

Uspallata Pass, 12,500 ft. high over Andes between Mendoza, **Argentina**, and Santiago, **Chile**; monument "Christ of the Andes" marks international bdy. settlement; used by Mendoza–Valparaiso rly.

Ussuri, R., rises in Maritime prov. of **RSFSR**, flows c. 500 m. to R. Amur; final 300 m. forms Sino-Soviet bdy.

Ussuriysk (Voroshilov), t., **RSFSR**; 70 m. N. of Vladivostok; rly. junc. of Trans-Siberian and Chinese Eastern rlys.; engin., agr. prod.; p. (1970) 128,000.

Ustica, I., Palermo, **Italy**; basalt; agr., fishing, handicrafts; a. 3 sq. m.; p. c. 1,200.

Usti-nad-Labem (Aussig), c., Bohemia, **ČSSR**; R. pt. on Elbe; route and industl. ctr.; chemicals, textiles, machin.; p. (1967) 73,000.

Ust Kamenogorsk, c., Kazakh SSR, **USSR**; on Irtysh R.; mng. ctr.; food processing, clothing, furniture; hydroelectric power sta. nearby; p. (1970) 230,000.

Usumbura. *See* **Bujumbura.**

Utah, st., **USA**; Rocky mtns. in E.; forms part of Gr. Basin in W.; Gr. Salt L. in N.W.; dry continental climate; poor agr. conditions, soil

erosion; copper, gold; tourism; Nat. Parks; cap. Salt L. City; a. 84,916 sq. m.; p. (1970) 1,060,631.

Utica, c., N.Y., **USA**; on Mohawk R. and Barge Canal; in rich dairying region; textiles, electronics, tools, firearms; p. (1970) 90,802 (c.), 335,809 (met. a.).

Utrecht, c., **Neth.**; on Old Rhine (Oude Rijn); univ., cath.; chemical and cigar factories; printing, machin., woollens, silks, velvets; major transport and financial ctr.; picturesque; p. (est. 1969) 277,647 (c.), 451,646 (met. a.).

Utrecht, prov., **Neth.**; between Gelderland and N. and S. Holland; fertile agr., cattle rearing, horticulture; a. 526 sq. m.; p. (1968) 768,715.

Utrera, t., **Spain**; S.E. of Seville; in irrigated valley; food processing; p. (1960) 41,126.

Utsunomiya, t., Honshu, **Japan**; ctr. for Nikko Nat. Park; p. (est. 1969) 292,000.

Uttar Pradesh, st., **India**; Himalayas on N. bdy., drained by Ganges and Jumna; irrigation; wheat, rice, millet, barley, maize, cotton, sugar, oil-seeds; ch. ts. Allahabad, Lucknow (cap.), Varanasi, Kanpur, Agra, Meerut; a. 113,410 sq. m.; p. (1961) 73,746,401.

Uttoxeter, t., Staffs., **Eng.**; on R. Dove; machin., biscuit mftg.; expanded t.; p. (1971) 9,034.

Uusikaupunki (Swed. **Nystad**), spt., Åbo-Bjorneborg, S.W. **Finland**; on G. of Bothnia; p. (1966) 5,074.

Uxbridge. *See* Hillingdon.

Uzbek (**Uzbekistan**) **SSR**, constituent rep., **USSR**; crossed by Rs. Amu Dar'ya and Syr Dar'ya; contains part of fertile Ferghana Valley; intensive farming based on irrigation; rice, cotton, fruits, silk, cattle, sheep; ch. cs. Tashkent (cap.), Samarkand; alluvial gold deposits and bauxite in Kizil-Kum desert; a. 159,170 sq. m.; p. (1970) 11,963,000.

Uzhgorod, c., Ukrainian SSR, **USSR**; economic and cultural ctr.; friendship pipeline from Kuybyshev; univ.; p. (est. 1967) 61,000.

V

Vaal, R., **S. Africa**; rises in Drakensberg mtns., flows between the Transvaal and Orange Free State to join the Orange R. nr. Kimberley; V. dam irrigates lge a. of Witwatersrand; 560 m. long.

Vaasa, c., cap. of Vaasa prov., W. **Finland**; pt. on G. of Bothnia; exp. timber and timber prods.; agr. ctr.; food processing, textiles, timber inds.; p. (1968) 48,679.

Vác, t., **Hungary**; on R. Danube; comm. ctr.; summer resort for Budapest; cath.; p. (1966) 28,700.

Vadso, cap. of Finnmark prov., N.E. **Norway**; ice-free Arctic pt. on N. side of Varangar fjord; whaling and fishing base; p. c. 3,000.

Vaduz, mkt. t., cap. of **Liechtenstein**; nr. Rhine; cotton inds.; sm. tourist resort; p. (1961) 3,514.

Vaigach, sm. I., between Novaya Zemlya and mainland of **USSR**; geological extension of Urals; low-lying reindeer pasture; seal fishing.

Valais, can., **Switzerland**; in upper valley of R. Rhône; surrounded by mtns., forested on slopes; vines and cereals in valleys; ch. resort Zermatt, cap. Sion; a. 2,021 sq. m.; p. (1967) 193,000.

Valdai Hills, morainic ridges between Leningrad and Moscow, **RSFSR**; rise to c. 1,140 ft. and form ch. watershed of E. European Rs., Volga, Dvina and Dniester.

Vindhya Hills, mtn. range, central India; separating the Deccan from the Ganges basin; c. 400 m. long.

Vinnitsa, t., Ukrainian SSR, USSR; on R. Bug, 120 m. S.W. of Kiev; agr. mkt. t.; engin., chemicals, textiles; p. (1970) 211,000.

Virginia, st., USA; one of original 13 sts.; wide Atl. coastal plain rising inland to Blue Ridge; famous for high quality "Virginia Leaf" tobacco; industl. ts. of Norfolk, Richmond, Portsmouth and Newport News; cap. Richmond; a. 40,815 sq. m.; p. (1970) 4,543,249.

Virgin Is. (Brit.), W.I.; gr. of Is. E. of Greater Antilles; most impt. Tortola, Virgin Gorda, Anegada; water scarcity, semi-subsistence agr. economy; livestock, fish, fruit, vegetables; a. 59 sq. m.; p. (1970) 10,500.

Virgin Is. (USA), W.I.; external terr. of USA, E. of Greater Antilles, 40 m. E. of Puerto Rico; 3 main Is., St. Thomas, St. John, St. Croix; bought from Denmark 1917; favourite tourist a. in Caribbean; cap. Charlotte Amalie on St. Thomas; livestock, sugar; rum distilling; a. 133 sq. m.; p. (est. 1969) 63,200.

Vis (Lissa), I., off Dalmatian cst., Adriatic, Yugoslavia; fish-canning ctr.; a. 35 sq. m.; anc. remains; resort; sea battle 1866 between Italian and Austrian ironclads; p. 3,000.

Visby, old spt., Sweden; on Gotland I. in Baltic Sea; rich in historic interest; resort; p. (1961) 15,604.

Vishakhapatnam, spt., Andhra Pradesh, India; deepwater harbour on Bay of Bengal; exp. manganese and oilseeds from Madhya Pradesh; shipbldg.; p. (est. 1970) 298,305.

Vistula, R., Poland; rises in Beskids range of Carpathians, flows through Poland past Krakow to Baltic Sea nr. Gdansk; forms major link in E. European waterway system; coal and timber transport; 660 m. long.

Vitebsk, c., Belorussiyan SSR, USSR; R. pt. on W. Dvina and impt. rly. junc., in agr. region; textiles, machine tools, food processing; p. (1970) 231,000.

Viterbo, c., cap. of V. prov., Italy; N. of Rome; agr. ctr., food-processing; 12th cent. cath. and historic bldgs.; p. (1969) 53,110.

Vitim, R., E. Siberia, RSFSR; flows to R. Lena; navigable for 5 months of year; coal and grain tr.; 900 m. long.

Vitória, spt., Espírito Santo, Brazil; exp. coffee, cocoa, fruit, iron ore; sugar refining, shoes, textiles, cement; p. (est. 1968) 121,843.

Vitoria, c., cap. of Alava prov., Spain; in Basque cty.; stands on hill at 1,750 ft.; furniture mnf.; defeat of Fr. by Wellington 1813; p. (est. 1968) 126,098.

Vitry-le-François, t., Marne dep., N.E. France; on Marne R.; industl., textiles, earthenware; agr. mkt. for Champagne Pouilleuse; p. (1962) 15,073.

Vitry-sur-Seine, S.E. sub., Paris, France; flower growing on sand and gravel terraces of Seine R., acreage being reduced by competition from housing and inds.; p. (1962) 66,247.

Vittoria, t., Sicily, Italy; mkt. for wine; p. (1961) 45,035.

Vittorio Veneto, t., Italy; N. of Venice; resort; textiles; p. (1961) 27,399.

Vizcaya, Basque prov., N. Spain; on Bay of Biscay; iron mng.; iron and steel inds.; dense p.; cap. Bilbao; a. 836 sq. m.; p. (1961) 754,383.

Vlaardingen, t., S. Holland prov., Neth.; 5 m. W. of Rotterdam, on Nieuwe Maas; leading fish. pt.; p. (1968) 78,654.

Vladimir, c., cap. of V. oblast, RSFSR; between Gorki and Moscow, on trib. of Oka R.; founded 12th cent.; caths., historic bldgs.; machine tools, agr. machin., textiles; p. (1970) 234,000.

Vladimir-Volynski, c., N.W. Ukrainian SSR, USSR; one of oldest Ukrainian settlements, founded 9th cent.; agr. mkt. ctr.; p. c. 21,000.

Vladivostok, c., spt., RSFSR; ch. pt. and naval base on Pac.; terminus of Trans-Siberian rly. and airline from Moscow; ch. cultural ctr. of Far East; shipyards, fisheries, oil refining, engin., chemicals; economic development in hinterland hindered by distance from major ctrs. of p. and ind.; p. (1970) 442,000.

Vlieland, Friesian I., at entrance to IJsselmeer, Neth.; resort, nature reserve.

Vlissingen or Flushing, spt., Zeeland prov., S.W. Neth.; on Walcheren I.; shipyards, oil refining, fishing; resort; birthplace of Admiral de Ruyter; p. (1967) 38,564.

Vlorë, spt., S.W. Albania; on Strait of Otranto, Adriatic Sea; salt; oil pipeline connects from Kucovë nr. Berat; p. (1967) 50,000.

Vltava or Moldau, R., Bohemia, ČSSR; rises in Sumava mtns. (Bohemian Forest) and flows to R. Elbe below Prague; used for hydro-electric power; c. 260 m. long.

Voghera, t., Lombardy, Italy; rly. junc. and agr. mkt.; textiles, machin., engin.; cas., cath.; p. c. 36,000.

Voi, t., Kenya, E. Africa; 90 m. N.W. of Mombasa on rly. to Nairobi; branch connection with Tanzania rly. system allows agr. prod. from Arusha and Moshi dists. to pass through Mombasa as alternative to Tanga.

Voiron, t., Isère dep., France; on Morge R., 15 m. N.W. of Grenoble; textiles, paper; p. (1962) 15,131.

Vojvodina, aut. prov., N. Serbia, Yugoslavia; impt. and fertile agr. dist. crossed by Danube R.; intensive agr., prosperous and dense p.; fruit, vegetables, livestock, food processing; ch. c. Novi Sad; a. 8,683 sq. m.; p. (1961) 1,854,965.

Volcano Is., Japan; 3 volcanic Is. in Pac. Oc., S. of Japan, admin. by USA until 1968, now Japanese.

Volga, R., USSR; rises in Valdai hills, flows in serpentine course to Caspian at Astrakhan in wide delta; ch. tribs., Oka, Sura, Vetluga, Kama, Samara; major waterway linked to Baltic Sea, Azov, and Black Seas, and to Moscow; hydroelectric developments reducing sturgeon in Caspian Sea and caviar prod. declining; longest R. in Europe, 2,325 m.

Volga Baltic Waterway (Mariinsk Waterway), RSFSR; inland deepwater navigation network linking Black Sea and Caspian Sea in S. with Baltic Sea and White Sea in N.

Volgograd (Stalingrad), c., RSFSR; R. pt. on Volga and major rly. ctr.; exp. raw materials, fish; industl. ctr. for steel, engin., chemicals, oil refining; hydroelectric power sta.; fierce siege and successful defence 1942 turning point of second world war; p. (1970) 818,000.

Volhynia, historic region, Ukrainian SSR, **USSR;** on Polish frontier; rich agr. lowland; coal mng. at Novovodinsk; cap. Lutsk.

Volkhov, R., RSFSR; flows from L. Ilmen to L. Ladoga; navigable; hydroelectric power sta. and aluminium smelting plant at Volkhov (Leningrad oblast); 130 m. long.

Völklingen, t., Saarland, W. Germany; on Saar R., 8 m. W. of Saarbrücken; coal mng., iron and steel; p. (1965) 42,000.

Vologda, c., RSFSR; R. and rly. junc. on upper Sukhona R.; in dairying a.; engin., textiles, sawmilling, paper, dairy inds.; cath., historic bldgs.; p. (1970) 178,000.

Volos, spt., Greece; at head of G. of V.; impt. transport, industl., comm. ctr.; exp. agr. prods.; car mnfs.; p. (1961) 49,221.

Volsk, c., RSFSR; R. pt. on Volga R.; cement, tanneries, metallurgy, food processing; p. c. 62,000.

Volta (White Volta), major R., W. Africa; drains extensive terr. in Niger bend, flows S. through Ghana to delta on Guinea cst., 70 m. E. of Accra; main means of communication but rapids make through navigation impossible; Volta R. project for industrialisation of Ghana; dam and power plant at Akosombo, aluminium smelter at Tema; 950 m. long. *See also* Black Volta.

Volta Redonda, t., Rio de Janeiro, Brazil; state-owned steel plant; p. (est. 1968) 118,114.

Volterra, hill t., Tuscany, Italy; Etruscan and mediaeval walls; alabaster, salt; p. c. 19,000.

Volzhsky, t., RSFSR; new industl. t. on Volga R.; aluminium smelting, chemicals; p. (1970) 142,000.

Voorburg, t., Neth.; industl. ctr. E. of the Hague; p. (1968) 46,703.

Vorarlberg, prov., Austria; forestry, dairying, tourism; inds. based on hydroelectric power; textiles; cap. Bregenz; a. 1,004 sq. m.; p. (1961) 226,323.

Vorkuta, ctr. of Pechora coal basin, RSFSR; beyond Arctic circle, which supplies entire European N. RSFSR; p. (est. 1967) 65,000.

Voronezh, c., RSFSR; R. pt. on Voronezh R. nr. junc. with Don; impt. comm. ctr. in fertile agr. dist.; machin., rubber, oil refining, food processing; nuclear power sta.; univ., cath.; p. (1970) 660,000.

Voroshilovgrad. *See* Lugansk.

Voroshilovsk, t., Ukrainian SSR, USSR; 25 m. S.W. of Lugansk; ctr. of iron, steel and coking inds.; p. c. 98,000.

Vosges, dep., E. France; on Franco–German frontier; dairying, vineyards, stone quarrying, textiles; cap. Epinal; a. 2,305 sq. m.; p. (1968) 388,201.

Vosges, highlands, E. France; structurally similar to Black Forest, from which they are separated by Rhine rift valley; forested slopes, vineyards; source of Meurthe, Moselle, Sarve, Ill, and Saône Rs.; highest summit Ballon de Guebwiller, 4,672 ft.

Voskresensk, t., RSFSR; S.E. Moscow; lignite, chemicals, fertilisers; p. c. 50,000.

Votkinsk, t., RSFSR; 38 m. N.E. of Izhevsk; lge engin. plant; hydroelectric power sta.; birthplace of Tchaikovsky; p. c. 60,000.

Vranja, t., Yugoslavia; flax and hemp culture and mnf.; developing industl. ctr. based on handicrafts; p. c. 15,000.

Vratsa, t., Bulgaria; on R. Vratcanska; jewellery, wine, silk, tanning; p. c. 27,000.

Vrsac, t., Yugoslavia; milling, wine, brandy; p. (1961) 31,620.

Vulcano, I., Lipari gr., Italy; off N.E. cst. Sicily; active volcano; gave its name as generic title for this type of mtn.

Vyatka, R., RSFSR; rises in foothills of Urals, flows past Kirov into Kama R.; timber transport, fishing; c. 850 m. long.

Vybord (Viipuri), c., RSFSR; spt. on G. of Finland, occupies strategic site on Karelian Isthmus, N.W. of Leningrad; Finnish until 1945; exp. timber; shipyards, engin., food processing; p. c. 51,000.

Vychegda, R., RSFSR; rises in Urals, flows W. to N. Dvina R.; timber transport; 700 m. long.

Vyrnwy, L., reservoir, Powys, Wales; with dam 1,180 ft. long supplies water for Liverpool; a. 1,121 acres.

Vyshni-Volochek, t., RSFSR; 74 m. N.W. of Kalinin; flour milling, textiles, glass inds.; p. c. 66,000.

W

Waal, R., Neth.; S. arm of R. Rhine.

Waco, c., Texas, USA; in Brazos valley; route ctr., airport; regional cultural ctr.; univ.; textiles, leather; p. (1970) 92,600 (c.), 142,772 (met. a.).

Waddenzee, stretch of shallow water between W. Frisian Is. and Neth. mainland.

Wadebridge, spt., Cornwall, Eng.; at head of Camel estuary, 6 m. N.W. of Bodmin; agr. mkt.; p. (1971) 17,799 (dist.).

Wadi Halfa, t., Sudan; on R. Nile at second cataract; rly. terminus of Sudan rlys.; inundated by Aswan L.; new t. Khashm el Girba for inhabitants.

Wad Medani, t., cap. of Blue Nile prov., Sudan; ctr. of cotton growing dist.; p. (1964) 57,000.

Wagadugu. *See* Ouagadougou.

Wagga Wagga, t., N.S.W., Australia; on R. Murrumbidgee; ctr. of agr. and pastoral dist.; p. (1972) 27,636.

Wahiawa, t., Oahu I., Hawaii; pineapples; p. (1960) 15,512.

Waikaremoana, L., N.I., N.Z.; hydroelectric power.

Waikato, R., N.I., N.Z.; rises in L. Taupo and flows N.W. into Tasman Sea; coalfields, hydroelec. power stas.; 264 m. long.

Wainuiomata, co. t., on Wainuiomata R., N.I., N.Z.; p. (1971) 16,670.

Wairakei, t., N.I., N.Z.; on L. Taupo; health resort; geothermal power sta.

Waitaki, t., Otago, S.I., N.Z.; Benmore hydroelectric power plant; p. (1971) 9,420.

Wakamatsu. *See* Kitakyushu.

Wakatipu, L. Otago, S.I., N.Z.; 52 m. long, 3 m. wide, 1,200 ft. deep, 1,070 ft. a.s.l.

Wakayama, spt., Honshu, Japan; textiles; new iron and steel plant; p. (est. 1969) 362,000.

Wakefield, c., West Yorks., Eng.; on R. Calder; 8 m. S. of Leeds; cath.; ctr. of coal-mng. a.; woollen and worsted gds., chemicals, engin.; p. (1971) 59,650.

Wakefield, t., Va., USA; on Potomac R., nr. Fredericksburg; birthplace of George Washington.

Wake I., coral atoll, Pac. Oc.; between Marianas and Hawaii; comm. and naval base on route to Far East, belonging to USA.

Walachia, region, S. Romania; wide plain bounded by Transylvanian Alps and separated from Yugoslavia by Danube; rich agr. a., "the bread-basket of Romania"; Ploiesti oilfields; inds. nr. ch. c. Bucharest; a. 29,561 sq. m.; p. c. 7,500,000.

Walbrzych (Waldenburg), c., S.W. Poland (since 1945); formerly in Lower Silesia; industl. and mng. ctr. at 1,400 ft.; porcelain, machin., engin.; p. (1970) 125,000.

Walchensee, Lake, Bavaria, W. Germany; a. 6 sq. m.; hydroelectric power sta.

Walcheren, I., Zeeland prov., S.W. Neth.; in N. Sea at entrance to Scheldt estuary; mainly agr.; ch. ts., Vlissingen, Middelburg; flooded 1944 to stop German advance; tourism.

Waldenburg. *See* Walbrzych.

Wales, principality, Great Britain; mostly mtnous.; Cambrian mtns. rise to 3,560 ft. at Snowdon; contrast between N. and Central Wales (pastoral farming, forestry, water supply, tourism, rural depopulation) and S. Wales (coalfield, metal-based inds., lge ts.); cap. Cardiff; a. 8,016 sq. m.; p. (1971) 2,723,596 (26 per cent Welsh speaking).

Wallasey, t., adjoining Birkenhead, Merseyside, Eng.; resídtl., seaside resort (New Brighton); p. (1971) 97,061.

Wallensee, L., Switzerland; 11 m. long.

Wallingford, t., Oxon., Eng.; on R. Thames, to N. of its gap between Chilterns and Lambourn Downs; p. (1971) 6,184.

Wallis and Futuna Is., gr. of coral Is., S. Pac. Oc.; overseas terr. of France; copra; a. 106 sq. m.; p. c. 9,500 (mostly Polynesians).

Walsend, t., Tyne and Wear, Eng.; on N. bank of Tyne, 4 m. below Newcastle; Tyne tunnel links with Jarrow; shipbldg., engin., iron, plywood; at end of Hadrian's Wall; p. (1971) 45,793.

Walmer, t., Kent, Eng.; 2 m. S. of Deal; holiday resort; cas., residence of Warden of Cinque Ports.

Walney, I., off cst. of Cumbria, Eng.; opposite Barrow.

Walsall, t., West Midlands, Eng.; 5 m. E. of Wolverhampton; leather and iron gds., engin., steel tubes; p. (1971) 184,606.

Walsingham, v., Norfolk, Eng.; many old bldgs., priory ruins, abbey; mediaeval pilgrimage ctr.; p. (1971) 17,416 (dist.).

Walsum, t., N. Rhine–Westphalia, W. Germany; at confluence of Rhine and Emscher canal; R. pt. for Oberhausen steelwks.; p. (1963) 46,400.

Waltham, c., Mass., USA; nr. Boston; science-based inds.; univ.; p. (1960) 55,413.

Waltham Abbey (Waltham Holy Cross), t., Essex, Eng.; 13 m. N.E. London, on edge of Epping Forest; glasshouses (tomatoes); Norman nave of abbey part of parish church; p. (1971) 14,585.

Wauwatosa, t., Wis., USA; sub. of Milwaukee; metals, concrete, chemicals; p. (est. 1969) 58,000.

Waveney, R., Norfolk and Suffolk, Eng.; 50 m. long.

Wayatinah, hydroelectric commission v., Tasmania, Australia; dam, lagoon and power sta. at confluence of Rs. Nive and Derwent.

Wazirabad (Balkh), t., Afghanistan; anc. Bactra, cap of Bactria, called the "mother of cities"; destroyed by Genghiz Khan 1221; textile plant projected; p. c. 13,000.

Weald, The, wooded and pastoral tracts S.E. Eng.; extending from Folkestone, Kent, through Surrey, Hants., and Sussex to the sea at Beachy Head; former a. of iron working; name derived from German *Wald* = forest.

Wear, R., Durham/Tyne and Wear, Eng.; rises in Pennines, flows through Durham to N. Sea at Sunderland; 60 m. long.

Weaver, R., Cheshire, Eng.; industl. trib. of R. Mersey; 45 m. long.

Weddell Sea, arm of S. Atl. Oc., Antarctica; whaling and sealing.

Wednesbury, t., West Midlands, Eng.; metal inds., iron and steel; p. (1961) 34,511.

Wednesfield, t., West Midlands, Eng.; metal

tubes, materials handling engin.; expanded t.

Wei, R., Shensi prov., W. China; rises in highlands of Kansu, flows E. between highlands of Shansi and Tsinling Shan to join Yellow R. nr. Tungkwan; valley contains very fertile loess soils; formed cradle of Chinese civilisation; c. 500 m. long.

Weiden, t., Bavaria, W. Germany; porcelain, glass, textiles; p. (1963) 42,200.

Weifang, c., Shantung prov., China; coal-mng. ctr.; tobacco processing; p. (1953) 148,900.

Weihai, spt., Shantung prov., China; naval base; fishing; vegetable-oil processing, textiles; p. 222,000.

Weimar, t., Erfurt, E. Germany; on R. Ilm; ctr. of music and culture in 19th cent., associated with Goethe, Schiller, Nietzsche, Liszt, Herder; scene of establishment of German rep. 1919; elec. and metal inds., textiles, musical instruments, glass; p. (1965) 63,985.

Weinheim, t., Baden-Württemberg, W. Germany; cas.; leather, machin., rubber; p. (1963) 28,800.

Weipa, Queensland, Australia; new t., pt., and alumina plant; bauxite nearby at Aurukin.

Weirton, t., W. Va., USA; on R. Ohio; steel, tinplate; p. (est. 1969) 29,000.

Weissenfels, t., Halle, E. Germany; on R. Saale, in lignite mng. a.; footwear, paper, metals; p. (1965) 46,874.

Weisshorn, mtn. peak, Switzerland; alt. 14,770 ft.

Wejherowo, t., Gdansk, Poland; on R. Reda; mediaeval stronghold; palace; p. (1970) 33,700.

Welkom, t., O.F.S., S. Africa; ctr. of O.F.S. goldfields; p. (1970) 131,767 (met. a.).

Welland, t., Ont., Canada; on Welland Canal; farm machin., steel tubing, castings, rope; p. (1971) 44,222.

Welland, R., Northants. and Lincs., Eng.; rises in Northampton heights and flows N.E. into the Wash; 70 m. long.

Welland Ship Canal, Ont., Canada; connects Ls. Erie and Ont.; 27 m. long.; 2-lane waterway, 1963.

Wellingborough, t., Northants., Eng.; on R. Nene, 9 m. N.E. of Northampton; mkt.; footwear; expanded t.; p. (1971) 37,589.

Wellington, mkt. t., Shrops., Eng.; brewing, sugar refining, timber, toys; name derived from "Watling Town" (stood on Watling Street); with Dawley and Oakengates forms new t. of Telford; p. (1971) 17,154.

Wellington, mkt. t., Somerset, Eng.; 6 m. S.W. Taunton, anc. woollen ind. still survives; dairy prod.; p. (1971) 9,434.

Wellington, c., spt., N.I., cap. of N.Z.; univ.; impt. exp. ctr. for dairy prod., wool, meat; new inds. developing in Hutt valley with vehicle assembly, rubber, oil refineries; p. (1971) 135,515 (c.); (est. 1970) 179,300 (met. a.).

Wellington, prov., N.I., N.Z.; mtnous., pastoral and dairy farming; a. 10,870 sq. m.; p. (1971) 552,640.

Wells, cath. t., Somerset, Eng.; on S. flank of Mendip hills; cath., bishop's palace; paper mftg.; tourism; p. (1971) 8,586.

Wells-next-the-Sea, t., Norfolk, Eng.; anc. pt. on N. cst. of E. Anglia, 14 m. W. of Sheringham; whelks, cockles and mussels; p. (1971) 2,342.

Wels, t., Upper Austria; on Traun R.; mkt. for agr. a.; foodstuffs, textiles; cas.; p. (1961) 41,060.

Welshpool, mkt. t., Powys, Wales; on R. Severn; lt. inds. based on agr., hosiery; nearby is Powys cas.; p. (1971) 6,705.

Welwyn Garden City, t., Herts., Eng.; 21 m. N. of London; founded by Sir Ebenezer Howard (1920) as first satellite t. of London; new t. 1948; pharmaceuticals, plastics, radio, and electronics, lt. inds.; p. (1971) 40,369.

Wembley, former M.B., Middx., Eng.; now inc. in Brent outer bor. Greater London; lt. inds., sports ctr.; British Empire Exhibition 1924–5; p. (1961) 124,892.

Wenchow (Wenzhou), c., spt., Chekiang prov., China; pt. on estuary of Wu R., E. China Sea; textiles, fishing, coastal tr.; exp. wood, tea, agr. prod.; p. (1953) 201,600.

Wenlock Edge, narrow ridge, Shrops., Eng.; extends 18 m. S.W. from Much Wenlock to Craven Arms; limestone; moorland, mainly above 950 ft.

Wensleydale, North Yorks., Eng.; valley in N. Pennines drained E. by R. Ure; cattle reared for fattening on lowland farms some dairying (cheese); length 35 m.

Wernigerode, t., Magdeburg, E. Germany; on N. slopes of Harz mtns.; mediaeval cas.; glass, wood, metal inds.; tourism; p. (1965) 32,676.

Wesel, t., N. Rhine-Westphalia, W. Germany; R. pt. at confluence of Rs. Lippe and Rhine, Ruhr conurb.; rebuilt since destruction in second world war; p. (1963) 32,100.

Weser, R., W. Germany; formed by confluence of Fulda and Werra Rs. at Münden; flows N. to N. Sea at Bremerhaven; linked by Mittelland canal to Rhine, Ems, and Elbe; navigable for entire l. of 330 m.

Wesermünde. *See* Bremerhaven.

Wessex, anc. kingdom, S. Eng.; inc. Berks., Hants., Wilts., Dorset, Somerset and Devon.

West Allis, t., Wis., USA; mng. machin., castings; heavy vehicles; p. (1960) 68,157.

West Bengal, st., N.E. India; W., mainly Hindu section of former presidency of B. (Muslim E.B. now Bangladesh); on Ganges delta and flood plain; humid sub-tropical climate; very dense p.; rice, jute; ch. c. Calcutta; a. 33,829 sq. m.; p. (1971) 44,440,095.

West Bridgford, t., Notts., Eng.; at junc. of Grantham canal with R. Trent; residtl. sub. of Nottingham; p. (1971) 28,496.

West Bromwich, t., West Midlands, Eng.; on R. Thame, 5 m. N.W. of Birmingham; heavy engin. and allied inds., chemicals, springs, oil refining; p. (1971) 166,626.

Western Australia, st. of the Australian Commonwealth; lgst. st., nearly a third of continent with only 8 per cent of p. concentrated in S.W. around st. cap. of Perth in fertile Mediterranean-like a.; diversity of relief, Hammersley range in N.W., Kimberley range in N.E., Gibson desert in interior; rich but irregularly distributed mineral deposits; intensive agr. in S.W., wheat and sheep in interior; a. 975,920 sq. m.; p. (1972) 1,027,372.

Western Desert, Egypt; part of Libyan Desert; inc. Qattara depression; coastal road from Cairo to Tripoli; scene of fighting second world war.

Western Pacific High Commission Territories, inc. British Soloman Is. and Gilbert and Ellice Is.

Western Port Bay, Vic., Australia; major heavy industl. a. close to Melbourne, rapidly growing.

Western Samoa, indep. sov. st., S. Pac. Oc.; member of Commonwealth (1970); gained independence from N.Z. 1962; consists of 2 lge Is. (Savai'i, Upolu) and 7 sm. Is.; 70 per cent p. in agr.; c. 30 per cent a. devoted to bananas; exp. bananas, copra, cacao beans; ch. spt. Apia on Upolu I.; a. 1,097 sq. m.; p. (1966) 131,379.

Westerwald, plateau of old volcanic rocks, W. Germany; ending in steep slope E. of R. Rhine; fertile soil; pastureland or deciduous woodland; sm. quantities of iron ore in Siegerland.

West Glamorgan, co., S. Wales; borders Bristol Channel; inc. Gower Penin. and lge. industl. ts. of Swansea, Neath and Port Talbot; impt. metal refining and engin. inds.; a. 315 sq. m.; p. (1971) 371,867.

West Ham, former C.B., Essex, Eng.; sub. to E. of London; bordered by Rs. Thames and Lea; now inc. in Newham bor., Greater London; residtl.; extensive docks, rubber, soap, jute wks., engin., smelting, chemicals; p. (1961) 157,367.

West Hartford, t., Conn., USA; residtl. sub. of Hartford; metal gds., ctr. for dairying, tobacco-growing dist.; p. (1960) 62,210.

West Hartlepool. *See* Hartlepool.

Westhoughton, t., Gtr. Manchester, Eng.; chemicals; p. (1971) 17,729.

West Indies or Antilles, I. grs., Atl. Oc.; extend between csts. of Fla. and Venezuela, separating Caribbean Sea and G. of Mexico from Atl.; inc. Cuba, Haiti, Dominican Rep., Bahamas, Barbados, Jamaica, Leeward Is., Trinidad and Tobago, Windward Is., Guadeloupe, Martinique, Curacao, Puerto Rico, Virgin Is.; mostly volcanic and coral Is.; former colonial terrs. developed for plantation agr. worked

by W. African slaves; most of indigenous Indians killed.

West Irian, prov., Indonesia; formerly West New Guinea and Dutch col.; came under Indonesian admin. 1963; inaugurated as prov., 1969; primitive agr. of rice, poultry, cocoa; few oil deposits; cap. Djajapura; a. (inc. Ternate) 159,376 sq. m.; p. (1961) 758,396.

West Lothian, co., Scot.; in Central Lowlands; mainly industl.; sm. coalfield; engin.; co. t. Linlithgow; a. 120 sq. m.; p. (1971) 108,481.

Westmeath, co., Leinster, R.o.I.; low-lying, drained by R. Shannon, many Ls.; dairying; co. t. Mullingar; ch. t. Athlone; a. 708 sq. m.; p. (1966) 52,849.

West Mersea, t., Essex, Eng.; on Mersea I.; p. (1971) 4,131.

West Midlands, met. co., **Eng.**; mainly industl. a. centred around Birmingham and the S. Staffs. coalfield (Black Country) and Coventry and the Warwicks. coalfield; many forms of engin. and light inds. inc. vehicle mftg.; p. (1971) 2,790,000.

Worsley, t., Gtr. Manchester, Eng.; ctr. of coal-mng. dist.; p. (1971) 49,573.

Worthing, t., West Sussex, Eng.; on S. cst., 10 m. W. of Brighton; holiday resort, retirement ctr. in mkt. gardening dist.; p. (1971) 88,210.

Woy Woy, t., N.S.W., Australia; resort and commuter t. for Sydney; clothing; p. (1966) 16,264.

Wrangel I., Arctic Oc., off Khabarovsk terr., RSFSR; weather sta.

Wrath, C., N.W. Sutherland, Scot.

Wrekin, hill, Shrops., Eng.; alt. 1,320 ft.

Wrexham, t., Clwyd, Wales; 11 m. S.W. Chester; tyres, synthetic fibres, clothing; p. (1971) 38,955.

Wroclaw (Breslau), c., Silesia, Poland; on R. Oder; impt. route ctr. and R. pt.; univ., cath.; rapid industl. development; ctr. of electronics inds.; p. (1970) 523,000.

Wroclaw (Breslau), prov., Lower Silesia, Poland; until 1945 part of Germany; heavy inds. based on local minerals; cap. Wroclaw; a. 9,552 sq. m.; p. (1970) 1,937,000.

Wroxeter, v., Shrops., Eng.; on R. Severn, 5 m. S.E. Shrewsbury; site of Roman c. of Uriconium.

Wuchang. *See* Wuhan.

Wuchow (Wuzhou), R. pt., Kwangsi prov., China; on R. Si; tr. ctr.; exp. tung oil, hides; p. (1953) 111,000.

Wuhan, c., Hupeh prov., China; formed by union of Hankow, Hanyang, and Wuchang; major metropolis on R. Yangtze; integrated iron and steel wks., machine tools, walking tractors, textiles, shipbldg.; univ.; p. (1957) 2,146,000.

Wuhu, c., Anhwei prov., **China**; former treaty pt. on R. Yangtze; textiles; p. (1953) 242,000.
Wupper, R., **W. Germany**; trib. of Rhine; industl. concentration along middle course; 40 m. long.
Wuppertal, t., N. Rhine–Westphalia, **W. Germany**; formed by amalgamation of Barmen and Elberfeld; textiles, rubber gds., paper, metals, pharmaceuticals; p. (est. 1969) 413,000.
Württemberg-Hohenzollern, former st., **W. Germany**; since 1952 part of Baden–Württemberg.
Würzburg, c., Bavaria, **W. Germany**; on R. Main; univ., cath.; historic bldgs., engin., chemicals, printing; p. (est. 1969) 120,100.
Wurzen, t., Leipzig, **E. Germany**; on R. Mulde; cath., cas.; machin., furniture, leather, foodstuffs; p. (1963) 23,824.
Wusih (Wuxi), c., Kiangsu prov., **China**; on N. shore of Tai L., 75 m. W. of Shanghai; univ.; industl. ctr. with cotton mills, chemical wks.; former treaty pt.; p. (est. 1957) 613,000.
Wutungkiao (Wutongqiao), c., Szechwan prov., **China**; 15 m. S.E. of Loshan; p. (1953) 199,000.
Wyandotte, t., Mich., **USA**; on Detroit R.; salt deposits; chemical ind.; p. (1960) 43,519.
Wye, R., Bucks., **Eng.**; rises in Chiltern hills above High Wycombe, flows S.E. to R. Thames at Cookham.
Wye, R., Derbys., **Eng.**; trib. of R. Derwent; 20 m. long.
Wye, R., **Eng. and Wales**; rises in Plynlimmon, flows S.E. into R. Severn at Chepstow; forms deeply incised valley at Symond's Yat; 130 m. long.
Wye, t., Kent, **Eng.**; nr. Ashford; impt. agr. college (Univ. of London).
Wylfa Head, Anglesey, Gwynedd, **N. Wales**; nuclear power sta.
Wymondham, t., Norfolk, **Eng.**; 9 m. S.W. of Norwich; mkt.; Benedictine abbey, founded 1107; p. (1971) 8,510.
Wyoming, st., **USA**; inc. areas of Rocky mtns. and great plains; Yellowstone Nat. Park; scant rainfall; irrigation; cattle and sheep ranching; petroleum; sparse p.; cap. Cheyenne; a. 97,914 sq. m.; p. (1970) 332,416.
Wyre, R., Lancs., **Eng.**; rises in Pennines, flows W. into Lancaster Bay at Fleetwood; 28 m. long.

X

Xanthi, t., Thrace, **Greece**; on R. Mesta; ctr. of tobacco-growing a.; p. (1961) 26,377.
Xanthus, ruined c., **Turkey**; on R. Xanthus; destroyed 43 B.C.; tourism.
Xauen, t., **Morocco**, N. Africa; holy t. founded 15th cent.; p. (1960) 13,712.
Xingu, R., **Brazil**; trib. of Amazon; navigable in its lower course; 1,200 m. long.

Y

Yablonovy, mtn. range, Siberia, **RSFSR**; E. of L. Baykal; highest peak, Sokhondo, 8,230 ft.; crossed by Trans-Siberian rly.
Yaila Mtns., Ukrainian SSR, **USSR**; form S.E. margin of Crimea penin., extend from Sevastopol to Kerch; form marked climate barrier between Black Sea littoral (Soviet Riviera) and N. part.
Yakima, t., Wash., **USA**; agr. ctr. of irrigated valley, noted for fruit; food processing; p. (1960) 43,284.
Yakima, R., Wash., **USA**; trib. of Columbia R.; used for irrigation; 208 m. long.
Yakut ASSR, aut. rep., **RSFSR**; borders Arctic Oc.; home of Yakuts; tundra and forest region, isolated; fur trapping, diamond and gold mng., state farms; a. 1,530,253 sq. m.; p. (1970) 664,000.
Yakutsk, t., cap. of Yakut ASSR, **RSFSR**; pt. on Lena R.; univ.; airport; p. (1970) 108,000.
Yallahs Valley, Jamaica; severe soil erosion; govt. improvement scheme of afforestation and new crops; a. 70 sq. m.
Yallourn, t., Victoria, **Australia**; ctr. of lignite mng. a.; p. (1972) 20,764 inc. Moe.
Yalta, spt., Ukrainian SSR, **USSR**; sub-tropical resort on Black Sea, sheltered by Yaila mtns.; conference between Churchill, Roosevelt, and Stalin 1945; p. (1965) 54,000.
Yalu, R., forms bdy. between N.E. China, and N. Korea; flows into Yellow Sea; used for hydro-electric power.
Yamagata, t., Honshu, **Japan**; ctr. of rice-growing a.; cas.; p. (est. 1969) 203,000.
Yamaguchi, t., cap. of Y. prov., S.W. Honshu, **Japan**; cas.; comm. ctr., chemicals; p. (est. 1969) 102,000.
Yamal-Nenets National Okrug, RSFSR; inc. Yamal penin.; permafrost; hunting, fishing; cap. Salekhard; a. 259,000 sq. m.; p. (1970) 80,000.
Yambol, t., **Bulgaria**; on R. Tunja; ruined mosque; agr. tr.; recent inds. inc. canning, farm machin., textiles, ceramics; p. (1965) 58,405.
Yamethin, dist., Upper **Burma**; teak forests, rice; ch. t. Yamethin; site of irrigation project; p. 9,291.
Yana, R., Siberia, **USSR**; flows into Arctic Sea; navigable; 1,000 m. long.
Yangchow (Yangzhou), c., Kiangsu prov., **China**; on Grand Canal; agr. mkt. ctr., historic bldgs.; p. (1953) 180,000.
Yangchuan (Yangqan), c., Shansi prov., **China**; ironworking ctr.; p. (1953) 177,000.
Yangi-yer, t., Uzbek SSR, **USSR**; founded 1957 as ctr. for new irrigated cotton lands of E. Uzbekistan.
Yangtze River, **China**; rises in plateau of Tibet, flows E. to E. China Sea, Pac. Oc., nr. Shanghai; traverses "Red Basin" of Szechwan, a deep gorge above Ichang, and finally a broad, level plain; many lge cs. on its banks, Chungking, Ichang, Wuhan, Nanking, Chinkiang; navigable by ocean-going vessels 1,800 m. to Ichang; total length 3,500 m.
Yaoundé, t., cap. of **Cameroon Rep.**, W. **Africa**; lt. inds. inc. beer, cigarettes, textiles; p. (est. 1969) 165,810 (met. a.).
Yap, I., Carolines, **Pac. Oc.**, USA trusteeship; a. 79 sq. m.; cable sta.; p. (1968) 6,761.
Yapura, R., **Brazil** and **Colombia**, S. America; trib. of R. Amazon; navigable for 600 m.; length 1,500 m.
Yaracuy, st., **Venezuela**; crossed by Y. valley, impt. agr. a. for bananas, coffee, sugar, tobacco; crossed by Pan-American Highway; cap. San Felipe; a. 2,741 sq. m.; p. (1961) 175,291.
Yare, R., Norfolk, **Eng.**; flows E. to N. Sea at Gorleston; forms part of Norfolk Broads navigable waterways; 50 m. long.
Yarkand (Soche), c., Sinkiang prov., **China**; tr. ctr. in Y. oasis; tr. in wheat, rice, beans, fruit, carpets, textiles; p. (est.) 60,000.
Yarkand, R., Sinkiang prov., **China**; trib. of Tarim R.; 500 m. long.
Yarmouth, spt., Nova Scotia, **Canada**; fisheries; p. (1961) 8,636.
Yarmouth, par., I. of Wight, **Eng.**; on N.W. est., 8 m. W. of Newport; holiday resort, yachting.
Yarmouth, Great, pt., Norfolk, **Eng.**; at mouth of R. Yare; holiday resort; fish and food processing plants; base for N. Sea gas; p. (1971) 50,152.
Yaroslavl, c., cap. of Y. oblast, **RSFSR**; on upper Volga in Moscow industl. region; founded 1010; comm. and industl. ctr.; mnfs. inc. textiles, motor vehicles, synthetic rubber, agr. machin.; Volkov theatre, 12th cent. monastery, churches; p. (1970) 517,000.
Yasan, N., **Bulgaria**; lge. refinery and petrochemicals complex.
Yatsushiro, t., Kyushu, **Japan**; p. (est. 1969) 106,000.
Yawata. *See* Kitakyushu.
Yazd, c., Isfahan prov., **Iran**; in desert a. at 3,900 ft.; fine silks, carpets; p. (1967) 280,442 (met. a.).
Yazoo, dist., Miss., **USA**; flood plain of R. Mississippi and R. Yazoo; very fertile alluvial soil, but subject to disastrous floods; one of ch. cotton-growing dists. in USA.
Yegoryevsk, t., **RSFSR**; 72 m. S.E. of Moscow; lge textile ind.; phosphorite deposits; p. 59,000.
Yeletz, t., **RSFSR**; on R. Sosna; grain and cattle tr.; cultural ctr.; rly. junc.; p. (1965) 93,000.

Yell, I., Shetlands, Scot.; 17 m. long; covered in peat moorland; p. (1971) 1,143.

Yellowhead Pass, B.C., Alberta, Canada; most N. and lowest of main passes across Rocky mtns.; carries Canadian Nat. rly. on route from Edmonton to Vancouver and Prince Rupert; summit alt. 3,700 ft.

Yellowknife, t., N.W. Terr., Canada; on N. shore of Gr. Slave L.; ctr. of impt. gold-mng. dist.; linked by air to Edmonton, Alberta; p. (1966) 3,741.

Yellow R. *See* Hwang-Ho.

Yellow Sea. *See* Hwang-Hai.

Yellowstone, L., Wyo., USA; 20 m. long, 15 m. wide; alt. 7,740 ft.; in Y. Nat. Park.

Yellowstone National Park, N.W. Wyo., USA; volcanic scenery, geysers; a. 3,458 sq. m.

Yemen Arab Republic (N. Yemen), S.W. Arabian penin.; climate hot and humid in semi-desert cst. strip; summer rainfall inland on high plateau; land slopes down in E. to desert of Rub'al Khali; agr. basis of economy; irrigated, terraced, fertile land in highlands; millet, maize, sorghum, oats, fruits; Mocha coffee main exp.; expanding cotton a. in Tihama cst. a.; ch. spt. Hodeida; cap. Sana'a; proposed union with S. Yemen; a. 75,000 sq. m.; p. (est. 1970) 5,728,000.

Yemen, People's Democratic Rep. of (S. Yemen), S.W. Arabia; comprises strategic pt. of Aden and much desert terr.; independence proclaimed 1967 when Brit. troops withdrawn; hot, dry climate; Brit. withdrawal, decline of tourism and closure of Suez Canal resulted in economic decline; subsistence agr., little comm. exploitation of rich fishing grounds; oil refinery at Aden; cap. Madinat ash Sha'b (N.W. of Aden); proposed union with N. Yemen; a. 112,075 sq. m.; p. (est. 1970) 1,500,000.

Yenangyaung, t., R. pt., Burma; on left bank of R. Irrawaddy, 280 m. N. of Rangoon; ctr. of Burma oilfields.

Yenesey, R., Siberia, RSFSR; rises in Sayan mtns., flows N. into Arctic Oc.; ch. tribs., Angara, Stony Tunguska, Lower Tunguska; hydroelectric power sta. at Krasnoyarsk; linked to Ob R. by canal; middle course navigable; 3,300 m. long.

Yentai (Chefoo), c., N. Shantung prov., China; pt. on G. of Pohai; former treaty pt.; noted for its pongee silk ("shantung"); p. (1953) 115,000.

Yeo or Ivel, R., Dorset, Somerset, Eng.; trib. of R. Parrett; 24 m. long.

Yeovil, mkt. t., Somerset, Eng.; on R. Yeo; glove mnf., aero-engin., agr. machin., dairy processing; p. (1971) 25,492.

Yerevan or Erivan, c., cap. of Armenian SSR, USSR; on Zanga R. in deep valley of Caucasus mtns.; founded 8th cent. B.C.; major science-based, industl. ctr.; p. (1970) 767,000.

Yes Tor, second highest summit, Dartmoor, Devon, Eng.; 2,028 ft.

Yevpatoriya or Eupatoria, spt., Crimea, on Black Sea, USSR; popular resort; children's sanatoria; chemicals, leather, locks, dried fish; new pt. being built; p. (1965) 66,000.

Yezd. *See* Yazd.

Yiewsley and West Drayton, former. U.D., Middx., Eng.; now inc. in Hillingdon outer bor. Greater London; varied lt. inds.; p. (1961) 23,723.

Yinchwan, t., cap. of Ningsia aut. region, China; on Hwang-Ho; ctr. of fertile agr. a.; new lt. inds.; p. (est. 1958) 91,000.

Yingkow (Ying-k'ou), c., Liaoning prov., N.E. China; 20 m. upstream from mouth of Liao R.; soyabean prods.; p. (1953) 131,000.

Yokkaichi, c., spt., S. Honshu, Japan; on Ise Bay, 23 m. S. of Nagoya; textiles, petrochemicals, synthetic rubber, porcelain; p. (est. 1969) 228,000.

Yokohama, leading spt., Honshu, Japan; on W. shore of Tokyo Bay; steel, chemicals, cars, oil refining, shipyards; univs.; with Tokyo and Kawasaki forms conurb. of Keihin; p. (1970) 2,237,513.

Yokosuka, spt., Honshu, Japan; S. of Tokyo; holiday resort; thermal power sta.; p. (est. 1969) 345,000.

Yonkers, c., N.Y., USA; on E. bank of Hudson R.; residtl.; lt. inds., textiles; p. (1965) 201,573; part of N.Y. met. a.

Yonne, dep., France; in S.E. of Paris basin, inc. Champagne, Burgundy, Orléanais; drained by R. Yonne; cap. Auxerre; agr., Chablis wines; a. 2,894 sq. m.; p. (1968) 283,376.

Yonne, R. France; major trib. of R. Seine; 180 m. long.

York, c., co. t., North Yorks., Eng.; on R. Ouse; in central position in Vale of York; anc. part of c. enclosed by walls; minster, cas., univ.; chocolate, confectionery, rly. wkshps.; p. (1971) 104,513.

York, c., Penn., USA; ctr. of fertile agr. region; varied inds., inc. agr. tools, machin., textiles, metal gds.; p. (1970) 50,008 (c.), 326,482 (met. a.).

York, C., Queensland, Australia; most N. point on mainland of Australia.

York, Vale of, broad lowland, North Yorks., Eng.; between Pennines and N. Yorks. Moors and Yorks. Wolds; drained to Humber by R. Ouse and tribs.; glacial and alluvial soils have required draining; crop farming, wheat, barley, root-crops, associated with fattening of beef cattle; settlement mainly marginal; ch. t. York; length 60 m., width from 10 m. in N. to 30 m. in S.

Yorke, penin., S. Australia; separates Spencer G. and G. of St. Vincent; 100 m. long, 30 m. wide.

Yorkshire, former co., Eng.; formerly divided into 3 separate admin. parts (Ridings) N., E., and W.; now split into 3 non-met. cos., Cleveland, North Yorks., and Humberside and 2 met. cos. West Yorks. and South Yorks.

Yorkshire Moors, hills North Yorks. and Cleveland, Eng.; inc. N. Yorks. Moors, Cleveland hills and Hambleton hills; bounded to N. by Tees valley, S. by vale of Pickering, W. by Swale valley, E. by sea; composed of oolitic limestone; gd. sheep pastures; impt. iron-ore deposits worked in Cleveland hills; max. alt. 1,489 ft.

Yorkshire Wolds, hills, Humberside, Eng.; extend N.E. from Humber and terminate in Flamborough Head; chalk; gd. sheep pasture; average alt. 600 ft.

Yorktown, v., Va., USA; scene of surrender by Lord Cornwallis to Washington 1781.

Yosemite National Park, Cal., USA; in Sierra Nevada; contains Yosemite creek and canyon with three famous cataracts.

Yoshkar-Ola, t., Mari ASSR, RSFSR; 80 m. N.W. of Kazan; cultural ctr.; wood processing, food inds.; p. (1970) 166,000.

Youghal, spt., U.D., Cork, R.o.I.; on estuary of the Blackwater; resort; p. (1966) 5,098.

Youngstown, c., Ohio, USA; on Mahoning R.; 57 m. N.W. of Pittsburgh; ctr. of one of most impt. iron and steel dists. in USA; heavy engin.; univ.; p. (1970) 139,905 (c.), 533,080 (met. a.).

Yoyang, t., Hunan prov., China; at outlet of Tung Ting L. on bank of R. Yangtze; p. 4,800.

Ypres (Ieper), t., W. Flanders prov., N.W. Belgium; textiles and textile machin.; ctr. of cloth ind. in middle ages; scene of battles 1914–17; p. (1969) 18,447.

Ypsilanti, t., Mich., USA; on Huron R.; residtl., agr. mkt., mnfs.; univ.; p. (1960) 20,957.

Ystwyth, R., Dyfed, Wales; flows 25 m. to join R. Rheidol at Aberystwyth.

Yuan, R., N.W. Hunan prov., China; flows into Tung Ting L. and Yangtze R.; rapids; 400 m. long.

Yucatán, st., S.E. Mexico; limestone lowlands, poor soils; henequen (sisal hemp), chicle (resin from which chewing gum is made); cap. Mérida; a. 23,926 sq. m.; p. (1969) 817,000.

Yugoslavia, Socialist Fed. Rep., S.E. Europe; comprises reps. of Serbia, Croatia, Macedonia, Montenegro, Slovenia, Bosnia, Hercegovina, and aut. regions of Kosovo and Vojvodina; long W. cst. on Adriatic Sea with well-developed limestone karstic topography; hilly interior; climate Mediterranean on cst., continental in interior; distinctive political development after second world war; refused to accept Soviet hegemony; well-developed links with W.; nearly 50 per cent p. employed in agr. but major attempts to industrialise, based on energy, heavy and consumer inds.; economic decision-making increasingly freed from central

control; developing tourist tr., especially with countries of W. Europe, based on climate and attractive Adriatic littoral, with many sm. Is ; cap. Belgrade; a. 98,725 sq. m.; p. (1971) 21,500,000.

Yukon, R., Canada and Alaska, USA; flows N.W. and W. into Bering Strait; navigable for 1,200 m.; 2,000 m. long.

Yukon Territory, prov., N.W. Canada; mtnous. (Mt. Logan 19,850 ft.); gold, silver, lead, zinc; Alaska Highway links with B.C. and Alberta; ch. ts. Dawson, and Whitehorse (cap.); a. 207,076 sq. m.; p. (1971) 18,388.

Yuma, t., Arizona, USA; at confluence of Rs. Gila and Colorado, nr. Mexican bdr.; ctr. of irrigated agr. region; p. (est. 1969) 29,000.

Yumen, c., N.W. Kansu prov., China; leading petroleum ctr.; drilling equipment, precision instruments; on Old Silk Road to Sinkiang; p. (est. 1958) 200,000.

Yunnan, prov., S. China; adjoins Burma; mtnous. a. of minority groups; rice, tobacco, tea, cotton; copper, tin; cap. Kunming; a. 162,342 sq. m.; p. (1957) 19,100,000.

Yuzhno-Sakhalinsk, t., RSFSR; at S. end of Sakhalin I.; paper, lt. inds.; p. (1970) 106,000.

Yvelines, new dep., France; W. of Paris; cap. Versailles; a. 877 sq. m.; p. (1968) 853,386.

Yverdon, t., Vaud, Switzerland; typewriters; p. (1969) 20,700.

Z

Zaandam, t., Neth.; industl. dist.; rly. junc.; timber-based inds.; p. (1968) 58,312.

Zabrze, t., Upper Silesia, Katowice, Poland; impt. coal-mng. ctr. with associated heavy inds.; cultural ctr.; p. (1970) 197,200.

Zacapa, t., cap. of Z. prov., Guatemala; mkt. t. at rly. junc.; tobacco tr. and processing; sulphur springs; p. (1964) 30,187.

Zacatecas, st., Mexico; on central plateau at 7,000 ft.; dry, agr. dist.; sm. mng. ctrs.; a. 28,122 sq. m.; p. (1969) 1,082,000.

Zacatecas, t., cap. of Z. st., Mexico; cath.; ctr. of silver mng., pottery, clothing; p. (1960) 31,701.

Zacatecoluca, t., El Salvador; cigar mkg., hand looms; coffee, cotton, sugar, vanilla in a.; p. (1961) 40,424.

Zadar (Zara), t., Yugoslavia; spt. on Croatian cst. of Adriatic Sea; formerly Italian (1920–47); Roman remains; cath.; car ferry to Pesaro (Italy); tourism; p. (1961) 25,132.

Zagan (Sagan), t., Zielona Gora, W. Poland (since 1945); on R. Bober; cas.; textiles, paper, lignite mines; p. (1970) 21,500.

Zagazig, t., Egypt; on Nile delta; tr. ctr. of fertile agr. a. producing cotton, grains; cotton mills; p. (est. 1970) 173,300.

Zagorsk, c., RSFSR; 44 m. N.E. of Moscow; woodcarving, toy mkg.; site of famous Troitse-Sergiyeva Lavra monastery, converted into museum 1920; p. (est. 1967) 85,000.

Zagreb, c., Yugoslavia; cap. of Croatia; on Sava R.; cath., univ.; tr. fair; many inds., notably petrochemicals based on local petroleum reserves, elec. engin.; airport; second c. of rep.; p. (est. 1969) 565,000.

Zagros, mtns., Iran; inc. Iran's major oilfield; highest peak Zardeh Kuh, 14,921 ft.

Zahedan, c., Iran; cap. of Sistan and Baluchistan prov.; airport; terminus of rly. from Pakistan; p. (1967) 79,257.

Zahle, t., Lebanon, S.W. Asia; on slopes of L. mtn.; p. c. 78,000.

Zaire, Rep. of, Central Africa; comprises eight provs. (caps. in brackets): Bas-Zaire (Matadi), Bandundu (Bandundu), Equateur (Mbandaka) Haut-Zaire (Kisangani), Kivu (Bukavu), Shaba (Lubumbashi), Kasai Oriental (Mbuji-Mayi), Kasai Occidental (Kananga); lies in vast basin of Zaire R., mtns. on E. and S. borders; climate equatorial in N., tropical in S.; agr. exp. inc. palm oil, cotton, coffee, but economy based on mng., diamonds (Kasai), cobalt, non-ferrous metals (Shaba), major world producer of copper; radium deposits nr. Lubumbashi; extensive navigation on Zaire R.; main pt. Matadi on estuary, linked by rail to cap. Kinshasa; a. 905,582 sq. m.; p. (1971) 22,480,000.

Zaire, gr. R. of Equatorial Africa; numerous tribs., drains 1,500,000 sq. m.; navigable from sea to Matadi for ocean steamers, from Matadi to Pool Malebo interrupted by rapids and falls, again navigable to Stanley Falls; proposed power project to be lgst in Africa; estuary 7–10 m. wide; c. 3,000 m. long.

Zakinthos, Ionian I., Greece; cap. Zante; devastated by earthquake 1953; currants, wine, olives; a. 277 sq. m.; p. (1961) 35,450.

Zakopane, t., Poland; in High Tatra mtns.; base for mountaineering and winter sports; health resort; tourism; p. (1970) 27,000.

Zalaegerszeg, t., Hungary; in Göcsej dist.; oil refining; mkt. t. for grain and livestock; p. (1968) 32,000.

Zambesi, R., S.E. Africa; flows E. to Moçambique Channel, Indian Oc.; forms frontier between Zambia and Rhodesia; inc. Mosi-Oa-Toenja and Kariba and Cabora Bassa dams; navigable but impeded by rapids; 2,200 m. long.

Zambia, rep., Central Africa; member of Commonwealth; tropical climate, modified by alt.; plateau (4,000 ft.); subsistence agr.; livestock on uplands free from tsetse fly; mng. basis of economy, especially in copperbelt; exp. disrupted by Rhodesian U.D.I.; need to develop alternative routes to cst.; pipeline from Ndola to Dar-es-Salaam; construction of Tan-Zam rly. financed by Chinese aid begun 1970; cap. Lusaka; a. 290,586 sq. m.; p. (1969) 4,056,995.

Zamboanga, t., Mindanao, Philippines; spt. on Basilian Strait, exp. agr. prod., timber; p. (est. 1968) 176,800 (met. a.).

Zamora, prov., Spain; borders Portugal; drained by R. Duero; cereals, wine, merino sheep; cap. Zamora; a. 4,077 sq. m.; p. (1960) 301,129.

Zamora, t., cap. of Zamora prov., Spain; on R. Duero; cath.; agr. tr. and processing ctr.; developing mnfs.; p. (1961) 42,030.

Zamosc, t., Lublin, Poland; Renaissance planned t. in valley of Lubianka R.; industl., comm. and cultural ctr. for E. part of Lublin prov.; p. (1970) 34,700.

Zanesville, t., Ohio, USA; textiles, pottery, machin.; p. (1960) 39,077.

Zanjan, c., Iran; cap. of Gilan prov.; cotton, woollen gds.; p. (1966) 82,350 (c.); p. (1967) 461,588 (met. a.).

Zante, t., Zakinthos I., Greece; spt. on E. cst.; agr. tr. and processing; p. (1961) 9,506.

Zanzibar, terr., E. Africa; comprises Is. of Z. and Pemba; joined Tanganyika to form **Tanzania** (1964); major world source of cloves; coconut and coconut prod. major exp. and basis of processing inds.; cap. Zanzibar; a. 1,020 sq. m.; p. (1969) 369,000.

Zanzibar, spt., Zanzibar I., Tanzania; on W. cst. 22 m. from E. Africa; outlet for clove exp., entrepôt tr.; former slave mkt.; p. (1967) 68,400.

Zaporozh'ye, t., Ukrainian SSR, USSR; on R. Dnieper, nr. dam and hydroelec. power sta.; metal inds. based on Donets coal and Krivoi Rog iron ore; p. (1970) 658,000.

Zaragoza, prov., Spain; largely barren plain suffering from climatic extremes; a. 6,611 sq. m.; cap. Z.; p. (1961) 656,772.

Zaragoza, cap. Z. prov., Spain; on R. Ebro; 2 caths., univ.; former cap. of Aragon; rly. junc.; comm. ctr.; p. (est. 1969) 387,529.

Zarate, t., Entre Rios, Argentina; paper wks., agr. ctr., meat packing; p. (1960) 52,000.

Zaria, c., N. Nigeria; founded 15th cent., old part surrounded by walls; univ., cotton ctr.; rly. ctr., p. (est. 1970) 197,524.

Zary (Sorau), t., Zielona Gora, Poland (since 1945); textiles; p. (1970) 28,400.

Zawiercie, t., Poland; industl. ctr.; coal, iron, textiles, glass; p. (1970) 39,400.

Zdunska Wola, t., Poland; nr. Lodz; textiles, engin.; p. (1970) 29,100.

Zealand. *See* Sjaelland.

Zeebrugge, spt., Belgium; 9 m. N. of Bruges; exp. coal, chemicals; oil refining; linked by canal to Bruges.

Zeeland, prov., Neth.; a. covering part of Scheldt estuary and Is.; low-lying; dairying; cap. Middelburg; a. 690 sq. m.; p. (1968) 298,457.

Zeist, t., Utrecht, **Neth.**: chemicals, toys; p. (1968) 55,950.

Zeitz, t., Halle, **E. Germany**; textiles, chemicals; p. (1965) 46,524.

Zelenodolsk, t., **RSFSR**; on R. Volga, 25 m. W. of Kazan; rly. junc.; sawmills; p. (1959) 60,000.

Zelten, Libya, N. Africa; oilfield; 200 m. S. of Benghazi; pipeline to Mersa al-Brega.

Zenica, t., **Yugoslavia**; lge iron and steel wks.; ctr. of Z. basin; rly. junc.; p. 47,000.

Zeravshan, R., Tadzhik SSR and Usbek SSR, **USSR**; flows for 460 m. before evaporating in desert region N. of Chardzhou.

Zetland. *See* **Shetland.**

Zgierz, t., Lodz. prov., central **Poland**; nr. source of R. Bzura; textiles, chemicals, textile machin.; p. (1970) 42,800.

Zhdanov (Mariupol), spt., S.E. Ukrainian SSR, **USSR**; on Sea of Azov; metallurgical ctr., chemicals; fishing and fish-processing; p. (1970) 417,000.

Zhitomir, t., Ukrainian SSR, **USSR**; engin., clothing; route ctr.; p. (1970) 161,000.

Zielona Gora (Grünberg), c., **W. Poland** (since 1945); in valley surrounded by wooded hills; admin. and industl. ctr., cap. of Z.G. prov.; textiles, food processing, machin.; viticulture; p. (1970) 73,200.

Zielona Gora, prov., **Poland**; borders E. Germany; glacial sands, wooded; brown coal deposits; cap. Z.G.; a. 5,604 sq. m.; p. (1970) 882,000.

Zietovo, terr., N.E. Macedonia, **Yugoslavia**; oil shales, lead, zinc deposits.

Ziguinchor, t., **Senegal**; pt. on R. Casamance; exp. groundnuts; p. (1962) 29,000.

Zilina, t., Slovakia, **ČSSR**; on R. Vah; paper, fertilisers; p. (1967) 39,000.

Zimbabwe National Park, Rhodesia; site nr. Victoria, Mashonaland, of ruined t. built c. 15th cent. A.D. by a Bantu people; discovered 1868.

Zinder, t., **Niger**, W. Africa; terminus of trans-Saharan motor route; tr. ctr.; former cap.; second t. of Niger; p. (est.) 15,000.

Zion National Park, Utah, USA; contains Z. canyon; a. 230 sq. m.

Zipaquirá, t., **Colombia**; 30 m. N. of Bogotá; salt mng., chemicals; cattle-rearing a.; p. 29,880.

Zistersdorf, t., **Lower Austria**; recently developed oilfields.

Zittau, t., Dresden, **E. Germany**; on R. Mandau; woollens, linens, machin., cars, chemicals; p. (1965) 42,876.

Zlatoust, t., S.W. **RSFSR**; in Ural mtns.; metallurgical ctr.; steel, chemicals, sawmilling; p. (1970) 181,000.

Zlin. *See* **Gottwaldov.**

Znojmo or **Znaim**, t., **ČSSR**; anc. t., cas.; ctr. of fertile agr. dist.; p. (1961) 23,956.

Zomba, t., cap. of **Malawi**, 2,900 ft. a.s.l. on slopes of Zomba mtn., 42 m. N.E. Blantyre; univ.; p. (1966) 19,616.

Zonguldak, t., **Turkey**; spt. on Black Sea; coal-mng. a.; p. (1965) 60,865.

Zorita De Los Canos, Guadalajara, **Spain**; on R. Tagus; nuclear power plant.

Zrenjanin, t., Vojvodina, **Yugoslavia**; pt. on R. Begej; ctr. of agr. dist.; agr. processing; p. (1961) 55,578.

Zug, smallest can., **Switzerland**; drained by R. Reuss; contains part of L. Z.; dairying, fruit; cap. Z.; a. 93 sq. m.; p. (1969) 66,700.

Zug, t., cap. of Zug can., **Switzerland**; on L. Z.; elec. engin., printing; p. (1969) 23,400.

Zugspitze, mtn., Bavarian Alps, on **Bavarian–Austrian** bdr.; highest peak in **Germany**, 9,722 ft.; connected by rack-and-pinion to Garmisch-Partenkirchen at foot.

Zuider Zee. *See* **IJsselmeer.**

Zulia, st., **Venezuela**; centred on L. Maracaibo, producing 70 per cent of Venezuelan oil; timber reserves; cap. Maracaibo; a. 24,360 sq. m.; p. (1963) 1,044,000.

Zululand, Bantu homeland, Natal, **S. Africa**; sugar on coastal plain, livestock on interior plateau; cap. Eshowe; a. 10,427 sq. m.; p. (1970) 2,106,774.

Zürich, c., cap. of Z. can., **Switzerland**; on L. Z. and R. Limmat; cath., univ.; leading world banking ctr.; inds. inc. textiles, paper; p. (est. 1969) 433,500 (c.), 671,500 (met. a.).

Zürich, can., **Switzerland**; forested and agr. a. stretching N. from L. Z.; inds. at cap. Z. and Winterthur; a. 667 sq. m.; p. (1969) 1,100,000.

Zürich, L., Z., **Switzerland**; drained by R. Limmat; length 25 m.

Zutphen, t., Gelderland, **Neth.**; on R. Ijssel; textiles, paper; Sir Philip Sidney died here 1586; p. (1968) 27,290.

Zuetina, oil pt. (1968), **Libya**; pipeline links shore storage sta. with offshore berths.

Zweibrücken, t., Rhineland-Palatinate, **W. Germany**; nr. Saarbrücken; cas.; machin., footwear, textiles; p. (1965) 34,000.

Zwickau, c., Karl-Marx-Stadt, **E. Germany**; on R. Mulde; cas.; coal, motors, machin., textiles; birthplace of Schumann; p. (est. 1969) 127,500.

Zwolle, t., Overijssel, **Neth.**; canal ctr.; cattle mkt.; p. (1968) 73,258.

Zyrardow, t., **Poland**; nr. Warsaw; specialised textile ctr.; p. (1970) 33,200.

Zyryanovsk, t., Kazakh SSR, **USSR**; lead, zinc; p. (1965) 56,000.

SOME RECENT CHANGES IN PLACE NAMES

Country	Former name	New Name
Algeria	Algiers	El Djezair
	Oran	Ouahran

THE COMMONWEALTH

The British Commonwealth of Nations is a free association of independent member nations and their dependencies. The political status of the member nations listed below is clarified and given legal substance in the *Statute of Westminster* drawn up in 1931, before the Commonwealth was founded, by the United Kingdom, Canada, Australia and New Zealand. *See also* Section C, Part II.

I. MEMBERS OF THE COMMONWEALTH

Original date of membership	Country	Land area (sq. miles)	Population[1]
1931	United Kingdom	94,500	55,347,000 (1971) C
	Canada	3,851,809	21,324,000 (1970)
	Australia, Commonwealth of	2,967,909	12,713,000 (1970)
	Antarctic Territory	2,333,624	—
	Christmas Island	62	3,361 (1970)
	Cocos (Keeling) Island	5	611 (1970)
	Norfolk Island	13	1,240 (1970)
	Papua New Guinea	183,540	2,522,890 (1970)
	New Zealand	103,736	2,860,475 (1971) C
	Cook Islands	93	24,000 (1970)
	Island Territories (Niue, Tohelau)	194	6,871 (1970) C
	Ross Dependency	160,000 (est.)	262 (1966) C
1947	India, Republic of	1,262,000	546,955,945 (1971) C
1948	Sri Lanka, Republic of	25,332	12,514,000 (1970)
1957	Ghana, Republic of	92,100	8,545,561 (1970) C
1960	Nigeria, Federal Republic of	356,669	66,174,000 (1970)
1961	Cyprus, Republic of	3,572	633,000 (1970)
	Sierra Leone, Republic of	27,925	2,500,000 (1970)
1962	Jamaica	4,411	1,861,300 (1970)
	Trinidad and Tobago	1,980	1,044,000 (1970)
	Uganda, Republic of	91,076	9,764,000 (1970)
1963	Kenya, Republic of	224,960	10,898,000 (1970)
	Malaysia, Federation of	129,000	10,434,034 (1970) C
1964	Malawi, Republic of	45,411	4,530,000 (1970)
	Malta G.C.	122	326,000 (1970)
	Tanzania, United Republic of	362,821	13,273,000 (1970)
	Zambia, Republic of	290,586	4,295,000 (1970)
1965	Gambia, Republic of	4,003	374,000 (1970)
	Singapore, Republic of	291	2,074,507 (1970)
1966	Barbados	166	238,141 (1970) C
	Botswana, Republic of	222,000	648,000 (1970)
	Guyana, Cooperative Republic of	83,000	721,098 (1970)
	Lesotho	11,716	1,043,000 (1970)
1968	Mauritius	787	834,000 (1970)
	Nauru (limited membership)	8	6,664 (1970)
	Swaziland	6,704	451,000 (1970)
1970	Fiji	7,055	513,000 (1970)
	Tonga	270	87,000 (1970)
	Western Samoa	1,097	143,000 (1970)
1972	Bangladesh	52,126	65,000,000 (1970)
1973	Bahamas	4,404	168,838 (1970) C
1974	Grenada	133	104,000 (1970)

[1] Estimates: those countries with recent census figures, indicated by a C.

II. TERRITORIES FOR WHICH THE U.K. IS RESPONSIBLE AND WHICH ARE ADMINISTERED BY A DEPARTMENT WITHIN THE FOREIGN AND COMMONWEALTH OFFICE

(Some of the very small, or practically uninhabited islands, have been omitted)

Territory	Political Status	Land Area sq. miles	Population[1]
Anguilla	Former W.I. Ass. St., under direct Brit. rule since July 1971	35	5,800 (1967)
Antigua	W.I. Ass. St.	170	65,000 (1970)
Bermuda	Colony (internal self-gov.)	21	52,700 (1970) C
British Antarctic Territory	Colony	472,000	—
Belize	Colony (internal self-gov.)	8,866	119,645 (1970) C
British Indian Ocean Territories	Colony	29	2,000 (1970)
British Virgin Islands	Colony (internal self-gov.)	59	10,500 (1970) C
Brunei	Protected St.	2,226	121,000 (1970)
Cayman Islands	Colony	100	10,652 (1970) C
Dominica	W.I. Ass. St.	290	70,300 (1970) C
Falkland Islands	Colony	4,700	2,000 (1970)
S. Georgia	Falkland Islands dependency	1,450	11
S. Sandwich Islands	Falkland Islands dependency	130	—
Gibraltar	City	2·5	28,964 (1970)
Hong Kong	Colony	398	3,950,802 (1971) C
Montserrat	Colony	39	12,302 (1970) C
New Hebrides	Anglo-French Condominium	5,700	86,084 (1971)
Pitcairn Islands	Colony	2	80 (1970)

[1] Estimates: those territories with recent census figures, indicated by a C.
[2] Illegal declaration of independence 11 November 1965.

LOCAL GOVERNMENT REORGANISATION IN THE UNITED KINGDOM

In the spirit of the reorganisation of local government, the maps (6–7) and gazetteer now incorporate only the newly created local government units. This means that the distinction between the *administrative* counties (*e.g.*, Lancashire), which included all land within the county boundaries but excluded the administratively separate county boroughs (*e.g.*, Bolton), and the *geographical* counties, which were made up of both administrative counties and the county boroughs, has been discontinued.

In making their proposals for local government reform the Redcliffe Maud Commission (*see* **Local Government, Section C, Part II**) considered that the division between administrative counties and county boroughs, originally instituted in 1888, created an entirely artificial barrier to the planning and provision of services for city regions (*see* K2). This consideration gave rise to the concept of unitary local authorities which in turn was incorporated, in a modified form, in the Government's proposals for reform contained in the Local Government Act 1972.

The new local government structure resulting from these proposals means the disappearance of certain geographical counties (*e.g.*, Pembroke and Rutland), the appearance of completely new counties (*e.g.*, Avon and Gwynedd) and the modification of former counties (*e.g.*, Glamorgan and Yorkshire). Details of the changes are listed below.

Within the gazetteer the population figures for places now stripped of major administrative status (*e.g.*, the former County Borough of Manchester, which now becomes a metropolitan district within the new metropolitan county of Greater Manchester), relate to the former areas of the administrative units.

ENGLAND

Under the Local Government Act 1972, the English counties now number 45. They are divided into 6 metropolitan counties (met. co.) and 39 non-metropolitan counties (non-met. co.).

Metropolitan Counties

- Greater Manchester
- Merseyside
- South Yorkshire
- Tyne and Wear
- West Midlands
- West Yorkshire

Non-Metropolitan Counties

- Avon
- Bedfordshire
- Berkshire
- Buckinghamshire
- Cambridgeshire
- Cheshire
- Cleveland
- Cornwall
- Cumbria
- Derbyshire
- Devon
- Dorset
- Durham
- East Sussex
- Essex
- Gloucestershire
- Hampshire
- Hereford and Worcester
- Hertfordshire
- Humberside
- Isle of Wight
- Kent
- Lancashire
- Leicestershire
- Lincolnshire
- Norfolk
- North Yorkshire
- Northamptonshire
- Northumberland
- Nottinghamshire
- Oxfordshire
- Salop
- Somerset
- Staffordshire
- Suffolk
- Surrey
- Warwickshire
- West Sussex
- Wiltshire

WALES

The distinction between metropolitan and non-metropolitan counties does not apply to Wales. The new Welsh counties created by the 1972 Act now number 8.

- Clwyd
- Dyfed
- Gwent
- Gwynedd
- Mid Glamorgan
- Powys
- South Glamorgan
- West Glamorgan

NORTHERN IRELAND

Under the Local Government (Boundaries) Act (Northern Ireland) 1971 the 6 counties and one county borough have been replaced by 26 local government districts (l. gov. dist.).

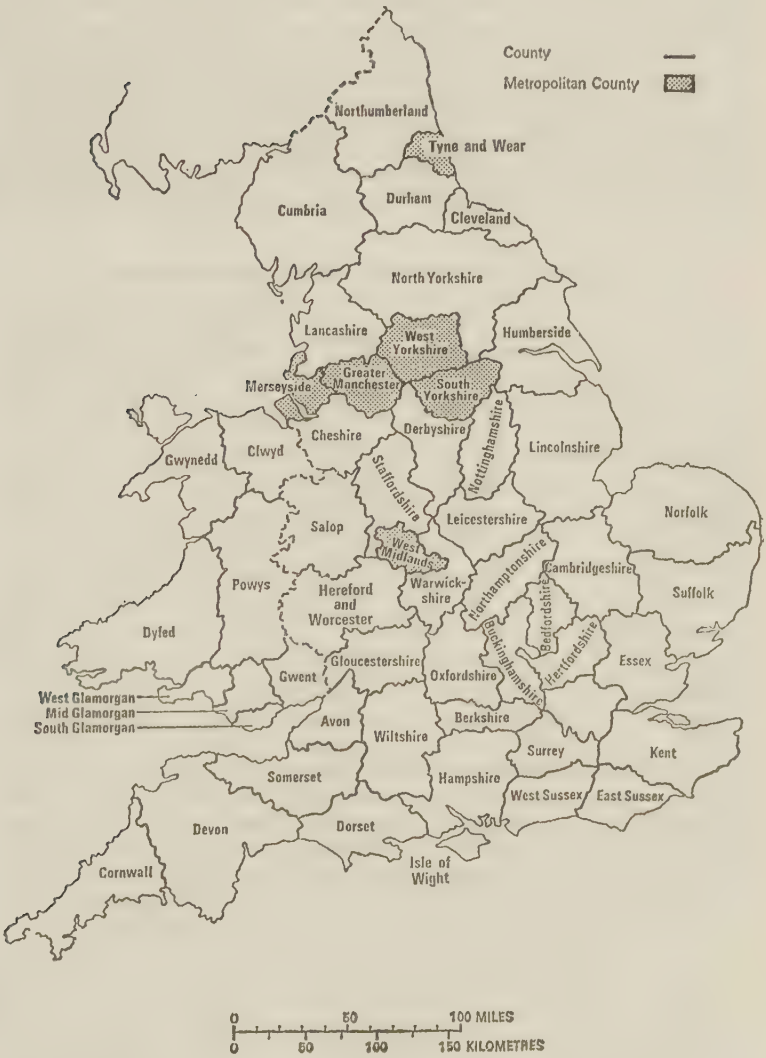
- Antrim
- Ards
- Armagh
- Ballymena
- Ballymoney
- Banbridge
- Belfast
- Carrickfergus
- Castlereagh
- Coleraine
- Cookstown
- Craigavon
- Down
- Dungannon
- Fermanagh
- Larne
- Limavady
- Lisburn
- Londonderry
- Magherafelt
- Moyle
- Newry and Mourne
- Newtownabbey
- North Down
- Omagh
- Strabane

SCOTLAND

Local government reorganisation in Scotland comes fully into force in May 1975 (a year later than the local government reforms in England and Wales and Northern Ireland). The existing Scottish counties will disappear and be replaced by nine Regions (Highland, Grampian, Tayside, Fife, Lothian, Central, Borders, Strathclyde, and Dumfries and Galloway) each sub-divided into districts, together with three Island Areas of Orkney, Shetland and the Western Isles. These changes will be reflected in the next (84th edition).

NEW COUNTIES IN ENGLAND AND WALES

(in force 1 April 1974)



Note: Local government for Greater London came fully into operation on 1 April 1965 under the London Government Act 1963.

THE EUROPEAN ECONOMIC COMMUNITY (EEC)

Unlike the free association of countries in the Commonwealth the EEC is a more formal organisation in which the member nation states (see Table below) are bound by rules contained within a complex and detailed treaty.

The obligations and aims of the EEC and its member nations are set down in the Treaty of Rome which was signed on 25 March 1957 by the six original members (see below), bringing the Community into being on 1 January 1958. A treaty of accession (The Treaty of Brussels) was signed on 22 January 1972, which provided for the expansion of the EEC by the addition of the United Kingdom, Republic of Ireland, Denmark and Norway. The Norwegian Government subsequently decided against membership after their referendum in September 1972. The EEC is a customs union operating a common external tariff on goods entering the union. In this it differs from the European Free Trade Area (EFTA) which has reduced internal tariffs between its member states but has no external tariff. In addition the EEC is technically a common market in that the free movement of factors of production, labour, capital and enterprise exists alongside the customs union. Furthermore the architects of the EEC see its ultimate importance in political rather than mere economic terms. *See also* **Section G, Part IV,** and **Section C, Part I.**

The European Economic Community: Some International Comparisons

	Land Area (sq. miles)	Population (U.N. est. 1970)	Proportionate (%) value of British imports		Proportionate (%) value of British exports	
			1961	1972	1961	1972
EEC (6)						
Belgium & Luxembourg	12,754	10,015,000	1·6	2·8	3·1	4·0
France	212,600	50,777,000	3·2	5·4	3·2	5·2
Italy	116,235	53,667,000	2·2	3·2	3·1	2·9
Netherlands	12,868	13,019,000	3·8	5·5	3·8	4·6
W. Germany	95,930	59,431,000	4·3	7·5	4·9	6·1
Total	450,387	186,909,000	15·1	24·5	18·1	22·9
New EEC members (1973)						
Denmark	16,576	4,921,000	3·2	3·1	2·4	2·5
Republic of Ireland	26,600	2,944,000	3·3	4·0	3·5	4·8
United Kingdom	94,500	55,711,000	—	—	—	—
Total	137,676	63,576,000	6·5	7·1	5·9	7·3
EEC (9)	588,063	250,485,000	21·6	31·6	24·0	30·2
Commonwealth	*c.*10,000,000	*c.*900,000,000	31·2	19·2	32·9	18·9
USA	3,615,123	204,800,000	10·8	10·6	8·5	12·5
USSR	8,599,341	242,768,000	2·0	2·0	1·8	0·9

GENERAL INFORMATION

Some three thousand entries, including a number of scientific terms and explanations. Cross references direct the reader to fuller information elsewhere in the book. A list of foreign phrases and of Nobel prize winners will be found at the end of the section.

GENERAL INFORMATION

A

Aard-vark (Dutch *aarde* = earth + *vark* = pig), name given by the Boers to a genus of ant-eating mammals peculiar to Africa. They are nocturnal and burrowing, with an arched back, and usually grow to a length of 5 ft.

Abacus, a device for making arithmetical calculations, consisting of parallel bars on which are strung movable coloured beads. The earliest form of this instrument was used in Mesopotamia about 3000 B.C., and its use spread westwards throughout the Græco–Roman world and eastwards to China. An efficient form of the abacus is still used today in parts of Asia.

Abdication. The term usually refers to the renunciation of the royal office by a reigning monarch. Both Edward II (1327) and Richard II (1399) were forced to abdicate, James II left the throne vacant without waiting for a formal deposition, and the abdication of Edward VIII was effected by the Declaration of Abdication Act, 1936. Since 1688 when Parliament declared James II to have abdicated by reason of desertion and subversion of the constitution, no British monarch can abdicate without the consent of Parliament.

Aberration, in astronomy, is the apparent displacement of a star due to the speed of the observer with the earth (see Parallax). In optics (i) spherical aberration is when there is blurring of the image and fringes of colour at its edges, due to failure of lens to bring light to a single focus; (ii) chromatic aberration is due to the refractive index of glass being different for light of different colours. For instance, violet light is bent more than red.

Abiogenesis, or spontaneous generation; the origination of living from non-living matter. The term is applied to such discredited ideas as that frogs could be generated spontaneously by the action of sunlight on mud, or maggots arise spontaneously in dead meat without any eggs from which the maggots hatch being present. Spallanzani (1729–99) upset the hypothesis of spontaneous generation; Pasteur dealt it a death-blow.

Abominable Snowman. *See* **Yeti.**

Aborigines, a term first applied to an ancient mythical people of central Italy, derives from the Latin *ab origine* = from the beginning. It now signifies the original inhabitants of any country, in particular the aboriginal tribes of Australia. In contrast to their highly complex social and religious customs, the material culture of Australian aborigines is very low and ill adapted to stand up to contact with European civilisation. Originally estimated at 300,000, their number has dropped in the last 200 years to some 80,000. They have no legal title to their ancient tribal lands, unlike the native people of the U.S.A., Canada, and New Zealand.

Absolute Temperature, Absolute Zero. This is a refined notion requiring some study of thermodynamics for its full understanding. For setting up an absolute temperature scale one must first assign a numerical value to one fixed temperature. For this, the triple point of water has been chosen, *i.e.*, the temperature at which solid, liquid, and gaseous water are all in equilibrium. The triple point is defined to be 273·16 K where K is read for kelvin (after Lord Kelvin). This temperature is 0·01 °C on the Celsius scale (*q.v.*) and is thus very close to the melting point of ice. Suppose the pressure and volume of a mass of gas are measured (i) at the triple point of water, giving $(pV)_{tr}$ as the product of the pressure and volume; and (ii) at any unknown temperature T K, giving (pV) as the product. Then the absolute temperature, T K, is defined by

$$T\text{ K} = 273{\cdot}16\ \frac{(pV)}{(pV)_{tr}}$$

It is to be understood that the gas pressure is very low. The nature of the gas is immaterial. More subtly, it can be shown that the temperature so defined is identical with that derived in a rather abstract way in the science of thermodynamics. The absolute scale is therefore also called the thermodynamic scale. Absolute temperatures can be obtained from Celsius temperatures by adding 273·15; thus the absolute temperature of melting ice is 273·15 K. Conversely, absolute zero is a temperature 273·15 K below the temperature of melting ice, *i.e.*, −273·15 °C. Theory shows that absolute zero is unattainable, but it has been approached to within about 1 millionth of a degree. Within ten or so degrees of absolute zero, matter develops some remarkable properties. *See* **Kelvin, Cryogenics, Superconductor, Helium.**

Absolution, an ecclesiastical term denoting the liberation of a person guilty of sin from its consequences by the act or intercession of religious authority.

Abstract Art, a term applied to 20th cent. plastic arts in which form and colour possess aesthetic value apart from the subject. Usually represented as a modern movement beginning with Cézanne. The idea is ancient, abstract design being found in the Neolithic period, in folk-art, and particularly in Moslem art (which forbids naturalistic representations especially of the human figure). Among those in the tradition are Kandinsky, Braque, Mondrian, Calder.

Acetic Acid, an organic acid produced when ordinary (ethyl) alcohol is fermented by the organism called *Acetobacter aceti*. The same oxidation process yields vinegar; this is a weak and crude solution of acetic acid obtained by trickling dilute alcoholic liquor over beechwood shavings at 35 °C. The souring of wine is due to the same process. Acetic acid is used as a food preservative and flavouring material, and in the manufacture of cellulose acetate and white lead.

Acetylene, a compound of carbon and hydrogen prepared from calcium carbide and water. A very reactive gas, it is used industrially on a large scale to prepare acetaldehyde, chlorohydrocarbon solvents, and many intermediates for plastics manufacture. Burns in air with a highly luminous flame formerly used for lighting purposes, but is now widely used, with oxygen, in welding. For safe storage and transportation it is dissolved in acetone.

Acids, substances having a tendency to lose a positive ion (a proton). This general definition overcomes difficulties of earlier views which merely described their properties and asserted that they are chemically opposite to bases. As a whole acids contain ionisable hydrogen, replaceable by a metal, to form a salt. Inorganic acids are compounds of non-metals or metalloids, *e.g.*, sulphuric, phosphoric acid. Carboxylic acids contain the group –COOH. F22.

Acolyte, one who assists the priest at Mass by saying the responses and by waiting on him.

Act of God, a natural catastrophe that could not be foreseen or averted.

Advent, a period devoted to religious preparation for the coming celebration of the Nativity (Christmas). It comprises four Sundays, and commences on the one nearest to St. Andrew's Day (Nov. 30). Advent was not observed before the 4th cent.

Advocatus Diaboli ("the devil's advocate"), a Roman Catholic functionary who presents opposing evidence in regard to the life of any deceased person it may be proposed to canonise.

Aeolian Harp, a musical instrument once very popular. It consists of catgut stretched over a wooden sound-box which, when placed out of doors in the wind, can be made to emit many pleasing harmonies.

Aerenchyma. Plant tissue which is spongy because there are large air spaces between the cells in which gases can circulate. This aerating tissue is characteristic of marsh and water-plants.

Aerodynamics, the science of gases (especially air) in motion, particularly in relation to aircraft (aeronautics). The idea of imitating the birds by the use of wings is of ancient origin. Leonardo da Vinci first carried out experiments in a scientific manner. The invention of the balloon in 1783 and the researches of scientists and engineers in the 19th cent. ultimately led to the development of the aeroplane.

Aerolites, the name given to the class of meteorites composed chiefly of heavy silicates. The other two main classes are *siderolites* (nickel–iron and silicates) and *siderites* (nickel–iron).

Aerosol, a suspension of a liquid in a gas; for example, a fog is very small drops of water suspended in air. Formed by spraying the liquid in air, aerosols are used to disperse liquids over a wide area in crop spraying, air freshening, and pest control.

Afrikander, type of cattle bred in South Africa.

Afrikaner, an Afrikaans-speaking South African, usually of Dutch descent.

After-damp occurs in a mine after an explosion, causing suffocation. It is composed mainly of carbon dioxide and nitrogen and contains water vapour and carbon monoxide (produced by the burning, in a restricted supply of air, of fine coal dust).

Agape, a "love-feast" held by the early Christians in commemoration of the Lord's Supper. *See* **Methodism, Section J.**

Agar-agar, a vegetable jelly obtained from seaweeds, widely used in jellies, canned meat and poultry, and as a constituent in medicinal and cosmetic preparations. Used by bacteriologists to solidify broth and blood upon which bacteria are cultivated. Chief sources of supply: Far East and California.

Agaric, large fungi of the family *Agaricaceae*, which includes the mushroom and what are popularly called "toadstools," though the idea that these two lay terms sharply differentiate between edible and poisonous fungi is an incorrect one. Characteristic of the agarics is the presence of a cap or *pileus* (bearing underneath the spore-shedding gills) and a stalk or *stipe*.

Agate, a variety of chalcedony. Parallel bands of colour are often characteristic. Brazil, Uruguay, India, and the U.S.A. furnish the main supplies, and Scotland has a species of agate called Scotch pebble.

Agave, the American aloe or Century Plant which sometimes does not attain to flowering maturity under sixty or seventy years, and then dies. The flower spray may reach a height of 20 feet and in its development the rush of sap is so great that the Mexicans collect for brewing the strong spirit called mescal. 1,000 litres of sap can be obtained from a single plant. Some species of agave yield sisal used for making cord and rope.

Agnus Dei (Lamb of God), a short anthem said or sung at a certain point of the Roman Catholic Mass or Anglican communion service. (John i. 29.)

Air is a mixture of gases forming the atmosphere we breathe. Nitrogen, oxygen, and argon are always present in air; a typical sample of dry air might contain these gases in the following proportions (by volume): nitrogen, 78·06%; oxygen, 21%; argon, 0·94%. A small quantity of carbon dioxide is present, about 3 parts in 10,000 parts of air. This carbon dioxide is the source of carbon compounds built up by green plants in photosynthesis (**F28**); in the process carbon dioxide is absorbed from the air and oxygen returned, the reverse of the respiratory process of animals. Air also contains a quantity of water vapour, and traces of ammonia, nitrogen oxides, hydrogen, sulphur dioxide, hydrogen sulphide, ozone and of the rare gases helium, krypton, neon, and xenon. In a city smoke and dust particles may be as abundant as 100,000 particles per cc. A litre of air at 0 °C. and 700 mm pressure weighs 1·2932 grams. *See also* **Atmosphere, Pollution.**

Alabaster, a soft crystalline form of sulphate of lime, or granulated gypsum, easily worked for statuary and other ornamental articles, and capable of being highly polished. Volterra, in Tuscany, yields the finest; that in highest ancient repute came from Alabastron in Egypt, near to the modern Antinoë.

Alb, white vestment reaching to the feet, worn by priests in religious ceremonies.

Albatross, a large sea-bird of almost pure white, black and white, or brown plumage. It nests in colonies on remote islands, but at other times rarely approaches land. Of the thirteen species, nine are found in the southern oceans, one in the tropics, and the three others in the North Pacific.

Albert Memorial, a large Gothic monument designed by Sir George Gilbert Scott, and embellished with sculptures by eminent artists. Erected in memory of Prince Albert in Kensington Gardens at a cost of £120,000.

Alcázar, the palace at Seville, famed for the beauty of its halls and gardens, in ancient days the residence of the Moorish kings.

Alcohols. A class of organic compounds of general formula R–OH, where R is an aliphatic radical. "Alcohol" is the name used for ethyl alcohol (ethanol); this is produced by distilling fermented liquors, and synthetically from ethylene, a product of petroleum cracking. Industrially ethyl alcohol is used in the manufacture of chloroform, ether, perfumes, etc. Diluted with wood alcohol or other denaturants ethyl alcohol is called "methylated spirits"; the denaturants are varied according to the industrial purposes for which it is required, the methylated spirits then being largely exempt from duty. Wood alcohol (methyl alcohol or methanol) can be obtained by distilling wood, or synthetically from water gas. *See* **F24(1).**

Alcoholic Strength. In Great Britain the standard is the proof gallon which is an imperial gallon of spirits containing 49·28 per cent. of alcohol by weight or 57·1 per cent. by volume at 60 °F. In Europe the strength of spirits is usually measured by the Guy-Lussac hydrometer. In the U.S.A., because of the smaller gallon, 1·87 U.S. proof gallons = 1 British proof gallon. In Britain the alcoholic content of spirits and liqueurs appears on the bottle in degrees proof. Whisky, for example, at 70° proof (or 30° under proof) contains 70/100 × 57·1 alcohol, or about 40 per cent. The alcoholic content of wines is not shown on the label.

Aldehyde, the generic term for a class of chemical compounds of general formula R–CHO, where R is an organic radical. Except for formaldehyde, which is a gas, aldehydes are volatile liquids. They are produced by oxidation of primary alcohols. Most important aldehyde is formaldehyde used in making the plastics described as formaldehyde resins. Formalin (formaldehyde solution in water) is much used for preserving zoological specimens.

Alder, a river-side tree of the genus *Alnus*, including some 30 species and found in north temperate regions and the Andes. The only species native to Britain is *A. glutinosa*, which has been described as "guardian of river-banks" because of the way its roots bind together the sand and stones, and so slow down erosion. The wood is used for furniture and charcoal.

Aldine Editions are the beautiful books printed in Venice by the Renaissance printer Aldo Pio Manuzio and his family between 1490 and 1597. Italics were first introduced in these books.

Algae, flowerless plants living mostly in water. Seaweeds and the green pond scums are the best known algae. The green powder found on trees is a microscopic alga (*Protococcus*). *See* **F39(2).**

Algebra, a branch of mathematics in which symbols are used in place of numbers. Sir Isaac Newton styled it the "universal arithmetic." The Chinese were able to solve the quadratic equation before the Christian era but it was Al-Khowarizmi, an Arab mathematician of the early 9th cent., who introduced algebra to Europe.

Alhambra, the ancient palace of the Moorish kings at Granada in Spain, built in the 13th and 14th cent. Though part of the castle was turned into a modern palace under Charles V., the most beautiful parts of the interior are still preserved—the graceful halls and dwelling-rooms grouped round the Court of Alberca and the Court of Lions, with their fountains, arcades, and lovely gardens.

Aliphatic describes derivatives of hydrocarbons having chains of carbon atoms, as distinct from rings of carbon atoms as in benzene (*see* **Aromatic**). The gas butane is aliphatic.

Alkali, the general name given to a number of

chemicals which are bases (*q.v.*). The term should be limited to the hydroxides of metals in the first and second group of the periodic table and of ammonia, *e.g.*, NaOH, KOH. They are used commercially in the manufacture of paper, glass, soap, and artificial silk. The word comes from the Arabic *al-kali* meaning calcined wood ashes. Alkalis are extremely soluble in water and neutralise acids to form salts and water.

Alkaloids, a large group of natural products which contain nitrogen; they are usually basic. Isolated from plants and animals, they include some hormones, vitamins, and drugs. Examples are nicotine, adrenalin, and cocaine. Many alkaloids are made synthetically for medicinal use, *e.g.*, morphine, quinine. Their function in plants is not well understood. *See* Belladonna.

Alligator, the crocodile of America, common in the lower Mississippi and adjacent lakes and marshes, varying in length from 2 to 20 feet.

Alloys are combinations of metals. They are made because of their valuable special properties, *e.g.*, durability, strength, lightness, magnetism, rust-resistance, etc. Some well-known ones are brass (zinc + copper), coinage bronze (copper + zinc + tin), steels (iron + carbon + various other materials), soft solder (tin + lead), dental fillings (mercury + various ingredients).

All Saints' Day (Nov. 1) is common to both the English and Roman Catholic Churches, and is in commemoration of the saints generally, or such as have no special day set apart for them. Instituted by Pope Boniface IV., early in the 7th cent., this ecclesiastical festival was formerly called "All Hallows."

All Souls' Day (Nov. 2) is a festival of the Roman Church, intended for the mitigation by prayer of the sufferings of souls in purgatory. The commemoration was enjoined by Abbot Odilo of Cluny during the 11th cent. upon the monastic order over which he presided, and was afterwards adopted generally throughout the Roman Communion.

Allspice, a flavouring obtained from a West Indian tree of the myrtle family, *Pimenta officinalis*. The essential oil of its unripe fruit is a powerful irritant, and the bruised berries are carminative.

Alluvium, accumulations of sand, mud, gravel, etc., washed down by rivers and forming distinct deposits.

Almond, the fruit of the *Amygdalus communis*, originally indigenous to Persia, Asia Minor, and N. Africa; now cultivated in Italy, Spain, France, the U.S.A., and Australia. It yields both bitter and sweet oil. Bitter almond oil is obtained by macerating and distilling the ripe seeds; it is used for flavouring and scenting purposes, its fragrant odour being due to the presence of benzaldehyde and hydrogen cyanide. When the seeds are pressed sweet almond oil results: this is used in perfumery, and also as a lubricant for very delicate machinery.

Almuce, a fur stole worn by certain canons.

Aloe, large plants of the lily family, with about 180 species found mainly in the S. African veldt and Karroo. The bitter purgative drug (aloes) is prepared by evaporating the plant's sap. *See* Agave.

Alpaca, a South American ruminant related to the llama whose long, fine wool is woven into a soft dress fabric known by the same name. Sir Titus Salt first manufactured alpaca cloth (1836). Saltaire, near Bradford, remains to evidence the success which for many years attended the enterprise.

Alpha Particle, or alpha-ray, fast-moving helium nucleus ejected by some radioactive atoms, *e.g.*, polonium. It is a combination of 2 neutrons and 2 protons. *See* F11(1).

Alphabet (so called from the first two letters of the Greek alphabet—alpha, beta) is the term applied to the collection of letters from which the words of a language are made up. It grew out of the knowledge that all words can be expressed by a limited number of sounds arranged in various combinations. The Phoenicians were the first to make use of an alphabetic script derived from an earlier Semitic alphabet (earliest known inscriptions c. 1500–950 B.C.) from which all other alphabets have sprung. The stages in the development of the alphabet were mnemonic (memory aids), pictorial (actual pictures), ideographic (symbols), and lastly phonetic. All the ideographic systems died out, with the exception of that of the Chinese.

Altimeter, an instrument used in aircraft to estimate altitude; its usual essential feature is an aneroid barometer which registers the decrease of pressure with height. Roughly 1 millibar corresponds to 30 ft. To read an aircraft altimeter correct for its destination, the zero setting must be adjusted for difference of ground height and difference of surface pressure, especially when pressure is falling or when flying towards low pressure.

Altitude, an astronomical term used to signify the angular elevation of a heavenly body; this is measured with a quadrant or sextant. In aeronautics it is the height (in feet or metres) above sea-level.

Alto-Relievo, a term applied to sculptured designs which are depicted in prominent relief on a flat surface, technically signifying that the projection exceeds one-half the true proportions of the objects represented. Basso-relievo is carving kept lower than one-half such projection.

Alum is a compound salt used in various industrial processes, especially dyeing, its constituents being the sulphate of one univalent metal or radical (*e.g.*, potassium, sodium, ammonium, rubidium, caesium, silver, thallium) and the sulphate of a tervalent metal (*e.g.*, aluminium, iron, chromium, manganese), and water of crystallisation.

Alumina is the oxide of aluminium. Very valuable as a refractory material. The ruby is almost 100 per cent. alumina; so also are the emerald, oriental amethyst, etc. An hydrated aluminium oxide is bauxite, chief ore of aluminium from which the metal is extracted electrolytically.

Aluminium is a light metal which conducts electricity well. Its specific gravity at 20 °C is 2·705. Melting point of aluminium is 660·2 °C. It is made commercially by electrolysing bauxite dissolved in cryolite (double fluoride of aluminium and sodium). Aluminium alloys because of their strength and lightness are being increasingly used for the construction of railway coaches, automobiles, aeroplanes, etc.

Amadavat, a popular cage bird of the weaver family, mainly crimson with white spots, so named because the first specimens came from Ahmadabad in India about 1700.

Amalgam is the term applied to any alloy of which mercury forms a part.

Amber, a brittle resinous substance; in origin, fossilised resin. Obtained mostly from the Baltic coasts, and used for ornaments, pipe mouth-pieces, etc.

Ambergris is a waxy substance produced in the intestines of the sperm whale, and generally found floating on the sea. It is a valuable perfumery material.

Ambiyopsis, a species of fish, practically sightless, and with inoperative organs of hearing and feeling, that inhabit the Mammoth Cave of Kentucky. A remarkable illustration of the failure of senses not brought into use.

America's Cup. In 1851 the Royal Yacht Squadron put up for competition a silver cup that has become the most famous trophy in yachting. In that year the New York Y.C. sent the schooner *America* across the Atlantic to compete in a 53-mile race round the Isle of Wight: it captured the trophy which now bears its name. None of the many challenges by yachtsmen from Great Britain, Canada, and, latterly, Australia, has been successful, though America's *Resolute* was nearly beaten in 1920 by Sir Thomas Lipton's *Shamrock IV*, which won the first two races and was first to cross the line in the third race, only to lose on corrected time.

Amethyst, the violet variety of quartz, used as a precious stone, containing traces of manganese, titanium, and iron. The finest coloured specimens come from Brazil and the Urals.

Amice, a linen vestment worn about the neck by Roman and many Anglican priests over the alb when officiating at Mass or Holy Eucharist. Formerly worn on the head by priests and pilgrims.

Amines, organic chemicals composed of carbon, hydrogen, and nitrogen. They are derived from ammonia, which they resemble in smell and chemical characteristics. The smell of bad fish

is due to the presence of amines. Important industrially as intermediates in a wide variety of products, for example, the synthesis of dyestuffs and man-made fibres such as nylon.

Amino acids, organic compounds containing an amine group and an acid group. They are the "building bricks" of proteins (*q.v.*). *See* F27(1), 29.

Ammeter, an instrument for measuring the current flowing in an electric circuit. A contraction of ampere-meter. *See* **Ampere**.

Ammonia, a colourless gaseous compound comprising three atoms of hydrogen to one of nitrogen. Formerly it was made by heating the horns and hoofs of deer, acquiring the name of spirits of hartshorn. The ammonia of commerce is now procured by coal decomposition in the course of gas-making and by direct synthesis. In the very important Haber process of ammonia production by fixation of atmospheric nitrogen, the nitrogen is made to combine with hydrogen and the ammonia so prepared is converted into nitric acid, ammonium nitrate or ammonium sulphate. The Haber process made Germany self-sufficient in nitrates in the first world war, and was afterwards exploited all over the world.

Ammonites, extinct animals related to the Nautilus. The chambered shell is coiled, usually in a plane spiral, and they are confined to Mesozoic rocks.

Ammonium, the basic radical of ammonium salts, Composed of one atom of nitrogen and four of hydrogen, it behaves chemically like an ion of a monovalent alkali metal. Ammonium chloride is known as "sal ammoniac." "Sal volatile" is ammonium carbonate.

Amnesty, an act of grace by which a ruler or governing power pardons political offenders.

Amorphous, a term used to indicate the absense of crystalline form in any body or substance.

Ampere, unit of electric current in the SI system of units; named after André Marie Ampère, who in the 1820s helped to lay the foundations of modern electromagnetism. Defined as that constant current which, if maintained in two parallel rectilinear conductors of infinite length, of negligible circular cross section, and placed at a distance of one metre apart in a vacuum, would produce between these conductors a force equal to 2×10^{-7} newton per metre length.

Amphibia. *See* F33(2).

Amphioxus *or* **Lancelet**, a primitive chordate (F33(1)), occurring in sand-banks around British shores and elsewhere.

Ana, a collection of criticisms, observations, or opinions about a particular person, place or subject. Used as a suffix especially applies to a person's memorable sayings, anecdotes about or publications bearing on, as in *Johnsoniana, Alexandriana, Victoriana*.

Anabolism. *See* Catabolism.

Anarchism. *See* Section J.

Anchor, an instrument used for keeping ships stationary. Great improvements have been introduced in recent years, stockless anchors being now chiefly used, consisting of a shank and a loose fluke. Lloyds' rules prescribe the number and weight of anchors which must be carried by merchant ships.

Anchorite is a religious person who retires into solitude to employ himself with holy thoughts. Among the early Christians, anchorites were numerous, but in the Western Church they have been few. Their reputation for wisdom and prescience was high, and kings and rulers in olden days would visit their cells for counsel. An anchorite or "ankret" was in mediæval times a source of fame and profit to the monastic house within which he was voluntarily immured.

Anchovy, a fish of the herring family, distinguished by its large mouth and projecting snout, plentiful in the Mediterranean, and much esteemed when cured.

Ancient Lights are rights of light enjoyed by a property owner over adjoining land. Such a right is obtained either by uninterrupted enjoyment for twenty years, or by written authority, and once legally established cannot be upset, no building being permissible that would seriously interfere with the privilege.

Anemometer, an instrument for measuring the strength of the wind. In the most widely used pattern the rotation, about a vertical axis, of a group of hemispherical or conical cups gives a measure of the total flow of air past the cups, various registering devices being employed. The Dines anemograph provides a continuous record of the variation in both velocity and direction; changes of pressure produced in a horizontal tube, kept pointing into the wind by a vane, cause a float, to which a pen is attached, to rise and fall in sympathy with the gusts and lulls. The recently devised hot-wire anemometer, depending upon the change of electrical resistance experienced by a heated wire when cooled, enables very gentle air currents to be investigated.

Aneroid is the kind of barometer which does not depend upon atmospheric support of a mercury (or other liquid) column. It consists of a metallic box, partially exhausted of air, with a corrugated lid which moves with atmospheric changes. A lever system magnifies the lid movements about 200 times and atmospheric pressure is read from a dial. The construction of the vacuum chamber provides automatic compensation for temperature changes. An aneroid barometer is the basic component of an altimeter.

Angelica, an aromatic plant of the Umbelliferae order, *Angelica officinalis*, valuable as a flavouring and possessing medicinal properties. In olden times supposed to protect against poison.

Angelus, a church bell rung in Roman Catholic countries, at morn, noon, and sunset, to remind the faithful to say their Angelic Salutation.

Angevin Dynasty includes the Plantagenet kings from Henry II. to Richard II. The name was derived from Henry II.'s father, Geoffrey, Count of Anjou.

Angles, a northern tribe originally settled in Schleswig, who with the Saxons and Jutes invaded Britain in the 5th cent.

Angstrom, a unit of wavelength, named after the Swedish physicist A. J. Ångström (1814–74), equal to one hundred-millionth of a centimetre (10^{-8} cm). It is used to measure wavelengths of light, X-rays, etc.

Aniline, a simple aromatic compound related to benzene and ammonia. It is obtained from coal-tar. The name recalls the fact that it was first prepared by distilling indigo (*anil* is Portuguese for indigo). In 1856 W. H. Perkin (1838–1907) discovered the first aniline or coal-tar dye, mauve, and thus founded the modern dyestuff industry.

Animal Kingdom. *See* F32.

Anise, an umbelliferous plant (*Pimpinella anisum*) found in Egypt and the Levant, and valued for its fruit, aniseed, possessing certain medicinal properties and yielding an aromatic, volatile oil. Also used in cooking. The anise of the Bible is *Anethum graveolens, i.e.*, dill.

Annates were acknowledgments formerly paid to the popes by way of fee or tax in respect of ecclesiastical preferment, and consisted usually of a proportion of the income ("first-fruits") of the office. Introduced into England in the 13th cent.; annexed to the Crown under Henry VIII; transferred to a perpetual fund for the benefit of the poorer clergy in 1704. *See* Queen Anne's Bounty.

"Annual Register," a yearly record of political and literary events, founded by Edmund Burke (as editor) in 1759 and Robert Dorsley, the bookseller.

Annunciation, Feast of the (March 25), is a church festival commemorating the message of the incarnation of Christ brought by the angel Gabriel to the Virgin Mary, hence the title Lady Day.

Anointing is the pouring of consecrated oil upon the body as a mark of supreme honour. In England it is restricted chiefly to the ceremony of the monarch's coronation, and the spoon with which the oil is applied forms part of the English regalia. In the Roman Catholic Church anointing represents the sacrament of extreme unction.

Ant. There are about 6,000 species of ants, which belong to the same order (Hymenoptera) as the bees, wasps, and ichneumon flies. They are social in habit, living in communities of varying size and development. There are three basic castes in ants—the females or *queens*, the *males*, and the *workers* (the last-named being neuter), although specialised forms of workers

are sometimes found, *e.g.*, the *soldiers* of the harvesting ants. In the communities of those species of ants which evolved most recently there is a highly complex social life and well-developed division of labour. Some species of these ants make slaves of other species, stealing the cocoons before the adult forms emerge. Many ants "milk" greenflies, which they protect for their honey-like secretion, and most ants' nests contain many "guests," such as beetles and silver fish. Some ants harvest grains of corn, and others, from S. America, live on fungi which they cultivate in underground "mushroom beds."

Antarctic Exploration. In earlier centuries it was thought that a great continent must exist in the southern hemisphere, around the South Pole, to balance the known land masses in the north. Its supposed extent was greatly reduced in the 18th cent., particularly when Capt. Cook sailed for the first time south of the Antarctic Circle and reached the edge of the ice pack. A portion of the ice-covered continent—the coast of Graham Land—was first sighted by Lieut. Edward Bransfield in 1820. Explorers of several other nations sighted portions of the coast-line in other quarters, but the first extensive exploration was made by Capt. James Clarke Ross, who with the *Erebus* and *Terror* penetrated into the Ross Sea in 1841, and discovered the great Ross Ice Barrier in 78° South lat. Interest in the Antarctic did not revive until after 1890, when an international scheme of research was drawn up. A Norwegian, C. E. Borchgrevink, in 1898–1900, was the first to winter in the Antarctic and to travel on the ice barrier. The British share in this work was carried out by Capt. R. F. Scott's expedition in the *Discovery*, 1901–4. Scott's party sledged across the barrier to 82° 17′ South, then a record "farthest south." A little later, Ernest Shackleton beat this by travelling to within 100 miles of the South Pole. In 1910 Scott organised his second expedition of the *Terra Nova*, and became engaged against his will in a "race for the Pole," when, after his departure, the Norwegian Arctic explorer, Roald Amundsen, suddenly announced that he was sailing for the Antarctic. Amundsen set up his base at the eastern end of the Barrier, and, relying on dog teams for hauling his sledges, reached the Pole on December 14, 1911. Meanwhile Scott and his party, their start delayed by adverse weather, were marching southwards, man-hauling their sledges, for Scott was against the use of dogs. After an arduous journey they reached the Pole one month after Amundsen. The return was a struggle against the weather and increasing weakness, probably due to scurvy, until at last they perished within a few miles of their base. After the First World War the development of the whaling industry greatly stimulated further exploration. Outstanding expeditions included that of Admiral R. E. Byrd, 1929, when he flew over the South Pole; The British Graham Land expedition, 1934, which carried out the first extensive mapping of any part of the Antarctic continent; and the U.S. Navy's Antarctic Expedition of 1940, when the whole continent was circumnavigated and great areas photographed from the air. In recent years valuable work has been done by the first International expedition, the Norwegian–British–Swedish Expedition to Queen Maud Land, and by the French in Adélie Land. The Falkland Island Dependencies Survey, set up during the war, has continued the scientific exploration of Graham Land. The Antarctic was the scene of high adventure during the International Geophysical Year (1957–58), when scientists from many countries participated in the explorations. The Commonwealth Trans-Antarctic Expedition set out from opposite sides of the continent and met at the South Pole, the U.K. party, led by Sir Vivian Fuchs, from the Falklands, and Sir Edmund Hillary and his party from New Zealand. The U.K. party accomplished the first crossing of the White Continent in 99 days. Their scientific work included the making of seismic and complementary gravimetric studies at frequent intervals along the 2,200-mile traverse. Since the Antarctic is becoming important for many reasons, in weather forecasting, in the whaling industry, and as a possible centre for world air routes, the tempo of exploration and research will become even faster in the future.

Anteater. There are two unrelated families of anteaters, the Myrmecophagidae and the Manidae. Among the former the Great Anteater (*Myrmecophaga jubita*) is the largest species, over 6 ft. in length, occurring in Central and S. America. Only half its size is the lesser Anteater (*Tamandua tetradactyla*); this is found in forests of tropical America and Trinidad. The Two-toed Anteater (*Cyclopes didactylus*) belongs to South America and Trinidad. These three animals live mostly on termites; they are adapted to this diet, having large claws for digging out ants, and a tubular mouth with a long sticky tongue. The Manidae are the Scaly Anteaters or Pangolins, widely distributed over Africa and the Orient. The difference between the two families is that the first has hair covering the body, the latter has horny scales instead.

Antennae, paired feelers of insects and crustacea.

Anthem, a choral composition, with or without instrumental accompaniment, usually sung after the third collect in the Church of England service. The words are from the Scriptures, and the composition may be for solo voices only, for full choir, or for both. Among the chief British composers of anthems are Tallis, Purcell, Croft, Boyce, Goss, and Stainer.

Anthracite is a black coal with a brilliant lustre. It contains 92% and over of carbon and burns slowly, without smoke or flame. *See* Coal.

Anthropoid, meaning "resembling man," a sub-order of the primate mammals including man and also the gibbon, chimpanzee, orang-utan, and gorilla.

Antibiotics. *See* Index to Section P.

Anticyclone, a region where barometric pressure is greater than that of its surroundings. Such a system is distinguished on weather charts by a pattern of isobars, usually circular or oval-shaped, enclosing the centre of high pressure where the air is calm. In the remaining areas light or moderately strong winds blow spirally outwards, in a clockwise direction in the Northern Hemisphere (and in the reverse direction in the Southern Hemisphere), in accordance with Buys Ballot's law (an observer with back to wind in Northern Hemisphere has lower pressure to left; in Southern to right). Over the British Isles anticyclonic weather is generally quiet and settled, being fair, warm, and sunny in summer and either very cold and often foggy or overcast and gloomy in winter. These systems move slowly and sometimes remain practically stationary for days at a time, that over Siberia being particularly well defined. Extensive belts of almost permanent anticyclones occur in latitudes 30° N. and 30° S. Persistent anticyclonic weather with easterly winds during the months December to March, 1962–3, brought the coldest and hardest winter to Britain since 1740 (taking the Midlands as representative).

Antimony. Metal element, symbol Sb. In group V of the periodic table. Exists in various forms, the stable form being a grey brittle metal with a layer structure. The other forms are non-conductors. On being burned, it gives off dense fumes of oxide of antimony. By itself it is not of special utility; but as an alloy for hardening other metals, it is much used. As an alloy with lead for type-metal, and with tin and copper or zinc for Britannia-metal, it is of great value. Most important antimony ore is stibnite (antimony sulphide).

Anti-Pope, one elected in opposition to one held to be canonically chosen; commonly applied to the popes Urban VI. and Clement VII., who resided at Avignon during the Great Schism (1378–1417).

Anti-proton, the "negative proton," an atomic particle created in high energy collisions of nuclear particles. Its existence was confirmed in Oct. 1955. *See* F14.

Antisemitism. *See* Section J.

Antlers are the branched horns of deer, the branches being called tines. Antlers originate as outgrowths of the frontal bone, and are usually shed once a year. Except in the reindeer and caribou they are restricted to the male

Apartheid. *See* Section J.

Ape, a term applied to the gorilla, chimpanzee, orang-utan, and gibbon—the anthropoid apes.

Aphelion, the point in the orbit of a planet farthest from the sun; the opposite of perihelion.

Aphids. *See* T29 (2).

Apis, the sacred bull worshipped by the ancient Egyptians; also the scientific name for the bee.

Apocalyptic writings are those which deal with revelation and prophecy, more especially the Revelation of St. John.

Apocrypha (hidden writings), the books which were included in the Septuagint (Greek) and Vulgate (Latin) versions of the Old Testament but excluded from the sacred canon at the Reformation by the Protestants on the grounds that they were not originally written in Hebrew nor regarded as genuine by the Jews. The books include: 1 and 2 Esdras, Tobit, Judith, additions to Esther, Wisdom of Solomon, Ecclesiasticus, Baruch, Song of the Three Holy Children, History of Susannah, Bel and the Dragon, Prayer of Manasses, 1 and 2 Maccabees. The term is usually applied to the additions to the old Testament, but there are also numerous Christian writings of the same character. *The New English Bible* with the Apocrypha was published in 1970.

Apogee, that point in the orbit of a heavenly body which is farthest from the earth; used in relation to the sun, moon, and artificial satellites. The sun's apogee corresponds to the earth's aphelion. *See* Perigee.

Apostasy is a revolt, by an individual or party, from one form of opinions or doctrine to another. Julian, the Roman Emperor (331–63), brought up as a Christian, became converted to paganism and on coming to the throne (361), proclaimed religious toleration. Hence his name, Julian the Apostate.

Apostles. The twelve apostles who were disciples of Jesus were: Simon Peter and Andrew (his brother), James and John (sons of Zebedee), Philip, Bartholomew, Thomas, Matthew, James, Thaddaeus, Simon, and Judas Iscariot. After the Ascension Matthias was chosen to take the place of Judas. St. Paul is always referred to as the chief apostle, though he is not one of the twelve. St. Barnabas has also been called an apostle.

Apostles' Creed, applied to the most ancient of the Church's statements of its belief: "I believe in God the Father Almighty; and in Jesus Christ his only Son our Lord, who was born of the Holy Ghost and the Virgin Mary. . . ." A later version is used in the Church of England at morning and evening prayer.

Apostolic Fathers were the immediate disciples or followers of the Apostles, especially such as left writings behind. They included Barnabas, Clement of Rome, Ignatius of Antioch, Hermas, Papias of Hieropolis, and Polycarp.

Appeasement Policy. The name of the policy during 1937 and 1938 of yielding to the demands of Hitler and Mussolini in the hope that a point would be reached when the dictators would co-operate in the maintenance of peace. The policy culminated in the Munich Agreement (which was the subject of much criticism) after a series of concessions including the recognition of the Italian conquest of Abyssinia and the German annexation of Austria. The policy was finally demonstrated as futile when Hitler seized Czechoslovakia in March 1939.

Appian Way, the oldest and finest of the Roman roads originally laid by Appius Claudius (312 B.C.) from Rome to Capua and thence to Brundisium (Brindisi).

Approved Schools were residential schools, subject to Home Office inspection, for the training of young persons under 17 who, because of disturbed behaviour as a result of unfavourable influences such as bad environment or parental neglect, were guilty of offences or in need of care and protection and had been sent to them by magistrates from juvenile or other courts. The approved school order was abolished by the Children and Young Persons Act 1969. Such young people may now be committed to the care of a local authority and accommodated in a system of community homes ranging from children's homes to borstal type institutions.

April, the fourth month of the year, from the Roman *Aprilis* derived from *aperire* "to open" —the period when the buds begin to open.

Apse is a semicircular recess, arched or domeroofed, at the end of the choir, aisles, or nave of a church.

Aqueducts are conduits in which water flows or is conveyed from its source to the place where it is to be used. Most famous builders were the Romans and the oldest Roman aqueduct was the Aqua Appia, which dates from about 310 B.C. Among modern aqueducts may be mentioned that of Glasgow, which brings water to that city from Loch Katrine; that of Manchester, which taps Thirlmere; that of Liverpool, with Lake Vyrnwy in North Wales as its source, and the Fron Aqueduct, Radnorshire, which carries water from the Elan Valley to Birmingham.

Arabesque, the term applied to the elaborate decoration based on flowing lines used in Moorish art.

Arabian Nights, a collection of fascinating tales of the Orient, of mixed Indian, Persian, Arabic, and Egyptian origination, and first made known in Europe by Antoine Galland, a French Oriental scholar whose original translation was called *The Thousand and One Nights*.

Arabic Numerals. The modern system of numbering 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, in which the digits depend on their position for their value, is called the Arabic numerical notation. The method is, in fact, of Indian origin. By the 9th cent. Hindu science was available in Arabic, and the Persian mathematician Al-Kwarizimi (*c.* 830) in his *Arithmetic* used the so-called "Arabic" system of numbering. Gradually the method spread to Europe, taking the place of the Roman system which was useless for calculation. The West is indebted to the Arabs for the zero symbol, the lack of which had been a serious drawback to Greek mathematics. It made the invention of decimal fractions possible.

Aragonite, the unstable form of calcium carbonate found as a mineral in some young deposits. It crystallises in the orthorhombic system but tends to revert to calcite (*q.v.*).

Aramaic Languages, the Semitic dialects current in Mesopotamia and the regions extending southwest from the Euphrates to Palestine from about the 12th cent. B.C. until after the rise of Islam, when Aramaic was superseded by Arabic. Both Aramaic and Greek were spoken in Palestine during the time of Christ.

Archaeopteryx, a fossil bird providing a connecting link between reptiles and birds. It had feathers, jaws with teeth, no bill, reptilian bones and skull, a long tail, and it probably used its fore-limbs for gliding flight. The first specimen, found in 1861, in the Solenhofen limestone of Bavaria, is in London's Natural History Museum.

Archbishop, the chief of the bishops of an ecclesiastical province in the Greek, Roman, and Anglican churches. In the Church of England there are two archbishops, the Archbishop of Canterbury, called the Primate of *all* England, and the Archbishop of York, styled the Primate of England.

Archimedes' Principle. When a body is weighed in air and then in any fluid, the apparent loss in weight is equal to the weight of fluid displaced. This scientific fact was noted by the Syracusan philosopher Archimedes (287–212 B.C.) and is frequently used as a basis for density measurements.

Architecture, the art and science of building. The provision of shelter for mankind by the orderly arrangement of materials in a manner which expresses man's attitude to living. The forms which buildings take are the outcome of the function for which they are to be used, of the architect's aesthetic sensibility and of the structural method adopted. Until the last hundred years structural methods were limited to timber frames, and columns, lintels, load-bearing walls, arches, vaults, and domes in brick or stone. From these few basic elements have evolved the great variety of historic styles of building to be found throughout the world. To give but one example, the Greeks created those systems of decorated columns and beams, known as the Orders, which were adapted by the Romans, revived decoratively rather than structurally during the Renaissance and are still used in debased form on the more presumptuous type

of modern building. In recent years, however, architecture has taken on a new meaning. Once confined to the rich, in the form of Church, State, or Commerce, it is now, with the coming of democracy, recognised as an essential social service for all. This, and the development of new structural techniques and materials (steel, aluminium, sheet glass, reinforced concrete, plastics, and plywoods, to name a few), have made the interest in historic styles, the mainstay of the older architect, of secondary importance. Modern architecture is the creation of buildings with the highest possible standards of functional performance in terms of efficient planning and structure, good artificial and natural lighting, adequate heating or cooling, and proper acoustic conditions consistent with the price the client can afford to pay. At the same time the architect's task is to design a structure and the spaces the structure delimits, internally and externally, which are esthetically stimulating and satisfying, and well related to the land and buildings around.

Arctic Exploration. Modern exploration of the Arctic begins in the 16th cent., when men sought to reach the East Indies by sailing through the Arctic to the Pacific Ocean. The North-east Passage, via the shores of northern Asia, was the first attempted. In 1553 and 1554 the English navigators Sir Richard Chancellor and Stephen Burrough sailed into the White Sea, but were prevented by storms and ice from advancing farther eastwards. The project was later revived by the Dutch; Barendts in 1594 discovered Spitsbergen, but also failed to get beyond Novaya Zemlya. It was not, in fact, until 1879 that the Swede, A. E. Nordenskiöld, in the *Vega*, succeeded in reaching the Pacific. The attempts to find a North-west Passage were more numerous and determined. In 1585 John Davis penetrated Davis Strait and coasted along Baffin Island. Hopes ran high when Henry Hudson discovered Hudson Bay in 1610, but a practicable passage continued to elude explorers. The problem was to find a navigable route through the maze of channels in the short summer season, and to avoid being frozen in with supplies exhausted. After the Napoleonic Wars the Admiralty sent out many naval expeditions which culminated in Sir John Franklin's expedition with the *Erebus* and *Terror* in 1845. The ships were beset by ice in Victoria Channel and, after Franklin's death, were abandoned by their crews, who perished from scurvy and starvation on their march southwards. To ascertain their fate, several further expeditions were despatched, and the crew of the *Investigator*, commanded by R. J. M'Clure, sailing eastwards from Bering Strait, were the first to make the Passage, though in doing so they were obliged to abandon their ship. It was thirty years before the Norwegian, Roald Amundsen, succeeded in sailing the *Gjoa* from east to west. In the meantime, the North Pole had become the goal of explorers. Nansen, in 1893, put the *Fram* into the ice-pack to drift across the Polar basin, and himself made an unsuccessful attempt on the Pole across the pack. This was eventually achieved by the American explorer Robert E. Peary, who after several expeditions in the North Greenland region, sledged to the Pole with Eskimo companions in 1909. The next phase was the employment of airships and aeroplanes in Arctic exploration. In 1926 Admiral Byrd made the first flight over the Pole, and in the same year Amundsen and Lincoln Ellsworth flew the airship *Norge* from Spitsbergen to Point Barrow, Alaska. Two years later, the *Italia*, commanded by the Italian, Nobile, was wrecked on a return flight from the Pole, and Amundsen lost his life in an attempt to rescue the survivors. With modern developments in aircraft and navigation, flights over the Polar basin are almost a routine matter, and passenger flights between Europe and America via northern Greenland are being pioneered. The first voyage under the North Pole was made in August 1958 by the American nuclear-powered submarine *Nautilus*.

Arenaceous Rocks, the rocks composed of grains of sand, chiefly sandstones; quartz is the most abundant mineral in these rocks.

Argillaceous Rocks are a sedimentary group, including the shales and clays.

Argon, chemical element, symbol A. This was the first of the inert gases (*q.v.*) to be isolated from air by Rayleigh and Ramsay in 1894. Argon is used for filling gas-filled metal filament electric lamps. In gas discharge tube it gives a blue glow.

Arithmetic, the branch of mathematics that deals with numerical calculations as in counting, measuring, weighing. The early civilisations used simple arithmetic for commercial purposes, employing symbols and later letters of the alphabet as numerals. When Hindu-Arabic numerals replaced Roman numerals in the Middle Ages it meant a great step forward and led to rapid developments—the invention of logarithms, slide-rule, calculating machines.

Ark of the Covenant was the sacred chest of the Hebrews and symbolised God's presence. It was overlaid with gold inside and outside. It accompanied the Israelites into battle and was once captured by the Philistines. Eventually it found a resting-place in Solomon's Temple.

Armada, Spanish, the naval expedition fitted out by Phillip II. of Spain in 1588 against England, commanded by the Duke of Medina Sidonia. It comprised 129 ships, was manned by 8,000 sailors and carried 19,000 soldiers and more than 2,000 cannon. Against this formidable force Elizabeth had only 80 ships, manned by 9,000 sailors, under Lord Howard of Effingham, under whom served Drake, Hawkins, and Frobisher. The British Fleet awaited the Armada off Plymouth, and at Tilbury there was a considerable defensive land force under the command of the Earl of Leicester. On July 19 the ships of the Armada were sighted off the Lizard, disposed in a crescent seven miles long from horn to horn. The excellent manoeuvring of the English, their fire-ships, and a gale from the N.W. combined so effectively to cripple the Spanish ships that the Armada was scattered in confusion, a very small remnant contriving to reach home via the North of Scotland. It was impossible to embark the army of Parma waiting in the Netherlands. Elizabeth had a medal struck bearing in Latin the inscription, "God blew, and they were scattered."

Armadillo, a genus of animals related to the sloths and anteaters, belonging to South America, and carrying a hard bony covering over the back, under which one species (*Tolypeutes*) can completely conceal itself when attacked, rolling itself up like a hedgehog.

Armageddon, according to the Revelation of St. John, the great battle in which the last conflict between good and evil is to be fought.

Armillary Sphere, an early form of astronomical apparatus with a number of circles representing equator, meridian, ecliptic, etc. Used by Hipparchus and Ptolemy and up to the time of Tycho Brahe for determining the position of the stars.

Aromatic. A term used by chemists, originally to describe compounds like benzene, having a characteristic smell. It is a term which implies a collection of chemical characteristics, the salient features being a flat ring structure and a general similarity to benzene.

Arsenic, a metalloid element, symbol As, in group V of the periodic table usually met with as a constituent of other minerals sometimes by itself. Its compounds are very poisonous. Lead arsenate is a powerful insecticide used for spraying fruit trees. The more stable allotropic form (grey) has a layer structure, and conducts electricity.

Artesian Wells take their name from Artois in France, where the first wells of this kind were constructed in 1126. They are to be found only when a water-bearing bed is sandwiched between two impervious beds. When a boring is made to the lower part of the bed, the pressure of water is sufficient to cause the water to overflow at the surface. Artesian wells were known to ancient Egypt and China, and have existed in the Sahara since the earliest times. The fountains in Trafalgar Square are fed by artesian wells sunk through the London clay into the chalk about 400 ft.

Arthur's Seat, a hill of volcanic origin, 823 ft. high,

dominating Holyrood Park, to the south-east of Edinburgh.

Articles. The *Six Articles* are those contained in an Act of Henry VIII, and were of Roman Catholic origin. The *Thirty-nine Articles* were drawn up for the English church at the Reformation. They are printed at the back of the Prayer Book. Candidates for holy orders in the Church of England are required to subscribe to them, though the form of assent has recently been modified.

Art Nouveau, a term applied to the "new art" which spread across Europe and the U.S.A. during the 1890s. It was mainly a style of architecture and interior decoration which attempted to break with the old traditions of darkness and "heaviness" by the use of the new materials of cement, steel, and glass from which it created patterns characterised by: (*a*) over-elaboration; (*b*) relatively naturalistic but tortuous representations of plants, etc.; (*c*) a ubiquity which left no surface undecorated. Typical of the extravagances of Art Nouveau are the cast-iron lilies with copper tendrils, the cupboard doors and chair-backs with heart-shaped holes, and the furniture shaped like animals, examples of which are still with us. In Britain the movement was basically a continuation of the Arts and Crafts movement of William Morris; Aubrey Beardsley represented this essentially fin-de-siècle school in his drawings.

Arts and Crafts Movement, the English revival of decorative art which began about 1875 as a revolt against the existing vulgarity of internal decoration and furnishings and the pettiness of academic art. Inspired by William Morris and Burne-Jones together with Rossetti, it was strongly influenced by the former's mediaevalism, his hatred of industrialism, and his own version of socialism which included the regeneration of man by handicrafts. His firm of Morris & Co. produced wallpapers, tapestries, furniture, stained-glass windows, carpets, and fabrics in a style totally different from that of contemporary Victorian decoration. Morris's Kelmscott Press did much to raise the standards of book design and printing. *See* **Art Nouveau.**

Arum, a genus of plants of the Araceae family, of which there is but one British species, the wake-robin or cuckoo-pint, sometimes also styled "Lords and Ladies."

Arundel Marbles, a collection of ancient Greek sculptures formed by Thomas Howard, Earl of Arundel in the 17th cent. and presented to Oxford University by his grandson, Henry Howard, who became Duke of Norfolk.

Aryans, nomadic peoples who made their way in successive waves from the Eurasian steppes to the Indus and the Nile during the first half of the 2nd millennium B.C. They crossed the Hindu Kush into N.W. India and settled in the valleys of the Indus and Ganges, where an earlier Indus civilisation had flourished, *c.* 3250–2750 B.C. Their religious ideas are reflected in the Veda (oldest Hindu scriptures, written down many centuries later in Vedic, parent language of Sanskrit). Those who made their way to Syria and Egypt founded the Hyksos empire (*c.* 1720–1550 B.C.). The Aryans introduced the horse-drawn chariot and spoke a language from which the great Indo-European family of languages is derived, with one group in India and Iran, and another in Europe. Because of the misuse of the term by the Nazis Aryan is now referred to as proto-Indo-European.

Asafoetida, an acrid, strong-smelling gum resin exuded from the stem of an umbelliferous plant, *Ferula foetida*, found in Persia and Afghanistan. Formerly used medicinally to treat hysteria; still used in cooking in India, Iran, and France.

Ascension Day, or Holy Thursday, is the 40th day after Easter.

Ascot Races are an annual fashionable function dating from 1711 and taking place on Ascot Heath, only six miles from Windsor, in June. These races have always had royal patronage. The course is nearly two miles long.

Ash, a familiar deciduous tree of the genus *Fraxinus*, of over 60 species, native to North-temperate regions. The ash held an important place in Norse mythology, as it was supposed to support the heavens with its roots in Hell. The species native to Britain, and to Europe, is *F. excelsior*, a tall tree with compound leaves greenish flowers, winged seeds, and black buds in winter. It is a valuable timber tree, tough and elastic, and largely used for wheels and handles. The rowan, or mountain ash, *Sorbus aucuparia*, with similar leaves and orange berries, belongs to a different family. *F. pendula* or weeping ash is a weeping strain which makes an ideal natural summer house.

Ashes, The, the symbol which distinguishes the winning cricket team in the Australian Test Matches. In 1882 the Australians won at the Oval by 7 runs. After the match the following epitaph appeared in the *Sporting Times*: "In affectionate remembrance of English Cricket which died at the Oval on Aug. 29, 1882, deeply lamented by a large circle of sorrowing friends and acquaintances. R.I.P. NB. The body will be cremated and the ashes taken to Australia." When the English Eleven went to Australia the same winter it was said that they had come to recover the "ashes." England won two out of three matches, and after the third match the ashes of what is now generally believed to have been a stump were presented in an urn to Ivo Bligh, later Lord Darnley. He bequeathed the urn to the M.C.C., and it now stands in the Memorial Gallery at Lord's.

Ash Wednesday, first day of Lent, the seventh Wednesday before Easter.

Assassination, treacherous murder for political ends, usually of a ruler or distinguished person. Among the most notable: Julius Caesar, 44 B.C.; Thomas Becket, 1170; David Rizzio, 1566; William the Silent, 1584; Henry IV. of France, 1610; Jean Paul Marat, 1793; Abraham Lincoln, 1865; Alexander II. of Russia, 1881; Archduke Francis Ferdinand of Austria, 1914; Dr. Dollfuss, 1934; King Alexander of Yugoslavia, 1934; Mahatma Gandhi, 1948; King Abdullah of Jordan, 1951; Liaquat Ali Khan, 1951; King Feisal of Iraq, 1958; Mr. Bandaranaike, 1959; President Kennedy, 1963; Malcolm X, 1965; Dr. Verwoerd, 1966; Dr. Martin Luther King, 1968; Senator Robert Kennedy, 1968; Mr. Tom Mboya, 1969, Dr. E. Mondlane of Moçambique, 1969, Dr. A. Cabal of Port. Guinea, 1973.

Asteroids are minor planets most of whose orbits lie between those of Mars and Jupiter; they were unknown until the discovery of Ceres by Piazzi in 1801. More than a thousand have been named and many thousands are believed to exist. After 1891 they were identified by their paths on exposed photographic plates. Most of them have a diameter of well under 50 miles. Ceres, with a diameter of *c.* 480 m., is the largest, then there are Pallas (*c.* 304 m.), Juno (120 m.), Vesta (240 m.), Astraea, Adonis, Hermes, Hidalgo, Eros, Amor, Apollo, and the Trojan group which all take their names from Homer's *Iliad*—Achilles, Patroclus, Hector, Nestor, Priam, Agamemnon, Ulysses, Aeneas, Anchises, Troilus, Ajax, and Diomede. The asteroid Icarus (diameter *c.* ¼ mile) makes the closest approach to the Sun, and was within a few miles of the Earth on June 14, 1968.

Astrolabe, a mediæval scientific instrument for taking altitudes, observing the sun by day and the stars by night, and used for telling the time and finding the latitude. Used by the ancient Greeks, later by the Arabs and Persians, and introduced into Europe by way of Spain in the 14th cent. Chaucer is said to have sent his son Lois, a ten-year-old student at Oxford, an astrolabe with a treatise on its use in 1391.

Astronomical unit, the mean distance from the centre of the earth to the centre of the sun, or half the major axis of the earth's elliptical orbit. It has been known for some 300 years that the earth–sun distance is roughly 93 million miles, but over the past 60-odd years astronomers have attempted to determine it with ever-greater accuracy, using various methods of computation. Spencer Jones (1931) deduced a value of 93,004,000 miles; the American astronomer E. K. Rabe (1950) obtained a value of 92,914,800 miles; and data from the *Pioneer V* space probe gave a value of 92,925,100 miles. There are two basic ways of determining the unit: one is based on observations of the minor planet Eros, the other is the radar method, based on the time taken for a radio signal bounced off the

planet Venus to return to earth. The earth–sun distance is a fundamental value in astronomy.

Astrology. *See* Section J.

Astronomy. The Pythagoreans believed the stars and planets moved with uniform circular velocity in crystalline spheres, centred round the earth (the "harmony of the spheres"). Hipparchus (190–120 B.C.) made the first star catalogue, discovered the precession of the equinoxes and introduced the idea of epicyclic motion. His planetary system, in the form it was presented by Ptolemy 200 years later, held until the Renaissance when Copernicus revived the heretical view first put forward by Aristarchus of Samos (310–230 B.C.) that the sun and not the earth was at the centre. Galileo, accurate observer and experimenter, went beyond Copernicus; helped by the contributions of Tycho Brahe, Giordano Bruno, Kepler and others, he was able to overthrow the Ptolemaic system of the heavenly spheres and Aristotelian philosophy, and pave the way for Newton and modern astronomy. To Galileo we owe the conception of acceleration; to Newton the theory of universal gravitation; they showed that the same laws govern both celestial and terrestrial physics. Three landmarks in more recent times were the discovery of Uranus by Herschel in 1781 which extended the solar system as then recognised; the estimation by Hubble in 1924 of the distance of Andromeda, which showed that our Galaxy was just one of many; and Einstein's theory of relativity which improved on Newton's theory of the solar system by bringing gravitation into the domain of space-time. Today radio-telescopes and space probes are advancing astronomical knowledge and making it possible to explore regions beyond the scope of optical telescopes. The following have held the position of Astronomer Royal (period of office in brackets): John Flamsteed (1675–1719), Edmund Halley (1719–42), James Bradley (1742–62), Nathaniel Bliss (1762–65), Nevil Maskelyne (1765–1811), John Pond (1811–35), Sir George Airy (1835–81), Sir William Christie (1881–1910), Sir Frank Dyson (1910–33), Sir Harold Spencer Jones (1933–55), Sir Richard Woolley (1956–72), Sir Martin Ryle (1972–). *See* **F5–7**, *also* **Radio Astronomy.**

Astrophysics, a branch of astronomy concerned with the physical nature and constitution of celestial bodies. Developments in space research technology have contributed to the great advance in this branch of science.

Athanasian Creed, one of the three ancient creeds of the Christian Church, often referred to as the *Quicunque Vult*, is a statement of the doctrine of the Trinity and the Incarnation, and though named after St. Athanasius, the view is now widely held that it is the work of St. Ambrose (339–97).

Athodyd, also called "Ramjet" or "Propulsive Duct." This can be considered as an extremely simple gas-turbine engine, without any rotating parts. A power plant with great possibilities for high-speed aerial flight, it consists of a diffuser, combustion chamber, and exhaust chamber; its thrust results from the fact that the gases leaving the athodyd have a higher velocity than the gases entering it.

Atmosphere is the gaseous envelope of the earth, and consists of a mixture of gases (*see* **Air**) and water vapour, the variability of the latter being of great importance meteorologically. The ozone layer, which absorbs ultra-violet radiation which would be lethal to plant life if it reached the ground, is concentrated at about 20 miles above the earth but extends to about twice that height. The lower level of the atmosphere up to a height of about 7 miles (6 miles at the Poles and 10 miles at the Equator) is known as the *troposphere*, and it is in this region that nearly all weather phenomena occur. This is the region of most interest to the forecaster studying temperature, humidity, wind-speeds, and the movement of air masses. Temperature falls with height by about 1° C. per 500 ft. in this layer. The *tropopause* is the boundary between the troposphere and the *stratosphere*. Temperature varies little in the lower levels of this region; it is mainly cloudless, and has no vertical currents. Strangely enough, the lowest temperatures of the atmosphere are to be found not at the Poles, but at about 11 miles above the Equator, where a temperature as low as −80 °C. has been recorded! Temperatures begin to rise about 20 miles from the earth's surface at about the same rate as they fall in the troposphere, owing to the absorption of solar radiation by the concentration of ozone. The stratospheric air is extremely dry. Near the 60-mile level a number of important atmospheric phenomena occur. Above this level the oxygen becomes predominantly monatomic in contrast to the normal diatomic form at lower altitudes. This is the *ionosphere* (*q.v.*). This layer acts as an electrical radio mirror which makes long-distance radio transmission possible. The region of the Van Allen belts (*q.v.*) c. 400 miles to c. 40,000 miles above the earth is called the magnetosphere. The auroras are most frequently observed at altitudes between about 60 and 200 miles but do extend at times far higher. *See also* **Ionosphere.**

Atmospherics are electrical impulses which are believed to originate in atmospheric electrical discharges such as lightning. They give rise to crashing background noises in the loudspeakers of radio sets, interfering with reception at distances of up to 4,000 miles from the centre of the disturbance. The location of atmospherics with the aid of radio direction-finding methods gives warning of the approach of thunder storms.

Atom. *See* **F9–14, F20.**

Atomic Pile, an apparatus containing a fissionable element and a moderator, such as heavy water or graphite, in which a self-sustaining fission process proceeds at a controllable rate. The first atomic pile, constructed on a squash court at Chicago, was operated for the first time on December 2, 1942, under the direction of Dr. Enrico Fermi. The pile contained 12,400 lb. of uranium. *See* **Nuclear Reactors.**

Augsburg Confession, name given to the doctrine of faith of the Lutheran churches, drawn up by Melanchthon and endorsed by Luther for the Diet of Augsburg (1530).

August, named after the Emperor Augustus, because it was his "lucky" month.

Auks, duck-like sea-birds, black and white, with short, narrow wings, compact bodies, and legs set well back. Breed in colonies on rocky coasts of N. Europe (incl. British Isles) and spend most time in coastal waters. Migrate south in winter. The Auk family includes the Razorbill, Little Auk, Guillemot, and Puffin. The Great Auk became extinct in the 19th cent. after ruthless hunting for the sake of its feathers.

Aurora polaris. This wonderful phenomenon of the night sky is a common sight in some high latitudes, north and south. It is visible less often in temperate latitudes, and only very seldom in the tropics. As seen in the northern hemisphere it is called the aurora borealis or northern lights, and in the south, the aurora australis or southern lights. The zone of maximum frequency surrounds the north magnetic pole and includes Greenland, northern Canada, and the north coast of Alaska. Auroral displays may take several forms, *e.g.*, a faint glow, a diffuse ribbon of light crossing the heavens, great folded waving curtains like draperies; the whole sky may be a grand panoply of light. Both the aurora and the magnetic storm associated with it are ascribed to the envelopment of the earth in a great cloud or stream of solar gas shot out from stormy areas on the sun (sunspots) that has travelled to the earth at a speed of over a thousand miles a second. The gas is mainly atomic hydrogen, but the atoms are broken up into their two parts, protons and electrons. These are both electrically charged. This renders them subject to the influence of the earth's magnetic field, which deflects many of them to the high latitudes where the aurora is most commonly seen. The aurora is a kind of light essentially different from that of the rainbow which is a partly subjective phenomenon. Each beholder sees his own rainbow, whose light is sunlight refracted and reflected by many raindrops. The raindrops that produce his rainbow depend on his position as well as on the direction of the sun. The aurora, on the contrary, is a

light as objective as that of a candle, though produced differently. It is a self-luminescence of the air in particular regions of the atmosphere that lie far above the clouds. By simultaneous observation from stations twenty or more miles apart it is possible to locate the position of the luminous air, *i.e.*, to determine the height of the aurora, its location in plan, and its form and volume.

Austerlitz, Battle of, was fought near Brünn, in Moravia, on December 2, 1805, when Napoleon defeated the Russians and Austrians under Kutuzon.

Auto-da-Fé, or Act of Faith, was the ceremony connected with the sentencing of heretics under the Inquisition of Spain and Portugal, the persons found guilty being imprisoned or burned alive. The ceremony took place in some public square, sometimes in the presence of the king and court.

Automation is a recently coined word, used to designate the adoption of methods of automatic control either of manufacturing processes or of any business process involving a large mass of routine work. The word is used in broader and narrower senses. In its broadest sense it covers any form of mechanisation which largely replaces human labour by the work of automatic or semi-automatic machines, such as has been in progress continuously since the Industrial Revolution; but it is better kept to a narrower meaning, in which it is confined to the recent development of electronic or similar devices, involving feedback (automatic detection and correction of malfunction). Human labour is eliminated save for that needed for watching and maintaining the elaborate machines used. In this sense, automation has been spreading rapidly in advanced countries. *See* G13(2).

Autumn, the third season of the year, begins with the autumnal equinox, and ends with the winter solstice, but the term is generally understood as covering the period from mid-August to mid-November.

Auxins, "plant hormones," organic substances produced by plants to regulate growth. Synthetic auxins are now widely used, *e.g.*, for promotion of root formation in cuttings, differential weed control, prevention of premature dropping of fruit, in storage of potatoes and hard fruit, and to overcome frost damage to fruit buds.

Average is a single number designed to give a typical example of a set of numbers, *e.g.*, a cricketer's batting average for a season gives an idea of his typical score. There are several kinds of average and their uses are studied in the science of statistics (*q.v.*). A statement that "so and so is the average value" can be misleading if one does not know which average is meant. Three common averages are: the arithmetic average (or mean), the mode, and the median. The arithmetic average of n numbers is found by adding them together and dividing by n; this is a very common method of averaging. The mode of n numbers is the most frequently occurring number. The median is the middle number, *i.e.*, the number which is smaller than just as many of the other numbers as it exceeds. Of the numbers 1, 2, 2, 2, 2, 3, 4, 5, 6, 8, 9, the arithmetic mean is 4, the mode is 2, the median is 3.

Avocet, a graceful wading bird related to the stilts, of black-and-white plumage, bluish legs, and slender upturned bill. There are four species. Avocets nest in colonies and there is one in the sanctuary on Havergate Island, Suffolk.

Avogadro's Hypothesis. This is a fundamental concept of chemistry. Equal volumes of all gases under the same conditions of temperature and pressure contain the same number of molecules. This law was instrumental in assigning the formulæ of molecules. The hypothesis was put forward in 1811, but was not generally accepted until 1860. *See* F21(2).

Aztecs, the name of a native and powerful race found in Mexico when the Spaniards first discovered that country, and with difficulty subdued.

B

Babiroussa, a ferocious, long-legged wild pig, native of Sulawesi, sometimes called the horned-hog, because of the long upper tusks in the male, which are developments of the canine teeth which grow upwards, piercing the upper lip, and curving backwards, often broken in fighting.

Baboon, monkeys belonging to the African genus *Papio*. They are considered the lowest of the Old World (Catarrhine) monkeys, and walk on all fours. In the main terrestrial, but take to trees after food. The mandrill is closely related.

Babylonian Captivity, the period spent by the Jews in Babylon after Jerusalem was captured by Nebuchadnezzar, the Babylonian emperor, in 586 B.C. Traditionally the captivity lasted 70 years, but when Babylon was in turn taken by Cyrus in 538 B.C., the exiles were permitted to return to Jerusalem. The term is also applied in church history to the period 1309–78 when the papacy moved to Avignon, into the control of the French monarchy.

Badger, a carnivorous mammal related to the weasel, of nocturnal and burrowing habits, inoffensive, subsisting chiefly on roots and insects, though sometimes mice, young rabbits, and eggs form part of its diet. Badger-baiting was a favourite sport in Britain until it was prohibited in the middle of 19th cent. The badger does little harm and quite a lot of good; badger digging is to be condemned as a cruel sport. In Britain the badger is protected by an Act of Parliament passed in 1973, and the new Nature Conservancy Council may declare an area to be one of special protection for the species.

Bagpipe. Once popular all over Europe, this instrument is still played in Scotland, Ireland, Brittany, and elsewhere. The bag acts as a reservoir of air and, when squeezed by the player's arm, forces air through the pipes. One of these, the Chanter pipe, provides the tune and is played by the fingers as in a flageolet. The remainder, the Drone pipes, give a continuous, unvarying note.

Bailey Bridge, invented by Sir Donald Bailey and first used in N. African campaign 1942–3. Built up of pre-fabricated girders, it can be easily transported and erected.

Bailiwick, a feudal term denoting the limits of a bailiff's jurisdiction. The term has survived in the Channel Islands, where Jersey and Guernsey are Bailiwicks.

Balance of Power was the doctrine in British policy whereby European groups should be so balanced as to prevent the emergence of a dominating Power. Thus the balance was maintained between the Triple Alliance (Germany, Austria and Italy) and the Triple Entente (Great Britain, France and Russia) and preserved peace from 1871 to 1914. After the first world war there was tentative support of Germany's recovery to counterweight a possible French hegemony; but when Germany's power grew under Hitler culminating in the second world war, Britain, France and Russia again became allies. By the end of the war the old system of a balance of power centred upon Europe collapsed to give way to a thermonuclear balance of power between the super-Powers, the Soviet Union (Warsaw Pact) and the United States (Nato alliance). In the future there may be a world of five great powers—United States, Soviet Union, China, Western Europe, Japan.

Baldachin (It. *Baldachino*), a canopy usually supported by four pillars over throne, altar, or other sacred object. The name is also applied to the silken canopy used in processions and borne by the priest who carries the Host.

Balearic Crane, the crowned crane of the Balearic Islands and the North African mainland, distinguished by its yellowish, black-tipped occipital tuft and by its trumpet note.

Baleen *or* "whalebone" the name given to a series of horny plates growing from the roof of the mouth in those whales classified as Whalebone or Baleen Whales (Mystacoceti) There are 300–400 or so plates on each side, and their inner edges are frayed, the whole system constituting a filter for collecting minute organisms used for food. The Baleen Whales include the Right-Whales, the Pacific Grey-Whale, and the Rorquals. *See* Whales.

Ballet is a combination of four arts; dancing, music, painting, and drama, each of which is ideally of equal importance. The movement of

the individual dancers and the "orchestration" of the whole group is in the hands of the choreographer. The dancer's training follows certain basic rules but save in classical ballet there is considerable freedom of movement. Ballet as we know it today developed professionally at the Court of King Louis XIV. of France, though it owes its origins to Italy and in the earliest times to Greece and Rome. Its movements were made up from the dances of courtiers, country folk and tumblers. Technique grew more complex as costume became modified, the body gaining complete freedom with the invention of tights. A succession of great dancers—French, Italian and latterly Russian left their imprint on the art. Contemporary ballet reflects the aesthetic of the Russian, Sergei Diaghilev. In England Dame Ninette de Valois has laid the foundation of a national ballet, at Sadler's Wells and Covent Garden, with a personality that reflects the national character. A Royal Charter was granted in 1957 setting up the Royal Ballet to co-ordinate the activities of the Sadler's Wells group.

Ballistics, the science dealing with the motion of projectiles, especially shells, bombs, and rockets. Great advances have been made in this science in recent years.

Balloon, the modern balloon consists of a bag of plastic material inflated with a gas lighter than air. The first ascent by man in a hot-air balloon was made on Nov. 21, 1783, and in a hydrogen balloon on Dec. 1, 1783. The most famous of the early scientific flights by manned balloons were those of the Englishmen Coxwell and Glaisher, in 1862, when a height of 7 miles was reached. The first aerial crossing of the English Channel by Blanchard and Jeffries was made on 7 Jan. 1785. Piccard's ascent to 10 miles, in 1931, marked the conquest of the stratosphere. Four years later the huge American balloon Explorer II, inflated with nearly 4 million cubic feet of helium, carried a team of scientists with their floating laboratory to an altitude of 14 miles. In 1957 a pressurised balloon carrying an American doctor rose 19 miles above the Earth. Captive kite-balloons were widely used in the war as defensive measures against air attack. Meteorologists send their instruments up in balloons to collect data about the upper atmosphere, and of recent years physicists have learned much about cosmic radiation from the study of photographic plates sent to the upper regions in balloons. The American balloon satellites *Echo I* and *II* move round the Earth in orbits several hundred miles high, and, as the brightest of the earth satellites, can be seen with the naked eye as brilliant points moving across the sky. Ballooning as a hobby is carried on by a number of enthusiasts.

Balsam, a big genus (140 species) of flowering plants. Many species are cultivated for their showy flowers, *e.g. Impatiens noli-me-tangere*, the yellow balsam or "touch-me-not," so called because the fruit explodes when touched, slinging out the seeds. Balsam fir is a conifer (*Abies balsamea*) from which Canada balsam gum is obtained.

Baltimore Bird, a lively black-and-orange bird of the oriole sub-family extending from Brazil to Canada; builds a well-constructed hanging nest, and has a fine voice.

Bamboo, a genus of strong grasses, some species growing to over 120 ft. in height; much used by oriental peoples for all kinds of purposes. The young shoots of some species are tender and esculent. *See* T5 (2).

Banana (family *Musaceae*), a large herbaceous plant cultivated in moist regions of the tropics, and one of the most productive plants known. The main areas of commercial cultivation are in tropical America, the Canary Islands, and West Africa. World production is estimated at 20 million tons, of which only 3 million are for trade.

Bandicoots, Australasian marsupial mammals, of the size of a large rat or rabbit. They are burrowing animals living largely on insects. The rabbit-eared bandicoot, restricted to Australia, has shrew-like snout, long ears like a rabbit, long crested tail, and a silky coat. The long-nosed bandicoot has a spiny coat and comes from E. Australia. The pig-footed bandicoot has two functional toes on the foot, like a pig.

Bantu (native word = people), term loosely used for large family of Negro races of Southern Africa.

Baobab, a tropical African tree. The species *Adansonia digitata* is one of the largest trees known, though not the tallest; the trunk can reach 30 ft. in thickness. The fruit is woody, but its juice provides a cooling beverage. The bark yields a fibre used for making rope and cloth.

Barbary Ape, a large monkey belonging to the genus *Macaca*. It is the only monkey living in relative freedom in Europe, a small colony being found on the Rock of Gibraltar. It has no tail.

Barberry, a genus of berry-producing shrubs containing a hundred species. Several species are cultivated for their flowers and bright berries. Has an interesting pollination mechanism; the base of each stamen is sensitive to touch, and insects probing for nectar cause top of stamen to spring inwards, so dusting visitor's head with pollen which can then be carried to the next flower visited. The common barberry (*Berberis communis*) harbours one stage of the fungus that causes rust of wheat.

Barbican, a fortified entrance to a castle or city, with projecting towers. In the London street called Barbican there was formerly a barbican in front of the city gates.

Barbiturates. A group of drugs derived from a parent compound called barbituric acid; phenobarbitone is the best-known example. They induce sleep and are used in the manufacture of sleeping pills and sometimes as anaesthetics, but they have the disadvantage of being habit forming. *See also* P23 (2).

Barbizon School, a school of mid-19th-cent. landscape painters whose main tenet was a return to nature with an exact rendering of peasant life and country scenery painted on the spot. It was named after the village of that name in the Forest of Fontainebleau, where its chief members—Millet, Theodore Rousseau, Daubigny, and Diaz—made their home. Their practice of painting direct from nature, which was far from universal at that time, made them the precursors of Impressionism (*q.v.*).

Barcarolle, a Venetian gondolier's song applied to instrumental as well as vocal compositions.

Bard, among the ancient Celts a poet or minstrel whose mission was to sing of heroic deeds. He was supposed to have the gift of prophecy, and was exempt from taxes and military service.

Barilla, soda carbonate or soda ash obtained by burning certain salt-marsh plants (*e.g.* the saltwort, *Salsola kali*). It used to be in great demand, until the product of the Leblanc and then the Solvay ammonia-soda process was made available by the chemical industry.

Barium, metal element, symbol Ba. In group II of the periodic table. The metal is soft and easily cut. It occurs as the sulphate and carbonate in nature. It was first prepared by Sir Humphry Davy in 1808, as an amalgam, by electrolysis of barium chloride. The pure metal was not isolated until 1901.

Barium meal. Barium sulphate is opaque to X-rays and before taking X-ray pictures of the alimentary canal radiologists give a "barium meal" to the patients so that the alimentary canal shows up more clearly.

Barnacles constitute a sub-class (*Cirripedia*) of the Crustacea. The barnacle fouling the bottom of ships is the Goose Barnacle, which has a long muscular stalk and a shell composed of five plates. The Acorn Barnacles, which cover rocks, breakwaters, etc., just below high-water mark are similarly constructed, but have no stalk. The manner of feeding of barnacles was vividly described by T. H. Huxley, who said the barnacle is "a crustacean fixed by its head kicking the food into its mouth with its legs." It was a naval surgeon, J. Vaughan Thompson, who discovered in 1830 that barnacles have a free-swimming larva (or nauplius). In the Middle Ages a curious myth grew up to the effect that the Barnacle changed into a sea-bird called, for that reason, the Barnacle Goose.

Barometer is an instrument for measuring atmospheric pressure, invented at Florence by Torricelli, pupil of Galileo, in 1644. The standard method consists of balancing the air column against a column of mercury, used on account of its high density. The mercury is

contained in a long glass tube, closed at one end, and inverted in a cistern also containing mercury. The height of the mercury column, supporting the air column, is taken as the pressure at the time, and can be read off very accurately by means of a vernier scale. Present-day tendency is to express the readings in units of pressure instead of length, the millibar being adopted (1 mb = 1000 dynes per sq. cm.; 1000 mb ≡ 29·53 inches of mercury approx.). The standard instrument is correct for pressures at 0°C in Lat. 45°, so that corrections have to be applied for temperatures and latitudes other than these. Also a correction has to be made for reducing the pressure to mean sea level. *See* Aneroid.

Baron, title given in feudal England to a man who held his land directly from the king by military or other honourable service. The first baron created by letters patent was John Beauchamp de Holt, Baron of Kidderminster, in 1387. A baron is a member of the fifth and last grade of the peerage of the United Kingdom and is addressed as "Lord." Life peers and life peeresses rank with hereditary barons and baronesses according to the date of their creation. In Scotland the term baron is used of the possessor of a fuedal fief, or the representative by descent of such a fief. The equivalent of the English baron, as a rank of the Scottish peerage, is Lord of Parliament.

Baronet, the lowest hereditary title, instituted by James I. to provide funds for the colonisation of Ulster. The first baronet was Sir Nicholas Bacon. Since 1964 no recommendations for hereditary honours have been made.

Baroque, a term used for the art style of the period *c.* 1600–1720 which was the artistic accompaniment of the Jesuit counter-Reformation. Its most obvious characteristics are: (*a*) its emotional appeal and dramatic intensity both related to its deliberate intention as propaganda ("a good picture makes better religious propaganda than a sermon" said one of its exponents); (*b*) in architecture, a style which is heavily and sometimes almost grotesquely ornate, plentifully covered with voluptuous sculpture on which draperies float rather than hang, with twisted and spiral instead of plain or fluted columns, and unnecessary windows or recesses added for ornament rather than use; (*c*) its emphasis on the whole at the expense of the parts such that a building's sculpture merges into its architecture and both into its painting (Baroque paintings are as closely knit as a jig-saw puzzle so that one cannot isolate individual figures as would be possible in a Renaissance one). Baroque architecture owing to its origin is found mainly in the Catholic countries: Italy, France, Austria, Bavaria, *e.g.*, the Barberini Palace, Rome, designed by its greatest exponent Bernini and others; the Church of the Invalides, Paris. Baroque artists include Caravaggio, Guido Reni, Murillo and Rubens, the greatest Northern Baroque painter. The Baroque style merges gradually into Rococo (*q.v.*).

Barque, a small sailing vessel with three or four masts. A three-masted barque has fore- and mainmasts square-rigged, the mizzenmast fore- and aft-rigged.

Barrow is an ancient artificial mound of earth or stone raised over the site of a burial. In Britain barrows were built from 2500 B.C. until the late Saxon period, but the Egyptian are the earliest barrows known, the great pyramids being a spectacular development of the custom of ceremonial burial. Silbury Hill, south of Avebury, is the biggest artificial mound in Europe, 1680 ft. in circuit at the base, 315 ft. at top, and 135 ft. high.

Bartholomew, Massacre of St., occurred in Paris on the night of Aug. 24, 1572, when over two thousand Huguenots were massacred by order of the Catholic French Court.

Basalt Rocks are fine-grained, dark coloured, of igneous origin and occur either as lava flows as in Mull and Staffa, or as intrusive sheets, like the Edinburgh Castle Rock and Salisbury Craig. One of the most noted examples of columnar basalt is that of the Giant's Causeway in Ireland.

Basanite, A smooth black siliceous mineral, or flinty jasper; a crypto-crystalline quartz used as a touchstone for testing the purity of gold, etc., by means of the mark left after rubbing the metal with it. Sometimes styled the Lydian stone.

Base, a substance having a tendency to accept a proton (H^+). This is a wide definition and covers unconventional types of compounds. In aqueous solution bases dissolve with formation of hydroxyl ions, and will neutralise an acid to form a salt. In non-aqueous solvents, like liquid ammonia or hydrogen fluoride, compounds classically regarded as salts can be bases. *e.g.*, sodium fluoride is a base in hydrogen fluoride solution. *See* F22.

Basilisk, is a lizard of aquatic habits, with an elevated crest (which it can erect or depress at will) down the centre of its back.

Basques, people of N. Spain and S.W. France, oldest surviving racial group in Europe, who have preserved their ancient language which is unrelated to any other tongue.

Bas-Relief ("low relief") a term used in sculpture to denote a class of sculptures the figures of which are only slightly raised from the surface of the stone or clay upon which the design is wrought.

Bastille, a castle or fortress in Paris, built in the 14th cent., and used as a state prison, especially for political offenders. Its bad repute as an instrument of despotism excited the hatred of the populace, who stormed and demolished it on July 14, 1789, at the beginning of the Revolution.

Bastinado, an oriental punishment, by beating with a pliable cane on the soles of the feet.

Bats. These mammals fly by means of a membrane stretched between each of the long fingers of the hand and between the fifth finger and the body. Another membrane stretches between the legs and the tail. Most British bats, including the pipistrelle, long-eared bats, noctules, belong to the family Vespertilionidae (with the exception of the horseshoe bats which belong to the family Rhinolophidae). These all feed on insects which they catch on the wing. The problem of how bats can detect their insect prey and avoid obstacles when flying in total darkness has interested zoologists for a very long time. The problem was solved with the advent of sensitive ultrasonic recording devices. Blindness does not affect this ability but deafness leaves bats comparatively helpless. One of the most interesting types of bat is the fishing bat (*Noctilio*) found in central America, which can detect fish by means of the ripples they make on the water surface, receiving echoes from such ripples. *See also* Ultrasonics.

Bath, Order of the, Britain's second oldest order of knighthood. Exclusive to men since its institution by Henry IV in 1399, women became eligible for admission to the order in 1971. The order has three grades: Knight Grand Cross (G.C.B.), Knight Commander (K.C.B.), and Companion (C.B.). Women members of the order are known as Dame Grand Cross, Dame Commander, and Companion.

Battery, Electric, the common term for an electric cell but really meaning a combination of two or more cells. A cell is a device for converting stored chemical energy into electricity which can then be used for heat, light, traction, or any desired purpose. A *primary* cell will do this until the chemical action is completed and the cell is then useless. In a *secondary* cell, the chemical actions are reversible and the cell can be returned to its initial condition and used again. This is done by passing an electric current through—a process called recharging. A common primary cell is the Leclanché dry cell used in torches. This works by the action of sal-ammoniac on electrodes made of zinc and carbon. About a century after it came into common use it is still the chief source of power for portable equipment in armed forces. A common secondary cell is the lead and sulphuric acid accumulator used in cars. Many other types of cell are known and some are under development because the demands of space travel, medicine, warfare, etc., call for batteries of lighter weight, greater reliability, or special properties. *See* Fuel Cell, Energy Conversion.

Bauhaus, a German institution for the training of architects, artists, and industrial designers,

founded in 1919 at Weimar by Walter Gropius, (d. 1969). It was closed by Hitler in 1933 and re-opened at Chicago. The Bauhaus doctrine held that there should be no separation between architecture and the fine and applied arts; that art, science, and technology should co-operate to create "the compositely inseparable work of art, the great building." Thus it was an organisation with a social purpose. The original institution, at the instigation of Gropius, included on its teaching staff not only architects and technicians but also such noted artists as Paul Klee and Wassily Kandinsky.

Bauxite, the chief ore of aluminium. Chemically it is aluminium oxide. Aluminium metal is made industrially by electrolysing purified bauxite dissolved in fused cryolite. Chief producing areas: Surinam, Guyana, U.S.A., France, Hungary, Indonesia, U.S.S.R., Yugoslavia, Italy.

Bayeux Tapestry, a famous tapestry representing the conquest of England by William the Conqueror. It is embroidered on a band of linen 231 ft. long and 20 in. wide in blue, green, red, and yellow, divided into 72 scenes ranging over the whole story of the conquest. The accepted view is that the tapestry was commissioned for Bayeux Cathedral, but a new interpretation is that it is an Anglo–Norman secular work of art, much influenced by the contemporary *chansons de geste* (songs of deeds), executed by English embroiderers for a Norman patron. A representation can be seen in the Victoria and Albert Museum in London.

Beagle, a small hound that tracks by scent, and formerly used for hare hunting.

Bears belong to the Ursidae family of the Carnivora. They are plantigrade mammals, walking (like man) on the soles of their feet. Found in most parts of the world except Australia. The common Brown Bear was once spread over the whole of Europe; it became extinct in England about the 11th cent.; 7–8 ft. in length, and stands 3 ft. or more at the shoulder. The Grizzly Bear of N. America is larger, and the coat is shorter and greyer. The Polar Bear is remarkable in having a white coat all the year round; it spends much time in water, and unlike the other bears it is entirely carnivorous. Bear-baiting was made illegal in England in 1835.

Beaufort Scale of wind force is used to specify numerically the strength of the wind. Since the introduction of anemometers to measure the actual velocity, equivalent values of the ranges in miles per hour at a standard height in the open have been assigned to the Beaufort numbers. *See* Section N.

Beaver, a genus of mammals of the Rodentia order, with short, scaly ears, webbed hind feet, and a long broad scaly tail. They grow up to 4 ft. long, and live in communities, constructing dams and lodges where they breed. Found in N. America, Russia, and Poland. Hunted mercilessly by trappers for its valuable pelt before protective laws were passed.

Bedford Level comprises parts of Norfolk, Suffolk, Huntingdon, Northampton, Lincoln, and Cambridge, generally called the Fens, 70 miles long and 20 to 40 miles broad. It was reclaimed and drained in the 17th cent. by the Earl of Bedford and the Dutch engineer Cornelius Vermuyden.

Bedlam (a corruption of Bethlehem) was a priory in Bishopsgate, afterwards converted into a hospital for lunatics. The asylum was transferred to St. George's Fields, Lambeth, in 1815. The term "bedlamite" came to be applied to any person behaving like a madman.

Beech, a deciduous tree belonging to the genus *Fagus* of some eight or nine species found in north temperate regions. The common beech, *F. sylvatica*, is believed to be native to Britain and is one of our finest trees, with massive trunk, long, pointed winter buds, and smooth, grey bark. There is little undergrowth under its dense shade. It is shorter lived than the oak, taking about 200 years to reach full size and then declining. The timber of beech has a variety of uses, *e.g.*, spoons, handles, tools, and chairs.

Bee-eater, name of a family of brilliantly coloured birds closely related to the rollers and kingfishers inhabiting the tropical and sub-tropical parts of Africa, Asia and Europe. The European species successfully nested in Britain for the first time in 1955 and a pair nested in Alderney in 1956. With their long curved beaks they catch insects on the wing, especially bees and butterflies, and lay their eggs in dark nest tunnels.

Beefeater. *See* Yeomen of the Guard.

Beeswax, the secretion of the bee, used for the formation of the cells or honey-comb of the hive; when melted it is what is commercially known as yellow wax, white wax being made by bleaching. Being impervious to water, it acts as a good resistant and is an article of much utility.

Beetles (Coleoptera) constitute one of the biggest orders of insects, numbering over 200,000 species. There are two pairs of wings; the hind pair are used for flight, while the front pair are hardened to form a pair of protective covers (elytra). Some beetles have lost the power of flight and then the elytra are joined together.

Bel and the Dragon is the title of certain supplementary chapters to the "Book of Daniel" of an apocryphal character. First appeared in the Septuagint, but the Jewish Church did not accept it as inspired. In 1546 the Council of Trent declared it to be canonical.

Bell, a hollow body of metal used for making sounds. Bells are usually made from bell-metal, an alloy of copper and tin. Small bells used for interior functions are often made of silver, gold, or brass. Ordinary hand-bells are of brass. From the 7th cent. large bells have been used in England in cathedrals, churches, and monasteries. The greatest bell in the world is the "King of Bells" in the Kremlin at Moscow, which weighs about 198 tons, is 20 ft. 7 in. high and 22 ft. 8 in. in diameter. It was cast in 1733, but cracked in the furnace (the broken part weighed 11 tons) and is now preserved as a national treasure. Other large bells in Russia, include the 171-ton one at Krasnogvardersk, near Leningrad, and the one of 110 tons at Moscow. The Great Bell (Great Paul) at St. Paul's, cast in 1881, weighs 16½ tons, and is the largest in the United Kingdom. Other gigantic bells are the Great Bell at Peking (53 tons); Nanking (22 tons); Cologne Cathedral (25 tons); Big Ben, Westminster (13½ tons); Great Peter, York Minster (10 tons). The Curfew bell is rung in some parts of England to this day, notably at Ripon. The number of changes that can be rung on a peal of bells is the *factorial* of the number of bells. Thus four bells allow 24 and eight bells 40,320.

Belladonna or **Deadly Nightshade** (*Atropa belladonna*) a well-known poisonous wild plant found in Southern Europe and Western Asia. The alkaloid atropine it contains is valuable in medicine, although a large dose is poisonous.

Bell, Book, and Candle. To curse by "bell, book, and candle" was a form of excommunication in the Roman Church ending with the words: "Do to the book, quench the candle, ring the bell."

Benedicite, the canticle in the Book of Common Prayer, known also as "The Song of the Three Holy Children."

Benedictines are monks and nuns of the Benedictine Order who live under the rule of St. Benedict—the monastic code whose influence on the religious and cultural life of the West has been so powerful. The rule is marked by an absence of extravagant asceticism. The greatest of the early Benedictines was Pope Gregory I (590–604) who sent St. Augustine of Canterbury to Anglo–Saxon England. Gregorian plainsong is named after him. *See also* Monasticism, Section J.

Benedictus, a canticle used in the morning service of the English Church, and deriving its name from the first word of the Latin verse, *Benedictus*, blessed.

Benzene. An aromatic hydrocarbon obtained from coal tar and some petroleum fractions. It is a volatile inflammable liquid with a characteristic smell. The molecule consists of a flat ring of six carbon atoms, each bound to one hydrogen atom. Benzene is the parent member of many aromatic organic compounds and is widely used in industry to synthesise intermediates for fibres, dyestuffs, explosives, and pharmaceutical chemicals.

Beryl, a mineral, of which the emerald is a grass-green variety. Composed of beryllium and

aluminium silicates. The pure mineral is colourless; the colour of most beryl comes from traces of impurities, notably iron and chromium. Otherwise it is yellowish, greenish-yellow, or blue, and is found in veins which traverse granite or gneiss, or embedded in granite, and sometimes in alluvial soil formed from such rocks.

Beryllium. Metallic element, symbol Be. Very similar to aluminium, it is stronger than steel and only one-quarter its weight. It is not very abundant, its main source is the mineral, beryl. Copper containing 2% beryllium is used for making springs. Because of its special properties the metal is used as a component in spacecraft, missiles and nuclear reactors. This accounts for its recent development on a technical scale. The metal powder is toxic.

Bessemer Process, for making steel depends on the forcing of atmospheric air into molten pig iron to burn out the impurities. *See* **Steel.**

Betel, the leaf of an Indian climbing plant, of pungent, narcotic properties. It is destructive to the teeth, and reddens the gums and lips.

Bhang, the Indian name for the hemp plant *Cannabis sativa*, the leaves and seed-capsules of which are chewed or smoked. The potent drug which comes from flowers of the female plant is called hashish in Arabia and marihuana in the United States and Mexico. *See* **P23(2).**

Bible (Greek *biblion* = scroll of paper; pl. *biblia* = writings) includes the Hebrew sacred Scriptures (Old Testament) and those held sacred by the Christians (New Testament). The Old Testament—the prehistoric portion—consists of 39 books, and is divided into three parts: (1) the Law, (2) the Prophets, (3) Miscellaneous Writings. The Old Testament was written in Hebrew except for parts of Ezra and Daniel, which were in Aramaic. It was not until the 9th cent. A.D. that a complete Hebrew text was made, the so-called Massoretic text. Before that the main versions were the Alexandrian Greek translation (Septuagint) made in the 2nd cent. B.C. and St. Jerome's Latin Vulgate of the 4th cent. A.D. (It was Jerome who used the Latin word "testament" (formed from *testis* = a witness)). Portions were translated into the Anglo-Saxon in the 8th cent. and the Venerable Bede put the greater part of St. John's gospel into English, but it was not until 1535 that a complete printed English version appeared—the Coverdale Translation. The Authorised Version dates from 1611 in the reign of James I., and its beautiful phraseology has given it a lasting appeal. The Revised Version dates from 1885. *The New English Bible*, with the Apocrypha, was published in 1970. It is a new translation in plain English prose of the earliest Hebrew, Aramaic, and Greek manuscripts. The finding of the Dead Sea Scrolls (since 1947) has added to our knowledge of Scripture.

Billion, in English usage, a million million, or 10^{12}; in American and French usage, a thousand million, or 10^{9}.

Bill of Rights, or Declaration of Rights, was the document setting forth the conditions upon which the British throne was offered to William and Mary in 1688. This was accepted and ultimately became an Act of Parliament.

Binary Notation, for numbers, is a way of representing numbers using only two digits, 0 and 1. Electronic digital computers handle numbers in this form and many people these days are having to learn it. Many school children find it both easy and fascinating—as did the great philosopher and mathematician Leibniz. The ordinary, or decimal numbers, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10 are written in binary notation as follows: 0, 1, 10, 11, 100, 101, 110, 111, 1000, 1001, 1010. The reader might divine the rules from this. The point is that you "carry 1," *i.e.*, move the digit 1 a place to the left, when you reach 2. In decimal notation you move 1 a place left when you reach 10. In other words, instead of columns for units, tens, hundreds, thousands, etc., the columns are for units, twos, fours, eights, etc. In binary notation: "1+ = 0 with 1 to carry." Since every digit in binary notation is either 0 or 1 it requires one bit of information to specify a binary digit. *See* **Bit.**

Biological Warfare, is the use for warlike purposes of bacteria, viruses, fungi, or other biological agents. These can be used to spread distress, incapacity, disease, or death among the enemy's people or livestock. One of the strange uses to which mankind puts its science is to make naturally infective organisms even more virulent for military use. This sort of research can be done in many countries; it is much cheaper and easier to hide than nuclear weapons development. Secret attack by biological agents is supposed to be easy and it may affect the populations without damaging buildings or bridges. In 1972 Britain, America and Russia joined in signing a Biological Warfare Convention banning germ warfare. Any nation suspecting violation may lodge a complaint with the UN Security Council.

Birch, a genus of deciduous trees including about 40 species and found only in northern regions. Birches native to Britain, and to Europe generally, are of two species—the silver birch, *Betula pendula*, with its graceful, drooping branches and triangular leaves, and the white birch, *Betula pubescens*, which has erect branches and soft oval leaves. Birch timber is an important plywood timber, the bark is used for tanning leather, and wintergreen oil comes from the bark of black birch, *Betula lenta*, a North American species. The birch is not a long-lived tree, few standing for more than a hundred years. The tallest recorded is at Woburn in Bedfordshire, 102 ft. high.

Birds, or Aves, are, next to mammals, the highest class of animal life. There are two kinds of modern birds—*Carinatae*, possessing keeled breast-bones and having power of flight; *Ratitae*, having raft-like breast-bones, and incapable of flight; and a sub-class of fossil birds, Archaeornithes, including *Archaeopteryx*. It is estimated that there are about 120 million land birds breeding in Great Britain, including 10 million each of the chaffinch and blackbird, 7 million each of the starling and robin and about 2 million sparrows.

The wheatear is usually the first of the migratory birds to return, often reaching Britain at the end of February and always before the middle of March; the sand martin is the first of the "early swallows" to return, followed by the house martin. The first cuckoo arrives about the middle of April, and the whinchat, garden warbler, and sedge warbler during the last week in April. The nightjar, spotted flycatcher, and red-backed shrike are not seen until the first week in May. The swift is among the last to return from Africa and the earliest to depart. Bird-nesting is illegal in Britain. *See also* **F33.**

Birds of Paradise, over 40 species of tropical birds inhabiting the dense forests of New Guinea and neighbouring islands. The male birds are remarkable for their brilliant plumage, long tail feathers, and ruffs on wings and neck, which are displayed to advantage during courtship. Related to the Bower Birds of Australia.

Biretta, a four-cornered head-covering worn by ecclesiastics of the Roman Church and varying in colour according to the rank of the wearer. A cardinal's biretta is red, a bishop's purple, a priest's black.

Bise, a keen dry north wind prevalent in Switzerland and South France.

Bishop is a Christian ecclesiastic, a person consecrated for the spiritual government of an area, a diocese or province, to the spiritual oversight of which he has been appointed (diocesan bishops), or to aid a bishop so appointed (suffragan bishops). In the Church of England there are forty-three diocesan bishops, all nominated by the Crown. Two, Canterbury and York, are archbishops having primacy in the respective provinces. The archbishops of Canterbury and York and the bishops of London, Durham, and Winchester and twenty-one other diocesan bishops in the order of seniority are spiritual peers, and sit in the House of Lords. The (Disestablished) Church of Ireland has two archbishops and twelve bishops; the (Disestablished) Church of Wales an archbishop and five bishops and the Episcopal Church in Scotland seven bishops. *See also* **Cardinal.**

Bismuth, metallic element, symbol Bi, in group V

of the periodic table. Like antimony, the stable form is a grey, brittle, layer structure; electrical conductor. It is readily fusible, melting at 264° C and boiling at about 1420° C. Wood's metal, an alloy with one of the lowest melting points (under 150° F, so that a spoon made of it will melt when placed in a cup of hot tea), contains four parts bismuth, two parts lead, one part tin, one part cadmium.

Bison, a genus of wild cattle, distinguished from the ox by its shorter, wider skull, beard under the chin, high forequarters, and, in winter, a great mane of woolly hair covering head and forequarters. There are two species, the European and the American bison, both now protected in game preserves.

Bit, formerly the word often referred to the metal piece in the mouth of a bridled horse, now more likely to be a technical expression in the mouth of a computer expert. A bit is a unit of information; it is the information that can be conveyed by indicating which of two possibilities obtains. Any object that can be either of two states can therefore store one bit of information. In a technical device, the two states could be the presence or the absence of a magnetic field, or of an electric voltage. Since all numbers can be represented in the binary system (*see* Binary Notation) by a row of digits which are *either* 0 *or* 1, it takes one bit of information to specify a binary digit. Bit is short for binary digit.

Bittern, a bird of the heron genus, with long, loose plumage on the front and sides of the neck. It is a solitary bird inhabiting marshes, but rare in Britain.

Bivalves, shell-fish whose shell consists of two hinged valves, lying one on each side of the body, such as mussels, oysters, and cockles.

Blackbird, or Merle, a member of the Thrush family, a familiar song bird in Britain. Male is all-black with orange bill; female is mottled brown with brown bill; the young are spotted brown.

Blackcock and Greyhen (as the female is called) are closely related to the Capercaillies but smaller. They nest on the ground and prefer wooded country to open moors. Found in northern half of northern hemisphere. Polygamous, they perform excited courtship dances; the male is a handsome blue-black bird with white undertail, the female dark brown mottled.

Black Death, the plague which swept across Europe in the years 1348–50, beginning in the ports of Italy, brought in by merchant ships from Black Sea ports. It was the worst scourge man has ever known; at least a quarter of the European population was wiped out in the first epidemic of 1348. It reached England in the winter of that year. The disease was transmitted to man by fleas from black rats, though this was not known at the time, the specific organism being *Bacillus pestis*. The disease continued to ravage Europe in recurrent outbreaks up to the late 17th cent. The epidemic which raged in England in 1665 wiped out whole villages and one-tenth of London's population of 460,000. Samuel Pepys wrote a grim account of it in his *Diary*. *See also* Labourers, English Statute of.

Black Hole of Calcutta, the name given to the place where a captured British garrison was confined in 1756, during the struggle for India between the French and British. Into a noisome space, about 20 ft. square, 146 persons were driven and only 23 were found alive the next morning. The authenticity of the story has been called into question, but after sifting the evidence Professor H. H. Dodwell, in the *Cambridge History of the British Empire*, believes it to be substantially true.

Black Holes. *See* Astronomy, Section F, Part I.

Black-letter, the Old English or Gothic type first used in printing blocks.

Black Woodpecker (*Dryocopus martius*), a black bird about the size of a rook, with slightly crested scarlet crown, found in parts of Europe.

Blenny, a group of marine fishes with spiny rays part of the fin running along the back. Several species are found around the British coast.

Blood Groups. *See* Index to Section F, *also* Physical Anthropology, Section F, Part V.

Bloody Assizes, the assizes, conducted in 1685 by George Jeffreys, Lord Chief Justice, at which participants in the Duke of Monmouth's rebellion against King James II. were tried. They were marked by relentless cruelty.

Bluebird, a migratory bird of North America, deriving its name from its deep blue plumage. It is one of the few song birds of America, and familiar in the woods from early spring to November. In India and Malaya there is the Fairy Blue-bird; the male is black with shiny blue upper parts. Used as the symbol of happiness by Maeterlinck in his play *The Blue Bird*.

Blue Peter, a blue flag with a white square in the centre, is hoisted 24 hours before a ship leaves harbour (the letter P in the alphabet of the International Code of Signals).

Blue Ribbon, a term in general use to denote the highest honour or prize attainable in any field or competition. Thus the Derby is the blue ribbon of the turf. The expression is derived from the highest Order of Knighthood in the gift of the British Crown, the insignia of which is a garter of blue velvet.

Blue Stocking, a term used to describe a learned or literary woman, particularly if pedantic and undomesticated. It is said that the term derives from the Bas-Bleu club of Paris, which was attended by the literary savantes of the 17th cent. In England a similar literary club was formed about 1780, whose members were distinguished by their blue stockings.

"Blue" Sun, Moon, etc., a phenomenon caused by the scattering of sunlight by transparent particles suspended in the atmosphere, the effect being that blue light is transmitted and red light extinguished to direct vision. The dust from the Krakatoa eruption in 1883 and the drifting layer of smoke from the forest fires in Alberta, Canada, in September 1950 gave rise to "blue" moons and suns, phenomena sufficiently rare to be described as occurring "once in a blue moon." In the cold climatic conditions of the Pamirs and the far north, vegetation is said to look "blue" on account of the rays of high calorific value (red, yellow, green) being absorbed, while only the blue and violet are transmitted. It was Tyndall who first explained the blue colour of the sky.

Boa, a term applied to a family of snakes of large size, some attaining a length of 30 ft. They are not poisonous, but kill their prey by crushing —constriction—hence the name "boa constrictor." They occur both in the Old World and the New, but are more abundant in the latter. Most Boas retain the eggs within the body until young are fully developed, whereas the Pythons almost all lay leather-shelled eggs.

Boar, or Wild Hog, an animal largely distributed over the forest regions of Europe, Asia, Africa, and South America. It has a longer snout and shorter ears than its descendant the domestic hog, and is provided with tusks. Having to forage for itself, it is a more active and intelligent animal than the pig of the sty, and offers good sport to the hunter.

Boat, an open vessel, propelled by oars or sails, or both. The boats of a ship of war are the launch, barge, pinnace, yawl, cutters, jolly boat, and gig; of a merchant vessel, the launch, skiff, jolly boat or yawl, stern boat, quarter-boat, and captain's gig. Every ship is compelled to carry adequate, fully provisioned and equipped lifeboats.

Bode's Law, a numerical relationship formulated by Bode in 1772, which states that the relative mean distances of the planets from the sun are found by adding 4 to each of the terms 0, 3, 6, 12, 24, 48, 96. The actual mean distances (in millions of miles) are: Mercury, 36; Venus, 67·2; Earth, 92·9; Mars, 141·6; Jupiter, 483·3; Saturn, 886·0; Uranus, 1782·8. The gap between Mars and Jupiter caused Bode to predict the existence of a planet there, which was later confirmed by the discovery of Ceres and other minor planets. The law breaks down, however, for Neptune and Pluto.

Boer War, lasted from Oct. 11, 1899, when the Boers invaded Natal, to May 31, 1902, when the Treaty of Vereeniging ended hostilities. At first the operations of the British troops in Cape Colony were unsuccessful and disastrous reverses were sustained. Lord Roberts was then sent out as Commander-in-Chief, with Lord Kitchener as Chief-of-Staff, and from February, 1900, when Kimberley was relieved

and Cronje was compelled to surrender and Ladysmith and Mafeking were relieved, the struggle was practically over.

Boiling-point is the temperature at which a liquid boils. At that point the pressure of the vapour is equal to the pressure of the atmosphere. Under increased pressure the b. p. rises and under less pressure, as on the top of a mountain, it is lower. At standard atmospheric pressure (760 mm of mercury) the b.p. of water is 100°C; alcohol 78·4°C; ether 35·6°C.

Books, Sizes of. *See* Section N.

Books, Classification of. All libraries are classified to facilitate reference, but the favourite system is the Dewey Decimal System, which divides the whole field of knowledge into ten Main Classes: General Works; Philosophy; Religion; Sociology; Philology; Natural Science; Useful Arts and Applied Science; Fine Arts; Literature; History (including geography and travel and biography). Each of these Main Classes is again subdivided into ten main divisions. As an example: the main class of Sociology receives the number 300. This range 300 to 400 (the next main class) is graduated into tens, and Economics is 330. The range 330 to 340 is again graduated, and the subject of Labour and Capital is 331. This process is carried on by decimals so that 331·2 deals with Remuneration for Work, 331·22 with Wage Scales, and 331·225 with Extra Pay.

Borax (Sodium Pyroborate) is a white, soluble, crystalline salt. It is widely and diversely used, *e.g.*, as a mild antiseptic, in glazing pottery, in soldering, in the making of pyrex glass, as a cleansing agent and sometimes as a food preservative. Borax occurs naturally in the salt lakes of Tibet, where it is called tincal, in California (Borax Lake, Death Valley), and elsewhere.

Bore. In physical geography, an almost vertical wall of water which passes upstream along certain estuaries. Its formation requires special conditions of river flow, incoming high tide, and shape of river channel. It can be spectacular and dangerous on some rivers. In Britain the best known is the Severn bore which can be a few feet high and move at 10 or 12 m.p.h. In some parts of Britain the bore is called an eagre.

Boron. A metalloid element, symbol B. There are two forms, one crystalline, the other amorphous. It is not very abundant in nature but occurs in concentrated deposits. It is best known in boric acid, which is used as a mild antiseptic (called boracic acid) and borax (*q.v.*). Boron compounds are essential to some plants, *e.g.*, beans. Used in the preparation of various special-purpose alloys, such as impact resistant steel. Compounds of boron and hydrogen are used as rocket fuels.

Borstal, an institution where young offenders between 15 and 21 on conviction may be sent for detention and reform. Emphasis is placed on vocational training in skilled trades. The Children and Young Persons Act 1969 makes provision for the minimum age to be raised to 17, if and when the Home Secretary makes an order to that effect. The first was opened in 1902 at the village of Borstal, near Rochester in Kent.

Boston Tea Party, an incident which occurred on Dec. 17, 1773, on board some tea-ships in Boston Harbour. High taxation imposed by the British Parliament under George III. had caused bitter feelings, and instigated by popular meetings, a party of citizens, disguised as Indians, boarded the tea-ships and threw the tea overboard. This incident was a prelude to the American War of Independence (1775–83).

Bounds Beating, an old Anglo-Saxon custom. The parish clergyman and officials go round the parish boundaries accompanied by boys who beat the boundary stones with long sticks of willow. The ceremony takes place on the Rogation days preceding Ascension Day.

Bourgeoisie, a term used by Marxists to indicate those who do not, like the proletariat, live by the sale of their labour. They include, on the one hand, industrialists and financiers or members of the liberal professions and, on the other, small artisans and shop-keepers who, although their standard of living may not be appreciably higher (and today is often lower) than that of the proletariat, are described as the "petty bourgeoisie." According to the Marxist view of history, the bourgeoisie arose with modern industrialism after it had overthrown the old feudal aristocracy and replaced it as ruling class.

Bow, an instrument for propelling arrows, and, in the days when it was a weapon of war, was usually made of yew or ash, and was about 6 ft. long, with an arrow 3 ft. long. It was the weapon with which Crécy, Poitiers, and Agincourt were won. The cross-bow was Italian and was adopted in France, but did not become popular in Britain.

Bow Bells is the peal of the London church of St. Mary-le-Bow, Cheapside, within sound of which one must be born to be entitled to be called a "cockney." Bow Bells had not been heard since 1939, but they once again rang out over the City of London on Dec. 20, 1961.

Bowdlerize, to expurgate a book. Derived from Thomas Bowdler (1754–1825), the editor of the Family Shakespeare, in which "those words and expressions are omitted which cannot with propriety be read aloud in a family." He treated Gibbon's *History of the Decline and Fall of the Roman Empire* in the same way, omitting "all passages of an irreligious and immoral tendency." Such prudery met with ridicule and hence the words "bowdlerism," "bowdlerist," etc.

Bower Bird, native to Australia and New Guinea and related to the Bird of Paradise, though often less striking in appearance. In the mating season the male builds a "bower" of sticks and grasses for courtship displays and as a playground. The Gardener Bower Bird of Papua makes a lawn in front of his bower and adorns it with bright coloured pebbles and flowers which are replaced as they wither. The female builds her nest away from the bower.

Boycott, a term used in connection with a person that the general body of people, or a party or society, refuse to have dealings with. Originally used when Captain Boycott (1832–97) was made the victim of a conspiracy by the Irish Land League which prevented him making any purchases or holding any social intercourse in his district. He had incurred the League's hostility by a number of evictions.

Brass, an exceedingly useful alloy of copper and zinc. Much brass is about two-thirds copper, but different proportions give different properties. It is harder than copper and easily worked. Brass in the Bible (Matt. x, 9) probably refers to bronze.

Breadfruit Tree (*Artocarpus altilis*), a native of the South Sea Islands; the fruits are a brownish green, about the size of a melon, and contain a white pulpy substance which is roasted before being eaten. The tree grows 40 ft. or more. Captain Bligh's ship *Bounty* was on a voyage to Jamaica carrying a cargo of 1,000 breadfruit trees when the mutiny occurred.

Breeder Reactor, a kind of nuclear reactor (*q.v.*) which besides producing energy by the fission process also produces ("breeds") more nuclear fuel at the same time. A typical reaction is: a neutron induces fission of a U-235 nucleus which breaks up into two medium-sized nuclei and some neutrons; one of the latter then enters a U-238 nucleus turning it into U-239 which then decays radioactively *via* neptunium into plutonium which is useful fuel. There are technical problems in breeder reactors which have delayed their practical use but the "breeding" principle is so valuable that experiments have gone on for many years in, *e.g.*, Scotland and Idaho, and breeder reactors will no doubt increase in importance the more the supply of natural nuclear fuel appears to become depleted.

Breviary (Lat. *breviarium*=abridgment), the short prayer-book of the Roman Catholic Church which gives the Divine Office, *i.e.*, the canonical hours or services. The directions for Mass are in the Missal. The modern Roman breviary is a reformed version of the 11th-cent. breviary and was produced by Pope Pius V. in 1568 in response to a decree of the Council of Trent. All Roman Catholic priests are required to recite the whole of the breviary services allotted for each day *See also* Matins.

Bridges are structures for continuing a road, railway, or canal across a river, valley, ravine, or a

road or railway at a lower level. From early times bridges were made of timber, stone, or brick, and it was not until the 19th cent. that wrought- and cast-iron were used. Today the materials mostly used are steel and reinforced concrete. Among the most famous of ancient bridges is that of S. Angelo at Rome, built by Hadrian as the Pons Aelius, A.D. 134. The Rialto bridge at Venice dates from 1588. The Ponte Santa Trinita at Florence, one of the finest Renaissance bridges and deemed the most beautiful in the world, was destroyed by German mines in 1944 but has now been reconstructed just as it was before. The first stone bridge across the Thames was begun in 1176. It had 19 arches and was lined with houses and stood until 1831 when it was replaced by the granite bridge designed by Sir John Rennie which stood until 1972. This has been replaced by a three-span concrete bridge with a six-lane carriageway and two footways. The first cast-iron bridge (recently repaired) was built by Abraham Darby at Coalbrookdale, Salop, in 1779. Telford's Menai suspension bridge (1825) has since been enlarged but the original design has been maintained. Another example of Britain's supremacy in constructional iron-work was Robert Stephenson's tubular bridge across the Menai Straits (1850), the prototype of all modern plate girder railway bridges. Other famous bridges are the Niagara (suspension), Forth railway bridge (cantilever), London Tower bridge (suspension), Tay railway bridge, Victoria Jubilee bridge across the St. Lawrence at Montreal (an open steel structure), Sydney Harbour bridge, Lower Zambesi bridge, Storstrom bridge in Denmark, Howrah bridge at Calcutta, with the third largest cantilever span in the world, the Volta bridge of Ghana and the Auckland Harbour bridge, both built in recent years, the Verrazano-Narrows bridge spanning New York's harbour from Brooklyn to Staten I., exceeding by 60 ft. the centre span of San Francisco's Golden Gate bridge. Britain is engaged in the largest bridge building programme for over a century. The road suspension bridge across the Firth of Forth, completed in 1964, has the largest single span in Europe (3,300 ft.). The Severn suspension bridge (from which the design principles for the new bridge across the Bosphorus were taken) and the Tay road bridge were completed in 1966, the Tinsley viaduct, near Sheffield, was opened in 1968. When the new Humber suspension bridge is completed in 1976 it will be the world's longest single-span bridge (1·5 miles with a main span of nearly a mile).

Britannia Metal, an alloy of tin, antimony, and copper, harder than pure tin, corrosion-resistant, used for teapots, and jugs (often electroplated).

British Association for the Advancement of Science, The, was founded in 1831 by a group of British scientists under the leadership of Charles Babbage (1792–1871) to stimulate scientific inquiry and promote research in the interest of the nation. Its meetings are held annually in different cities of the United Kingdom. It is divided into sections which include the chief physical and biological sciences, economics, anthropology and archaeology, psychology and education, engineering, forestry, agriculture, and there is also a division for studying the social and international relations of science. The 1974 meeting will be held in Stirling under the presidency of Dr. J. C. Kendrew.

British Museum, was created by an Act of Parliament in 1753, when the Sir Hans Sloane collection, which the British Government had acquired for £20,000, was added to the Cottonian Library and the Harleian Manuscripts. It was opened to the public in 1759 at Montagu House, Bloomsbury. The acquisition of the library of George III (known as the King's Library) in 1823 led to the construction of the present building with the new wing (1829), quadrangle (1852), domed reading room (1857), and later additions. The books and the reading room are now part of the British Library (*see* Libraries). The Natural History Department was transferred to South Kensington in the eighties. As a museum it is perhaps the most famous in the world, since it has many priceless collections of sculptures, antiquities, prints and drawings coins and medals. Its treasures include the Elgin Marbles (L36), the Rosetta Stone (L101), the Portland Vase (L94). *See also* Libraries.

British Railways. The name under which the railways of Britain were unified on January 1, 1948. Instead of the former four main railway systems six regions were formed: London Midland region (former L.M.S.R.) Western (former G.W.R.), Southern (formerly S.R.), Eastern (southern area of former L.N.E.R.), N.E. region (N.E. of former L.N.E.R.), Scottish region (Scottish system of the former L.M.S.R. and L.N.E.R.). The most far-reaching change in the modernisation and re-equipment programme since 1955 has been the replacement of steam traction by electric and diesel locomotives. Under the chairmanship of Lord (then Dr.) Richard Beeching the British Railways Board planned a viable railway system by closing uneconomic branch lines, by developing new services on the liner train principle, and by utilising a more limited trunk route system. Under the Labour Government an integrated system of transport was worked out, embracing rail, road, canals, shipping, etc., itself integrated in the pattern of the country's social and economic needs. Under the Transport Act 1968 some railway passenger services are eligible for grants on social grounds, including urban railways and unprofitable rural services. In 1973 the Government announced a 5-year investment programme. The name was changed to British Rail in 1964.

British Standard Time, The British Standard Time Act of 1968 put Britain an hour ahead of Greenwich Mean Time (GMT) throughout the year for an experimental 3 years. This brought Britain into line with countries in Western Europe where Central European Time is observed. In 1970 Parliament called for the restoration of the previous position—BST in the summer months and GMT in the winter months—as from 31 Oct. 1971.

Brocken-spectre or Glory. The series of coloured rings which an observer sees around the shadow of his own head (or an aeroplane in which he is travelling) as cast upon a bank of mist or thin cloud. This effect is produced by reflection and refraction of sunlight in minute water-droplets in the air just as in a rainbow.

Bromine. A non-metal element, symbol Br, member of the halogen family (*q.v.*). It is a red, evil-smelling liquid (Greek *bromos*, a stink). It is an abundant element. In the U.S.A. bromide is extracted from sea-water on a large scale. It unites readily with many other elements, the products being termed bromides. Its derivatives with organic compounds are used in synthetic chemistry. Bromoform is a liquid resembling chloroform. Bromides are used in medicine to calm excitement.

Bronze is primarily an alloy of copper and tin, and was one of the earliest alloys known, the Bronze Age in the evolution of tool-using man coming between the Stone Age and the Iron Age. Some modern bronzes contain zinc or lead also, and a trace of phosphorus is present in "phosphor-bronze."

Bubble Chamber. An instrument used by physicists to reveal the tracks of fast fundamental particles (*e.g.*, those produced in large accelerating machines) in a form suitable for photography; closely related to the Wilson cloud chamber (*q.v.*), but the particles leave trails of small bubbles in a superheated liquid (often liquid hydrogen) instead of droplets of liquid in a supersaturated gas; invented in 1952 by the American physicist, Dr. D. Glaser, Nobel Prizeman, 1960, and developed by Prof. L. W. Alvarez, Univ. of California, Nobel Prizeman, 1968.

Buckingham Palace, London residence of British sovereigns since 1837. Originally built for the Duke of Buckingham (1703); bought by George III. in 1762 and remodelled by Nash 1825–36.

Buddhism. *See* Section J.

Bulk Purchase. Arrangements for bulk purchase involve undertakings by a country, or by some agency within it, to buy from another country specified quantities of its products, either at prices fixed in advance or with provision for adjusting the prices at specified intervals to take account of general price movements. Such

long-term arrangements may be, but need not be, combined with undertakings by the seller to buy specified quantities, or specified values, of the products of the purchasing country in exchange. The purpose of bulk-purchase arrangements is, on the one hand, to provide the seller of the goods in question with assured markets and, on the other, to assure the buyers of needed supplies of their goods.

Buntings, name of a group of finches, seed-eating birds, usually found in open country. The Yellowhammer, Reed Bunting, Corn Bunting, and Cirl Bunting are resident in Britain; the Snow Bunting (which breeds in small numbers in Scotland) and Lapland Bunting are regular winter visitors, and the Ortolan is among the rare visitors.

Butane, a colourless inflammable gas made of carbon and hydrogen; formula C_4H_{10}. Found in natural gas and made as a by-product of oil refining. Butane, like propane (*q.v.*), can easily be liquefied and moved safely in cans and tanks. It is thus useful as a "portable gas supply"; also used in internal combustion fuels.

Byzantine Art developed in the eastern part of the Roman empire after Constantine founded the city of Constantinople (A.D. 330). It has many sources—Greek, Syrian, Egyptian, and Islamic—and reached its zenith in the reign of Justinian (527–65). The major art form was ecclesiastical architecture, the basic plan of which was Roman—either basilican (symmetrical about an axis) or centralised (symmetrical about a point). Arched construction was developed, and the dome became the most typical feature, although, unlike the Roman dome which was placed on a round apartment, the Byzantine dome was placed on a square one on independent pendentives. Frequently small domes were clustered round a large one as in the case of the great church of Santa Sophia (537), the climax of Byzantine architecture. Usually the churches were small and include those of SS. Sergius and Bacchus, Sta. Irene (in Constantinople), S. Vitale in Ravenna, and the much later and larger St. Mark's in Venice. Byzantine art also took the form of miniatures, enamels, jewels, and textiles, but mosaics, frescos, and icons (*q.v.*) are its greatest treasures.

C

Cacao, *Theobroma cacao*, is an evergreen tree, from 15 to 20 ft. high, growing abundantly in tropical America, West Africa, the West Indies, Ceylon, etc., yielding seeds, called cocoa beans, from which cocoa and chocolate are manufactured. The fruit is 7–10 in. long, hard and ridged; inside are the beans, covered with a reddish-brown skin, which are first fermented, then dried. The trees mature at five to eight years and produce two crops a year.

Cactus, a family of flowering plants numbering about a thousand species adapted to living in very dry situations. The stem is usually fleshy, being composed of succulent tissue, remarkably retentive of water; commonly equipped with sharp thorns which deter animals from eating them. The roots are generally very long, tapping soil water over large area; a "prickly pear" cactus may have roots covering a circular area 25 ft. or more in diameter. The leaves are commonly insignificant or absent, and the stem takes over the photosynthetic leaf function and becomes accordingly flattened to expose greater area to sunlight and air. In some kinds of cactus (*e.g. Echinocactus*) the stem is shaped almost like a sea-urchin.

Cadmium. A metallic element, symbol Cd, chemically similar to zinc and mercury. Used in alloys to lower the melting point, as in Wood's metal with bismuth and tin. Alloyed with copper to make electric cables. Like zinc, it is a protective metal and is used in electro-plating. The cadmium-vapour lamp gives a characteristic frequency used in measuring wavelength.

Caesium, also spelt Cesium, is an alkali metal element, symbol Cs, in first group of the periodic table. It resembles rubidium and potassium and was discovered by Bunsen and Kirchhoff in 1860. It was the first element whose existence was discovered spectroscopically. The caesium atom consists of a heavy nucleus surrounded by 55 electrons, 54 of which are arranged in stable orbits, and one of which, known as the valency electron, is in a less stable orbit surrounding them. Used in the construction of photo-electric cells and as an accurate time standard (atomic clock).

Calcium, a silvery-white metallic element, symbol Ca. It melts at 810° C. and is very reactive. It was discovered by Sir Humphry Davy in 1808, but not until 1898 was it obtained pure, by Moissan. Does not occur as metal in nature, but calcium compounds make up a large part of the earth's crust. Most important calcium sources are marble, limestone, chalk (all three are, chemically, calcium carbonate); dolomite, which is the double carbonate of calcium and magnesium; gypsum, a hydrated calcium sulphate; calcium phosphate and calcium fluoride. Igneous rocks contain much calcium silicate. Calcium compounds are essential to plants and are used in fertilisers. Animals require calcium and phosphorus for bone and teeth formation; deficiency is treated by administration of calcium phosphate. Strontium is chemically similar to calcium, and the radioactive strontium 90 from atomic "fall-out" is therefore easily assimilated by the body.

Calendar, a collection of tables showing the days and months of the year, astronomical recurrences, chronological references, etc. The Julian Calendar, with its leap year, introduced by Julius Cæsar, fixed the average length of the year at 365¼ days, which was about 11 minutes too long (the earth completes its orbit in 365 days 5 hours 48 minutes 46 seconds of mean solar time). The cumulative error was rectified by the Gregorian Calendar, introduced in Italy in 1582, whereby century years do not count as leap years unless divisible by 400. This is the rule we now follow. England did not adopt the reformed calendar until 1752, when she found herself 11 days behind the Continent.

Calends, the first day of the month in the Roman calendar, when interest fell due, and proclamations as to the order of days were made.

Calorie. Unit of quantity of heat. The "small" or fundamental calorie is the amount of heat required to raise the temperature of 1 gram of water from 14·5 to 15·5 °C. This is the gram-calorie used in physics and chemistry. The large Calorie (written with a capital C), commonly used in nutritional connotations, is equal to 1000 small calories and is called the kilogram-calorie.

Calvinism. *See* Section J.

Calypso, West Indian song in the form of a doggerel lampoon composed spontaneously and sung to a guitar.

Cambridge University had a sufficiently good teaching reputation to attract Oxford students in 1209, when lectures at their own university were suspended. In 1226 it had a Chancellor who was recognised by King and Pope. The first college to be founded was Peterhouse in 1284. The university was reorganised and granted a Charter of Incorporation by an act of Elizabeth in 1571. The colleges with their dates of foundation are Christ's (1505), Churchill (1960), Clare (1326), Clare Hall (1966), Corpus Christi (1352), Darwin (1964), Downing (1800), Emmanuel (1584), Fitzwilliam (1966), Gonville and Caius (1348), Jesus (1496), King's (1441), Magdalene (1542), Pembroke (1347), Peterhouse (1284), Queens' (1448), St. Catharine's (1473), St. Edmund's House (1896), St. John's (1511), Selwyn (1882), Sidney Sussex (1596), Trinity (1546), Trinity Hall (1350), Wolfson (1965). The women's colleges are: Girton (1869), Newnham (1871), New Hall (1954), Hughes Hall (formerly Cambridge T.C.) (1885), and Lucy Cavendish Collegiate Society (1965) (for women research students and other graduates). Women were admitted to degrees (though not allowed to sit for examination) in 1920, and to full membership of the University in 1948.

Camel, a large ruminant quadruped, inhabiting Asia and Africa, where it is largely used as a beast of burden. There are two species—the Arabian camel or dromedary, with only one hump; and the Bactrian, or double-humped camel. There are no wild dromedaries, and the only wild bactrians occur in the Gobi Desert. The camel is able to go for long periods without

water, not, as was formerly believed, because it stored water in its hump, but because of the unique mechanism of its physiology which enables it to conserve water at the expense of not sweating until 104° F. is reached.

Campanile, or bell-tower, is separate from but usually adjoining its parent church. The most famous are in Italy. Giotto's tower at Florence, adjoining the cathedral of Santa Maria del Fiore, is architecturally the finest in the world. Others are at Cremona, the loftiest in Italy (364 ft.) and Pisa (the leaning tower). The magnificent pointed campanile of St. Mark's, Venice, which collapsed in 1902 and has since been rebuilt in its original form, was begun in 902.

Canal, an artificial watercourse used for navigation which changes its level by means of locks. The completion of the Bridgewater Canal in 1761 to take coal from Worsley to Manchester marked the beginning of canal building in industrial Britain. There are some 2,500 miles of navigable inland waterways in Great Britain today, 2,000 miles of which are under the control of the British Waterways Board set up by the Transport Act, 1962. The English network is based on the four great estuaries Mersey, Humber, Severn, and Thames. Under the Transport Act, 1968, the Board is enabled to maintain an extensive network of amenity waterways. In 1973 the Government proposed to set up a new Water Space Amenity Commission which will have close links with the Countryside Commission and the Sports Council.

Candela, unit of luminous intensity, symbol cd. An idea of the value which this unit represents may be gained from the fact that light obtained from a 40 W filament-type electric lamp or bulb is approximately the same as would be given by a point source of luminous intensity 30 cd. *See* **S.I. units, Section N.**

Candlemas, an English and Roman Church festival in celebration of the Purification of the Virgin Mary. The date is February 2.

Canon, a term applied to signify a recognised rule for the guide of conduct in matters legal, ecclesiastical, and artistic, or an authoritative ordinance: thus we have Canonical Scriptures, Canon Law, etc. A Canon is also a dignitary of the Church, usually a member of a cathedral chapter in the Anglican communion, or in the Roman Church a member of an order standing between regular monks and secular clergy.

Canonical Hours were seven in number in the Western Church; Matins and Lauds, before dawn; Prime, early morning service; Terce, 9 a.m.; Sext, noon; Nones 3 p.m.; Vespers, 4 p.m.; Compline, bed-time.

Canonisation, the entering of one of the faithful departed on the list of saints of the Roman Catholic Church. The rules governing canonisation were simplified by papal decree in 1969. The forty English martyrs, of whom Edmund Campion was one, executed between 1535 and 1679 and beatified long ago, were canonised in 1970. Beatification, by which a person is called blessed, is usually followed by canonisation, but not necessarily.

Canticles, the name given to the scriptural passages from the Bible sung by the congregation in the various Christian liturgies. They are the *Benedicite*, *Benedictus*, *Magnificat*, *Nunc Dimittis*.

Capercaillie, the largest of the grouse family, found in the Scottish highlands and the pine forests and mountainous regions of Northern and Central Europe and Asia.

Capet, the family name of the royal house of France, founded by Hugh Capet in 987, with its collateral branches. The main line of the dynasty came to an end in 1328 with the death of Charles IV when the throne passed to the related house of Valois. The direct Valois line ended in 1498 with the death of Charles VIII. The first of the Bourbon line was Henry IV whose descendants ruled France (except during the French Revolution and the Napoleonic era) until 1848.

Capitalism. *See* **Section J.**

Capuchins are members of a mendicant order of Franciscans, founded in the 16th cent. with the aim of restoring the primitive and stricter observance of the rule of St. Francis, so called from the capuce or pointed cowl worn by them.

Carat, a term used in assessing the value of gold and precious stones. In connection with gold, it represents the proportion of pure gold contained in any gold alloy, and for this purpose the metal is divided into 24 parts. Thus 24-carat indicates pure gold, and any lesser number of carats shows the proportion of gold contained in the alloy. The carat as a measure of weight is now obsolete, having been replaced by the *metric carat* of 0·2 grams.

Caravan, a band of travellers or traders journeying together for safety across the Eastern deserts, sometimes numbering many hundreds. There are several allusions to caravans in the Old Testament. The great caravan routes of this period from Egypt to Babylon and from Palestine to Yemen linked up with the Syrian ports and so with western sea commerce. Many wars have been fought in the past over their control.

Carbohydrates. *See* **P40, F23.**

Carbon, a non-metallic chemical element which occurs in crystalline form as diamonds and graphite; amorphous forms of carbon include charcoal and soot, while coke consists mainly of elementary carbon. The biochemistry of plants and animals largely hinges upon carbon compounds. The study of carbon compounds is called Organic Chemistry. **Carbon 14.** A radioactive isotope of carbon, with a half-life *c.* 6,000 years, used in following the path of compounds and their assimilation in the body. Also used in determination of the age of carbon-containing materials such as trees, fossils, and very old documents. *See* **F24.**

Carbonari, members of a secret political society originated in Naples, and at one time very numerous. Their chief aim was to free Italy from foreign rule, and they exerted considerable influence in the various revolutionary movements in the first half of the 19th cent. Their name was adopted from the charcoal-burners (*carbonari*), and their passwords, signs, etc., were all in the phraseology of the fraternity.

Carbon dioxide. Commonest of the oxides of carbon. It is formed when carbon and its compounds are burnt with abundant supply of air, and when carbon compounds are oxidised in the respiration process of animals. The atmosphere contains carbon dioxide to the extent of about three parts in 10,000; this figure remains more or less constant because, while carbon dioxide is always being added by animal respiration and the burning of fuels, such as coal and oil by man, plants are constantly removing it in the process known as photosynthesis (F28) or carbon assimilation.

Carbon monoxide is a colourless gas with no taste or smell. It is formed when coal and coke are burnt with a restricted supply of air; the blue flame to be seen in a coke brazier, for instance, is the flame of carbon monoxide. This gas is very poisonous, forming with the haemoglobin of the blood a compound which is useless for respiration and cherry red in colour, which gives a visible symptom of poisoning by carbon monoxide. With nickel it forms a volatile compound, called nickel carbonyl, and this reaction is the basis of the Mond process for extracting nickel.

Cardinal, one of the chief dignitaries of the Roman Catholic Church who constitute the Pope's council, or Sacred College, and when the papal chair is vacant elect by secret ballot a Pope from among themselves. There are three orders: cardinal bishops, members of the Roman Curia (the central administration of the Church) and bishops of sees near Rome; cardinal deacons, also members of the Curia, holding titular bishoprics; and cardinal priests who exercise pastoral duties over sees removed from Rome, though some are members of the Curia. Their numbers were fixed by Pope Sixtus V in 1586 at 6, 14, and 50 respectively. Both Pope John XXIII and Pope Paul VI increased the number and in 1973 there were 144 cardinals. Their insignia was trimmed of embellishment by papal decree in 1969 with the abolition of the famous red hat (the galero) and the shoes with buckles. Cardinals must now retire at 80.

Cardinal Virtues, according to Plato these were justice, prudence, temperance, fortitude—*natural* virtues as distinct from the *theological* virtues of the Roman Catholic Church, faith, hope, charity. The phrase "seven cardinal

virtues," combining the two, figures in mediæval literature. *See* Sins, Seven Deadly.

Carmelites, a body of mendicant friars taking their name from Mount Carmel, where the order was first established in the 12th cent. The original rule of the order required absolute poverty, abstinence from meat and a hermit life. The rigidity of the rule of the order was mitigated by Innocent IV. They wear a brown habit with white mantle, hence their name of White Friars. The order of Carmelite nuns was instituted in the 15th cent.

Carolingians, dynasty of Frankish rulers founded in the 7th cent. The family was at its height when represented by Charlemagne. It ruled, with interruptions, until 987 when the Capetian dynasty succeeded.

Carp, a well-known fresh-water fish, found in plenty in most European and Asiatic still waters; reaches a length of about 2 ft., and under favourable conditions lives for about 40 years. Familiar British members of the family are the roach, rudd, dace, chub, gudgeon, tench, minnow, barbel, bream and bleak. The goldfish, popular in ornamental ponds, is the domesticated variety of a Far Eastern member of the carp family.

Carthusians, an order of monks founded in 1084 by St. Bruno at the Grande Chartreuse near Grenoble, and introduced into England about a century later. They built the Charterhouse (corruption of Chartreuse) in London in 1371. The chief characteristics of the order are a separate dwelling-house in the precincts of the charterhouse for each monk, and the general assembly in the Church twice in the day and once at night. They wear a white habit, with white scapular and hood. The liqueur *Chartreuse* was invented by the order and is still their secret. For many years they have derived large revenues from its sale. The order of Carthusian nuns was founded in the 12th cent.

Casein, the chief protein in milk and cheese. It is coagulated by the action of rennet or acid. An important class of plastics ("casein plastics") are produced from it, and these plastics are converted into buttons, knitting-needles, etc. 8000 gallons of milk yield about a ton of casein.

Cassowary, a genus of ostrich-like birds which, together with the emu, form a separate order found only in Australasia. All species are black, with brightly coloured necks, and with a horny crest on the head. Noted for fleetness.

Castor-oil Plant (*Ricinus communis*), an African shrub now cultivated in most tropical countries. It has broad palmate leaves and bears a spiny fruit containing seeds which when pressed yield the well-known oil.

Cat, the general name for all members of the class *Felidae* of the carnivorous order, from the lion down to the domestic cat. The latter is believed to be descended from the European and African wild cats. Egypt is credited with having been the first country in which the cat was domesticated.

Catabolism, Anabolism, are the terms used to describe the two types of metabolic pathway. Catabolic pathways are routes by which large organic molecules are broken up by enzymes into their simpler constituents *e.g.*, starch into glucose. The anabolic pathways are the routes by which complex molecules are synthesised from simple sub-units, *e.g.*, proteins from amino acids.

Catalyst. A substance which speeds up a chemical reaction without being changed itself. Various aluminium and titanium compounds are catalysts in the formation of polythene from ethylene. Palladium catalyses the reaction of hydrogen with oxygen (hence its use in gas lighters). Enzymes in the body hasten the breakdown of carbohydrates and proteins by catalytic action. *See* F24(2).

Cataracts are gigantic waterfalls. The most famous are those of Niagara in North America, the Orinoco in South America, the Victoria Falls on the Zambesi in Africa, the Falls of the Rhine at Schaffhausen, and the Cascade of Gavarni in the Pyrenees.

Catechism, an elementary book of principles in any science or art, but more particularly in religion, in the form of questions and answers. There is a great variety of these, including the Lutheran, prepared by Luther in 1529, Calvin's Geneva (in 1536), and the Anglican, in the Book of Common Prayer.

Caterpillar, the larva of a butterfly or moth, worm-like in its segmented body, with 3 pairs of jointed true legs often curiously marked and coloured, and frequently more or less hairy.

Cathedral, the chief church of a diocese, so called from its containing a Bishop's seat, or episcopal chair. The town in which it is situated is a cathedral city. Some celebrated cathedrals are St. John Lateran of Rome, Notre Dame of Paris, the cathedrals of Cologne and Milan, St. Paul's in London, Canterbury Cathedral, York Minster, and the cathedrals of Durham, Bristol, Gloucester, Peterborough, Exeter, Liverpool, and Coventry (destroyed by bombs, now rebuilt).

Catholicism. *See* Section J.

Cat's-eye, a kind of quartz, much valued as a gem, opalescent, and of various shades.

Cavalier, a name adopted during the troubles of the Civil War to designate the Royalist party; it is also used generally in reference to a knightly, gallant, or imperious personage.

Caves, natural hollow places in the earth, frequently found in Carboniferous limestone areas. The underground caves are formed by the action of rainwater carrying carbon dioxide, a dilute acid which slowly attacks the limestone rocks. The main caves in the British Isles are in the Mendips, Derbyshire, Yorkshire, S. Wales, and in County Clare. The floods of Sept. 1968 moved masses of debris in some of the British caves, redistributing it in a major way; new routes were blocked and old passages reopened. The scientific study of caves is known as spelaeology.

Cedar, a dark-leaved, cone-bearing, horizontal-branched evergreen tree that grows to a considerable height and girth, the best known species in Britain being the Cedar of Lebanon, which was introduced in the 17th cent.

Celluloid, one of the first synthetic thermoplastic materials, discovered by Alexander Parkes in 1865 when he was attempting to produce synthetic horn. It is made by treating cellulose nitrate with camphor and alcohol. Photographic film is made of a similar, but less-inflammable material, formed by the use of cellulose acetate instead of the nitrate.

Cellulose, a carbohydrate, and a constituent of nearly all plants. Cellulose occurs in an almost pure state in the fibres of linen (flax), absorbent cotton, jute, and filter-paper (used in laboratories).

Celsius was an 18th cent. Swedish scientist (B13) after whom the modern Celsius temperature scale is named. Since 1954, °C stands for "degree Celsius" instead of "degree Centigrade" but this is only a change in name. Both symbols refer to the temperature scale which calls the melting point of ice 0°C and the boiling point of water at one atmosphere pressure 100°C. *See* Absolute Temperature.

Celts, an ancient race of W. Europe, originally from southern Germany (2nd millennium B.C.), united by a common language and culture, who spread westward into Spain, northward into Britain, eastward to the Black Sea, reaching Galicia in Asia Minor. The "La Tène" iron age Celts invaded Britain 250 B.C. After Britain was conquered by the Romans and invaded by the Angles and Saxons there remained as areas of Celtic speech only Wales (Brythonic speakers), Ireland, Scotland, Isle of Man (Gaelic speakers). The late Celtic period in Britain produced a distinctive Christian art (*e.g.*, the Lindisfarne Gospel *c.* 700, and the Irish Book of Kells, dating from about the same time). Surviving Celtic languages are Welsh, Irish, Breton and Scots Gaelic; Cornish survived until the 18th cent. and Manx Gaelic is on the point of extinction.

Centrifuge, a machine which produces large accelerations by utilising the radial force caused by rotating a body about a fixed centre. Centrifuges have found extensive application in modern science. They can be used for the separation of one size of particle from another (for this use in biochemistry see F20) or in the training of astronauts where the accelerations occurring during rocket lift-off can be simulated in a centrifuge on the ground.

Ceramics, are substances in which a combination of one or more metals with oxygen confers special and valuable properties. These include hardness, and resistance to heat and chemicals. Ceramic comes from the Greek word for pottery, and pottery materials of mud and clay were probably the first man-made ceramics. Nowadays the range is enormous and growing; apart from all the pottery materials, there are firebricks, gems, glasses, concretes, nuclear reactor fuel elements, special materials for electronic devices, coloured pigments, electrical insulators, abrasives, and many other things. The scientific study of ceramics is part of materials science (*see* Materials Science). The need to design ceramic objects has inspired great art, and the production of ceramics is a major industry. *See also* China Marks, Section N.

Cerium, a scarce metallic element discovered by Berzelius in 1803. A mixture of cerium and thorium nitrates is used in the manufacture of gas mantles, which owe their incandescent property to the deposit of cerium and thorium oxide with which they are coated.

Chain reaction. *See* F12(1).

Chalcedony, a mixture of crystalline silica and amorphous hydrated silica, *i.e.*, of quartz and opal. It has a waxy lustre, and is much used by jewellers for necklaces, bracelets, etc. Commonly it is white or creamy. Its bright orange-red variety is called carnelian; its brown variety, sard. Chrysoprase, plasma, bloodstone are varieties which are respectively pale apple-green, dark leek-green, green with red spots.

Chalk, a white limestone, calcium carbonate, found in the Upper Cretaceous deposits (formed from the shells of minute marine organisms). In southern England the chalk is a soft rock, but in Yorkshire, Scotland, and Ireland it is solid limestone. French chalk is hydrated magnesium silicate, a variety of talc.

Chamberlain, Lord, the senior officer of The Royal Household who is responsible for all ceremonial within the palace (levées, courts, garden parties, entertainment of foreign royalties and heads of state) but not the coronation or state opening of parliament. He is also in charge of appointments to The Royal Household. His office as censor of plays was abolished in 1968.

Chamberlain, Lord Great, one of the great officers of state whose duties are now mainly ceremonial. He attends the monarch at the state opening of parliament and at the coronation and is custodian of the Palace of Westminster (Houses of Parliament). The office is hereditary, dating from Norman times, and is held for one reign in turn by the descendants of the De Veres, Earls of Oxford.

Chameleon, a family of lizards with numerous species. Their ability to change colour is well known, but exaggerated, and is due to the movement of pigment cells beneath the skin. They are slow in movement, arboreal, and mainly insectivorous. Found in Africa, India, Ceylon, Madagascar, and Arabia.

Chamois, a species of antelope, native of Western Europe and Asia. About the size of a goat, it lives in mountainous regions, and possesses wonderful leaping power, so that it is very difficult to capture. Its flesh is much esteemed, and from its skin chamois leather is made, although to-day sheep and goat skins are usually substituted. The mating season is Oct.–Nov. and the fawns are born in May or June. Live to be 20–25 years old.

Channel Tunnel, a scheme to bore a tunnel through 20–30 miles of chalk under the sea between Dover and Calais has been a subject for discussion ever since Albert Mathieu first conceived the idea as a practical possibility in 1802. In the 1830s proposals for a bridge were made. Investigations have been undertaken from time to time, the most recent being that of the Channel Tunnel Group, composed of British, French, and American interests, which was set up in 1957. In 1964 it was announced that the British and French Governments had decided in principle to go ahead with a rail tunnel. In the spring of 1974 final studies had still to be completed before Parliament's final decision on the fate of the project. It is expected that it would be financed by private capital but operated by a Franco-British public authority. Estimated cost £846 million by completion date 1980 with rail link to London costing a further £120 million. The tunnel would provide ferry services for road vehicles in addition to through rail services and would run from Cheriton, near Folkstone, and Sangatte, near Calais.

Chapel Royal, the church dedicated to the use of the Sovereign and Court. There are, among others, chapels royal at St. James's Palace, Buckingham Palace, Windsor, Hampton Court, the Tower, and Holyrood. *See also* E4(2).

Characterology. *See* Section J.

Charcoal, a term applied to wood that has been subjected to a process of slow smothered combustion. More generally it refers to the carbonaceous remains of vegetable, animal, or combustible mineral substances submitted to a similar process. Charcoal from special woods (in particular buckthorn) is used in making gunpowder. Bone charcoal finds use in sugar refining, as it removes dark colouring matter present in the crude syrup.

Chasuble, a sleeveless vestment worn by ecclesiastics over the alb during the celebration of Mass. It is supposed to symbolise the seamless coat of Christ.

Cheese, an article of food made from the curd of milk, which is separated from the whey and pressed in moulds and gradually dried. There are about 500 varieties differing with method of preparation and quality of milk. They used to be made in the regions after which they are named but nowadays many of them are mass-produced, *e.g.*, Cheddar is made not only in all parts of Britain but in Canada, New Zealand, Australia, Holland, and the U.S.A. Cheeses may be divided into 3 main classes: (1) soft, *e.g.*, Camembert, Cambridge, Port l'Evêque; (2) blue-veined, *e.g.*, Stilton, Gorgonzola, Roquefort (made from ewe's milk), (3) hard-pressed, *e.g.*, Cheddar, Cheshire, Gruyère, Parmesan, Gouda.

Cheetah or "hunting leopard," the large spotted cat of Africa and Southern Asia whose ability to run at 45 m.p.h. for 500 yards makes it the swiftest four-footed animal alive.

Chemistry is the science of the elements and their compounds. It is concerned with the laws of their combination and behaviour under various conditions. It had its rise in alchemy and has gradually developed into a science of vast magnitude and importance. Organic chemistry deals with the chemistry of the compounds of carbon; inorganic chemistry is concerned with the chemistry of the elements; physical chemistry is concerned with the study of chemical reactions and with the theories and laws of chemistry. *See* F20–6.

Chestnut, the fruit of the chestnut tree; those of the Spanish chestnut, *Castanea vesca*, furnish a favourite esculent. The wood is used in carpentry; while the horse-chestnut (*Æsculus hippocastanum*) is much employed in brush-mounting and in cabinet work.

Chiaroscuro, a term used in painting to denote the arrangement of light and shade in a picture.

Chiltern Hundreds, three hundreds—Stoke, Burnham, and Desborough—the stewardship of which is now a nominal office under the Chancellor of the Exchequer. Since about 1751 the nomination to it has been used as a method of enabling a member of Parliament to resign seat on the plea that he holds an office of honour and profit under the crown. (This has been a disqualification for Parliament since 1707.)

Chimpanzee, a large anthropoid ape, a native of tropical West Africa, of a dark brown colour, with arms reaching to the knee, and capable of walking upright. Its brain is about a third of the weight of the human brain, but is anatomically similar. The animal has considerable intelligence and powers of learning. A suitable subject for space flight experiments.

China Lobby, the name applied to the body of opinion and pressure in American politics which strenuously opposed recognition of Communist China.

Chinchilla, a South American burrowing rodent. Grey in colour, and white underneath. It is greatly esteemed for its beautiful fur

Chippendale Furniture was introduced in the reign of George I. by Thomas Chippendale, a cabinet-maker from Yorkshire who migrated to London and set up for himself in St. Martin's Lane, Charing Cross. He was fonder of inventing designs for furniture than of making it, and in 1752 published a book of patterns; the London furniture-makers of the day soon began to model their work upon it.

Chivalry, an international brotherhood of knights formed primarily during the 13th cent. to fight against the infidels in the Crusades. For the French the major battle was against the Moslems in the Holy Land and North Africa, the Spaniards fought the same enemy in their own country, and the Germans were concerned with the heathen of Baltic lands, but Chaucer's "very perfect gentle knight" had fought in all these areas. One did not easily become a knight who had to be of noble birth and then pass through a period of probation, beginning as a boy page in the castle of some great lord, serving his elders and betters humbly while he was taught good manners, singing, playing musical instruments, and the composition of verse. Probably he learned Latin, but he certainly learned French, which was the international language of knights as Latin was of scholars. At fourteen he became a squire and learned to fight with sword, battle-axe, and lance, and to endure conditions of hard living while carrying out his duties of waiting on his lord, looking after his horses, and in time accompanying him in battle Only if he showed himself suitable was he finally knighted by a stroke of the hand or sword on the shoulder from the king or lord. Knighthood was an international order and had its special code of behaviour: to honour one's sworn word, to protect the weak, to respect women, and defend the Faith. To some extent it had a civilising effect on the conduct of war (*e.g.*, knights of opposing sides might slaughter each other in battle but feast together after), but, since war was regarded as the supreme form of sport, it cannot be said to have contributed to peace.

Chlorine, a gaseous element of the halogen family, first isolated in 1774 by Scheele by the action of manganese dioxide on hydrochloric acid. It unites easily with many other elements, the compounds resulting being termed chlorides. The gaseous element is greenish-yellow, with a pungent odour. It is a suffocating gas, injuring the lungs at a concentration as low as 1 part in 50,000, and was used during the first world war as a poison gas. Has a powerful bleaching action, usually being used in form of bleaching powder, made by combining lime and chlorine. Also a valuable disinfectant; used, for instance, in rendering water of swimming baths sterile.

Chloroform, a volatile colourless liquid, compounded of carbon, hydrogen, and chlorine. It is a powerful solvent, not naturally occurring but synthesised on a large scale. When the vapour is inhaled it produces unconsciousness and insensibility to pain. It owes its discovery to Liebig, and its first application for medical purposes to Sir James Young Simpson (P5(2)).

Chlorophyll, the green pigment contained in the leaves of plants, first discovered by P. J. Pelletier (1788–1829) and J. B Caventou (1795–1877) in 1818. Enables the plant to absorb sunlight and so to build up sugar. The total synthesis of chlorophyll was reported in 1960 by Prof. R. B. Woodward. This is an outstanding achievement in the field of organic chemistry. *See* Photosynthesis, F28, F41(1).

Chouans, the name given to the band of peasants, mainly smugglers and dealers in contraband salt, who rose in revolt in the west of France in 1793 and joined the royalists of La Vendée. Balzac gives a picture of the people and the country in which they operated in his novel *Les Chouans*. They used the hoot of an owl as a signal—hence the name.

Chough, a member of the crow family, of glossy blue-green-black plumage, whose long curved bill and legs are coral red. It used to be abundant on the cliffs of Cornwall, but its haunts are now restricted to the rocky outcrops of the western coasts and in the mountains near by. It nests in cleft rocks and caves. The Alpine chough with yellow bill inhabits the mountainous districts of Europe and Asia and is not found in Britain. It was found at 27,000 ft. on Everest.

Christmas means "mass of Christ" from the old English *Cristes maesse*, which is celebrated by the Western church on December 25. The actual day on which Christ was born is not known and there is some uncertainty about the year. December 25 as the day of Nativity was not generally observed until the 5th cent. A.D., though, as the winter solstice, it had long been observed as a pagan festival of *sol invictus* (unconquered sun). The first Christmas card dates from about 1843 and the Christmas tree, of pagan origin, was introduced into England from Germany where it had been a tradition since the Middle Ages. Santa Claus is a corruption of Santa Nikolaus (St. Nicholas) patron saint of children, whose feast day properly falls on December 6.

Chromatic Scale, a scale proceeding in intervals of one semitone. *E.g.*, chromatic scale in C: C–D♭–D–E♭–E–F–F♯–G–A♭–A–B♭–B–C.

Chromium, a very hard, bluish-white metal element, symbol Cr, melting at a very high temperature (above 1900° C.). Its chief ore is chromite or chrome iron-ore (ferrous chromite). "Ferro-chrome" is produced by heating chromite and anthracite in an electric furnace, and chrome steels are prepared by adding the pre-calculated amount of ferro-chrome to melted steel. Best known chrome steel is stainless steel first made by Brearley in 1912 and since then developed greatly at Sheffield. A typical formula is 18 per cent. chromium, 8 per cent. nickel, 74 per cent. iron. Equally important are Stellite alloys, containing chromium, cobalt, tungsten (or molybdenum), which have made possible modern high-speed cutting tools. Dies used in manufacture of plastics are commonly of chrome steel. The elementary metal finds little use alone except in chromium-plating for motor cars, etc.

Chromosomes, the structures contained within the nucleus of every animal and plant cell by which genetic information is transmitted. The chromosome number in somatic (body) cells is constant for each species of plant and animal, *e.g.*, man (46), cat (38), mouse (40), honey bee (16), fruit fly *Drosophila* (8), potato (48). Chromosomes are long molecules composed of deoxyribonucleoproteins (*i.e.*, proteins and DNA). Human chromosomes have been the subject of much recent research since it has been found that certain disorders are associated with chromosomal aberration, *e.g.*, in Mongolism an extra chromosome is present. *See also* Genes, Cell Division, F30(2).

Church Commissioners. The Church Commissioners were established in 1948 by the amalgamation of Queen Anne's Bounty (established 1704) and the Ecclesiastical Commissioners (established 1836) to administer Church revenues and to manage Church property generally. The Commissioners own in investments and real estate a total of over £400 million.

Church of England. *See* Section J.

Cid, The, a famous Spanish hero of the 11th cent. Don Rodrigo Diaz de Vivar, who, before he was twenty, led a Spanish force against the Moors, and drove them out of Spain. He is celebrated in poem, play, and romance.

Cilia, minute hair-like projections on the surface of some cells, which beat together in wavelike movements like the wind over a corn-field. These movements can be used as a means of locomotion as in the aquatic organism paramecium. Cilia are also found on the outer layers of the human trachea where they waft particles upwards to the throat, thus protecting the lungs. *See* F34, P31, *also* Flagella.

Cinchona, the tree native to the Andes which is famous for its bark, source of the drug quinine. It was introduced into Ceylon, India, and Java, the latter becoming the main supplier of quinine.

Cinque Ports, a number of seaport towns on the coast of Kent and Sussex, originally five: Hastings, Romney, Hythe, Dover, and Sandwich. Winchelsea and Rye were added later. These ports were required to furnish a certain number of ships, ready for service, and in return they were granted many privileges. The offi-

cial residence of the Lord Warden (Sir Robert Menzies) is Walmer Castle, near Dover.

Cistercians, an order of monks and nuns taking their names from Cîteaux, near Dijon, where their first monastery was established in 1098. The order was noted for the severity of its rule. They were famous agriculturists. The habit is white, with a black cowl or hood. The order declined, and in the 17th cent. there was a reform movement instituted by the Trappists, who were later organised into a separate order.

Civil List is the annual sum payable to the Sovereign to maintain the Royal Household and to uphold the dignity of the Crown. The amount is granted by Parliament upon the recommendation of a Select Committee and has to be settled afresh in the first six months of a new reign. The Civil List of Queen Victoria was £385,000; Edward VII. and George V., £470,000; Edward VIII. and George VI., £410,000; Elizabeth II., £475,000. In 1972 the Civil List was increased to £980,000 and increases were also made in the royal allowances as laid down in the Civil List Act 1952, as follows:

	From	*To*
Queen Elizabeth, the Queen Mother	£70,000	£95,000
The Duke of Edinburgh	£40,000	£65,000
The Princess Anne	£6,000	£15,000
The Princess Margaret	£15,000	£35,000
The Duke of Gloucester	£35,000	£45,000
Younger sons at age 18 and before marriage	£10,000	£20,000
Daughters at age 18 and before marriage	£6,000	£15,000
Daughters after marriage	£15,000	£35,000

The Prince of Wales who is entitled to the entire revenue from the Duchy of Cornwall (£210,000 in 1970) has voluntarily surrendered half to the Exchequer. Resources available to the Royal family also include the sums which Parliament votes to government departments every year which increased from £343,000 in 1952–3 to £2,932,000 in 1971–2.

Cleopatra's Needle on the Thames Embankment is of the time of Tuthmosis III. (1500–1450 B.C.). The monolith had nothing to do with Cleopatra, as it only came to Alexandria after her death. It was first erected at the Biblical On (Greek Heliopolis), sacred City of the Sun. It was presented to the British Government by Mehemet Ali in 1819, but not brought to this country until 1878. Weight, 180 tons; height, 68¾ ft.

Climate is a generalised representation of the day-to-day weather conditions throughout the year, the combination of all weathers thus determining the climate of a place. Averages and extremes of temperature, variation of humidity, duration of sunshine and cloud cover, amount of rainfall and frequency of snow, frost, gales, etc., are amongst the data normally investigated. The interiors of great land masses are characterised by large ranges of temperature and low rainfall (continental climate), while proximity to oceans has an ameliorating effect with increase in rainfall (oceanic climate). Presence of mountain ranges and lakes and configuration generally produce local modifications of climate, also apparent between the centre and the outlying suburbs of a city. There is evidence that vast changes of climate have occurred during geological time. Since the mid-19th cent. most of the world has shown a tendency to be warmer; the rise in annual mean temperature is now over 1° C. But this trend now seems to be easing off. Latitude introduces zones of climate, *e.g.*, tropical rain, subtropical steppe and desert, temperate rain and polar.

Clock, a device for measuring the passage of time. The earliest timekeeper was the shadow-clock, a primitive form of sundial, used in Ancient Egypt about 1500 B.C. To find the time at night the water-clock or clepsydra was used. The sand-glass dates from the 15th cent. No one knows when the first mechanical clocks were invented, but it is known that a complicated mechanical clock driven by water and controlled by a weighbridge escapement was built in Peking in 1090. The Dover Clock in the Science Museum is not the earliest surviving clock in England, as was once believed, but early 17th cent. The Salisbury Cathedral clock dates from 1386 and that of Wells Cathedral from 1392. The pendulum clock was invented by the Dutch scientist Christiaan Huygens(1625–95). The first watches were made in Nuremberg shortly after 1500. The marine chronometer is a high-precision timepiece used at sea for giving Greenwich mean time. The quartz-crystal clocks are accurate to one thousandth of a second a day, and the improved atomic clock, recently developed at the British National Physical Laboratory, which makes use of the natural vibrations of the caesium atom, is said to be an almost absolute measure of time (accurate to 1 sec. in 300 years, *i.e.*, one part in 10^{10}).

Cloisonné, a kind of fine pottery with enamelled surface, decorated with elaborate designs, the outlines of which are formed by small bands or fillets of metal. The Byzantines excelled in this work, but in the 20th cent. Japan and China led in Cloisonné-ware.

Cloud chamber, an apparatus invented by C. T. R. Wilson in which the tracks of atomic particles can be made visible. Just as the vapour trails tell of the track of an invisible aircraft high up in the air, so the vapour trails of an unseeable particle can tell of its behaviour. The rays under investigation pass through a chamber containing a gas, *e.g.*, air thoroughly cleansed of dust, supersaturated with water- or alcohol-vapour. As the particle passes through it forms a track of tiny water droplets which can be photographed. After a long and honourable history this wonderful instrument is now virtually obsolete. A later ingenious device for tracking fast fundamental particles is the Bubble chamber (*q.v.*).

Clouds are formed by the ascent of moist air, the type depending on the way the air ascends and the height at which condensation occurs. There are three main classes: (1) high cloud (above 20,000 ft.)—cirrus (delicate and fibrous), cirrostratus (thin white veil), and cirrocumulus (delicately rippled) consisting of ice crystals; (2) medium cloud (above 7,000 ft.)—altostratus (dense, greyish veil) and altocumulus (broken flattened cloudlets)—chiefly water particles, often supercooled; (3) low cloud (from near ground to 7,000 ft.)—cumulus (fair weather, broken, dome-topped), cumulonimbus (heavy, towering to great heights), stratocumulus (layer of globular masses or rolls), stratus (like fog but off the ground), nimbostratus (low, rainy cloud). The highest clouds of all, and the rarest, are the noctilucent, seen only on summer nights in high latitudes. They form at about 50 miles above the earth and consist of ice-coated dust from meteors.

Clover, plants of the *Trifolium* genus, family *Leguminosae*, with about 250 species. These are "nitrogen fixing" plants and include red clover, white clover, alsike clover, and crimson clover. They are of great importance in agriculture because in a good pasture they supply directly or indirectly most of the protein available to the animals. Seed of "wild white" clover has been accepted since about 1939 as the indispensable plant of good United Kingdom grassland, largely through the efforts of pioneers like D. A. Gilchrist (1859–1927).

Coal. Until recently the most important single fuel has been coal. It is a mineral of organic origin, formed from the remains of vegetation which over millions of years has changed to coal by the effects of heat and pressure from overlying rock or water. All coal contains moisture, inflammable volatiles, mineral impurities (some of which remain as coal ash after the coal is burnt), and fixed carbon (the coke that is left after the volatiles have been driven off). The relative proportions vary—from Anthracite, a hard coal containing the highest proportion of fixed carbon, to Lignite or brown coal which is little more than a hard peat. World reserves of bituminous coal have been estimated at $7{\cdot}5 \times 10^{12}$ tons. If one adds the reserves of brown coal and lignite, this figure is increased by about 15 per cent. The proportion of the reserves that could be economically recovered varies from country to country and estimates vary from 50 to 100 per cent of the reserves. The reserves are highly localised—over half being located in the Soviet Union. In the United

Kingdom coal has formed the basis of past industrial prosperity. Peak output occurred in 1913 when 287 million tons were mined, one third of which was exported. At the end of the second world war production had fallen to 183 million tons and was far below demand. In 1947 the British coal industry was brought under public ownership and all its assets were vested in the National Coal Board. During the next ten years great efforts were made to increase coal output but, quite suddenly in 1956, demand for coal fell as oil became a popular fuel and since then the problem has been to cut back the coal industry without causing undue social problems. The fall in demand has been accompanied by increasing productivity, both mines and miners having been cut in their numbers by over half. Expansion of the industry is again planned as a result of the international oil shortage.

Coat of Arms, in heraldry, a device containing a family's armorial bearings. In mediæval times an actual coat upon which such device was embroidered; knights wore it over their armour.

Cobalt, a white metal melting at 1490 °C. Two main ores are *cobalt glance* (in which the element is combined with arsenic and sulphur) and *smaltite* (cobalt arsenide). The principal sources are Ontario and the Congo. Various cobalt alloys are important, *e.g.*, stellite, ferrocobalt and carboloy. Its monoxide is an important colouring medium, and is used for colouring glass and porcelain-blue.

Cobra, hooded and very venomous snakes. The best known species are the Indian Cobra, the Egyptian Cobra, and the Black-necked Cobra. Their food consists chiefly of small rodents. The King Cobra is almost exclusively a snake-eater. "Spitting" Cobras (or Ringhals) of S. Africa are a related genus, capable of spitting their venom several yards.

Coca, a S. American shrub, *Erythroxylon coca*, also cultivated in Java. The leaves yield cocaine, classified as a dangerous drug; used medicinally as a local anaesthetic, especially on the eyes and in dentistry. When the natives chew the leaves they are enabled to withstand astonishing amounts of hunger and fatigue, as cocaine acts both as a mental stimulant and as an anaesthetic on the mucous lining of the stomach.

Cochineal *or* **Carmine**, a dyestuff consisting of the dried bodies of the female scale insect (*Dactylopius coccus*) which feeds on cacti. Of ancient origin, the dye was well known to the Aztecs, and was used widely in the Middle Ages. The famous scarlet tunics worn by the English during the Napoleonic wars owed their colour to carmine. To-day it is almost entirely replaced by aniline dyes.

Cockatoo, a member of the parrot family, bearing a crest of feathers on the head, native to Australia and adjacent regions. Predominant colour is white tinged with yellow or scarlet while some species have dark plumage. The great black cockatoo of New Guinea is slaty black with pale red cheeks and can crack Kanary nuts which usually require a hammer to break them open.

Cockchafer (*Melolontha*), one of the most destructive of beetles, the larvae feeding on roots. It is about 1 inch in length, of a brownish colour, and emits a loud whirring sound when flying.

Cockle, the popular name of the bi-valve shell-fish of the genus *Cardium*, found plentifully in sandy bays near low-water line; there are numerous British species.

Cockroach, inaccurately called the "black beetle"; a pest of bakeries and kitchens. In Britain two species are commonly found: the Common Cockroach (*Blatta orientalis*), resident since the time of Elizabeth I, dark brown, about an inch long, with the wing covers long in the male and short in the female; and the German Cockroach (*Blatta germanica*), now the most common, half the size, dark yellow, with both sexes fully winged. All species have long antennae and flattened, leathery, shiny bodies. They are nocturnal and omnivorous.

Coconut Palm (*Cocos nucifera*), a tropical tree, growing to a height of 100 ft., with a slender, leaning trunk surmounted by giant feather-like leaves. One of the most important sources of food and raw material for people living in the tropics. The juice of the fruit, or coconut, is drunk; the kernel is eaten fresh or dried to form copra, which yields animal feeding stuffs and oil, used in the manufacture of soap, margarine, cosmetics, synthetic rubber, etc.; leaves are used for thatching; leaf stalks for canes, fence posts, needles, etc., and the trunk for houses and bridges. Main producing areas: Indonesia, Philippines, Malaysia, Ceylon, and S. India.

Codes, a term used to designate a system of laws properly classified. The Code of Hammurabi, king of Babylon, *c.* 1700 B.C., had extensive influence over a long period. The Romans formulated several codes of historic importance including the Theodosian Code which summarised the Roman laws from the time of Constantine to 438 A.D. The final codification was made under order of the Emperor Justinian by his chief minister Tribonian and published in 529 with a new edition in 534. The most important of modern codes is the *Code Napoléon*, compiled between 1803 and 1810, and still in force. It has been used as an example for the codification of the laws of a number of countries from America to Japan. Under Frederick the Great the law of Prussia was codified. English law has never been codified, although the law on certain subjects has been gathered up into a single statute. The Law Commission Act, 1965, was passed to consolidate and codify the law wherever possible. *See* D8(2).

Codex, a manuscript volume of the Scriptures comprising the Sinaitic codex of the 4th cent., the Vatican codex of the same period, the Alexandrine codex of the 5th cent., and others. The British Museum, in 1933, purchased the *Codex Sinaiticus* from the Soviet Government for £100,000.

Coffee, a shrub found originally in Arabia and Abyssinia, but now extensively grown in Brazil, Colombia, Ivory Coast, Uganda, Angola, and Central America. It yields a seed or berry which, after undergoing the necessary preparation, is ground and used in most countries as a breakfast beverage. The best coffee is the Mocha, an Arabian variety. The stimulating effect of coffee is due to the caffeine, which is also present in tea. The beverage was introduced into Europe in the 16th cent., and the first London coffee shop was opened in 1632.

Coke is the solid residue remaining when coal is carbonised and nearly all the volatile constituents have been driven off. Used as fuel, and as an agent for reducing metallic oxides to metals, *e.g.*, iron ore to iron, in the manufacture of steel.

Colorado Beetle, a serious pest of potato crops. Both adults and larvae feed on the foliage where the orange eggs are laid. The grub is reddish, with two rows of small black spots on each side. The adults are about ½ in. long with yellow and black striped wing cases. The beetle is avoided by birds because of its nasty taste, and is controlled by arsenical sprays.

Colosseum, the name of the Flavian amphitheatre at Rome, begun by Vespasian and finished by Titus A.D. 80. In general outline it still remains one of the most magnificent ruins in the world. In the arena of this great building the famous gladiatorial displays and mimic naval battles used to be given, and about 50,000 spectators could be accommodated.

Colossus is the name which the ancients gave to any statue of gigantic size. The Colossus at Rhodes, which was a bronze statue of the sun god, Helios, was the most famous, and reckoned among the seven wonders of the world. It stood over 100 ft. high at the mouth of the harbour. There is no truth in the legend that ships could pass between its legs. It fell in an earthquake in 224 B.C.

Coluga, also known as "flying lemur", caguan or kubuk, a remarkable mammal which may be regarded as an aberrant insectivore or an aberrant form of the earliest ancestor of the bats. It has nothing to do with lemurs. There are two genera, one inhabiting the Philippines and one inhabiting Malaya. They have a parachute-like membrane which covers them from the neck to the tip of the tail, by means of which they can glide from treetop to ground a distance of up to 70 yards.

Column, in architecture, is an upright solid body serving as a support or decoration to a building.

Columns consist of a pedestal, a shaft, and a capital, over which the supported entablature rises. They are named according to the styles of architecture of which they form part, being Doric, Tuscan, Ionic, Corinthian, or Composite as the case may be.

Comets are celestial bodies which move about the solar system in elliptical or hyperbolic orbits. Usually these star-like bodies are accompanied by a long shining tail. The hyperbolic comets are seen once only, and do not reappear; the elliptical comets are periodic, and their recurrence can be calculated with accuracy. The head of a comet is believed to consist of small lumps of solid matter accompanied by dust particles and gases such as carbon dioxide and methane. It used to be thought that the tail was produced by the pressure of sunlight on the cometary material but a modern explanation is that it is produced by the combined action of the solar wind (a continuous stream of ionised hydrogen originating in the sun) and the interplanetary magnetic field. When they run parallel the effect is to produce a long streaming tail pointing away from the sun. Chief among the periodic comets is Edmund Halley's, the first to return as predicted in 1757. It reappears about every 76 years and is next due in 1985. The most spectacular comet of the 19th cent. was Donati's in 1858. Kohoutek's comet, discovered in 1973 by the Czech astronomer of that name, was the first comet to be studied from space (by the Russian Soyuz and the American Skylab).

Common Law. *See* **D7.**

Commons are the remnants of the mediaeval open fields round villages in which the villagers had rights in common, *e.g.*, (i) estover—the right of taking wood for house building or firewood; (ii) pasture—the right of grazing beasts; (iii) turbary—the right of digging turf; (iv) piscary—the right to fish. Many of these common lands were enclosed during the agrarian revolution which went on steadily in England from the 15th cent. onwards, and with their enclosure common rights vanished. A Royal Commission on Common Land described the commons in 1965 as the "last reservoir of uncommitted land" which provide, as far as the public is concerned, by far the largest part of the accessible open spaces of the country. Under the Commons Registration Act, 1965, it was the duty of County Councils and County Borough Councils to make a register of all common land and all town and village greens in their areas.

Commons, House of, the Lower House of the British Parliament. *See* **Section C, Part II.**

Commune of Paris has twice played a dramatic part in the history of France. In 1792 it was able, through its control of the administrative organisation of Paris, to override the National Assembly. In 1871, after the withdrawal of the Prussian troops, it tried to assert its authority. Public buildings were destroyed by members of the Commune and civil war raged during April and half May, but Government troops savagely suppressed the rising.

Communism. *See* **Section J.**

Compass *or* **Mariner's Compass** is an instrument by which the magnetic meridian is indicated, and comprises a horizontal bowl containing alcohol and water, a card upon which the thirty-two points of the compass are marked, and the steel needle which always points to the meridian. Although the discovery of the directive property of a magnet is credited to the Chinese, the first practical use of this property in a compass was made in western Europe in the 12th cent. Aircraft and ships now largely employ gyrostatic compasses which are not affected by electrical and magnetic disturbances. Sperry, Brown, and Anschutz are three important types of gyroscopic compass.

Computer, a technical device for accepting an input of information, processing this information according to some prescribed programme of operations and supplying an output of processed information. Many types of operation can be performed on many types of information and computers are now indispensable in science, business, warfare, government, and other activities. Early thinkers in this field were Pascal (17th cent.), Babbage (19th cent.) and Turing (1930s), but electronic computers as we know them appeared during the Second World War and the first commercial machine was on sale in 1950. Computers are millions of times faster than human beings at computing; and the introduction of computers into an organisation does more than just speed up the calculations, it tends to transform the whole nature of the organisation. The possibilities for future developments seem enormous. Analogue computers and digital computers are two different kinds stemming from the difference between *measuring* and *counting*. Analogue types handle data that is represented by physical quantities of continuously variable size such as voltages or lengths. These quantities can be made to vary like the quantities in a problem which the computer is set to solve; the problem is thus solved by analogy. A slide rule is a rudimentary analogue computer in which numbers are represented by lengths of rule. Digital computers handle actual numbers expressed in digits and the quantities in the problem are represented by discrete numbers. These can all be expressed in binary form and thus stored or handled in bits. *See* **Bit, Binary Notation.**

Conclave, an assembly of Roman Catholic cardinals met together to elect a pope. The last Conclave was held in the Vatican in June 1963 when Cardinal Montini, archbishop of Milan, was elected Pope Paul VI.

Concordat, an agreement or convention between the pope and a secular government regarding ecclesiastical matters. The Concordat of Worms in 1122 between Calixtus II. and the Emperor Henry V. was famous as deciding a long struggle in regard to investiture. In 1801, Napoleon concluded a concordat with Pius VII. defining the restored relations between the head of the Church and the French Roman Catholics.

Condor, a large eagle of brilliant black plumage with a circlet of white feathers round its neck. It is a native of the Andes.

Confederation is a free association of sovereign states united for some common purpose. It is to be distinguished from a **Federation,** which is a union of states with one central government, each state relinquishing its sovereignty, though retaining some independence in internal affairs.

Coniferae are cone-bearing trees, including firs, pines, cedars, cypresses, junipers, yews, etc., and are widely distributed in temperate regions.

Conservatism. *See* **Section J.**

Constitution, the fundamental organic law or principles of government of a nation, state, society, or other organised body, embodied in written documents, or implied in the institutions and customs of the country or society. The government of the U.S.A., unlike Great Britain, works upon a written Constitution. It was framed when the U.S.A. came into existence as a sovereign body, when the Constitution built a republic out of a federation of thirteen states, based on representative government. The constitution was adopted in 1789, and its strength has been tested by the fact that, substantially unchanged, it is now the groundwork for a federation which now comprises fifty states.

Continent, a word used in physical geography to denote the larger continuous land masses in contrast to the great oceans of the earth. They are: Eurasia (conventionally regarded as 2 continents, Europe and Asia), Africa, North America, South America, Australia and Antarctica.

Continental Drift. The hypothesis of drifting continents is due to F. B. Taylor, an American geologist who published his theory in 1908, and to the Austrian meteorologist Alfred Wegener in 1910. The latter was impressed by the matching coasts of South America and Africa, which seemed to him to fit together like the pieces of a jigsaw puzzle. Since then many other people have taken up and developed the idea. According to Wegener, at one time there were two primary super-continents, Laurasia and Gondwanaland. The one in the northern hemisphere consisted of North America, Europe, and the northern part of Asia. Its southern counterpart included Antarctica, Australia, India, Africa and South America. These super-continents broke up, and their various bits moved apart. In particular, the southern hemisphere continents drifted radially north-

wards away from the south pole, and the two Americas shifted westwards from Europe and Africa. What would have been the leading edges of the land masses on this hypothesis, are now heavily buckled up into mountain belts, such as the Cordillera and the Alpine-Himalayan chain. The resistance afforded to drifting by the strong ocean floors may well have been the cause of such structures. Despite the wealth of geological facts which have a bearing on the problem of continental drift, none of these has been able to decide the issue in a conclusive manner. Further studies of rock magnetism (*q.v.*) and of fossil climates should ultimately establish the concept of continental drift on a firm basis. *See also* Earth, F8.

Conurbation, a term which has been defined as "an area occupied by a continuous series of dwellings, factories, and other buildings, harbours, and docks, urban parks and playing fields, etc., which are not separated from each other by rural land; though in many cases in this country such an urban area includes enclaves of rural land which is still in agricultural occupation." The term has been widely adopted for the contiguous densely populated areas which form continuous urban areas. The seven officially recognised in Britain are: Greater London, West Midlands, S.E. Lancashire, West Yorkshire, Merseyside, Tyneside, Clydeside. The population of the conurbations has continued to decline since 1961.

Convention is an assembly of delegates, representatives, members of a party met to accomplish some specific civil, social, political, ecclesiastical or other important object.

Convocation, an assembly called together to deliberate ecclesiastical affairs. In the Church of England the provinces of Canterbury and York each have their convocation. The term is also applied to assemblies of the graduates of certain universities.

Coot. A very widely distributed bird of the rail family and a common resident of the British Isles. The adult is black with a conspicuous white bald shield on the forehead and a white bill. The juvenile is brownish grey with whitish breast and throat. The coot flies heavily, but swims well. It dives frequently and can remain submerged for a considerable time. It is pugnacious and in winter gregarious. The food is chiefly vegetable. The large nest is usually built among aquatic vegetation and the young are fed by both parents. Another species, the Crested Coot, occurs in S. Europe.

Copper, one of the most familiar of metals, symbol Cu, used in ancient times as an alloy with tin in producing bronze, and preceding iron as an industrial material. Copper ores are most abundant in the U.S.A., Chile, Canada, Zambia, and Zaire. All copper compounds are poisonous.

Copyright. Under the Copyright Act, 1956, copyright subsists in every original literary, dramatic, musical, and artistic work if the author is a British subject or a citizen of the Republic of Ireland or resident in the United Kingdom, or if the work is first published in the United Kingdom. The Act provides that, except in certain special cases, the author of the work shall be the first owner of the copyright, and there are no formalities, such as registration or payment of fees, to be accomplished. Copyright includes the right to reproduce the work in any material form, to perform the work in public, or, if the work is unpublished, to publish the work. The Act also protects sound recordings, films, and television and sound broadcasts. Literary, dramatic, musical, and artistic works which enjoy the protection of the Act are automatically protected in those countries which are parties to the Berne Copyright Convention or the Universal Copyright Convention. In general, copyright in literary, dramatic, musical, and artistic works is vested in the author for the period of his lifetime and 50 years following, after which it passes into the public domain and becomes freely available to any who wish to make use of it. The Copyright Libraries, entitled to receive copies of books published in the United Kingdom are given under Libraries. The Berne Copyright Convention and the Universal Copyright Convention were revised at a diplomatic conference held in Paris in 1971. The effect of the revisions allows any national of a developing country to obtain, under certain conditions, a compulsory licence to translate and publish a copyright work for the purpose of teaching, scholarship and research, upon payment of compensation to the copyright owner of the original work. The Government Department responsible for matters in connection with copyright is the Industrial Property and Copyright Department, 25 Southampton Buildings, London, WC2A 1AY.

Coral, an order of small marine animals closely related to the sea-anemone, but differing from it in their ability to develop a limy skeleton. They multiply sexually and by budding. The structure of the coral secretions assumes a variety of forms, fan-like, tree-like, mushroom shape, and so forth. Red coral (the skeleton of *Corallium rubrum*) is mainly obtained from the Mediterranean. The coral reefs of the Pacific and Indian Oceans are often many miles in extent. Living corals occur only in warm seas at about 23 °C.

Cordite, a smokeless explosive adopted for small arms and heavy artillery by the British Government in the naval and military services in 1889, and composed of 58 parts of nitro-glycerine, 37 of gun-cotton, and 5 of vaseline. It is a jelly or plastic dough, and used in the form of sticks.

Cork, the bark of a species of oak, *Quercus suber*, grown largely in the South of Europe and North America. The cork tree is said to yield bark every six to ten years for 150 years, and grows to a height of from 20 to 40 ft. Its lightness, impermeability, and elasticity enable it to be used for a variety of commercial purposes, especially for stoppers of bottles.

Cormorant, a large, long-billed water-bird which captures fish by diving. It has bronze-black plumage with white cheeks and sides and is found around the sea coasts of most parts of the world, including the British Isles. It nests in colonies on sea cliffs and rocky ledges. The Shag or Green Cormorant is a smaller bird with green-black plumage and a crest.

Corncrake. *See* Landrail.

Corn Laws were statutes intended for the benefit of British agriculture, and restricted import and export of grain. From the 14th to the mid-19th cent. such laws were in force, and were often of a stringent nature. They became so oppressive and caused corn to reach so high a price that the poorer classes were plunged into distress. A powerful anti-corn law agitation was organised, of which Cobden, Bright, and Villiers were the leaders, and Sir Robert Peel, in 1846, at the time of the Irish potato famine, carried through free trade. The repeal of the Corn Laws marked an important phase in the transformation of an agricultural to an industrial Britain.

Coronae, series of luminous rings surrounding sun or moon produced by the diffraction of light by water droplets in the atmosphere. Usually seen when sun shines through altostratus clouds. The outside of the ring is red and the inside bluish. *See* Halo.

Cortes, the name of the Parliamentary assemblies of Spain and Portugal.

Cosmic Rays, a form of radiation coming from outer space, of deep penetrating power and of great scientific interest. The rays are believed to consist chiefly of fast protons, with a few α-particles and other positive nuclei. By interacting with the gas of the atmosphere, these rays initiate a complex series of events, in the course of which other particles ("secondary radiations") are generated. The secondary rays contain virtually all the particles listed on F14; indeed, several particles were first discovered as secondary cosmic rays. Cosmic rays are investigated at and below sea-level, on mountains, in mines, in balloons, rockets, and satellites Origin still uncertain. *See* F3(2).

Cosmology is the science which studies the whole universe, its origin, its nature, its size, and evolution. At present it is a very active science partly because new techniques such as radio-astronomy are revealing more facts about distant parts of the universe and partly because of fruitful clashes between theoretical ideas. *See* F3–7.

Cotton, the name of a plant of several species,

bearing large yellow flowers with purple centres. These centres expand into pods, which at maturity burst and yield the white fibrous substance known as cotton. The raw cotton contains a large proportion of seeds which are removed by "ginning." Long before the Christian era, cotton had been grown and used with great skill in India to make fabrics. The industry was not introduced into England until the middle of the 17th cent. when Protestant refugees from Flanders came to settle in the wool textile districts of East Anglia and Lancashire. With improvements in machinery and expansion of overseas trade in the 18th and 19th cent., Lancashire became the centre of the world's cotton industry but since the second world war man-made fibres have taken the place of cotton. Chief producers: USA, USSR, China, India, Brazil, Mexico, Pakistan, Egypt, Turkey.

Coulomb, a unit of electric charge, named after the French naval engineer, Charles Augustin de Coulomb (1736–1806), equal to the quantity of electricity transferred in one second by a current of one ampere.

County. The word county was introduced after the Norman conquest as an equivalent of the old English "shire." England has 41 geographical counties, Wales 13, Scotland 33, and Ireland 32. The number of administrative counties differs from the number of geographical counties because the division for Local Government purposes is made on grounds of convenience. Under the London Government Act, 1963, the county of Middlesex was absorbed in Greater London. *See also* **Reform of Local Government, Section C, Part II.**

Coup d'Etat, a violent change in the government of a state carried out by force or illegally. Examples are the overthrow of the French Republic in 1851 by Louis Napoleon, who then became Emperor, and more recently the military *coups* in the Middle East which brought about the abdication of Farouk of Egypt in 1952 and the assassination of Feisal of Iraq in 1958.

Court Leet, a court of record held annually before the steward of any particular manor or lordship; originally there was only one court for a manor, but in the time of Edward I. it branched into two, the court baron and the court leet.

Coypu or Nutria rat, a large beaver-like rodent found in S. America; now wild in E. Anglia, where it is causing damage to dykes, reeds, and crops, having escaped from farms where it is bred for its fur.

Crane, a large, graceful wading-bird with elegant long legs and neck, greyish plumage, superficially resembling the heron and related to the bustard. They migrate in V or W formation and have trumpet-like voices. There are several species, found in all continents except S. America, including the Crowned Crane with golden coronet and the Demoiselle with tuft-like crest of white feathers. The Common Crane nested in East Anglia in mediaeval times but now comes only as a rare visitor from the Continent.

Credit is an advance of money or of goods or services in consideration of a promise of payment later. Trade credit is such an advance from trader to customer; bank credit is an advance of money by a bank to a client, whether a business firm or a private person, in consideration of an interest payment by the borrower.

Creed, (Latin *credo* = I believe), a formal statement of belief. The three orthodox Christian creeds are the Apostles' Creed (a summary of their teaching), the Nicene Creed (drawn up by the Church Council at Nicaea in A.D. 325 to define its theological doctrines), and the Athanasian Creed (concerning the nature and divinity of Christ). *See also* under individual headings.

Cremation, the ancient custom, revived in modern times, of burning the dead. Cremation was first legalised in Great Britain in 1885 and the first crematorium opened at Woking in that year. Application for cremation must be accompanied by two medical certificates.

Cricket, a genus of insects of the grasshopper order which move by leaps. The male produces a chirping noise by rubbing its wing-covers together.

Crimean War (1853–56). This war between Russia and the allied powers of Turkey, England, France, and Sardinia, was connected with the Eastern Question (*q.v.*) and the desire of Russia for a port on the Mediterranean. Chief engagements were the Alma, Balaclava, and Inkerman. Fighting virtually ceased with fall of Sevastopol in Sept. 1855. Treaty of Paris signed March 30, 1856.

Crocodile, the name of the largest existing reptile, and classed with the alligator and the gavial. The crocodile inhabits the Nile region, the alligator the lower Mississippi, and the gavial is found in many Indian rivers.

Crow, a family of birds including many well-known species such as the rook, raven, jackdaw, carrion crow, hooded crow, magpie, nutcracker, jay, and chough.

Crusades were military expeditions undertaken by some of the Christian nations of Europe with the object of ensuring the safety of pilgrims visiting the Holy Sepulchre and to retain in Christian hands the Holy Places. For two centuries nine crusades were undertaken: First, 1095–99, under Godfrey of Bouillon, which succeeded in capturing Jerusalem; Second, 1147–49, led by Louis VII. of France, a dismal failure, which ended with the fall of Jerusalem; Third, 1189–92, in which Richard I. of England took part, making a truce with Saladin; Fourth, 1202–4, led by French and Flemish nobles, a shameful expedition, resulting in the founding of a Latin empire in Constantinople; Fifth, 1217–21, led by John of Brienne; Sixth, 1228–29, under the Emperor Frederick II.; Seventh, 1248–54, under St. Louis of France; Eighth, 1270, under the same leadership, but cut short by his death on an ill-judged expedition to Tunis; Ninth, 1271–72, led by Prince Edward of England, which accomplished nothing. Millions of lives and an enormous amount of treasure were sacrificed in these enterprises and Jerusalem remained in the possession of the "infidels." The chief material beneficiaries were the Italian maritime cities; the chief spiritual beneficiary was the pope; but in literature and the arts both Europe and the Levant benefited enormously from the bringing together of the different cultures.

Cryogenics (Greek roots: productive of cold) is the science dealing with the production of very low temperatures and the study of their physical and technological consequences. "Very low" is often taken to mean below about −150°C. The growth of cryogenics (essentially a 20th-cent. science) is connected with the discovery of how to liquefy all gases including even helium which resisted liquefaction until 1908. Scientifically, cryogenics is important partly because special phenomena (*e.g.*, superconductivity (*q.v.*)) appear at low temperatures and partly because more can be learned about ordinary properties by studying them in the absence of heat. Technologically, cryogenics is becoming more and more significant, for example, liquefied gases are rocket propellants, superconductors make valuable magnets, tissue-freezing techniques (using very cold liquids) have been introduced into surgery. *See* **Absolute Temperature.**

Crystal, in everyday usage, a solid chemical substance bounded by plane surfaces which show a regular geometrical arrangement as, *e.g.*, quartz crystals, rock salt, snow flakes. In physics the term means any substance whose atoms are arranged in a regular three-dimensional array. This includes most solids, even those not particularly crystalline in appearance, *e.g.* a lump of lead Liquid crystals (*see* **Sec. F, Part VI**) are of increasing scientific interest.

Cubism, the name of a revolutionary movement in art created in the years 1907–9 by the two painters Picasso and Braque. Rejecting purely visual effects, they approached nature from an intellectual point of view, reducing it to mathematical orderliness. Its respectable grandparent was Cézanne who had once written: "you must see in nature the cylinder, the sphere, and the cone"—a concept which, together with the contemporary interest in Negro sculpture, moved the two founders of the movement to experiment with the reduction of natural forms to their basic geometrical shapes. In practice, this meant combining several views

of the object all more or less superimposed in order to express the idea of the object rather than any one view of it. The name Cubism was derisive and the movement aroused the same opposition as Impressionism, Fauvism, and the later Futurism. Picasso's *Young Ladies of Avignon* was the first Cubist painting and his "Head" (1909) the first Cubist sculpture. Three phases are recognised: (1) Cubism under the influence of Cézanne; (2) high or analytical Cubism (*c.* 1909–12) concentrating on the breaking-down of form to the exclusion of interest in colour; (3) synthetic Cubism (*c.* 1913) making use of *collage* in which pieces of pasted-on paper (illustrations, wallpaper, newspaper) and other materials were used in addition to paint. Amongst other early cubist painters were Metzinger, Gleizes, Gris, and Léger.

Cuckoo, a well-known migratory bird which is found in Great Britain from April to July, hawk-like in shape, with a very characteristic note, uttered during the mating season only by the male. The hen has a soft bubbling call. It lays its eggs in the nests of other birds, *e.g.*, the meadow pipit and hedge sparrow, but only one egg in each nest. Feeds mainly on insects, particularly hairy caterpillars.

Cuneiform, (Latin = *wedge-shaped*), an ancient method of writing by impressing wedge-like strokes into tablets of damp clay which when dried and hardened formed a permanent script. Cuneiform writing developed from its original pictographic form into a phonetic writing and can be traced back to the non-Semitic Sumerians of ancient Mesopotamia, the earliest civilisation known to us. It passed to the Semitic Accadians of Babylonia in the 3rd millennium B.C. who adapted it to their own language. Decipherment by Sir Henry Rawlinson, 1835.

Curfew (Old Fr. *covre-feu* = cover fire), a regulation common throughout Europe in mediæval times by which, at a fixed hour in the evening, the church bell was rung as a signal that fires were to be put out and the people were to go to bed. The custom originated in the fear of fire when buildings were built of timber. Nowadays a curfew is imposed by the military in areas where riots or disturbances are expected, compelling the civilian population to remain indoors after nightfall.

Curia, the central government of the Roman Catholic Church. By the reform which came into force on Jan 1, 1968, its twelve Sacred Congregations or "ministries" were reorganised and reduced to nine. The aim of the reform was to streamline the Curial offices so that the Church's machinery can cope with modern problems, so favouring the desires expressed by the Ecumenical Council convened by Pope John.

Curie, a measure of the rate at which radioactive material emits radiation. One curie is a disintegration rate of $3{\cdot}7 \times 10^{10}$ disintegrations per second.

Curlew, a wading-bird of which there are several species. It frequents marshy places, feeds on worms, insects, molluscs, and berries and possesses a very long, down-curved bill.

Currency is the name given to the types of cash money—metal or paper—in use in an area (*e.g.* pound, sterling, dollar, franc). It also designates the actual coins or notes issued. Its amount is usually subject to regulation by the Government, or by a Central Bank acting on the Government's behalf. Britain changed over to a £-based decimal currency in Feb. 1971. *See also* Foreign Currencies, Section N.

Cybernetics, the science concerned with the automatic control and communication processes in both animals and machines. Thus it is concerned with brain function, information theory, electronic computers, and automation.

Cyclone, a term usually applied to a tropical revolving storm. Cyclones often occur towards the end of the hot seasons and are mainly confined to tracks in the western areas of the oceans, being known as hurricanes (Caribbean and Pacific), cyclones (Indian Ocean), and typhoons (China Seas). The circulation of air in a cyclone is similar to that in the *depression* of temperate latitudes, but the region of low pressure is much more localised and the pressure gradients steeper. Winds of hurricane strength and torrential rain occur generally, although at the centre of the storm there is a small area, known as the "eye," where fair, calm weather prevails.

Cyclotron, a machine for accelerating charged particles such as protons to very high energies. Devised by E. O. Lawrence in California in 1930, it uses a magnetic field to make the particles traverse nearly circular paths and an electric field to give them an additional pulse of energy each time round. The accelerated particles impinge on targets, and the resulting events are a basic source of information for nuclear physicists. The cyclotron is obsolescent and has led to the development of other machines, *e.g.*, betatrons, synchrotrons. Britain has two major national high-energy machines: *Nimrod* (7,000 MeV proton synchroton) and *Nina* (5,000 MeV electron accelerator).

D

Dactylopterus, a fish of the gurnard family, with wing-like pectoral fins; sometimes known as the flying fish, though that appellation is more generally given to *Exocaetus exiliens*.

Dadaism (French *Dada* = hobby-horse) was a hysterical and nihilistic precursor of Surrealism (*q.v.*) resulting from the shock produced by the first world war. Beginning in Zurich about 1915, it spread to other continental cities, such as Berlin and Paris, dying out in 1922. The movement was deliberately anti-art, destructive, and without meaning; it intended to scandalise by such tricks as "compositions" made out of anything that came to hand—buttons, bus tickets, pieces of wire, bits of tin, etc. Other excesses included incoherent poetry, Dada night-clubs, plays, and short-lived newspapers. Many Dadaist painters became Surrealists at a later stage, but where Surrealism is a deliberate attempt to present subconscious and dream-like images, Dadaism was sheer anarchism. Among its chief exponents were Hans Arp, Marcel Duchamp, André Breton, Guillaume Apollinaire, and Max Ernst, all of whom subsequently became noted in more reputable ways.

Daddy Longlegs, or Crane-fly, a slender long-legged fly of the family Tipulidae. The larvae which do damage to lawns and plants are called leather-jackets. The Americans call Harvestmen (*q.v.*) daddy longlegs.

Daguerreotype, a first practical photographic process, invented in Paris by M. Daguerre during the years 1824–39. The light-sensitive plate was prepared by bringing iodine in contact with a plate of silver. After exposure a positive image came by development of the plate in mercury vapour. Even for open-air scenes the first daguerreotypes involved exposure of 5–10 minutes. The wet collodion process (1851) rendered the technique obsolete.

Dáil Eireann, the name of the national parliament of the Irish Republic.

Damaskeening, the art of inlaying one metal upon another, largely practised in the East in mediæval times, especially in the decoration of sword blades.

Dandies, the name given to a class of exquisites prominent in early Victorian days, and who attracted attention by excessive regard for dress. Their feminine counterparts were the dandizettes.

Danegeld, a tax imposed in England in Anglo-Saxon times to raise funds for resisting the Danes or to buy them off. Edward the Confessor abolished the tax, but it was revived by the Conqueror and subsequently retained, under another name, after the danger from the Danes was past. It is the basis of all taxation in this country. Domesday Book (*q.v.*) was originally drawn up for the purpose of teaching the State how to levy the tax.

Danelaw, the law enforced by the Danes in the kingdoms of Northumbria, East Anglia, and in the districts of the five (Danish) boroughs—lands grouped round Leicester, Nottingham, Derby, Stamford, and Lincoln—which they occupied during the Viking invasions of the 9th and 10th cent. The country occupied was also called the Danelaw or Danelagh.

Darter, 1. Snakebirds, a genus of the pelican family, with long, pointed bill and serpent-like neck and

resembling cormorants in appearance. There are 5 species. 2. Numerous species of small freshwater fish belonging to the Perch family, found in N. America.

Date Palm, *Phoenix dactylifera*, one of the oldest known food plants widely cultivated in N. Africa and W. Asia. It grows to 100 ft. and continues to bear for 2 or 3 centuries, its fruit being of great value as a food. From the leaves the Africans make roofs for their huts; ropes are made from the fibrous parts of the stalks; and the sap furnishes a stimulating beverage.

Dauphin, the title borne by the eldest sons of the Kings of France from 1349 to the Revolution of 1830.

Day is the most natural unit of time and may be defined as the period of rotation of the earth relative to any selected heavenly body. Relative to the sun it is called the *solar day*. Relative to a fixed star it is called the *sidereal day*. Owing to irregularities in the earth's movements, the time taken for the earth to rotate through 360° relative to the sun is variable, and so the *mean solar day* of 24 hours has been introduced, which is the average throughout the year. The *mean solar day* is our standard, used for purposes of the calendar, and astronomers use *sidereal* clocks to check mean solar time. In practice, for convenience, the sidereal day is determined by the earth's rotation relative to the vernal equinox or first point of Aries, and is equal to 23 hours 56 minutes and 4·091 seconds of mean solar time (*i.e.*, about 4 minutes shorter than a solar day). *See* **Time**.

DDT, (dichloro-diphenyl-trichloroethane). A very powerful insecticide which has had wide success in the control of diseases, such as malaria and typhus, which is carried by insects. Mosquito swamps are sprayed with DDT to kill the carriers. Because this toxic chemical breaks down very slowly it builds up in birds and animals and its use is now banned in Britain. Its detection in Antarctic wild life confirmed that DDT pollution was virtually world-wide.

Deacon, an ecclesiastical official, who assists in some of the smaller ministerial duties in church or chapel; in the Anglican Church he ranks below a priest.

Dead Languages are such as the ancient Greek and Roman tongues, which are no longer spoken but are preserved in literature.

Dead Sea Scrolls, a group of ancient Jewish documents, consisting of scrolls and fragments which have been recovered since 1947 in the vicinity of Qumran near the Dead Sea and which represent one of the most important finds ever made in the field of biblical archæology and Christian origins. The scrolls, written in Hebrew or Aramaic, were found in caves, the first by chance by an Arab shepherd in 1947. These consisted of biblical texts older by a thousand years than the earliest Hebrew manuscript of the Old Testament (A.D. 895). Many fragments have since been discovered, comprising the whole of the Old Testament with the exception of Esther. In addition there are commentaries and other non-biblical writings, including one called "The War of the Sons of Light with the Sons of Darkness." The writing on the scrolls indicates that they were written over a period of two centuries, the greater proportion before the birth of Christ. A nearby ruin is believed to have been the home of a religious sect called the Essenes (J18), to whom the scrolls belonged. By the aid of the latest scientific techniques, including radiocarbon tests, the age of the scrolls is being accurately determined. An account of the scrolls and their implications is given in Edmund Wilson's *The Dead Sea Scrolls: 1947–1969*.

Dean, a Church of England dignitary, ranking below a bishop, and the head of the chapter of a cathedral. A rural Dean supervises a *deanery* or group of parishes. There are also Deans of Faculties in some universities, and at Oxford and Cambridge the *Dean* is in charge of chapel services and disciplinary arrangements.

Death Watch Beetle (*Xestobium rufovillosum*), a wood-boring beetle, larger than the common furniture beetle, found chiefly in the old oak beams of churches and other historic buildings. The grub bores from 4–12 years. The name "death watch" comes from the superstition that the ticking sound, made by the beetle striking its head against the wood, is a sign of approaching death. The death watch beetle in the roof of Westminister Hall is being smoked out by means of an insecticide called gamma benzine hexachloride. *See also* **Furniture Beetle, Woodworm**.

Decalogue, name given to the Ten Commandments of the Old Testament. There are two versions of them, differing in detail: Exodus xx. 2–17 and Deuteronomy v. 6–21. They are of Hebrew origin and are recognised by Jews and Christians as the divine law given by God to Moses on Mt. Sinai. Most of them are prohibitions in contrast to the beatitudes (pronounced by Christ in the Sermon on the Mount) which are positive, *e.g.*, Blessed are the merciful.

December, the last month of the year in our calendar, and the tenth in the old Roman.

Deciduous Trees are such as shed their leaves at certain seasons as distinguished from evergreens or permanent foliaged trees or shrubs.

Decimal System is based on the unit of 10. **Duodecimal System** is based on the unit of 12. Fractional numbers are expressed as divisions of 10 and 12 respectively. Thus:

Fraction	*Decimal*	*Duodecimal*
$\frac{1}{2}$	0·5	0:6
$\frac{1}{3}$	0·3333	0:4
$\frac{1}{4}$	0·25	0:3
$\frac{1}{5}$	0·2	0:2497
$\frac{1}{6}$	0·1666	0:2
$\frac{1}{8}$	0·125	0:16
$\frac{1}{12}$	0·0833	0:1
$\frac{1}{24}$	0·04166	0:06

Decimal currency was imposed on France in 1795. The United Kingdom changed over to decimal currency on 15 February 1971. The six new coins are:

Denomination	*Value*	*Metal*
½ new penny	1·2*d.*	bronze
1 new penny	2·4*d.*	bronze
2 new pence	4·8*d.*	bronze
5 new pence	1*s.*	cupro-nickel
10 new pence	2*s.*	cupro-nickel
50 new pence	10*s.*	cupro-nickel

Declaration of Independence was an Act by which the American Congress, on July 4, 1776, declared the American colonies to be independent of Great Britain. "Independence Day" is a holiday in the United States.

Defender of the Faith (*Defensor Fidei*), a title conferred upon Henry VIII. by Pope Leo X. in 1521 for entering the lists against Luther with his pamphlet in defence of the Seven Sacraments. After Henry assumed headship of the Church of England the Pope withdrew the title but it was confirmed to him by Parliament in 1554 and has been used ever since by English monarchs.

Deflation is a policy designed to bring down costs by reducing the supply of means of payment. It is usually advocated as a remedy for inflation, and in this connection is often referred to as Disinflation. It usually results in a fall in employment. *See* **G8**.

Dehydrate, to eliminate the water from a substance. The process of dehydration is now used in the food industry, as a result of wartime research, in making such things as dried egg and packet soups. Most vegetables contain over 90% of water, and much of this can be removed under vacuum at low temperatures without appreciably impairing the flavour. The lightness of the dehydrated products is an advantage when supplies have to be transported.

Deliquescence, the process of dissolving by the absorption of moisture from the atmosphere. For instance, chromic acid crystals on exposure to the air quickly deliquesce.

Delta, a triangular tract of land between diverging branches of a river at its mouth, and so called from its general resemblance to the Greek letter Δ *delta*. The best-known examples are the deltas of the Nile, the Ganges, the Niger, and the Mississippi.

Deluge, a flood, commonly applied to the story of the Deluge in the Bible, in which Noah and the Ark figure. A similar tradition lingers in the mythologies of all ancient peoples.

Democratic Party, one of the two great American political parties, originated about 1787, advocating restrictions on the federal governments and in opposition to the federalists. It was in 1825 that a group who were in favour of high tariffs seceded, later to become the Republican Party. The Democratic Party was split again over slavery before the Civil War (1861–65), and in the main the southern states have been supporters of the Democrats. The economic depression helped the Democrats to power in 1932 (*see* New Deal) and they held office until 1953 when Eisenhower became President. In 1960 Kennedy narrowly won the Presidency and in 1964 Lyndon Johnson swept in with a landslide victory over the Republican candidate. In 1968 Humphrey was beaten by Nixon, the Republican candidate. The symbol of the party is a donkey, invented, like the Republican's elephant, by the cartoonist Nash.

Dendrite, a stone or mineral on or in which tree-like tracery appears, the result of the action of the hydrous oxide of manganese.

Density, a measure of the mass per unit volume of a material, usually expressed in grams per cubic centimetre. *Specific gravity* is the ratio of the density of a material at the temperature under consideration to that of water at the temperature of its maximum density (4 ° C). In grams per cubic centimetre the density of gold is 19·3, silver 10·5, lead 11·3, water 0·99997, air 0·00129.

Depreciation of a currency is a fall in its relative value in terms of gold or of other currencies. The term is most often used to indicate a fall in the value of one country's money in relation to others.

Depression, a region where barometric pressure is lower than that of its surroundings. These areas of low pressure enclosed by the isobars are usually less extensive than anticyclones and may vary from 100 to 1,000 miles in diameter. The winds, often of gale force when the depression is deep, blow round the system in an anti-clockwise direction in the Northern Hemisphere (in the reverse direction in the Southern Hemisphere) and inwards across the isobars. The majority of depressions which cross the British Isles travel from the Atlantic, sometimes in series or families, at rates of between a few miles and 700 miles in a day, bringing their generally unsettled weather with them.

Deserts, vast, barren, stone or sandy wastes where there is almost no rainfall and little or no vegetation. These regions are found in the interior of the continents Africa, Asia, and America between 20° and 30° north and south of the equator. Europe is the only continent without deserts. The most famous are the Sahara, the largest in the world, the Gobi desert of central Asia, the Kalahari desert of south-west Africa, and the great Australian desert.

Detention Centres in Britain are for young people (boys and girls) over 14 but under 21 who have been found guilty of an offence for which an adult could be sent to prison. Controlled by the Home Office.

Determinism and Free-will. *See* Section J.

Deuterium or "heavy hydrogen." The second isotope of hydrogen; the third is called tritium. Deuterium atoms have in their nuclei a neutron as well as a proton; tritium nuclei have two neutrons and one proton. In ordinary hydrogen gas about one out of every 5,000 atoms is a deuterium atom. Deuterium was discovered in 1932 by Professor Harold Urey. The oxide of deuterium corresponding to water is called "heavy water." The nucleus of the deuterium atom is called a deuteron. An anti-deuteron consisting of an anti-proton and an anti-neutron was produced at Brookhaven in 1965, the first compound anti-nucleus ever to be produced.

Devaluation is a definite, official downward valuation of a country's currency in terms of its exchange value with other currencies. The £ was devalued in 1949, when an official exchange rate of £1 = $2.8 was established, and again in 1967, to a rate of £1 = $2.4. Since 1972 there has been greater flexibility in exchange rates and national currencies have been allowed to "float". *See* Section G, Part IV.

Devonian System in geology refers to the strata between the Silurian and the Carboniferous Formations. It includes the Old Red Sandstone Formation. The fauna of the Devonian include the group of fishes known as the Rhipidistra (on the evolutionary route towards the amphibians), Actinistia (coelacanth), and the Dipnoi or lung fishes. *See* F45.

Dew, moisture deposited by condensation of water vapour on exposed objects especially during calm, cloudless nights. The loss of heat from the ground after sunset, by radiation, causes the layer of atmosphere close to the surface to be chilled below the temperature, known as the dew-point, at which the air is saturated with vapour. Part of the vapour condensed may be transpired from blades of grass and foliage of plants.

Dew Pond is a shallow artificial pond which is on high ground and rarely dries up, even during prolonged droughts, despite being used by cattle and sheep as a drinking source. The name arose from the belief that dew deposits at night provided the moisture for replenishment. Drainage of rain-water and mist condensed on neighbouring trees and shrubs are probably more important factors.

Dialectical Materialism. *See* Section J.

Diamond, a mineral, one of the two crystalline forms of the element carbon (the other is graphite), the hardest known substance, used as a gem and in industry. India was the first country to mine diamonds (the Koh-i-noor, known since 1304, came from Golconda near Hyderabad). The celebrated diamond mines of South Africa were discovered in the 1870s. Other important diamond producing countries are Zaire, USSR, Congo, Ghana, Sierra Leone, S.W. Africa, Angola, Tanzania. The world's biggest diamond is the 3,106-carat Cullinan, discovered near Pretoria, South Africa, in 1905. Diamonds can be made artificially by subjecting carbon to very high temperatures and pressures; many industrial diamonds are made this way. Antwerp is the main diamond centre of the world, London the main marketing centre, Amsterdam the main diamond cutting centre.

Diatoms. One-celled algae, common in fresh and salt water. Distinctive feature is the siliceous wall which is in two halves, one fitting over the other like the lid of a box. These walls are often very finely and beautifully sculptured. The diatoms constitute a class of the plant kingdom known as the Bacillariophyta. *Diatom ooze* is a deep-sea deposit made up of diatom shells. *Diatomite* or *diatomaceous earth* is the mineral form that such diatom oozes assume (sometimes known as kieselguhr which mixed with nitroglycerine yields dynamite).

Diatonic Scale. The ordinary major and minor scales on which most European music is built, *e.g.*,

C major	C – D – E – F – G – A – B – C
Tone intervals	1 – 1 – ½ – 1 – 1 – 1 – ½
C minor	C – D – E♭ – F – G – A♭ – B♭ – C
Tone intervals	1 – ½ – 1 – 1 – ½ – 1 – ½

Dies Irae (the Day of Wrath), a famous 13th-cent. Latin hymn of the Roman Catholic Church, part of the Requiem Mass.

Diesel Engine. A compression-ignition engine. The air in the cylinder is compressed to over 500 lb. per sq. in. and its temperature is about 800° F.; oil injected into the hot compressed air ignites immediately. The modern oil engine has been evolved mainly from the principles enunciated by Herbert Akroyd-Stuart in his patent of 1890 and, like the steam and other inventions, represents the improvements achieved by many men, including those by Rudolf Diesel of Germany, in respect of high compression pressures and greater fuel economy.

Diet, in German history, an assembly of dignitaries or delegates called together to debate upon and decide important political or ecclesiastical questions. The most famous imperial Diets were those held at Worms (1521), Speyer (1529), and Augsburg (1530), all of which dealt with matters of religious conflict arising from the Reformation.

Diffusion is the process of mixing which occurs when two liquids or gases are in contact. It is most rapid between gases, and, as laid down by Graham's law, "the rates of diffusion of different gases are in the inverse proportion to the square roots of their relative densities."

Diffusion arises through the continual movement of molecules. Even in solids diffusion can occur. If a block of gold and a block of silver are welded together, after some time particles of gold are found in the silver, and *vice versa*.

Dimensions in common speech are the magnitudes of length, breadth, and thickness giving, the size of an object, thus a line has only one dimension: length; a plane surface two: length and breadth; and a solid three: length, breadth, and thickness. In mathematics, hypothetical objects with any number of dimensions are considered. In physics and mechanics, dimensions are numbers which relate the units in which any quantity is measured to the so-called fundamental units. The latter are usually but not necessarily those of length, mass, and time. "Dimensional analysis" is an important technique of scientific reasoning.

Dimorphism, the quality of assuming two distinct forms. For instance, carbon, which is graphite in one form, is the diamond in another.

Dinosaur, the name given to a group of extinct reptiles of the Mesozoic period, some of which were of immense size—much larger than crocodiles. *See* **Diplodocus.**

Dip Needle. Instrument for measuring the *dip* or inclination of the earth's magnetic field.

Diplodocus, one of the best known of the extinct mammoth dinosaurs. Fossil remains have been discovered in the Jurassic rocks of the United States. Some reached a length of over 80 ft.

Dipnoi *or* **Lung Fishes.** These have the air bladder adapted to function as a lung, and they can remain alive when the stream or marsh in which they live dries up. Species of lung fish occur in Australia, Africa, and S. America.

Diptera, an order of insects. Their main characteristic is that they are two-winged, and the common house-fly is the best-known example. There are at least 50,000 species of these insects, including gnats, blow-flies, mosquitoes, tsetses.

Diptych was a folding two-leaved tablet of wood, ivory, or metal, with polished inner surfaces, utilised for writing with the style by the ancient Greeks and Romans. The same term was applied to the tablets on which the names of the persons to be commemorated were inscribed in the early Church. In art any pair of pictures hinged together is styled a diptych.

Discus, a circular piece of metal or stone about 12 in. in diameter, used in athletic contests by the ancient Greeks and Romans. Throwing the discus was a very favourite game, which was deemed worthy of celebration in Myron's famous *Discobolus* (c. 460 B.C.–450 B.C.), the best copy of which is in Rome.

Disk, an astronomical term denoting the seemingly flat surface of celestial bodies as seen by the eye.

Distillation, a process used to separate liquids of different boiling points. This is effected by placing the mixture in a distillation apparatus and heating. The liquid with the lower boiling point distils over first, the vapour being condensed and collected, forming the first *fraction*. With continued heating the second liquid reaches its boiling point, distils over and the mixture is said to be *fractionated*. Mixtures of liquids with close very high boiling points require more elaborate apparatus. Fractional distillation is a common process in the chemical industry, particularly in the refining of petroleum.

DNA (Deoxyribonucleic acid), a polymer molecule in the form of a double-strand helix containing many thousands of sub-units. Contains the genetic information coded in sequences of sub-units called bases. The Nobel Prize for medicine was awarded in 1962 for the discovery of the structure of DNA; that for 1968 for interpreting the genetic code and its function in protein synthesis. *See* **Nucleic Acids.**

Docks are enclosed water spaces where ships rest while being loaded or unloaded, repaired, or waiting for cargo. There are three main types: the wet dock in which water is maintained at the level of high tide so that vessels remain afloat while loading and unloading; the tidal dock, with open entrance to permit free ebb and flow of tide (*e.g.*, Glasgow, Southampton (which has double tides)); and the dry dock, or graving dock, for overhauling and repairing vessels, so constructed that, after a ship has been docked, the water can be drawn off (*e.g.*, Southampton, Tilbury). The floating dock is a type of dry dock. The Port of London Authority operates four main groups of docks. With the closing of some of the older up-river docks, down-river docks, notably at Tilbury, have being extensively developed. Technological advances in the handling of cargo, *e.g.*, containers (sealed boxes of cargo), have led to modernisation of the docks and labour practices.

Dodo, an extinct bird, giant and flightless, which lived on the island of Mauritius up until 250 years ago. Another species, the white dodo, lived on Réunion. Some reached exceptional sizes. By the end of the 17th cent. Mauritius, Rodriguez, and Réunion had all been colonised, and the dodo along with many other birds vanished forever because of their inability to stand up to man and the animals imported into the islands.

Dog-days, a period of 40 days (3 July–11 Aug.) when Sirius rises and sets with the sun. The ancient superstition, which can be traced back in Greek literature to Hesiod (8th cent. B.C.), was that this star exercised direct influence over the canine race.

Doge, the chief magistrate in the former republics of Venice (697–1797) and Genoa (1339–1797, 1802–5).

Dogfish, a large family of small sharks, seldom more than 3 ft. in length. The flesh is sold as "rock salmon." The eggs are contained in horny cases called "mermaid's purses." The commonest of the British dogfishes are the spur-dogs.

Doldrums, a nautical term applied to those areas of the Atlantic and Pacific towards which the trade winds blow and where the weather is calm, hot, and sultry but liable to change suddenly to squall, rendering navigation difficult.

Dolomite, a name applied to a limestone containing appreciable magnesium; also the mineral dolomite, a double carbonate of magnesium and calcium.

Dolphin, an ocean mammal of the whale order, from 6 to 8 ft. long, with a long, sharp snout, and of an active disposition. They abound in most temperate seas and swim in shoals. A few species live in large rivers (Ganges and Amazon). They can cruise for long periods at around 15 knots and produce bursts of speed in the region of 20 knots, the water apparently flowing smoothly past their bodies. Dolphins are some of the most intelligent of mammals and are currently the subject of scientific experiments in communication.

Dome, a large cupola, hemispherical in form, rising over the main building of a cathedral or other prominent structure. The finest existing dome, that of the Pantheon at Rome, is also the oldest, dating from the time of the Emperor Hadrian. It is 142 ft. in diameter and about the same in height. The dome of St. Peter's, in the same city, has a double shell, is 330 ft. high and 140 ft. in diameter. The dome of the cathedral at Florence is 139 ft. in diameter and 310 ft. high, and that of St. Paul's, London, has 3 shells and is 112 ft. in diameter and 215 ft. high. The circular reading-room of the British Museum has a dome 140 ft. in diameter and is 106 ft. high. Malta's Mosta dome is also famous.

Domesday Book is the famous register of the lands of England framed by order of William the Conqueror. According to Stowe, the name was derived from *Domus dei*, the name of the place where the book was deposited in Winchester Cathedral; though by others it is connected with doom in the sense of judgment. Its compilation was determined upon in 1084, in order that William might compute what he considered to be due to him in the way of tax from his subjects. William sent into each county commissioners to make survey. They were to inquire the name of each place, the possessor, how many hides of land were in the manor, how many ploughs were in demesne, how many homagers, villeins, cottars, serving men, free tenants, and tenants in soccage; how much wood, meadow, and pasture; the number of mills and fish ponds; what had been added to or taken away from the place; what was the gross value at the time of Edward the Confessor. So minute was

the survey that the Saxon chronicler of the time reports "there was not a single hide, nor one vintage of land, nor even, it is shame to tell, though it seemed no shame to do, an ox, nor a cow, nor a swine was left that was not set down." The record, which did not take in Northumberland, Cumberland, Durham, and parts of Lancashire and Westmorland, was completed on Nov. 15, 1085, and was comprised in two volumes—one a large folio, sometimes called the Little Domesday, which deals with Essex, Norfolk, and Suffolk, the other a quarto, sometimes called the Great Domesday. The first is written on 384 double pages of vellum in one and the same hand, and in a small but plain character, each page having a double column. The quarto is written on 450 pages of vellum, but in a single column and in a large, fair character. The original is preserved in the Public Record Office. *See also* Danegeld.

Dominicans, an order of mendicant preaching friars founded by St. Dominic in Languedoc in 1215 and confirmed by the Pope in 1216. The rule of the order was rigorous. The dress was a white habit and scapular with a long black mantle. This gave them the name of Black Friars. Their official name is Friars Preachers.

Donjon, the keep, or inner tower of a castle, and the strongest and most secure portion of the structure. This was the last refuge of the garrison, and there was usually a prison on the lower floor, hence the name *dungeon*.

Don Juan, the legendary hero of many famous works, supposedly based on the life and character of the unscrupulous gallant Don Juan Tenorio of 14th-cent. Seville. The first dramatisation of the legend and the most famous is Tirso de Molina's *El Burlador de Sevilla*. Don Juan was also the subject of Molière's *Le Festin de Pierre*, Mozart's *Don Giovanni*, Byron's *Don Juan*, and José Zorilla's *Don Juan Tenorio*. The latter is played on All Saints' Day throughout Spanish-speaking countries.

Don Quixote, the "knight of the doleful countenance," the hero and title of Cervantes' classic novel of 16th-cent. Spain. Don Quijote de la Mancha, a gentle country gentleman of lofty but unpractical ideals, having read many chivalric romances, believes he is called upon to redress the wrongs of the world. Mounted on his nag Rosinante and accompanied by his companion Sancho Panza, a hard-headed and practical peasant, he sets out on his journeys of knight-errantry.

Dormouse, a family of small, squirrel-like rodents widely distributed throughout Europe and Asia, and living mainly on fruit and nuts. It is of nocturnal habits and sleeps through the winter.

Dot, a French term indicating the property which a wife brings to her husband on marriage and is usually settled on the woman, being her separate property, though the income from it may go towards the general household expenses.

Dotterel, a handsome bird of the plover family found in northern Europe and Siberia. Nests in the Cairngorms, the Grampians, and E. Ross. Very tame.

Doukhobors. *See* Section J.

Drachm (or **Drachma**), an ancient Greek silver coin and weight. One drachma was equivalent to six obols. The word has survived as the name of a weight: Avoirdupois, one-sixteenth part of an ounce; Apothecaries' Weight, one-eighth part of an ounce.

Drag. Term used in mechanics for resistance offered by a fluid to the passage of a body moving through it. When speed of sound is reached drag increases abruptly. The lift/drag ratio gives the aeroplane designer his measure of aerodynamic efficiency.

Dragon, a fabulous monster common to folk-lore in most countries; generally represented as a winged reptile with fiery eyes and breath of flame. A dragon guarded the garden of the Hesperides; in the New Testament there is mention of the "dragon, that old serpent, which is the devil"; St. George, England's patron saint, is supposed to have overcome the dragon; mediaeval legend abounds in dragons; in heraldry the dragon has also a conspicuous place; and in China it was the imperial emblem.

Dragonade, the term given to the series of persecutions of Huguenots in France in the reign of Louis XIV., just before and after the revocation of the edict of Nantes, dragoons being chiefly employed in the work. Since then the term has been used in reference to any onslaught on the people by soldiers.

Dragonet, the name of the fish of the *Callionymus* genus, beautifully coloured, and about a foot in length. They are common on the British coast and in the Mediterranean.

Dragon Fly, the common name of a well-known order of insects having two pairs of membraneous wings, and often of very brilliant colours. They are swift of flight and may be seen hovering over sheets of water in the sunshine all through the summer. Their chief food is mosquitoes.

Dragon's Blood, a dark-red resinous substance obtained from the fruit of a Malay palm, and possessing medicinal virtues. In a special technique used for making line blocks in printing, dragon's blood is used.

Drawbridge, a bridge that can be lifted up so that no passage can be made across it. It was a usual feature of a fortified castle in the Middle Ages, and was raised or lowered by chains and levers. It spanned the fosse, and on the approach of an attacking party was raised and formed a special barricade to the gate. Modern drawbridges are such as are raised to allow of the passage of boats up and down a river or estuary. The Tower Bridge is a famous London bridge of this type.

Drongo. The King Crow or Indian Black Drongo is frequently seen in India perched on branches or telegraph wires, darting suddenly to catch insects and to attack crows and hawks. Other members of the family are found in Asia, Africa, and Australia. Its plumage is black with steel-blue gloss.

Drosophila *or* **Fruit Fly**. More has been learnt by geneticists from breeding experiments with this insect than with any other.

Dross, the name generally applied to the refuse of molten metal, composed of slag, scales, and cinders.

Drought, a period of dry weather, is a normal and recurring condition in many warm climates, and is frequently provided against by irrigation. In the British Isles really long rainless spells are somewhat rare, and an "absolute drought" is defined officially as a period of at least fifteen days on each of which the rainfall is less than $\frac{1}{100}$ inch. The summer of 1959 was wholly without precedent in all parts of Britain for lack of rainfall, abundant sunshine, and warm weather. In South Yorkshire an absolute drought lasted 59 days, the longest period in British records.

Druidism. *See* Section J.

Drupe is the scientific term for stone fruit. The stone forms the inner part (endocarp) of the fruit, and encloses a seed or kernel which is liberated after the fleshy part (pericarp) has rotted.

Dry-rot, the term was first used about 1775 to describe the fungal decay of timber in buildings. Creosote distilled from coal tar is the standard material for preservation of timber, and pentachlorophenol and copper naphthenate are two compounds now extensively used. Dry wood always escapes dry-rot. Chief fungi causing dry-rot are *Merulius* and *Poria*.

Duck, water bird smaller than the related goose and swan, which together form the family Antidae. Duck refers to the female, drake to the male. The duck family falls into two separate groups; the river or freshwater (surface feeding) ducks, such as the mallard, pintail, wigeon, shoveler, mandarin, teal, garganey; and the sea (diving) ducks, such as the goldeneye, pochard, scoter, eider, and the fish-eating mergansers or "sawbills." The ancestor of all domestic breeds, with the exception of the muscovy, is the mallard.

Duckbill, *Ornithorhynchus anatinus*, also duck-billed platypus, a fur-covered, egg-laying, nest-building mammal inhabiting Australia and Tasmania. It has webbed feet and a muzzle like a duck's bill and is about 20 in. long.

Ductility is a property possessed by most metals which renders them capable of being stretched without breaking. Gold is the most, and lead the least ductile of metals, the order being gold,

silver, platinum, iron, copper, palladium, aluminium, zinc, tin, lead. In animated nature the spider and the silkworm produce secretions of notable ductility.

Dugong. A marine mammal, belonging to the order Sirenia (sea-cows). Inhabits Red Sea and Indian Ocean; also found as far East as the Philippines and Australia. Lives on seaweed. Related to the Manatee.

Duke, the highest rank in the British peerage next to that of a royal prince. Edward, the Black Prince, eldest son of Edward III., who died before his father, was the first English duke, being created Duke of Cornwall in 1337. Since then all Princes of Wales have held that title.

Dukeries, a range of English woodland and park country, mainly in Nottinghamshire, comprising the adjacent demesnes of several English dukes and nobles. The Dukeries include Sherwood Forest and the estates of Welbeck Abbey, Clumber Park, Worksop Manor, and Thoresby Hall.

Dunes. Sand dunes are elliptical or crescent-shaped mounds of loose sand produced by wind action. The dune has a gentle slope on windward side; a steep slope on the leeward side.

Dunlin, very common small wading-bird of the Sandpiper family nesting in Britain. Its range extends to other areas where it also breeds.

Dunmow Flitch, a custom which originated in the parish of Little Dunmow, Essex, in the reign of Henry III., which was that the husband who was prepared to swear before the prior, convent, and townsfolk of Dunmow that he had not repented of marriage or quarrelled with his wife for a year and a day, should be rewarded with the gift of a flitch of bacon. The custom has frequently been revived.

Dunnock (*Prunella modularis*), a small bird of rich brown and dark grey plumage common in gardens and hedgerows. Sings a cheerful song all the year round. Called hedge-sparrow in southern England. Another member of the same family, the larger Alpine Accentor (*Prunella collaris*), is found on rocky mountain slopes of Europe and Asia.

Duodecimo, a sheet of paper folded into twelve leaves, written "12mo."

Durbar, a term used in India from the Persian word *darbár* meaning "court" or "audience." It may be either a council for administering affairs of state, or a purely ceremonial gathering. The word was applied to great ceremonial gatherings like Lord Lytton's durbar for the proclamation of the Queen-Empress in 1877 and the Delhi durbar of 1911.

Dust, solid particles of matter floating in the atmosphere, produced chiefly by volcanic eruptions, sand-storms in desert regions, and industrial and domestic smoke. When the island of Krakatoa erupted in 1883, more than 1 cubic mile of dust was thrown into the air and carried three times round the earth by the explosion wave. The particles in dust-storms are much finer than those in sand-storms and are swept up to far greater heights. The local whirlwinds which form over loose dry soils are termed dust-devils.

Dyke. A wall-like intrusion of igneous rock which cuts across the bedding or other layered structure of the country rock; the word also signifies in alternative usage, a sea-wall and an open drain.

Dynamite, a powerful explosive whose chief element is nitro-glycerine. It was discovered by Nobel in 1867, who absorbed nitro-glycerine in kieselguhr; has a disruptive force of about eight times that of gunpowder.

Dynamo. Machine for transforming mechanical energy into electrical energy. Depends on principle of electromagnetic induction whereby a current is produced in a conductor (*e.g.*, copper wire) traversing a magnetic field. The two essential parts of a dynamo are the conductors or *armature* and the *field magnets*.

Dynasty, a succession of monarchs of the same family, as the Carlovingian dynasty, the Bourbon dynasty, the Plantagenet dynasty, etc.

E

Eagle, large bird of prey with huge hooked bill, related to the buzzard, kite, hawk, harrier, falcon, and vulture, together forming the family Falconidae. There are many species to be found throughout the world, the Golden, Imperial, Tawny, Spotted, and Lesser Spotted being found in Europe. The Golden Eagle, a magnificent-looking bird, nests in the Scottish Highlands, and the White-tailed Sea Eagle, which used to breed in Britain, is now only an occasional visitor. The eagle has been the symbol of royal power since the earliest times, and the American or Bald Eagle is the emblem of the United States.

Earl, a British title of nobility of the third rank, duke and marquis coming first and second. The title dates from Saxon times, and until 1337 ranked highest in our peerage.

Earl-Marshal, in England ranks as the eighth of the great officers of state, is head of the College of Arms, attends the sovereign in opening and closing the session of Parliament, arranges state processions (especially coronations) and assists in introducing newly created peers in the House of Lords. The office is hereditary in the family of the Dukes of Norfolk.

Earth, our habitable globe, is the third of the planets of the solar system in order from the sun, and on an average throughout the year takes 24 hours to turn completely round relative to the sun, the whole earth revolving round the sun in a slightly elliptical orbit once in a year of 365·2564 days. The mean distance of the earth from the sun is 93,004,000 miles. The shape of the earth is that of an oblate spheroid, its equatorial and polar axes measuring 7,926 miles and 7,900 miles respectively. Recent earth satellite studies have shown that it is even more pear-shaped than used to be thought with the north polar region having a definite stem and the south polar region a marked depression. Why this should be is not known. The crust consists of an outer layer of surface soil of varying thickness, beneath which there is a mass of hard rock several miles deep, the percentage (by weight) of the principal elements present being oxygen 47, silicon 28, aluminium 8, sodium and potassium 5, iron 4·5, calcium 3·5, magnesium 2·2, titanium 0·5, hydrogen 0·2, carbon 0·2, phosphorus and sulphur 0·2. Mass of the earth is estimated to be 6,000 million million million tons. Two-thirds of the earth's surface is covered with water. It has only one satellite, the moon. The earth receives more light from the sun in 13 seconds than it does from the moon in one year. Weather changes are independent of the moon. A recent estimate of the age of the earth is 4,750 million years. Recent discoveries suggest that the earth is embedded in the atmosphere of the sun and that some of the heat that reaches us from the sun gets here by direct conduction through interplanetary space. *See* F8–9.

Earthquake, a sudden violent disturbance of the earth's crust; the region of the surface immediately above the "focus," or source where the earthquake originates, is termed the "epicentre." On account of their destructive power earthquakes have attracted attention from the earliest times, but accurate study dates only from the last century and the development of a world-wide network of recording stations from the present one. The majority of severe earthquakes result from fractures, usually along existing faults, in underlying rock strata subjected to great strains, the shearing movement sometimes extending to the surface. These dislocations set up vibrations which are propagated as waves throughout the bulk of the earth or round the crust. Frequently the main shock is followed by a series of smaller after-shocks. Minor local earthquakes may be attributed to the effects of volcanic activity, but most of the larger ones originate in non-volcanic regions along well-marked lines of weakness in the earth's crust. Generally the ground is felt to tremble, undergoing oscillations which may gradually or suddenly increase to a maximum and accompanied by sounds. Where there is movement of the sea-bed a tidal wave may result. One of the greatest of historic times was that which destroyed and flooded Lisbon in 1755. Among the notable shocks of the present century rank those of San Francisco (1906), Messina, Italy (1908), China (1920), Japan (1923), Napier, New Zea-

land (1931), N.E. Assam (1950), Ionian Is. (1953), Agadir, Morocco (1960), Chile (1960), Iran (1962), Yugoslavia (1963), E. Turkey (1966), W. Sicily (1968), Peru (1970). *See also* F9(1).

Earthworm, of which there are several species, has a cylindrical body, tapering at both ends, and segmented into rings. It moves by contraction of its rings, aided by retractive bristles; is eyeless, but has a mouth, gullet, and stomach. Earthworms exist in immense numbers, and perform an important part in the scheme of nature by loosening the soil and rendering it more amenable to tillage. They also form a valuable food for birds and many mammals, and are unequalled as bait for certain kinds of fish.

Earwig, a genus of insects possessing two pairs of wings and anal forceps. It is nocturnal, lives on vegetable matter, and hides by day under stones or in flowers, *e.g.*, dahlias. The old belief that it deliberately creeps into people's ears is altogether unfounded. *See* T30(2).

Easter, the annual Christian festival in commemoration of the resurrection of Christ, the English name being derived from Eostre, goddess of Spring. The date cannot fall earlier than March 22 nor later than April 25. Many disputes arose among the early Christians as to the proper time to celebrate this day which governs all other movable feasts. It was eventually ruled at the Council of Nicæa in 325 that Easter Day should be the first Sunday after the full moon following the vernal equinox. If this happens to be a Sunday, then Easter Day is the Sunday after. It should be remembered, however, that this moon is a hypothetical moon of the ecclesiastical calendar, quite imaginary, and generally one or two days later than the real moon we see in the heavens. In fact the reverend fathers at Nicæa did us a bad turn in having anything to do with the moon but then they had no Astronomer Royal to advise them of the complications. *See also* Section N.

Eastern Question, a term formerly applied to the problems arising from the instability of the Mohammedan power of Turkey and its relations with the other nations of Europe. Later connected with other problems of the Near East, such as the possession of Constantinople and the position of the Balkan states.

East India Company was incorporated by Elizabeth in 1600. In 1613 the Company set up a factory at Surat, India, and in 1662 Bombay came under the Company's influence and developed into an important trading port. Dupleix wanted to establish French power in India and a struggle for supremacy took place. Clive gained the victory for England and thenceforward British dominion in India remained undisputed except by native princes. In 1772 Warren Hastings was appointed the first Governor-General and in 1784 Pitt's India Act established a Board of Control for the India Company. A great increase of trade resulted, and this rule continued down to 1858, when, as a result of the mutiny, the Crown assumed the sovereignty. With the passing of the Indian Independence Act of 1947, British dominion ended and India was handed back to the Indians.

Eau-de-Cologne, a popular distilled perfume first manufactured at Cologne in the 18th cent. by Johann Maria Farina, an Italian, and since made in large quantities in Cologne and elsewhere.

Ebony, a name applied to various hard black woods, the best of which are grown in Mauritius and Ceylon. There are also Indian and American varieties. Only the inner portions, the heartwood, of the trees are of the necessary hardness and blackness. Ebony is largely used in ornamental cabinet work, for piano keys, canes, etc.

Ecce Homo ("Behold the Man!"), used in reference to the pictures and sculptures representing Christ crowned with thorns.

Ecclesiastical Courts, courts for administering ecclesiastical law and maintaining the discipline of the Church of England. Introduced by the Normans. Originally they had jurisdiction over both clergy and laity. *See also* D28(1).

Eclipse, the partial or complete obscuring of one heavenly body by another. An eclipse of the sun occurs when the moon, which is 1/400th of the diameter of the sun and about 1/390th as far away, obscures some portion of the sun as seen by an observer on the earth. A total eclipse occurs when the whole of the sun's disc is covered by the moon. Astronomers travel many thousands of miles to observe the outer layers of the sun and its corona, which is only possible when the light from the sun is totally obscured by the moon during the few minutes of an eclipse. The total solar eclipse of 7 March 1970, as seen from Mexico, was watched by millions on their television screens. Total solar eclipses have occurred over parts of the British Isles in the years 1424, 1433, 1598, 1652, 1715, 1724, 1927, 1954 (visible from the Shetland Is.), and the next will be seen only from near Land's End on 11 August. 1999.

Ecliptic is the sun's apparent path in the sky: the great circle described by the sun from west to east in the course of a year. The sun is exactly on the equator on approx. March 21, and Sept. 23, and the points where the celestial equator and ecliptic intersect on these days are called the *equinoctial points*. On approx. June 21 and Dec. 22 the sun reaches its greatest and least midday elevation and its greatest distance north and south of the equator, and the points on the ecliptic on these days are called the *solstices* (*see* Seasons, Section N). These four points are equidistant from each other by 90°. The equinoctial points are not fixed. The angle of inclination of the ecliptic to the equator is called the obliquity of the ecliptic which is also variable, being influenced by the gravitational action of the other planets on the earth. At present the angle is 23½°.

Ecumenical Council, a general council of the Christian Church summoned when important questions of Church doctrine and policy are to be decided. The early councils were predominantly Greek and convoked by the emperor. Those summoned by the pope when they meet at the Lateran Palace in Rome are called Lateran Councils; others have met at Constance, Florence, Trent, and the Vatican. Their decisions are not binding on the rest of Christendom. Only 21 Ecumenical Councils have been held in the history of Christendom. The first was held at Nicæa in 325 when the mystery of the Trinity was defined. The 21st (known as the 2nd Vatican Council), convened by Pope John, opened in Oct. 1962 in St. Peter's, Rome, and ended in Dec. 1965. Two of the principal themes were the reunion of all Christians with the Church of Rome and the Church's place in the modern world. At the last session of the Council the Pope announced his decision to establish for the first time an international synod of bishops in Rome for consultation and collaboration in the government of the Roman Church. This Senate of Bishops will provide the balancing factor alongside the Curia, which represents the Papacy and not the episcopasy.

Edda, the name given to two important collections of early Icelandic literature—*the Elder or Poetic Edda*, poems handed down from the 9th and 10th cent., probably Norwegian in origin, and the *Younger* or *Prose Edda* of Snorri Sturluson compiled about 1230. They treat of mythical and religious legends of an early Scandinavian civilisation.

Eddystone Lighthouse, 13 miles south of Plymouth, is one of the most isolated in the world. The tower is 168 ft. high, and its light can be seen for 17½ miles. The present structure is the fourth that has occupied this dangerous position. The first was of wood, completed by Winstanley in 1698, but it was destroyed by storm in 1703. In 1708 a second and stronger lighthouse was built by Rudyerd. This lasted until 1755, when it was destroyed by fire. Smeaton built the third lighthouse of granite and this withstood storm and tempest for over a hundred years, 1759–1881. The present lighthouse, also of granite, was built 1879–81 on a nearby rock by Sir James Douglass.

Edelweiss, a white perennial flower of the daisy order, common in Alpine regions.

Education, History of. *See* Section J.

Eels, edible fishes of the order Apodes, with snakelike body covered with minute scales embedded in the skin. The common or freshwater eel *Anguilla anguilla* is found in the Atlantic coastal areas of N. America and Europe and in the Mediterranean, and breeds S.E. of Bermuda. The electric eel of S. America

is a variety of great interest, being able to cause electric shocks.

Egret, a slender, graceful bird of the heron family, of pure white plumage, famed for its beautiful silky plumes (aigrettes), which appear in the breeding season, and for which it was ruthlessly hunted and would have been exterminated had not international action been taken to protect it. The Little Egret with black bill, black legs, and yellow feet breeds in Mediterranean lands.

Eider, a large diving duck, found along the rocky coasts of northern latitudes, well known for the beautifully warm soft down, called "eider down," which the female bird plucks from her breast to line her nest. In Norway and Iceland the haunts of the eider are preserved and the birds protected by law on account of the much prized "eider down," which is collected from the nests just before the breeding season. "Eider down" is so elastic that a pound or two of it will fill an ordinary bed covering.

Eiffel Tower, built by the French engineer Alexandre Gustave Eiffel (1832–1923) for the Paris Exhibition of 1889. The tower which is made of iron is 985 ft. high and weighs about 7,000 tons.

Eisteddfod (a sitting) was originally a congress of Welsh bards and minstrels, and dates from before the 12th cent. These assemblies, discontinued for a long period, were resumed in 1819, and have been held yearly since, each lasting three or four days. Their object is to foster the Welsh patriotic spirit; they are devoted to orations and competitions in poetry, singing, and harp-playing, prizes being awarded to the successful contestants.

Eland, largest species of antelope, native of Africa; large pointed horns, stands 5 feet high at the withers, and weighs several hundred pounds.

Elder, small trees of the *Sambucus* genus, with pinnate leaves, and clusters of white flowers and, later, small purplish-black berries. The black elder, the best known, is common in most parts of Europe, and thrives in Britain. A wine is made from its berries.

El Dorado, a "golden land," was an idea much favoured in the days of the early Spanish explorers. It was believed that somewhere on the South American continent there was a country abounding in gold and precious stones. Many expeditions were fitted out to discover it. Sir Walter Raleigh also went forth on this illusive quest. The term is still used in regard to any place of rich promise.

Electret, a piece of solid matter which retains a permanent electric polarisation analogous to the magnetic polarisation of a permanent magnet. There are various recipes for making them; carnauba wax is a common constituent.

Electricity. *See* F18, *also* Energy Conversion.

Electric Light is produced in several ways, commonly by causing a tungsten wire to heat up to incandescence by passing a current through it. Current may also be forced through ionised gases, causing them to glow. Such discharges include neon lights, sodium and mercury-vapour street-lamps, and various intense electric arcs used for technical purposes. In fluorescent lights an electric discharge causes ultra-violet (invisible) light, which then excites luminosity in certain chemical substances called luminescent materials. Other forms of electric lighting are being investigated.

Electric Telegraph may be said to date from 1836, when Sir Charles Wheatstone and his co-inventor Cooke introduced their Single-Needle instrument, which was soon followed by the Double-Needle apparatus. Morse, in 1837, invented his famous recording instrument. The first electric cable was between Dover and France, and was laid in 1850. The first Atlantic cable was laid in 1858, and the second in 1866. It was in 1899 that the first Marconi wireless telegraph messages were sent between England and France.

Electroencephalograph, an instrument which records the minute voltages produced by the electrical activity of the brain by means of electrodes taped to the scalp. The record of brain waves, known as EEG, shows that there is a general cycle of activity in the brain that underlies both sleep and wakefulness. *See* Q5(2).

Electrolysis is the condition established when an electric current passes through a conducting substance, between electrodes, resulting in decomposition and separation into constituents. Water thus becomes decomposed into hydrogen and oxygen.

Electromagnetic waves. *See* F13.

Electrometer, an instrument for measuring differences of electrical potential. The moving part, perhaps a needle, is affected by electrostatic forces and no current flows through the instrument. High sensitivity can be obtained.

Electron. *See* F10, 14.

Electron Microscope. A microscope in which beams of electrons are focused by magnetic lenses in a manner analogous to the focusing of light beams in the ordinary optical microscope. Modern electron microscopes have very high resolving power and can magnify up to 1,500,000 times, making it possible to explore the cell and the virus. A development of the electron microscope is the scanning electron microscope (stereoscan), recently developed at Cambridge, which can examine an essentially thick object, giving a very large depth of focus. *See* F27(2).

Electronvolt, unit of energy used in nuclear physics. It is the amount of energy required to move one electronic charge through a potential difference of one volt. It is very small—$1{\cdot}6 \times 10^{-12}$ ergs—and therefore suited to atomic physics. 1 MeV = a million electronvolts and this larger unit is used in nuclear energy physics.

Electronics. The science which deals with the behaviour and control of free electrons. It started with the discovery of the electron by Sir J. J. Thomson in 1897. The practical applications, constituting electronic engineering, have given us radio, radar, photo-electric cells, cathode-ray oscillographs, electron microscopes, television. Nowadays electronics uses devices like transistors such that the electrons move inside solid matter instead of *in vacuo*. This is sometimes referred to as "solid state electronics." *See also* Microelectronics.

Electrophorus, a simple device for producing static electricity, consisting of a smooth disc of resin or ebonite mounted on a metal base and with a metal cover carrying an insulated handle. The disc is first electrified (negatively) by rubbing it with a dry catskin or flannel and the cover replaced, the upper surface receiving a positive charge and the lower a negative. On lifting off the cover, after having touched it with the finger, the negative charge leaks away to earth and the positive charge is isolated on the cover. The action may be repeated a number of times before it is necessary to replenish the original charge on the disc. Of historical interest only.

Elements. In chemistry, an element is a substance in the simplest form to which it has been reduced. Ninety elements are found naturally on the earth, one is observed spectroscopically in the stars, and a further twelve have been made artificially. Between them these elements can appear in some 1,200 different isotopes, of which 317 occur in Nature. (There are 274 stable isotopes among 81 stable elements.) *See* F6, 20, *also* end p. Sec. F.

Elephant, a proboscidian mammal of which only two species survive—the Asiatic, in India, and the African elephant. No other animals possess a trunk. Both males and females have large ivory tusks, of considerable commercial value. The Indian elephant is usually about 9 ft. high and weighs about 3 tons; African elephants are larger, weigh about 6 tons, and are usually much fiercer. Several fossil elephants of still larger bulk have been discovered, including the mammoth and the mastodon. The Indian elephant is domesticated and used as a beast of burden, and may live 70 years.

Eleusinian Mysteries, festivals common throughout ancient Greece, agricultural in their symbolism.

Elgin Marbles, a collection of ancient Greek sculptures and architectural fragments got together by the 7th Earl of Elgin and brought to England between 1802 and 1812. These celebrated treasures had originally formed part of the Parthenon at Athens, and were probably carved by pupils of the sculptor Phidias. Lord Elgin expended over £70,000 upon them, and they were purchased for £35,000 for the British Museum, where they can now be seen displayed.

Elk, the largest animal of the deer family, possess-

ing enormous antlers, and standing, when mature, about seven feet high. The American moose is of the same family.

Elm, a stately, wide-spreading tree having some 20 species spread over north-temperate regions, several of which are native and peculiar to Britain. The grandest of the field elms is the English elm, *Ulmus procera*, which may reach a height of 140 ft. and a girth of 25 ft. The wych elm, *U. glabra*, or Scots elm, is a valuable hardwood and used in boat-building. The fungus that causes Dutch elm disease is carried from tree to tree by a bark beetle.

Elzevir, the name of a celebrated family of Dutch printers, who produced editions of Latin, French, and German classics, which were highly valued for their beauty of type and accuracy of printing. They flourished in the 17th cent.

Embalming, the process by which dead bodies are preserved from decay by means of spices and drugs. The art reached perfection in ancient Egypt, as the mummies which still exist so powerfully testify. In modern times many experiments in embalming have been tried, with various degrees of success.

Ember-days are set apart for fasting and prayer in the Western Church, at the periods appointed for ordination, viz., the Wednesday, Friday, and Saturday after the first Sunday in Lent, Whit-Sunday, Sept. 14 (Holy Cross Day), and Dec. 13 (St. Lucia's Day); of very ancient origin.

Embossing, the art of stamping in relief letters or designs upon pliant substances.

Embryology, that branch of biology which deals with embryos, tracing their development from fertilisation of the germ or seed to birth.

Emerald. The rich green variety of beryl (beryllium aluminium silicate). The colour is due to the presence of chromium oxide.

Emery, a granular substance of the corundum order, generally mixed with other metallic substances, and used in a powdered state for polishing and grinding purposes. Emery is mined in Asia Minor and the Grecian archipelago.

Enamel, a vitrified substance applied as a coating to pottery and porcelain. The art was practised by the Assyrians and Egyptians, and was introduced into Europe by way of Greece. Enamels are all either of the transparent or opaque kind, and are susceptible to an immense variety of colouring, according to the metallic oxides introduced.

Encaenia, a festival commemorating a dedication; at Oxford University the annual commemoration of benefactors, accompanied by the conferring of honorary degrees, is held in June.

Encyclical Letters, a term used in reference to letters addressed by the Pope to his bishops upon matters of doctrine or discipline.

Encyclopaedists, a term first applied to the eminent writers who collaborated in the French *Encyclopédie* (1751–65). They included Diderot, D'Alembert, Voltaire, Helvetius; their writings generally were sceptical as to religion, destructive as to politics, and had great influence in popularising the social ideas which afterwards resulted in the French Revolution.

Energy. One of the most fundamental concepts of science. A body in motion possesses *kinetic energy* as a result of the *work* done by the forces creating the motion. But a force which does work to stretch a spring does not create motion. Instead, the work is stored up in the spring and is one example of *potential energy*. A raised body also possesses potential energy which turns into kinetic when the body falls. The *heat energy* contained in a body is the sum of the kinetic and potential energy of the constituent atoms which are vibrating all the time. Heat and motion are obtainable from electrical, magnetic, chemical, atomic, and other sources, and physicists therefore define corresponding forms of energy. The vital point is that all forms of energy are transferable into one another *without loss or gain*. This is the Law of Conservation of Energy. It is one of the most fundamental laws of science, and its general validity is the reason why energy is an important idea. Since Einstein, it has been recognised that mass also is interchangeable with energy. *See* F15, *also* Nuclear Energy.

Energy Conversion. For practical purposes it is frequently necessary to change energy from one into another of its many forms; indeed almost every activity does this in one way or another. The primary sources of energy are the sun, uranium and other elements from which nuclear energy can be drawn, and the tides. The sun is not much used *directly* because its heat is intermittent and not very intense, but solar cookers and refrigerators have been invented and solar batteries (*q.v.*) are used in spacecraft. The sun can be used *indirectly* because it has produced, *via* living processes, fossil fuels like coal and oil and still continues to generate winds, rain, and rivers and hence hydroelectric and wind power. Commonly both fossil fuels and the energy of river or tidal waters are converted into electricity. Windmill type electricity generators are also quite common. The bulk of electricity production is a two-stage process: first fossil or nuclear fuel is used to create heat (*see* Nuclear Reactors); then the heat is used to raise steam and drive generators. Efforts are being made to convert heat into electricity more directly, *e.g.*, by using thermoelectric or thermionic effects (*q.v.*), but these have not been used for large-scale production. Once electrical energy is available, factories can make chemical batteries in great numbers and these can then be used as portable energy sources, as can petrol and other refined forms of fossil fuel. *See* Battery, Fuel Cell, Solar Battery.

Engraving is the art of cutting or otherwise forming designs of pictures on wood, stone, or metal surfaces for reproduction by some method of printing. Wood-engraving was the earliest in the field, dating from the 15th cent. Later, engraving on steel and copper plates was introduced, and mezzotint, lithography, stipple, aquatint, etc. Most modern methods of reproduction are based on photography.

Ensilage, a method of storing and preserving fodder, vegetables, etc., in pits dug in the ground and excluded from air or light. The system was practised in ancient Rome and revived in England in the 19th cent.

Entablature, that portion of a building which surmounts the columns and extends to the roof of the tympana of the pediments; it comprises the architrave, the frieze, and the cornice.

Entomology is the study of insects. *See* Insects.

Entrepreneur. An entrepreneur or undertaker, is a firm which brings together the factors of production needed for producing goods or services undertaking the risks and uncertainties involved—though it may transfer some of them by insurance or by other methods. The entrepreneur may be either an individual or a company or corporation, private or public.

Enzymes. Organic catalysts which accelerate chemical processes occurring in living organisms. There are a large number present in the cell, and most have a high degree of specificity. Enzyme mechanisms are the key to basic biological processes. *See* F25(1), 30(1).

Epaulette, a shoulder badge fringed with cord, worn by English army officers until 1855; now confined to naval officers, and varying in form and richness according to rank of wearer.

Ephemoptera *or* **May-flies**, an order of insects. In the larval condition they exist from two to three years aquatically, but no sooner do they arrive at maturity than their lives are hurried to a close. They rise up in pyramids on warm summer nights, take no food, propagate, and perish. The Latin name expresses the fact that the adults have an ephemeral existence.

Ephod, a vestment worn by a Jewish high priest, and sometimes by priests of lower rank. In olden times it was of rich texture and set with gems.

Epiphany, a church festival celebrated on January 6, Twelfth Day.

Equator, the imaginary great circle of the earth, every point of which is 90 degrees from the earth's poles, and dividing the northern from the southern hemisphere. It is from this circle that the latitude of places north and south is reckoned. The celestial equator is the circle in which the plane of the earth's equator meets the celestial sphere (the imaginary sphere, in which the observer is at the centre, used for representing the apparent positions of the heavenly bodies).

Equinox, the time when the sun crosses the plane

of the earth's equator, making day and night of equal length.

Eras are distinctive periods of time associated with some remarkable historical event or personage. *The Christian era* is computed according to a 6th-cent. reckoning to begin with Jesus's birth, A.D. 1. The date is placed some years too late. Scholars now believe that Jesus was born *c.* 6 B.C. The *Jewish era* dates from 3761 B.C.; the *Julian era* from the alteration of the calendar by Julius Caesar 45 B.C.; the *Mohammedan era* from the date of the *Hejira*, or the flight of Mohammed from Mecca to Medina, which is A.D. 622, July 16, in the Gregorian Calendar.

Erbium, belongs to the group of rare-earth metals discovered by Mosander in 1842.

Erg, the unit of work and energy in the centimetre-gram-second system; the energy involved when a force of 1 dyne moves its point of application through a distance of 1 cm.

Ermine. *See* Stoat.

Ernie, the name given to the "electronic random number indicator equipment", the electronic machine which selected the prizewinning numbers in the first Premium Bond draw held June 1–2, 1957.

Eros. This asteroid is 15–20 miles in diameter. It comes closer to the earth than any other member of the solar system with the exception of the moon and several very small asteroids. Determination of solar parallax based on observations of Eros in 1930–31 yielded the most accurate estimate of the distance of the sun from the earth (93,004,000 miles).

Erse, a term used by Lowland Scottish, and English writers for the Gaelic language spoken in the Highlands of Scotland. Sometimes erroneously applied to Irish, the Gaelic language as spoken in Ireland and revived as an official language in recent times. Dr. Johnson, Sir Walter Scott, and other writers used "Erse" to signify Scottish Gaelic. The language of the Scottish Lowlands (that used by Robert Burns) is related to the English language and not to Gaelic and is variously termed Scots, Braid Scots, the Doric, the Scottish vernacular, and, fashionably of late, Lallans.

Escurial or Escorial, Spanish monastery built in the mountains near Madrid by Philip II to commemorate the victory over the French at Saint-Quentin (1557). A palace was added later and it also includes a church, library and royal mausoleum. Built in granite in sombre style, it is one of the finest buildings in Europe.

Escutcheon, a shield-shaped surface called a field, upon which a man's armonial bearings are represented. A woman's is lozenge-shaped.

Esperanto, an artificial international language created by L. Zamenhof of Warsaw and first published in 1887. It does not seek to replace national languages but to serve as a second language for international communication. It is based on the internationality of many words in the principal modern languages, and is entirely phonetic in spelling and pronunciation.

Esquire, formerly a title applied to a young man of noble birth who attended on a knight and carried his shield. The title ranked next below that of knight and was applied to the eldest sons of knights and the younger sons of peers. Later it became a courtesy title and given to any man as a mark of respect.

Essential Oils are oils derived from plants by distillation or expression, and much used in perfumery as well as to some extent in medicine.

Estate Duty is the duty payable upon the value of all property passing on the death of any person. The charge to duty is not limited to property owned by the deceased but may extend to other property, *e.g.*, to trust funds from which the deceased received income in his lifetime and to gifts made by the deceased within seven years of his death (one year in the case of a gift for public or charitable purposes). For deaths occurring after 23 March 1972 estates not over £15,000 are exempt from duty. On estates of a higher value duty is chargeable by reference to rates ranging from 25 per cent to 75 per cent on successive slices of the estate. Property up to a further £15,000 left to a surviving spouse and up to a further £50,000 to a charity of museum, is left out of account for duty calculation. In his April 1974 Budget the Chancellor announced that he intended to take measures to close the loopholes which prevent estate duty from performing the role assigned to it. A tax on lifetime gifts was to be introduced to take effect from 27 March 1974. *See also* G50.

Estates of the Realm in Great Britain are the Lords Spiritual, the Lords Temporal, and the Commons. They are the great classes invested with distinct political powers, and whose concurrence is necessary to legislation.

Esters. Organic chemicals formed by combining an alcohol with an acid. They have a pleasant smell, and occur naturally in plants as the scent of flowers. Manufactured for use in the perfumery industry, and as flavourings in food. Some esters are used as solvents, notably amyl-acetate ("pear drops") in quick-drying paints. The polymeric fibre "Terylene" consists of chains of molecules containing many ester groups, formed by reacting an alcohol having two alcoholic (OH) groups with an acid having two acid (COOH) groups.

Etching, a process of engraving, on copper usually, the design being drawn with a steel needle, and the lines produced by the action of an acid.

Ether, in chemistry, is a volatile inflammable liquid composed of carbon, hydrogen, and oxygen. It is a valuable anaesthetic obtained by heating alcohol with sulphuric acid. In physics, in the 19th cent., all space was supposed to be filled with a substance called ether, the chief property of which was to carry light waves, *i.e.*, light was supposed to be waves in this all-pervading medium known as the ether. Speculation and experiment concerned with the ether were very fruitful in advancing physics. Ultimately the attempts by Michelson and Morley to detect the motion of the earth through the ether were unsuccessful in this respect but profoundly successful in stimulating the theory of relativity. The ether concept has now been abandoned. *See also* F15(1).

Ethylene. A gas compounded of carbon and hydrogen, it is related to acetylene and ethane. Industrially it is obtained as a by-product in petroleum refining. It has wide uses as a starting material in the industrial manufacture of intermediates, especially alcohol. Its most important application is in the production of polythene (poly-ethylene). *See* Catalyst.

Etruscans, people believed to have come from Asia Minor who colonised Italy about 900 B.C., settled in what is now Tuscany and part of Umbria, reached the height of their civilisation about 500 B.C., and were ultimately absorbed by the Romans. They were skilled technicians in bronze, silver, and goldwork, and excelled in the art of granular decoration.

Eucalyptus. This genus includes 300 species of evergreen, leathery-leaved trees native to Australia. The oils yielded by different species vary a great deal in their scent and other properties and are chiefly used in pharmacy and perfumery; about 30 species produce oils suitable for medicinal purposes. Various species produce timber.

Euro-dollar Market. An international financial market, located mainly in Britain and Europe, for lending and borrowing dollars, *i.e.*, titles to dollar deposits in United States banks. *See* Section G, Part IV.

Europium, element discovered by Demarcay in 1906. A member of the rare-earth metal group.

Evaporation is the process by which a solid or liquid is resolved into vapour by heat. The opposite process is condensation. Wherever a liquid or solid surface is exposed, evaporation takes place into the space above. If the vapour is continually removed the solid or liquid vanishes into vapour; the higher the temperature the quicker the process. If the vapour is confined, then it collects, getting more concentrated until as many atoms of vapour are condensing as are evaporating. The vapour is then said to be saturated. Evaporation of water from sea, soil, plants, skin, etc., is continuously in progress, so it is a process of fundamental importance to meteorology, botany, physiology, industry, not to speak of human comfort and homely activities such as laundering.

Everest Expeditions. For many years after Mt. Everest had been shown to be the highest

mountain in the world, political conditions in Nepal, lying south of the summit, and in Tibet, to the north, prevented mountaineers from attempting an ascent. At last in 1921 the Tibetan authorities gave permission, and the first expedition, organised, as were all subsequent British expeditions, by a joint committee of the Royal Geographical Society and the Alpine Club, and led by Col. C. K. Howard-Bury, was sent out. This was primarily a reconnaissance; besides mapping the northern flanks, it found a practicable route up the mountain. By 1939, six further expeditions had climbed on the northern face. Some were baulked by bad weather, others by problems previously little known, such as the effect of high altitudes on the human body and spirit. Nevertheless, notable climbs were accomplished. In 1924, for example, Col. E. F. Norton reached 28,163 ft., and it was on this expedition that G. L. Mallory and Andrew Irvine were seen going well at about the same height. They never returned, however, and what disaster befell them is not known. After the war, political conditions again closed the Tibet route: permission was eventually obtained from the Nepalese Government to make the attempt from the south. In 1951 a reconnaissance expedition under Eric Shipton reached the ice-fall at the exit of the Western Cwm (a high valley lying south-west of the massif), and reported favourably on the prospects for an ascent. The first attempt from this side was made the following year by a Swiss expedition led by Dr. E. Wyss-Dunant, two members of which made an attempt on the summit, but were stopped at approx. 28,200 ft. by the intense cold and the very strong winds. When the British 1953 Expedition led by Col. John Hunt (now Lord Hunt), was being organised, stress was laid on three main points; proper acclimatisation of the climbers; use of oxygen for the final stages; and the establishment of very high altitude camps, so that the final assault parties would set out fresh and unencumbered. Great attention was also paid to recent developments in diet, clothing, and equipment. In all these matters the 1953 expedition was able to draw on the accumulated experience of their predecessors. By the end of April, a base camp had been established below the ice-fall, and with the aid of thirty-four Sherpa porters supplies had been carried up into the Western Cwm. The next critical stage was the ascent of the steep head of the cwm, the Lhotse face, with the threat of avalanches always present. By most strenuous efforts, a camp was established on the South Col (25,800 ft.) on May 21. From this camp on May 26, T. D. Bourdillon and R. C. Evans climbed the South Peak of Everest (28,720 ft.), then the highest altitude ever attained. On May 28, Edmund Hillary and the Sherpa leader, Tenzing Norkey, spent the night at the highest camp (27,900 ft.) and on the following day, May 29, climbed to the South Summit, negotiated the difficult final ridge, and reached the summit of Everest—the climax of a long, arduous, and stirring endeavour.

Evolution, in the words of Sir Julian Huxley, "a natural process of irreversible change which generates novelty, variety, and increase of organisation". The theory, as laid down by Darwin, is that all existing species, genera, and classes of animals and plants have developed from a few simple forms by processes of change and selection. Up to the time of Darwin a large part of the civilised world believed that life had been created suddenly at the beginning of the world which God had created, according to Archbishop Usher, on 22 Oct. 4004 B.C. The evidence of the rocks, however, has given a more convincing theory of creation, and by studying the fossils preserved in the various layers of the earth's crust the past history of the earth's life has been pieced together. Darwin has been called the Newton of biology. *See* F46–8.

Excommunication, exclusion from the rights and privileges of the Church. It is of two kinds—the major, which means a total cutting off, and the minor, which shuts out only from participation in the Eucharist. In mediæval times, major excommunications were often launched against rulers and leaders.

Exchequer, which derives its name from the checkered tablecloth on which accounts were calculated in early Norman times, is a term connected with the revenues of the Crown. In former times it had jurisdiction in all revenue matters. The term Exchequer is now applied to the Governmental department which deals with the public revenues, the working head of which is the Chancellor of the Exchequer.

Existentialism. *See* Section J.

Exploration. Modern exploration began in the second half of the 15th cent. with the voyages of the great Portuguese and Spanish discoverers. They were followed by sailors of other European nations, who profited from their developments in navigation and from their charts, and in less than one hundred years the coast-lines of much of the Americas, Africa, and south-west Asia had been revealed and the globe circumnavigated. The motives of these early explorers were mixed: they were seeking adventure, trade, plunder, national power, and the conversion of the heathen. Few if any were directly interested in advancing scientific knowledge. But from the reports of their voyages and travels, scholars at home compiled descriptions of the strange new world which stimulated their successors to undertake more systematic enquiries. One of the earliest English expeditions to be despatched for scientific research was that of William Dampier on the *Roebuck*, which was sent out by the Admiralty in 1699 to examine the coasts of North-west Australia. In the 18th cent. British explorers were at work mainly in the Pacific Ocean, with the object of breaking the Spanish monopoly of trade. Capt. James Cook sailed thither in 1769 to observe first the transit of Venus at Tahiti, and then to search for the alleged great southern continent. On this voyage he discovered and charted much of the coasts of New Zealand and the east coast of Australia. On his second voyage he was the first to sail across the Antarctic Circle, and he showed that the southern continent was much smaller than had been supposed. By 1800 the general outlines of the continents, except for Antarctica were known, and explorers in the 19th cent. were largely engaged in opening up the interiors. In Africa British explorers solved two problems which had puzzled men for centuries: Mungo Park and Richard Lander established the true course of the River Niger, and Sir Richard Burton, J. H. Speke, Sir Samuel Baker, and others revealed the true sources of the Nile. The greatest African explorer of that age was undoubtedly David Livingstone, the missionary, who in three great journeys explored the Zambesi and the region of the Great Lakes, spreading the Gospel, fighting the slave trade, and opening up the interior to settlement and trade. In North America Alexander Mackenzie was the first to cross the main breadth of the continent from sea to sea. In Asia motives were also mixed; men like Charles Doughty, who explored in Arabia, and Sir Francis Younghusband, who journeyed from China to India across the Gobi and the Himalaya, were impelled by a love of adventure and the quest for knowledge, but political considerations were often involved. In recent years, with the main features of the world's surface known, exploration has become more intensive. Teams of scientists go out to study restricted areas in detail. An Antarctic expedition can contribute to our knowledge of world weather, or by biological research into the life history of whales, can help to improve our food supplies. Similarly, expeditions in Africa can help to check the loss of valuable agricultural land through soil erosion, or to develop areas of settlement by schemes for irrigation and power. And there are still great areas to be adequately mapped. All these problems are inter-related, and in solving them the modern explorer can call on many improved techniques and instruments—the aeroplane, the aerial camera, tracked motor vehicles, radio, in fact all the resources of modern science. But the human element is still vital, and for those with the old explorers' spirit there will always be problems left to solve.

Explosives, substances which burn violently to produce gases in such volume that an explosion

is induced. Gunpowder was the first explosive to be used; Roger Bacon's powder, consisting of charcoal, sulphur, and saltpetre, was the only effective explosive until the 19th cent., but it was difficult to control. Nitroglycerine (glyceryl trinitrate) was first compounded in 1847 by adding glycerine to a mixture of sulphuric acid and nitric acid. In 1866 Alfred Nobel discovered how to make dynamite by absorbing nitroglycerine in the fine sand kieselguhr. Cordite was the joint invention of Sir Frederick Abel and Sir James Dewar (1889). It came into general use as a propellant. High explosives, providing bursting charge for shells and bombs, include TNT (trinitrotoluene), picric acid, cyclonite (RDX) and many others. Slurry explosives can be pumped on to the site and therefore offer advantages in transportation and safety; they are also waterproof. Chemical explosives have been eclipsed by nuclear explosives which have developed from the first atom bomb (dropped on Hiroshima 6 August 1945) to the 100-megaton hydrogen bomb.

Expressionism, a modern art movement confined primarily to the non-Latin countries of Europe which sought to give expression to intimate and personal emotions by means of distortions of line and colour and simplified style which carried a greater impact in terms of feeling. Broadly speaking, this has been characteristic of northern art in general. (*See* Gothic.) The term is usually used of the modern movement which influenced the Post-impressionists and subsequent movements in France. Tired of the naturalism of the Impressionists, such artists as van Gogh, Gauguin, Matisse, and Rouault together with the Fauvists (*q.v.*) made use of simple outlines and strong colours. Apart from Toulouse-Lautrec, the principal Expressionists were Norwegian, like Munch, or German, like the painters of *Die Brücke* and *Der Blaue Reiter* groups. Individual artists were Ensor, Kokoschka, Nolde, Rouault, and Soutine.

F

Fabian Society. *See* Section J.

Fables are fictitious narratives intended to enforce some moral precept, and may be either in prose or verse, and deal with personified animals and objects or with human beings. Æsop in ancient times and Hans Christian Andersen and the Brothers Grimm (in many of their stories) in later days, have given fables. Mention must also be made of La Fontaine's and Krylov's fables.

Faience, a kind of decorated glazed earthenware invented in Faenza, Italy, about the end of the 13th cent. Wedgwood-ware is a notable example of modern faience.

Fairs were established in mediæval times as a means of bringing traders and customers together at stated periods, and formed the chief means of distribution. The great English fairs of early times were those of Winchester and Stourbridge near Cambridge. Traders from the Netherlands and the Baltic gathered there with the great merchants of London, and goods of every kind, wholesale and retail, were sold. The British Industries Fair is the modern counterpart of the mediaeval trade fair. One of the biggest trade fairs was at Nijni-Novgorod, founded in the 17th cent.; other big continental fairs are those of Leipzig (founded in the 12th cent.), Lyons, and Prague.

Fairy Rings are the circles caused in grassland by certain fungi. The circles expand outwards as the fungus spreads, the fruiting bodies being at the periphery. Farther inward where the fungi are decaying the grass grows more strongly, fertilised by the nitrogen released from the rotting fungi. In olden times these rings were held to be the scene of fairy dances.

Falcon, name given to diurnal birds of prey which belong to the same family, *Falconidae*, as the hawk, eagle, buzzard, kite, and harrier. They are swift of wing and feed on birds and small mammals. These birds have long, pointed wings, strong, hooked and notched bill, long, curved claws, and an eye of great power. They are found all over the world. Those that breed in Britain are the Kestrel (the most common), Hobby (one of the swiftest of European birds), Merlin, and Peregrine, a swift and magnificent bird with slate-grey back, blackish crown, black "moustache" and whitish breast. Other members of the family are the Gyr Falcon from northern latitudes, Iceland and Greenland, which is a winter visitor to Britain, the Lanner, Saker, Eleonora's falcon, Red-footed falcon, and the Lesser Kestrel. The Gyr Falcon and the Peregrine were used in the sport of falconry in olden times. Because of its fearlessness and larger size, the female bird was used. When the quarry was sighted, the bird was unhooded, set free, and after mounting high into the air would dart swiftly down to strike the prey. The heron was the usual victim.

Fall-out. Radioactive material produced by nuclear explosions which may cause bodily and genetic damage. (1) *Local fall-out*, due to the return to earth of larger particles, occurs locally, and within a few hours after the explosion; (2) *Tropospheric fall-out*, due to particles which remain in the troposphere and come down within a month or so, possibly all over the world, but within the altitude in which the explosion occurred; (3) *Stratospheric fall-out*, which comes from fragments taken up into the stratosphere and then deposited, in the course of many years uniformly all over the globe. The two radioactive materials which have given rise to the greatest concern for the health of the individual are strontium-90 and iodine-131. Both these materials are liable to become concentrated in certain parts of the human body, strontium-90 in bone and iodine-131 in the thyroid gland. Radiation exposure may produce genetic effects, that is effects which may show up in succeeding generations. An extensive survey has been carried out by scientists of the U.S. Atomic Energy Commission on the islands of the Bikini atoll, site of some 23 nuclear tests, 1946–58. Their records, published in 1969, reveal that the intensity of radioactivity underneath the point of explosion is still exceedingly high. Most of the radiation remaining is due to the radioactive isotope caesium-137. The variation in intensity from one place to another seems to be correlated with the variations of vegetation: where there was little vegetation weathering had been rapid. (The nuclear test ban treaty, 1963, applies to all nuclear tests except those held underground.)

Fantail, a variety of the domestic pigeon; also a genus of Australian birds of the *Muscicapidae* family. A small New Zealand bird is called a fantail.

Fan Tracery, a complicated style of roof-vaulting, elaborately moulded, in which the lines of the curves in the masonry or other material employed diverge equally in every direction. It is characteristic of the late Perpendicular period of Gothic architecture, and may be seen in St. George's Chapel at Windsor and the Chapel of Henry VII. at Westminster Abbey.

Farmer-General, the name given to the financiers who in the days of the old French monarchy farmed certain taxes, contracting to pay the Government a fixed sum yearly, on condition that the specified taxes were collected and appropriated by themselves. The revolution of 1789 swept Farmers-General away.

Fascism. *See* Section J.

Fata Morgana, the name given to a curious mirage often observed over the Straits of Messina, attributed to the magic of the fairy Morgana, half-sister of King Arthur, who was fabled to live in Calabria.

Fathers of the Church were early writers who laid the foundations of Christian ritual and doctrine. The earliest were the Apostolic Fathers, (*q.v.*). The Four Fathers of the Latin Church were St. Ambrose, St. Jerome, St. Augustine, and St. Gregory the Great. The Four Fathers of the Greek Church were St. Basil, St. Gregory Nazianzen, St. John Chrysostom, and St. Athanasius.

Fathom, a nautical measure, the six-foot stretch of a man's arms. It is to be replaced by the metre on British Admiralty charts, but will continue on yachtsmen's coastal charts.

Fats are important foodstuffs. In physiology they constitute a valuable form of reserve food. They contain carbon, hydrogen and oxygen: chemically they are described as esters of

glycerol (glycerine). Commonest fats are stearin, palmitin, and olein, esters formed by the combination of glycerol with stearic, palmitic, and oleic acid respectively. Fats are converted into soap by alkali: this process (saponification) also releases glycerol.

Fault, a term designating a breakage coupled with displacement of geological strata. *See* F9(1).

Fauvism (Fr. *fauve* = wild beast), a term contemptuously applied to the work of a group of French painters led by Matisse who exhibited at the Salon d'Automne in Paris in 1905. Their belief was that a painting must be not only a consistent and harmonious decoration but the expression of an idea or feeling. Forms and colours are emotive in their own right. The objects painted by the Fauves, though simplified, distorted, and often violently coloured, are easily recognisable. Inspiration for their highly decorative canvases came from many sources: Byzantine and Persian art in the case of Matisse; German Expressionism in the case of Derain and Vlaminck. The Fauves paved the way for the Cubists (Braque joined Picasso in 1909) who approached nature in more arrogant mood, from a more intellectual point of view.

February, the second month of the year, contains in ordinary years 28 days, but in leap years 29 days. When first introduced into the Roman calendar by Numa *c.* 700 B.C. it was made the last month of the year, preceding January, but in 452 B.C. the position of the two months was changed, February following January.

Federation. *See under* **Confederation.**

Félibrige, a movement founded in 1854 to revive the ancient glories of Provence, initiated by the French poet Frédéric Mistral.

Felspar, the name given to a group of minerals, silicates of aluminium with some calcium and sodium, or potassium, which make up probably more than half of the earth's crust. It is formed in granite and other rocks, both igneous and metamorphic.

Fenestella, the niche set apart on the south side of the altar for the piscina in Roman Catholic churches.

Fermentation, the action of chemical ferments or *enzymes* in bringing about chemical changes in the materials of living animals and plants, *e.g.*, the breaking-down of sugar by yeast into alcohol.

Ferret, a carnivorous animal of the Pole-cat family, with a pointed head and long sinuous body, well adapted for following rabbits and game into their burrows and hiding-places, it being kept in this country for that purpose. It is a native of Spain and Africa, and does not exist in England in a condition of natural freedom.

Ferrites are compounds containing iron, oxygen, and one or two of a certain range of other possible metallic elements. Ferrites have recently become very important technically, because, unlike ordinary magnetic materials, they combine strong magnetism with electrical insulating properties. Ferrite-rod aerials are now common in portable radios, and ferrite devices are used in radar. *See* F20(1).

Feudalism. *See* **Section J.**

Fieldfare, the largest member of the thrush family, a regular winter visitor to Britain from Scandinavia. It is brown in colour with a lighter spotted breast and a grey head.

Field-Marshal, the highest ranking title in the British army, and only bestowed on royal personages and generals who have attained great distinction. The first British Field-Marshal was created in 1736, when John, Duke of Argyll, had the title conferred upon him by George II.

Fifth Column. When Franco, the Spanish dictator, revolted against the Spanish Republic in 1936 and attacked Madrid with four armies, he declared that a group of fascists within the city was assisting the besiegers. The term is used to describe a body of spies behind a fighting front.

Fighting-Fish, small pugnacious Siamese fish with long caudal and ventral fins. They are kept in glass globes in Siam, and when brought into contact will fight to the death, these encounters being the occasion of much gambling.

Filibuster, a name first given to pirates and buccaneers in the 17th cent. who took possession of small islands or lonely coast lands, and there maintained themselves apart from any governing authority. In later times the term was used to specify men taking part in expeditions whose object was to appropriate tracts of country, and settle upon them in disregard of international law. The most notable expeditions of this kind in modern times were those of Narcisco Lopez against Cuba in 1850–51, and of William Walker against Nicaragua, between 1855 and 1860. Both leaders were captured and executed. The term is also used to express the right of a minority in the United States Senate for unlimited debate, which is used on occasions to delay legislation.

Finches, a large family of small birds belonging to the Passerine or perching order of birds. There are about 200 species, including greenfinch, hawfinch, chaffinch, goldfinch, siskin, bullfinch, crossbill, linnet, twite, and buntings.

Fir, a cone-bearing tree with small evergreen leaves and of considerable use as timber. There are two types: the Silver Firs and the Douglas Firs numbering about 25 species. All these firs attain to a considerable height, and all yield turpentine or other resinous material.

Fire-damp. *See* **Methane.**

Fire-Fly, a small winged insect of the *Eleteridae* family, is able to throw out a strong phosphorescent light in the dark. There are some remarkable specimens in tropical countries.

Fire of London, of 1666, extended from East to West, from the Tower to the Temple church, and northward to Holborn Bridge. It broke out in a baker's shop in Pudding Lane, and lasted four days, and destroyed 87 churches, including St. Paul's Cathedral, and many public buildings, among them the Royal Exchange, the Custom House, and the Guildhall. In the ruins were involved 13,200 houses and 400 streets. About 100,000 people were made homeless yet in about 10 years all the houses had been rebuilt. The plague had not disappeared from London when the fire occurred.

Firkin, a former measure of capacity, the fourth part of a barrel, now only used in reference to a small cask or tub for butter, lard, tallow, etc.

Fischer-Tropsch Process. A process for making synthetic petrol from carbon monoxide and hydrogen. The synthesis is accelerated by cobalt-thoria and nickel-thoria catalysts.

Fish Louse. Parasitic crustacea found on marine and fresh-water fishes and whales.

Fission, Nuclear. A nuclear reaction in which the nucleus of an atom (*e.g.*, uranium 235, plutonium) captures a neutron, and the unstable nucleus so produced breaks into two nearly equal fragments and throws out several neutrons as well. In biology the term fission is applied to reproduction by fragmentation of a single-cell organism, as in amœba. *See* F12(1).

Flagella, single hair-like projections found on many micro-organisms. Their sole function is, by complicated motion, to move the organism about. They are longer and less versatile than cilia (*q.v.*).

Flag Officer, a British naval officer who enjoys the right of carrying a flag at the mast-head of his ship, and is of the rank of Admiral, Vice-Admiral, or Rear-Admiral.

Flagship, the ship that flies the Admiral's flag, and from which all orders proceed.

Flamingo, a strangely beautiful, extremely slender wading bird of white and rose-pink plumage with long, slender legs and neck and a long, down-curved bill with which it rakes the mud and obtains its food of worms and molluscs. The wings are bright crimson, bordered with black, and a flock in flight is a picture of singular beauty. There is a large and famous colony in the Camargue, S.E. France.

Flash-Point. This is found by heating an oil in a special cup and taking the temperature at which sufficient vapour is produced to ignite when a small flame is applied. It is an index of the inflammability of oils.

Flea. Fleas are small parasitic insects belonging to the order *Aphaniptera* (so called because these creatures have no wings). They obtain their food by sucking blood from their host. They are laterally compressed, which immediately distinguishes them from lice. The human flea

(*Pulex irritans*) is able to jump vertically a distance of over 7 in.

Fleet Prison, a noted debtors' prison that stood in Farringdon Street, London, where the Congregational Memorial Hall now stands, taking its name from the Fleet Ditch. Notorious for the cruelties inflicted on prisoners. It was pulled down in 1846.

Fleet Street, a famous thoroughfare in London, now the centre of journalism and newspaperdom, though it was long celebrated for its taverns where the literary coteries of the day were wont to meet. It takes its name from the Fleet stream which used to run from Hampstead through Holborn to the Thames at Blackfriars.

Flemings, the people of Flanders, whose ancestors of mediaeval times excelled in the textile arts; England owes its early eminence as a manufacturing nation to the migration of numbers of Flemings to this country in the 16th and 17th cent. *See also* **Walloons.**

Fleur de Lis, the former national emblem of France, the flower of the lily. It was superseded by the Tricolour in 1789, but is still adhered to by the supporters of the old French royalties.

Flint, consists of granular chalcedony with some opaline silica, and occurs as nodules and bands in the Chalk. It is hard and has a conchoidal fracture, so enabling it to be used in making cutting implements in prehistoric times. Before the invention of lucifer matches, it was used along with steel for striking lights.

Flint implements are objects found in the younger geological strata, and constituting evidence of the condition and life of the period. They include knives, clubs, arrow-heads, scrapers, etc., used as weapons, tools and possibly as surgical instruments and in religious ceremonies. At the end of the Neolithic Period and the beginning of the Bronze Age a people using a new type of stone axe became evident in Europe, advancing towards the south and central regions, and supposed by many to be the ancestors of the present European stock, or Aryans. Similar to prehistoric specimens are the flint and obsidian implements of some of the primitive peoples of today. Ritual weapons and sacrificial knives continued to be made of stone long after the introduction of metals for practical purposes.

Flounder, one of the most familiar of the smaller flat fishes common round the British coasts, and seldom attaining a weight of over three pounds.

Fluorine, a chemical element, member of the halogen family, symbol F, it is found in combination with calcium in fluorspar, and occurs in minute quantities in certain other minerals. Discovered by Scheele in 1771, it was first obtained by Moissan in 1886. A pale yellow gas, it is very reactive and combines with most elements except oxygen. Its acid, hydrogen fluoride, etches glass, the fluorine combining with the silicon to form volatile silicon fluoride. Organic fluorine compounds have found use as very stable polymers which resist a wide variety of chemical actions.

Fluorescent Lamp. *See* **Electric Light and Ultra-Violet Rays.**

Fluorspar, a mineral; chemically, calcium fluoride. Can be colourless, green, or yellow, but is most commonly purple. Blue fluorspar under the name of Derbyshire "blue John" has been used for ornamental purposes.

Fly, the popular name for a large number of insects with one pair of wings and a proboscis terminating in a sucker through which fluid substances can be drawn up. The best-known species are the common house-fly, the blue-bottle, and the blow-fly. In the larval form flies are maggots, and feed upon decaying substances, animal flesh, etc. Flies are able to walk upon ceilings or upright surfaces by having suckers at the soles of their feet. *See* **Diptera.**

Flycatcher, name of a large family of small birds, the Muscicapidae. They are insect feeders, catch their food in the air, and are distributed over most countries of the world. The spotted and the pied nest in Britain, which they visit from April to September.

Flying Fish are frequently to be seen in southern waters, and are capable of gliding considerable distances without touching the water. To build up speed for its "take-off" the fish swims rapidly, to break the surface at 15–20 miles an hour. Maximum air speed is about 40 m.p.h.

Flying Fox, a member of the bat family, but of much larger size, and confined to the tropical and sub-tropical Old World. Like the bats, it is nocturnal, but it feeds entirely on fruits.

Flying Lemur. *See* **Colugo.**

Flying Lizard, or *Draco*, an Asiatic lizard, possessing wing-like projections from each side, which enable it to make flying leaps through the air, though not sufficient for continuous flight.

Flying Saucers, the name given to certain saucer-like shapes which have on occasion been seen travelling through the atmosphere. For some time speculation was rife, especially in America, but it is now believed that when not hallucinations, meteorological or cosmic-ray balloons, they are nothing more than atmospheric phenomena like mirages or mock suns caused by unusual atmospheric conditions. Described by Dr. Menzel, astrophysics professor at Harvard, "as real as rainbows are real, and no more dangerous". It has been suggested that the study of some of the people who report the sighting of unidentified flying objects (UFOs) would be more rewarding than the investigation of what they saw! *See also* **Section J.**

Flying Squirrel, rodents of which there are several species in Europe, Asia and America. It possesses a parachute-like fold of skin by means of which it projects itself through the air. In appearance they are much like ordinary squirrels, to which they are related. The African flying squirrels belong to a different family.

Fog is caused by the presence of particles of condensed water vapour or smoke in the surface layers of the atmosphere, the term being applied meteorologically when the resulting obscurity is such as to render objects invisible at distances of up to 1 km. Fogs are frequently formed when the air near the ground is cooled below its dew-point temperature by radiation on a still, cloudless night; by flowing over a relatively cold land or water mass; or by mixing with a colder air stream. An accumulation of smoke over a large city may cause a high fog cutting off the daylight and producing gloom. *See* **Pollution** *and also* **Aerosol.**

Foliation, a geological term applied to rocks whose component minerals are arranged in parallel layers as the result of strong metamorphic action.

Folio, a printing term for a sheet of paper folded once, a half sheet constituting a leaf.

Folklore concerns itself with the mental and spiritual life of the people—both civilised and primitive—as expressed in the traditional beliefs, customs, institutions, and sayings that have been handed down from generation to generation by word of mouth and with the observation recording, and interpretation of such traditions. (The word *folklore* itself was first suggested and used—as two words *Folk Lore*—by W. J. Thoms in the *Athenaeum* of August 22nd, 1846, and was at once absorbed into the English language.) Traditional lore of the kind included in the term folklore takes many forms and ranges from omens of good and bad luck (spilling the salt breaking a mirror, dropping an umbrella, etc.) and the wearing of amulets or the possession of talismans (such as the horse-shoe) as protection against misfortune, to elaborate ceremonial dances such as the Abbots Bromley Horn Dance, the Hobby horses of Padstow and Minehead, the Northern sword-dances, and the Christmas mummers' plays. Especially important are the beliefs and customs associated with birth, babyhood, marriage, and death such being occasions when the individuals concerned require special protection or when unusual happenings can be used for foretelling their future. The child born on a Sunday will be the luckiest; rocking an empty cradle will ensure the speedy arrival of a new baby; throwing an old shoe after a newly-married couple brings them luck; the bride should be carried over the threshold of the new home; on the sea-coast, death is believed to take place at the ebb-tide; the bees must be told of the death of the master of the house, or they will leave the hive. Another very large section of the subject deals

with the traditional sayings and practices associated with particular days and seasons of the year—calendar customs, as they are called. The eating of pancakes on Shrove Tuesday; Mother Sunday customs and the simnel cake; Good Friday as the right day for planting potatoes, but emphatically the wrong day for washing clothes or cutting one's finger-nails; the necessity of wearing something new on Easter Sunday; the children's maypole dances and May garlands; midsummer fires; All Hallowe'en as the most favourable occasion for divining the future—especially in respect of marriage—and for games and sports such as apple-bobbing; the numerous practices accompanying the harvest. All these are examples of calendar customs; their full story would occupy several volumes. Folklorists are interested in all such oral tradition because they think that to a large extent it represents what folk have mentally stored up from the past and transmitted to their descendants throughout the centuries, and because therefore it is able to assist other historic methods—ethnographical linguistic, archaeological, etc.—in the elucidation of the early story of man. In those countries with a great diversity of peoples in all stages of culture, a knowledge of folklore and what it can teach of the mind of man is of great importance to administrators. The Folk-Lore Society was founded in 1878, and that part of the subject represented by song and dance has now its own organisation in the English Folk Dance and Song Society.

Force, as a term in physics, signifies an influence or exertion which, when made to act upon a body, tends to move it if at rest, or to affect or stop its progress if it be already in motion. In the c.g.s. system, the unit of force is the dyne; in the foot-pound-second system, the poundal; in the SI system, the newton.

Formaldehyde. Chemically it lies between methyl alcohol and formic acid; oxidation of methyl alcohol yields formaldehyde, and oxidation of formaldehyde produces formic acid. It is used as a disinfectant, in silvering mirrors, and in the manufacture of phenol-formaldehyde plastics (of which bakelite is the best-known example). Solutions of formaldehyde in water, formalin, are used to preserve biological specimens.

Forme, a body of letterpress type, composed and secured for printing from; or a stereotype or electrotype. The former is used more for newspaper formes and the latter in good book work.

Formic Acid can be obtained from a colourless fluid secreted by ants and other insects and plants. It is a strong irritant. Commercially it is obtained from sodium formate, which is synthesised by the absorption of carbon monoxide in caustic soda. It is used in the electroplating, tanning, and textile industries.

Formula, in mathematics and physics a statement of certain facts in symbolical form. In chemistry a representation of the composition of a compound.

Fossils. Remains of animals and plants, or direct evidence of their presence, preserved in rocks. They include petrified skeletons and shells, leaf imprints, footprints, etc.

Four Freedoms, a phrase coined by President Roosevelt in January, 1941, embodying what should be the goal of the Allies. They were (1) Freedom of speech and expression; (2) Freedom of every person to worship God in his own way; (3) Freedom from want; (4) Freedom from fear.

Fox, carnivorous animal of the canine family, found in considerable numbers in most parts of the world. The common fox *Vulpes vulpes* of Europe is a burrowing animal of nocturnal habits, living upon birds, rabbits, and domestic poultry, in the capture of which it displays much cunning. The fox in Britain is preserved from extinction chiefly for hunting purposes. Among other notable species are the Arctic fox and the red fox of North America, of which the valuable silver fox, coveted for its fur, is a variety.

Fox-Shark, *or* **Thresher Shark**, a large species of shark common in the Atlantic and in the Mediterranean. It is very destructive to small fish, but although it attains a length of 15 ft. it is not dangerous to man.

Franciscans. *See* Friars.

Franco-German War (1870–71) was opened by a declaration of war by Napoleon III., but the Germans who were better prepared than the French, won victory after victory. In September Napoleon and the whole French army were made prisoners at Sedan, a republic was then proclaimed, and Paris sustained a four months' siege. In the end France ceded Alsace and part of Lorraine to Germany, who claimed a war indemnity of over £20 million.

Francolin, a genus of birds closely related to the common partridge, belonging to Africa. It includes the spur-legged partridge, and the black partridge which ranges from Cyprus to Assam.

Frankincense is of two kinds, one being used as incense in certain religious services and obtained from olibanum, an Eastern shrub, the other is a resinous exudation derived from firs and pines, and largely used in pharmacy.

Franklin, the name given in feudal times to a country landowner who was independent of the territorial lord, and performed many of the minor functions of local government, such as serving as magistrate.

Fresco, a painting executed upon plaster walls or ceilings, a technique which has remained unchanged since it was practised by the great Renaissance artists.

Freshwater Shrimp, a small crustacean abounding in British streams, and feeding on dead fish or other decomposing matter. Although of shrimp-like form it is not closely related to saltwater shrimps. Its generic name is *Gammarus*.

Friars, members of certain mendicant orders of the Roman Catholic Church. The four chief orders are the Franciscans or Grey Friars, the Dominicans or Black Friars, the Carmelites or White Friars, and the Augustinians (Austin Friars).

Friday, the 6th day of the week, named after Frigga, the wife of Odin. It is the Mohammedan Sabbath, a general abstinence day of the Roman Catholic Church, and according to popular superstition, an unlucky day.

Friends, The Society of. *See* Quakers, Section J.

Frigate-Bird, a web-footed bird widely distributed over tropical latitudes, and deriving its name from its great expanse of wing and forked tail, resembling the shape of a swift vessel. It feeds on flying fish mostly, being unable to dive and also steals from other birds. A frigate-bird was found dying on the Hebridean island of Tiree in July 1953; only twice previously had one been recorded in Europe—the first on the German coast in 1792, and the second on the coast of France in 1902.

Frog, a familiar amphibian, breathing through gills in the earlier (tadpole) part of its existence, and through lungs later. It remains three months in the tadpole stage. The frog hibernates underwater in the mud during the winter.

Frost occurs when the temperature falls to, or below, 0 °C., which is freezing point. Hoar frost is applied to the needles or feather-like crystals of ice deposited on the ground, in the same manner as dew. Glazed frost is the clear icy coating which may be formed as a result of rain falling on objects whose temperatures are below the freezing point. These layers of ice, often rendering roads impassable for traffic, damaging overhead power and communication systems and endangering aircraft, can also be caused by condensation from warm, damp winds coming into contact with very cold air and freezing surfaces.

Froth-Hopper *or* **Frog-Hopper.** A family of bugs (belonging to the insect order *Hemiptera*) which in the larval stage surround themselves with a protective mass of froth ("cuckoo spit"). These insects, which suck the sap of plants, bear a faint resemblance to frogs, and the adults possess great leaping powers.

Fuel Cells. A recent development is a type of battery into which the active chemicals are fed from external fuel tanks. This is the *fuel cell*, which is being developed in a number of versions in several countries. One was demonstrated in action when in 1959 Bacon of Cambridge University used his fuel cell to drive a fork-lift truck and a welding machine. The Bacon fuel cell consists of two electrodes of porous nickel dipping into a solution of caustic potash in water. One electrode is supplied with

hydrogen gas from an outside cylinder and the other with oxygen. These gases, forming layers on the nickel, are the active chemicals. The oxygen combines with water to make two negatively charged ions, each consisting of an oxygen and a hydrogen atom joined together (a hydroxyl ion). The hydroxyl ions travel through the solution to the hydrogen electrode, where they combine with hydrogen to form neutral water. Their negative charge (one electron per ion involved) has now arrived at the hydrogen electrode and is ready to flow back to the other electrode through any outside circuit that is provided. This flow constitutes the useful electric current, and it has been provided at the expense of creating water out of the original hydrogen and oxygen. The water can be removed in the form of steam. What is the advantage of all this? In the first place the fuel gases are easy to make and to store in cylinders. Supplying a new gas cylinder is easier and quicker than recharging an ordinary accumulator. Furthermore, a fuel cell is lighter for a given power than an accumulator; satellite designers have found them useful. The fuel cell is not damaged by heavy overloading, and this is valuable for application to vehicle driving. Fuel-cell-driven buses could combine the advantages of diesel buses and trolleybuses. Fuel cells are still in the development stage. It is not certain how they will compete with combustion engines or, in the oil-less future, with improved ordinary batteries.

Fulani, a non-Negro people of Hamitic stock widely distributed in N.W. Africa, chiefly in Nigeria. There are two main branches: the dark-skinned Fulani, settled farmers and city dwellers, Moslem in religion, and the light-coloured Bororo'en who are semi-nomadic herdsmen. The Fulani are different from any tribe in W. Africa though they resemble in some ways the Masai of E. Africa. The Fulani conquered the Hausa states at the beginning of the 19th cent. which passed under British suzerainty after 1903. Sokoto, built in 1810, was capital of the Fulani empire.

Fuller's Earth, a special kind of clay or marl possessing highly absorbent qualities, originally used in the "fulling"—that is, cleansing and felting—of cloth. Now used in clarifying oils. Deposits in America and in south of England.

Function. In mathematics, one quantity y is said to be a function of another quantity x, written $y = f(x)$, if a change in x results in some corresponding change in y. Thus $\sin x$ or $\log x$ are functions of x. If y depends not only on x but on several other quantities as well, y is called a function of many variables.

Functionalism, in architecture, a movement originated by Le Corbusier, Swiss-born French architect and town-planner, who applied the austere principles of the Purist movement in painting to his own art. From about 1924 he designed in concrete, steel, and glass, buildings in which every part had a significance in terms of function on the theory that objects created to carry out their particular function to perfection cannot help being beautiful. "A house is a machine for living in." The style was in vogue between the two wars, and although its severity became somewhat modified, it is still the basis of most modern architecture.

Fungi, a class of simple plants, which reproduce from spores and lack the green colouring matter *chlorophyll*. It includes moulds, rusts, mildews, smuts, mushrooms, etc. Potato blight is a fungus disease which caused the failure of the potato crop in Ireland in 1846. 50,000 different fungi are known. *See also* F39(2), P8(1).

Furniture Beetle (*Anobium punctatum*). The common furniture beetle is responsible for 80 per cent of all woodworm damage and is the great pest of the comparatively modern house, causing damage in the main to softwood roofing and flooring timbers. Adults one-eighth of an inch long. The grub tunnels for about 33 months. *See also* Woodworm, Death Watch Beetle.

Futurism, the only important modern art movement to arise outside France, initiated by Marinetti, an Italian writer and mountebank friend of Mussolini at a later period. Its origin took the form of a manifesto published in Paris in 1909 in which Marinetti glorified violence, war, and the machine age. In its aggression it favoured the growth of fascism. One of the distinctive features of Futurist art was the use of the principle of "simultaneity" in which the same figure (*e.g.*, a woman descending a flight of stairs) is represented in successive positions like film "stills" superimposed on each other. In spite of two further manifestos it was not until 1911 that the first examples of Futurist painting and sculpture appeared by the artists Severini, Balla, and Boccioni. Apart from the principle of simultaneity, Futurism derived from Cubist and Post-impressionist techniques. The movement faded out early in first world war.

G

Gabardine, a long, loose, coarse, over-garment, worn by men of the common class in the Middle Ages, and prescribed by law as the distinctive garment of the Jews. The name is now given to a closely woven cloth of wool and cotton used to make raincoats.

Gabbro, a kind of igneous rock, often very coarse-grained, containing a good deal of plagioclase felspar, and monoclinic pyroxene; it may occasionally also include biotite, magnetite, ilmenite, and hornblende. A gabbro containing nickel at Sudbury in Canada is one of the richest sources known of that metal.

Gadfly, a widely distributed family of flies with only one pair of wings, including the horse fly. The females are very voracious, being able to bite through the skin and suck the blood of animals. The males are harmless.

Gadolinium. An element belonging to the rare-earths metals discovered in 1886 by Marignac. It is strongly magnetic.

Gaelic, relating to the Gaels and their language, a term now applied only to the Celtic people inhabiting the Highlands of Scotland, but formerly also to the Celts of Ireland and the Isle of Man.

Galago, "Bush Babies," related to the lemur, native to Africa, large-eyed, in keeping with its nocturnal characteristics.

Galaxy *or* **Milky Way Galaxy** is the huge disk-shaped cloud of gas and stars (some 100,000 million, one of which is the sun) that is turning in space like a great wheel, with a diameter of about 100,000 light years. The Milky Way (that part of the heavens in Milton's words "powdered with stars") is really only a small part of this disk, and every star in the galaxy is moving round the centre under the gravitational control of the whole. The sun and planets lie near the edge of the disk, and it takes them about 250 million years to travel once round. The number of stars that can be seen with the unaided eye is about 3,000, and they all belong to the Milky Way Galaxy, as do most of the stars that can be seen with anything but the greatest telescopes. With the large modern optical and radar telescopes many other systems, similar in size and weight to our galaxy, have been discovered, scattered more or less uniformly through space, and the universe is said to include at least 10,000 million such galaxies. *See also* F3–6.

Gale, a high wind now technically defined as one of at least Beaufort force 8. Between thirty and forty gales a year occur on the north and west coasts of the British Isles and only about half of this number in the south-east. At St. Ann's Head, Pembroke, the anemometer registered a gust of 113 m.p.h. on Jan. 18, 1945, which is a record for these islands. Gusts exceeding 70 m.p.h. are rarely experienced in London. Gale warnings are issued for specified areas by the Meteorological Office, the warnings taking the form of radio broadcasts and the hoisting of storm signals at certain points on the coast. *See* Beaufort Wind Scale, Section N.

Gall, abnormal vegetable growths caused by insects, mites, bacteria, or fungi, found on all parts of the plant. Oak-apples, Robin's pincushion (on wild rose), "witches' brooms" (on trees) are examples. Some are useful commercially, *e.g.*, oak apples yield tannic acid and the black oak gall is used in America as animal food.

Galleon, the name given to the old three-decked Spanish treasure vessels employed in conveying the precious minerals from the American

colonies to Spain. The term is often applied to any large, especially stately, sailing vessel.

Galley, an oar-propelled sea-boat used by the ancient Greeks and Romans for transport purposes, manned by slaves. Boats of a similar class were used by the French down to the middle of the 18th cent., and manned by convicts.

Gallic Acid, obtained from gall nuts, sumach, tea, coffee, and the seeds of the mango, is used in the manufacture of inks and as an astringent in medicine. It was discovered by C. W. Scheele (1742–86), a Swedish chemist.

Gallium, a white metal, symbol Ga, related to aluminium, but which can be cut with a knife. It was discovered spectroscopically by L. de Boisbaudran in 1875. Long before Mendeleyev had predicted that an element with its properties would be found to fill the then existing gap in the Periodic Table; this gap came immediately below aluminium, so he suggested the name "eka aluminium" for it.

Gallup Poll, a system, introduced by Dr. Gallup of the United States, for testing public opinion on topical subjects by taking a test poll on questions framed to elicit opinions.

Galvanised Iron is iron coated with zinc. The name comes from the fact that such a coat protective against rust could be deposited electrolytically. Electrodeposition is sometimes used, but the cheaper and more common process depends on dipping the iron in a bath of molten zinc.

Gamboge, a resinous gum obtained from the sap of *Garcinia morella*, a tree native to Thailand, Cambodia, and Ceylon, and used as a yellow pigment in paints and also as a purgative.

Game is the term applied to wild animals which are protected from indiscriminate slaughter by Game Laws. In the United Kingdom game comprehends deer, hares, pheasants, partridges, grouse, black game, moor game, woodcocks, bustards, and certain other birds and animals of the chase. Game can only be killed (with few exceptions) by persons holding game licences. Occupiers of land and one other person authorised by them in each case are allowed to kill hares and rabbits on their land without licence. Game cannot be sold except by a person holding a proper licence. There is a "close time" prescribed for the different classes of game; for instance, the selling or exposing for sale of any hare or leveret during March, April, May, June, or July is prohibited by law. Grouse cannot be shot between Dec. 11 and Aug. 11; partridges between Feb. 2 and Aug. 31; pheasants between Feb. 2 and Sept. 30; and black game between Dec. 11 and Aug. 10. In regard to foxes, stags, and otters, custom and not Parliament prescribes a certain law which sportsmen rigidly adhere to. Game reserves are legally protected areas where natural vegetation and wild life are allowed to remain unmolested by sportsmen or those who might destroy for economic ends.

Gaming, *or* **Gambling**—*i.e.*, staking money on the chances of a game—differs from betting in that it depends upon the result of a trial of skill or a turn of chance. The Betting and Gaming Act of 1959, passed by the Macmillan administration, replaced all the old laws on gaming, which went back to an Act of 1541 entitled "An Acte for Mayntenance of Artyllarie and debarringe of unlauful games," under which some games were unlawful if played for money in any circumstances. Roulette and any game of dice were among such games. Under the 1959 Act any game was lawful, subject to certain conditions. Since then the Betting, Gaming and Lotteries Act, 1963, and the Gaming Act, 1968, have been passed, to deal with unlawful gaming and to prevent the exploitation of gaming by commercial interests. The playing of bingo is now restricted to clubs licensed for bingo only.

Gammexane, a powerful insecticide, used particularly to kill the tsetse fly and mosquito.

Gangue. Useless minerals associated with metallic ores.

Gannet, a fish-eating bird which dives on its prey from a great height, swallowing it under water; is found in large numbers off the coast of Scotland, and has breeding stations in the Hebrides, St. Kilda, Ailsa Craig, the Bass Rock, Grassholme Island, and on Ortac and Les Etacs (rocks off Alderney). It is a bird of white plumage, black tips to long narrow wings and wedge-shaped tail, and weighs about 7 lb. The gannet breeds in colonies on ledges of steep, rocky, island cliffs. Related to the cormorants, pelicans, and frigate-birds.

Garden Cities in England were founded by Ebenezer Howard (1850–1928), and his ideas were put forward in his book *Tomorrow—A Peaceful Path to Real Reform* (later re-issued as *Garden Cities of Tomorrow*). New towns should be so placed and planned as to get the best of town and country life, an adaptation of the model villages of certain industrial philanthropists such as Salt, Richardson, Cadbury, Leverhulme, and others. The Garden City Association (later the Town and Country Planning Association) was formed in 1899, and the first garden city was begun at Letchworth in 1903 and successfully established. Welwyn Garden City was also Howard's foundation, established in 1919.

Gardener-Bird, a bird possessing many of the characteristics of the bower-bird, and found only in Papua–New Guinea. *See also* **Bower Bird.**

Gargantua, the giant hero of Rabelais' satire, of immense eating and drinking capacity, symbolical of an antagonistic ideal of the greed of the Church.

Gargoyle, a projecting spout for carrying off water from the roof gutter of a building. Gargoyles are only found in old structures, modern waterpipe systems having rendered them unnecessary. In Gothic architecture they were turned to architectural account and made to take all kinds of grotesque forms—grinning goblins, hideous monsters, dragons, and so forth.

Garlic, a bulbous plant of the same genus as the onion and the leek, and a favourite condiment among the people of Southern Europe. It possesses a very strong odour and pungent taste and its culinary use is agelong.

Garnet, a group of minerals; chemically they are orthosilicates of the metals calcium, magnesium, titanium, iron, aluminium. Garnets can be coloured yellow, brown, black, green, or red; the blood-red garnet is an important gemstone.

Garrotte, a method of strangulation used as capital punishment in Spain, and consisting of a collar which is compressed by a screw that causes death by piercing the spinal marrow. Garrotting was also applied to a system of highway robbery common in England in 1862–63, the assailants seizing their victims from behind, and by a sudden compression of the windpipe disabling them until the robbery was completed.

Garter. The Most Noble Order of the Garter was founded (*c.* 1348) by King Edward III., and is the premier order of knighthood in Great Britain. The traditional story associating the garter and the motto with the Countess of Salisbury, who it was said dropped her garter while dancing with the King, who remarked "honi soit qui mal y pense" cannot be accepted. The order was originally limited to the Sovereign and 25 knights, but the number has been extended, and it may now be bestowed on royal personages and leading representatives of the British peerage. The insignia of the order are the garter of dark-blue velvet with the motto in letters of gold, the mantle of dark-blue velvet lined with white silk, the surcoat and hood, and the gold-and-enamel collar. The garter is worn on the left leg below the knee and by women as a sash over the left shoulder. *See* Knighthood.

Gas is an elastic fluid substance, the molecules of which are in constant rapid motion, and exerting pressure. The technique whereby gases are liquefied depends on increasing pressure and diminishing temperature. Each gas has a critical point; unless the temperature is brought down to this point no amount of pressure will bring about liquefaction. Last gas to be liquefied was helium (1908) which boils at —209 °C. *See* F17(1).

Gas from coal was first used as an illuminating agent by William Murdoch towards the end of the 18th cent. in Birmingham, and about 1807 was introduced in London, one side of Pall Mall being lighted with it. It became widely used as an illuminant, and for space heating and cook-

ing. In the United Kingdom there has been increasing attention paid to the possibility of using a primary fuel—natural gas—instead of producing gas from coal or oil. *See* Gas, Natural.

Gas, Natural, natural mixture of gases often present with deposits of petroleum, found issuing from the ground in many parts of the world—in the oilfields of Venezuela and the Caucasus, in China, Saudi-Arabia, but chiefly in North America. Its chief component is methane. Large industrial centres have made use of this gas since the latter part of the 19th cent., but much of this valuable fuel still goes to waste. Pipelines have been constructed to deliver the gas to where it is wanted. Britain began to ship liquid methane from the Saharan oilfield in 1964. Some of the world's largest natural gas fields have recently been discovered in the North Sea and are being actively exploited. Domestic gas appliances have to be modified if the natural product is substituted for ordinary town gas because the burning characteristics are different. Oil production from the North Sea fields is expected in the late 1970s.

Gas Turbine. In this kind of engine mechanical movement is produced by a jet of gas impinging on a turbine wheel; used in aeroplanes, locomotives, and ships. These engines are mechanically simple compared with internal combustion engines, and require less maintenance. It has been stated that the jet-propelled Comet cruises at 450 m.p.h. burning less than ½ lb. of kerosene per passenger mile.

Gauge, a standard dimension or measurement, applied in various branches of construction. Thus, the standard railway gauge is 4 ft. 8½ in. in the United Kingdom, United States, Canada, France, Germany, Austria, Holland, Egypt, Belgium, Denmark, Italy, Hungary, Sweden, Switzerland, and Turkey. In India, Ceylon, and Spain the gauge is 5 ft. 6 in. In Soviet Russia and Finland, 5 ft., Ireland, 5 ft. 3 in. Narrow railway gauges of different standards are in use on very steep inclines in various countries. Other standard gauges are fixed in building and gun-boring.

Gauls were inhabitants of ancient Gaul, the country which comprised what is now France, Belgium, and parts of the Netherlands, Switzerland, and Germany.

Gault, a stratum of blue clay between the Lower Greensand and the Chalk. A typical section of the Gault can be seen at Folkestone.

Gauss, a unit of magnetic induction in the c.g.s. system, named after the great German mathematician and astronomer, K. F. Gauss.

Gavelkind, an old English custom of land tenure in Kent and other places in England, whereby on the death, intestate, of a property owner his property is divided equally among his children and not according to the law of primogeniture. Abolished by the Law of Property Act, 1922, and the Administration of Estates Act, 1925.

Gazelle, an animal of the antelope family, of small and delicate shape, with large eyes and short cylindrical horns. It is of a fawn colour, a native of North Africa, and easily domesticated.

Geiger Counter, an electrical device, invented by Geiger, which can detect individual atomic particles, *e.g.*, electrons, protons, etc. It often consists of a tube of gas at a few cm. Hg pressure, fitted with two electrodes—a cylinder and an axial wire. A high voltage is kept across the electrodes, and the passage of a charged particle through the gas releases ions which permit a momentary discharge between the electrodes. Electronic circuits register this discharge as a "count." Geiger counters are used to detect and measure radioactivity and cosmic rays both for technical and research purposes.

Gelatine, a transparent, tasteless, organic substance obtained from animal membranes, bones, tendons, etc., by boiling in water. It is of various kinds, according to the substance used in making it. Isinglass, the purest form of it, is made from air-bladders and other membranes of fish, while the coarser kind—glue—is made from hoofs, skin, hides, etc. Its constituents are carbon, hydrogen, oxygen, and nitrogen. Gelatine is applied to an immense variety of purposes, from the making of food jellies to photographic materials.

Gemsbok, a large South African antelope, with long straight horns and tufted tail. Light fawn in colour, it has a black streak across its face, and is very fleet of foot.

General, a military title next in rank to that of Field-Marshal, the highest officer in the army. Ranking below full General are Lieutenant-General, Major-General, and Brigadier.

Generation, a time-measure reckoned at about 30 years when children are ready to replace parents; also the body of persons existing at the same time or period. According to a U.N. report in 1958 "one can no longer think of generations in traditional terms. Interests and activities are today changing so fast that sets of young people not more than seven or eight years apart in age may be as far apart in their thinking and behaviour as two generations once were." The generation gap is now even less years apart.

Generation, Spontaneous. *See* Abiogenesis.

Genes, the elementary units of heredity. They exist as highly differentiated regions arranged along the length of the chromosomes which the nuclei of cells carry. A chromosome may carry hundreds or even thousands of genes, each with its own particular structure and specific properties. The position of a particular gene on a chromosome is called its locus. The material of the gene is DNA (*q.v.*). *See* Cell Division, F30(2).

Genesis, the first book of the Pentateuch, compiled in the 5th cent. B.C. from earlier documents which carries the scriptural narrative from the creation to the death of Joseph. Sometimes there is disagreement, as in the story of the creation, Gen. i and ii. Gen. i reflects the views of the ancient Greek scientist Thales (*c.* 640–546 B.C.) and may be said to be the first scientific account of the creation of the world. The conditions described around the figures of Abraham, Isaac, Jacob, and Joseph have a genuine historical basis.

Genetic Code. The elucidation of the structure of DNA (*q.v.*) for which Crick, Wilkins, and Watson were jointly awarded the 1962 Nobel Prize for medicine, revealed the code or chemical dictionary out of which messages serving as blueprints for living structures can be made. *See* Protein synthesis, F29(2).

Geneva Convention, an agreement made by the European Powers at Geneva in 1864, establishing humane regulations regarding the treatment of the sick and wounded in war and the status of those who minister to them. All persons, hospitals, hospital ships are required to display the Geneva cross—a red cross on a white ground. A second conference held at Geneva in 1868 drew up a supplementary agreement. An important result of this Convention was the establishment of the Red Cross Society in 1870.

Genocide is an international crime, defined by the General Assembly of the United Nations in 1948 as "acts committed with intent to destroy, in whole or in part a national, ethnic, racial or religious group as such." The U.N. Convention came into force in 1951.

Genus, a term applied in biology to designate a group of similar species. A group of similar genera is called a family.

Geodesy, the science of calculating the configuration and extent of the earth's surface, and determining exact geographical positions and directions, with variations of gravity, etc. Land-surveying is a branch of geodesy.

Geography, the science which describes the earth's surface, its physical peculiarities, and the distribution of the various animals and plants upon it. It is usual to divide the subject into two main branches—physical geography, which deals with the composition of the earth's surface and the distribution of its living occupants, animate and inanimate; and human geography, which includes economic, political, and social geography.

Geology, the science which deals with the condition and structure of the earth, and the evidence afforded of ancient forms of life. The geological strata are classified in the following categories: *Primary* or *Palaeozoic* (the oldest fossil-bearing rocks including the Cambrian, Ordovician, Silurian, Devonian, Carboniferous, Permian); *Secondary* or *Mesozoic* (Triassic, Jurassic, Cretaceous); *Tertiary* or *Cainozoic*

(Eocene, Oligocene, Miocene, Pliocene, Pleistocene); *Post tertiary* (most recent rocks). *See* F45.

Geometrical Progression is a term used to indicate a succession of numbers which increase or decrease at an equal ratio—as 3, 9, 27; or 64, 16, 4.

Geometry is the branch of mathematics which demonstrates the properties of figures, and the distances of points of space from each other by means of deductions. It is a science of reason from fundamental axioms, and was perfected by Euclid about 300 B.C. The books of Euclid contain a full elucidation of the science, though supplemented in modern times by Descartes, Newton and Carnot. Of recent years non-Euclidean geometry has been developed.

Geophysics, the branches of physics which are concerned with the earth and its atmosphere. Meteorology, geomagnetism, aurora and airglow, ionosphere, solar activity, cosmic rays, glaciology, oceanography, seismology, nuclear radiation in the atmosphere, rockets, and satellites—all these are geophysical subjects. The object of the International Geophysical Year, 1957–58, was to investigate the physical phenomena occurring on and around the earth by means of carefully co-ordinated observations made simultaneously all over the globe.

Geothermal Energy. Some of the heavy elements within the earth's crust are radioactive and this gives rise to a temperature rise towards the centre of the earth. The practical exploitation of this geothermal energy comes about when there are hot springs or geysers. It is believed that these are caused by rainwater slowly percolating down to the hot rocks and blowing out as steam. The homes of people living in Reykjavik are heated by geothermal steam and there are a number of small power stations in various parts of the world. Although the costs in the few cases where geothermal power has actually been exploited are remarkably low, the expense of drilling, etc., required when attempting to exploit the heat in the rocks where surface manifestations do not occur, is likely to limit the use of this source of power.

Germanium. A grey, hard, brittle chemical element, symbol Ge, chemically related to silicon and tin. Discovered by Winkler in 1886. Its richest ore is germanite containing 6% of the metal. Coal is also a relatively rich source. Since 1948 it has assumed great importance as a semi-conducting material for making transistors (*q.v.*). Because of this it has been so intensively studied that more is known about its physical properties than about those of any other element.

Gesta Romanorum (Latin = deeds of the Romans), a mediaeval collection of Latin stories of unknown authorship which circulated widely in Europe during the Middle Ages. First printed in the 15th cent. The stories were used by Chaucer, Shakespeare and other writers who found many romantic incidents and legends which they were able to turn to good account.

Gestation, the carrying of young in animals during pregnancy, varies considerably in its length. In the case of an elephant, the period is 21 months; a camel, 12 months; a cow, 9 months; a cat, 8 weeks; a horse, 48 weeks; a dog, 9 weeks; and a pig, 16 weeks. Hens "sit" for 21 days; geese, 30; swans, 42; turkeys, 28; pigeons, 18.

Geysers, hot springs of volcanic origination and action, are remarkable for the fact that they throw out huge streams of boiling water instead of lava as in the case of a volcano. The most famous geysers are those of Iceland, which number over a hundred, the principal one having an opening 70 ft. in diameter and discharging a column of water to a height of 200 ft. There are also geysers in the Yellowstone region of America, and some in New Zealand.

Ghost-Moth or **Ghost Swift**, an interesting nocturnal insect (*Hepialus humuli*), common in England, possessing in the male a white collar and known for its habit of hovering with a pendulum-like action in the twilight over a particular spot where the female is concealed.

Gibbon, the name of a long-armed ape mainly inhabiting S.E. Asia. It is without tail, and possesses the power of very rapid movement among the trees of the forests.

Gin, a well-known spirit distilled from malt or barley and flavoured with the juniper berry. The principal varieties are the English and American, known as "Gin" or "Dry Gin", and the Dutch, referred to as "jenever" or "Hollandse jenever". In Germany and Austria it is called "Schnapps". The word "Gin" is an abbreviation of "Geneva", both being primarily derived from the French genièvre (juniper).

Giraffe, the tallest of existing animals, reaching a height of from 18 to 20 ft. when full grown. Its sloping back and elongated neck seem to be the natural evolution of an animal that has to feed on the branches of trees. It is a native of Africa, is of a light fawn colour marked with darker spots, and has a prehensile tongue.

Giralda, a beautiful and remarkable example of Arabian art, erected in 1195 at Seville, still in existence.

Glaciers form in the higher Alpine ranges, and are immense consolidated masses of snow, which are gradually impelled by their force down the mountain-sides until they reach a point where the temperature causes them to melt, and they run off in streams. From such glaciers the five great rivers, the Rhine, the Po, the Rhône, the Inn, and the Adige, have their source. The longest of the Swiss glaciers is the Gross Aletsch, which sometimes extends over 10 miles. Some of the glaciers of the Himalayas are four times as long. The Muir in Alaska is of enormous magnitude, and that of Justeldals Brae in Norway is the largest in Europe.

Gladiators were professional athletes and combatants in ancient Rome, contesting with each other or with wild beasts. At first they were drawn from the slave and prisoner classes exclusively, but so much were the successful gladiators held in esteem that men came to make a profession of athletics, and gladiatorial training schools were established. When a gladiator was vanquished without being killed in combat, it was left with the spectators to decide his fate, death being voted by holding the hands out with the thumb turned inward, and life by putting forth the hands with the thumb extended. Gladiatorial shows were the chief public displays in Rome from the 3rd to the 4th cent. A.D.

Glass, a substance obtained from the fusion of silica (sand) with various bases, and is more or less transparent. There are numerous kinds of glass, but they group themselves under one or other of the following classifications:—Flint glass, or crystal, whose components are potash, silica, and oxide of lead; window glass, made from soda, lime, and silica; Bohemian glass, containing potash, lime, and silica; and bottle glass, composed of soda, lime, alumina, silica, and oxide of iron. Heat-proof glasses used for making cooking utensils contain boron. Glass was made by the Phoenicians, and was familiar in ancient Egypt. The Egyptians introduced it into Rome. In the Middle Ages Venice was famed for its glass manufactures, but after the 17th cent. Bohemia acquired pre-eminence. English glass reached its highest level of artistic design in the 17th and 18th cent. Window glass was not used in this country for dwellings until the end of the Middle Ages.

Glass-Snake, genus, *Ophisaurus*, of legless lizards with long fragile tails capable of re-generation when broken. Six species are known; in S.E. Europe, S.W. Asia, Indo-China, and N. America. Attains a length of about 2 ft.; main colouring, green, with black and yellow markings.

Glauconite. A green mineral, chemically a hydrated silicate of potassium and iron. Commonly found in marine sands (hence these rocks are known as "greensands") and sandstones.

Glaucus is a curious genus of sea slugs often called the Sea Lizard belonging to the molluscs. It is without shell and has a soft body, with horny mouth and four tentacles. It is a native of the Atlantic, and is not more than 12 in. in length.

Glee, an unaccompanied piece for three or more voices. Glee-singing was popular in England during the 18th and early 19th cent. and glee-clubs are still in existence.

Globigerina, an oceanic unicellular animalcule with a perforated shell, and occurring in certain parts of the Atlantic in such vast numbers as to form a bed of chalk ooze with their empty shells.

Glockenspiel, an instrument composed of metal bars each of which is tuned to a note. The bars are struck by hand-hammers and give forth chiming sounds.

Gloria in Excelsis (" Glory to God in the highest ") is the opening of the Latin hymn adapted from Luke ii. 14, and the most prominent hymn of the ecclesiastical rites in the Christian liturgies.

Gloria Patri, the lesser Doxology, with which chants are generally concluded in the English Church service—" Glory be to the Father, and to the Son."

Glow-worm, a beetle, possessing the power (much stronger in the female than the male) of emitting phosphorescent light from the hind end of the body. The female is wingless.

Glucinium. *See* **Beryllium.**

Glucose, Dextrose *or* **Grape Sugar** is a carbohydrate (*q.v.*). It is produced by hydrolysis from cane sugar, dextrine, starch, cellulose, etc., by the action of reagents. It also occurs in many plants, fruits, and honey. For brewing purposes glucose is prepared by the conversion of starch by sulphuric acid. Malt also converts starch into glucose.

Glutton *or* **Wolverine**, the biggest animal of the weasel family, inhabits the northernmost parts of Europe and America. In build it resembles the bear, and is rather larger than a badger. Its fur is of a brown-black hue, but coarse.

Glycerine *or* **Glycerol**, occurs in natural fats combined with fatty acids, and is obtained by decomposing those substances with alkalies or by superheated steam. It is colourless and oily and sweet, and is put to a variety of commercial uses, being widely utilised for medicaments, for lubricating purposes, and in the manufacture of nitro-glycerine.

Glycols. Organic compounds containing two alcohol groups. Ethylene glycol is the most widely known example: it is used as an anti-freeze in motor-car radiators on account of its property of greatly reducing the freezing point of water. Also used in the manufacture of " Terylene ". *See* **Esters.**

Glyptoden, an extinct species of gigantic armadillo, fossil remains of which have been discovered in S. America. It was some 9 ft. long, carried a huge tortoise-like shell, and had fluted teeth.

Gneiss, a metamorphic rock usually containing quartz, felspar, and mica. It is banded, the light-coloured minerals being concentrated apart from the dark minerals.

Gnosticism. *See* **Section J.**

Gnu, an animal of the antelope family, combining the characteristics of the buffalo in its head and horns, the ass in its neck and mane, and the horse in its long and bushy tail. There are two species, the common and the brindled, and they are about the size of an ass. They abound in Africa and congregate in herds.

Goat-Moth (*Cossus cossus*), a large moth of the *Cossidae* family, common in Britain, evil-smelling, and very destructive in the larval stage to trees of the poplar and willow genus, into the wood of which the caterpillar bores during its three years' period of development.

Goats are horned ruminant quadrupeds, indigenous to the Eastern Hemisphere, but now domesticated in all parts of the world. Though related to the sheep, they are a much hardier and more active animal. The male has a tuft of hair under the chin. Many species, including those of Cashmere and Angora, are valuable for their hair, which is used for fine textile fabrics. The milk of the goat is nutritive, and goat-skins are in good demand for leather for gloves, shoes, etc.

Gobelin Tapestry was originated by a family of dyers named Gobelin in the 15th cent. in Paris. The Gobelin establishment, which produced this beautiful tapestry, made of silk and wool, or silk and cotton, was taken over by the Government of Louis XIV., in 1662, and since then has been the French national factory for that class of fabric.

God and Man *See* **Section J.**

Gog and Magog, two legendary City of London giants, supposed to be the offspring of certain wicked daughters of the Emperor Diocletian and a band of demons. They were brought captive to London and made to serve as prisoners at the Palace of Brute, which stood on the site of Guildhall. Effigies of the giants have stood in Guildhall since the time of Henry V. They were destroyed in the Great Fire of 1666, replaced in 1672, and used to be carried through the streets of London in the Lord Mayor's Show. The present figures, newly carved in lime wood by Mr. David Evans, replaced those carved in 1708 by Richard Saunders, which were destroyed in an air raid during the last war.

Gold. Metallic element, symbol Au (Latin *Aurum*) related to silver and copper, the coinage metals. The greatest amount of gold is obtained by treating gold-bearing quartz by the cyanide process. The gold is dissolved out by cyanide solution, which is then run into long boxes filled with zinc shavings when the gold is precipitated as a black slime. This is melted with an oxidising agent which removes the zinc.

Gold-Beaters' Skin is the outside membrane of the large intestine of the ox, specially prepared and used by gold-beaters for placing between the leaves of gold while they beat them. This membrane is of great tenacity, and gets beaten to such extreme thinness that it is used to put on cuts and bruises.

Gold Standard. Under the gold-standard system, which was widely prevalent up to 1914, each gold-standard country fixed the value of its currency in terms of a weight of gold of a certain fineness and was, broadly speaking, ready to exchange its currency freely for gold, which could then be exported without restriction. This involved keeping a gold reserve big enough to meet all likely demands and also to serve as a backing for the issue of notes. The gold standard had to be given up during the First World War; and though it was in substance restored in Great Britain in 1925 (when Churchill was Chancellor), the restoration was never complete, as the gold reserve remained too small for complete freedom to export to be practicable. Sterling had to be devalued in the financial crisis of 1931 (which brought about the fall of the Labour Government) and Great Britain was forced off the gold standard. A currency is fully *convertible* if it can be freely exchanged for any other currency, or for gold, at the ruling official rates of exchange. *See* **Section G, Part IV.**

Goldeneye, a species of wild duck, widely distributed over Arctic regions. It is a passage-migrant and winter-visitor to the British Isles. Has nested in Cheshire. Distinguished by a large white spot in front of each eye on a dark ground.

Golden Number, the number of any year in the metonic cycle of 19 years, deriving its name from the fact that in the old calendars it was always printed in gold. It is found by adding 1 to the number of the year A.D. and dividing by 19, the remainder being the Golden Number; or, if no remainder, the Golden Number is 19. The only use to which the Golden Number is put now is in making ecclesiastical calculations for determining movable feasts.

Goldsmiths Company, one of the richest London City Companies; the official assayers of gold and silver, invested with the power of " hall-marking " the quality of objects made from these metals. First charter granted in 1327.

Gondola, the old regulation black boats so common on the canals of Venice, propelled by a gondolier with one oar who stands at the stern, his passengers being accommodated in a covered space in the centre.

Gonfalon, the pennon affixed to a lance, spear, or standard, consisting usually of two or three streamers and made to turn like a weather-cock.

Gophers. Rodent mammals. The pocket gophers are stout-bodied burrowers common in the U.S.A. The slender burrowing gophers, also called " ground squirrels," occur in central and western U.S.A. The sisel or suslik is a related European species. They are a great pest among grain crops.

Gordon Riots of 1780 were an anti-popery agitation fomented by Lord George Gordon. Called also " No-Popery Riots."

Gorilla, the largest of the anthropoid apes, found in the forests of Equatorial Africa, and at maturity standing from 4 to 5 ft. high.

Goshawk (*Accipter gentilis*), a diurnal bird of prey,

fearless and extremely agile; loves wooded country and is very destructive of poultry and game-birds. It resembles the peregrine falcon in appearance, but has shorter, rounded wings. This bird was a great favourite of falconers in mediaeval times.

Gospels are those portions of the New Testament which deal with the life, death, resurrection, and teachings of Christ. They are the gospels of Matthew, Mark, Luke, and John, all compiled in the later part of the 1st cent. The first three are called the *synoptic gospels* because of their general unity of narrative. Mark was the first to be written and John the last, and it is to Mark that one should turn for the most reliable source of knowledge of the life of Jesus. The word *gospel* comes from two Anglo-Saxon words *gode* (good) and *spell* (tidings), a translation of the Greek *euangelion* = evangel, evangelist.

Gothic. A term applied to a style of architecture which followed the Romanesque, appeared in France during the 12th cent., and is typical of northern Europe. It was not generally appreciated south of the Alps. The high and sharply pointed arches, the walls supported outside by flying buttresses, the traceried windows, often filled with stained glass, and the lofty spires are in sharp distinction to the semicircular arches and the massive walls characteristic of the more sturdy Romanesque style. Yet the transition was gradual. The cathedrals of Chartres, Laon, and the Benedictine church of St. Denis just outside Paris are typical of early Gothic. The style found its full expression in the French cathedrals of the 13th and 14th cent.: Reims, Notre Dame, Beauvais, Bourges, and Amiens. From France the style spread to other lands in each of which it developed its own characteristics; thus the English churches tended to have massive towers and delicate spires and, as at Salisbury, were often set in open grounds surrounded by lawns; Flemish and Dutch churches were sometimes built of brick as were those in north Germany and Scandinavia; in Spain the Flamboyant style was followed. The main Gothic cathedral in Italy, that of Milan, although begun in 1386 was not completed until the early 19th cent. The lofty character of Gothic has been attributed by the romantic to pious aspiration, as if the spires were striving towards heaven and this concept may well have played a part. The more concrete reasons however were somewhat different: Romanesque churches were thick-walled, sturdy, small-windowed, and set often in open country or on heights (*a*) because architects had not yet discovered how to support a heavy roof without massive walls; and (*b*) because, being built in dangerous times, they had a defensive function. Gothic churches began to be raised in less troublesome times and were tall for the same reason that New York skyscrapers are tall (*i.e.*, the increasing price of land). Also they were built in growing cities where not much space was available and they were lavish in style because wealth was increasing and rich merchants were willing to contribute. Late English Gothic is seen, for example, at King's College Chapel, Cambridge, Henry's Chapel at Westminister, and St. George's Chapel at Windsor (all *c.* 1500). Gothic is also found in secular buildings, *e.g.*, Little Wenham Hall in Suffolk, the castle at Ghent, the town halls of Louvain and Middelburg, and the streets of Gothic houses in Bruges still in use today. Virtually Gothic as a style (excluding the "Gothic revival" of 19th cent. England) ended at the close of the 15th cent. Gothic art is best seen in the illuminated manuscripts of the 13th and 14th cent. and in the church sculpture. Its characteristic is a complete departure from the cool, perfectionist realism of classical times with distortion to produce emotional effects. The human figures are not ideal forms but recognisable as people we might meet in the street; yet there was also the element of wild imagination, intricate design, and a wealth of feeling which might be grotesque, humorous, macabre, or even obscene. This element of distortion and sometimes wildly "unrealistic" colouring which produced an effect more dramatic than the literal representation of the classic schools remained an important element in German art (*see* Expressionism) right up to modern times.

Goths. A Teutonic people who originally came from southern Sweden (Gotland) and by the 3rd cent. were settled in the region north of the Black Sea. They began to encroach on the Roman Empire and early in the 4th cent. split into two divisions: the "wise" Goths or Visigoths between the Danube and the Dniester (referred to as the West Goths), and the "bright" Goths or Ostrogoths in southern Russia on the Dnieper (referred to as the East Goths). The Ostrogoths were conquered by the Huns *c.* 370, while the Visigoths under Alaric devastated Greece and sacked Rome in 410. Eventually the Visigoths spread to France and Spain and their last king Roderick fell in battle against the Moors in 711. The Ostrogoths regained their independence on the death of Attila in 453 and under their king Theodoric the Great conquered Italy in 493. They lost their identity after Justinian regained Italy, 525–552.

Gourd Family *or* **Cucurbitaceæ.** This family of about 650 species of flowering plants includes the gourds, pumpkins, cantaloupes, cucumber, gherkin, water-melon and squashes. Most abundant in the tropics, the cucurbits are mainly climbing annuals with very rapid growth. The bath-room loofah is the skeleton of one curcurbit fruit, *Luffa cylindrica*. The squirting cucumber is another member of the family.

Governor. A device attached to an engine, turbine, compressor, etc., which automatically controls the engine's speed in accordance with power demand. Most governors depend upon the centrifugal action of two or more balls which are thrown outwards as their speed of rotation increases and actuate a throttle valve or cut-off. The centrifugal governor was invented by Thomas Mead, patented by him in 1787, and used on windmills. Watt adapted it to the steam engine.

Grail, Legend of the Holy, a tale of Celtic origin which became part of Arthurian legend and the subject of many mediaeval quest-romances. According to the Christian version the grail was the cup which Christ used at the Last Supper, brought to England by St. Joseph of Arimathea.

Grand Prix, the "French Derby," was established by Napoleon III., in 1863. It is the chief French race and is an international competition of three-year-olds.

Granite is a coarsely crystalline igneous rock consisting of quartz and alkali felspars plus mica or hornblende. It is a much used ornamental and building stone; it forms the high ground of Dartmoor and Bodmin Moor.

Graphite *or* **Plumbago,** commonly called black-lead, is a form of carbon occurring in foliated masses in marble, schist, etc. It is soft, will make black marks on paper or other plain surfaces, and is mainly used for lead pencils. It is also a valuable lubricant. Pure graphite has found a new use with the construction of atomic piles. Important deposits occur in Siberia, Ceylon, Madagascar, Canada, and the U.S.A.

Graptolites, fossil animals confined to Cambrian, Ordovician and Silurian strata. Once classified as hydrazoa but now considered more likely to be hemichordates.

Grasshopper. There are many species of these leaping insects which are related to the locusts and crickets. Most are vegetarians; some eat flies and caterpillars also. The chirping sound they make is made by scraping the hind legs against the wings; in some species a noise is produced by rubbing the wings together.

Gravitation. One of the four types of force known to physics. The others are electromagnetic forces and two types of nuclear force (F15(2)). Gravitational forces are an attraction that one piece of matter has for another; they dominate astronomical phenomena, but inside the atom they are negligible compared with the other three types of force. Einstein's General Theory of Relativity is the only theory at present extant which attempts to interpret gravitational forces in terms of more fundamental concepts. *See* F15(2).

Graylag, the ordinary wild grey goose of Europe, the species from which domestic geese are derived; frequents fens and marshes; breeds

in Iceland, Scandinavia, and Scotland; distinguished by pinkish legs and feet and lack of black markings on bill.

Grayling, a fresh-water fish of the salmon family having a large dorsal fin, and averaging about 1 lb. in weight.

Grebe, a diving bird of beautiful plumage found over a great part of the world on lakes and oceans. The two species familiar in Great Britain are the Dabchick or Little Grebe and the large and handsome Great Crested Grebe, which has a feathery tuft, lost in the autumn, on each side of the head. Grebes have remarkable courtship displays. The breast feathers are of a downy softness and silver lustre, for which they were formerly much hunted.

Greek Art. *See* Hellenic Art.

Greek Fire, a combustible supposed to have been composed of sulphur, nitre, naphtha, and asphalt, used with destructive effect by the Greeks of the Eastern Empire in their wars.

Greek Kalends, equivalent to never, as only the Romans, not the Greeks, had kalends.

Green Revolution. The "green revolution" is principally due to the American agricultural expert, Dr. Norman Borlaug, who since the 1940s has been working in Mexico on the development of new improved strains of wheat, rice, maize and other cereals. The application of new plant varieties has transformed the agricultural prospects of India, Pakistan, Sri Lanka, Mexico, the Philippines and other underdeveloped countries; food importers are turning into exporters. For his pioneering work Dr. Borlaug was awarded the 1970 Nobel peace prize.

Greenwich Mean Time. The first Nautical Almanac, for the use of navigators and astronomers, was published by the Astronomer Royal in 1767. It was based on the meridian at Greenwich, with longitude measured east and west of 0°. A master clock, which still exists, was built at Greenwich Observatory in 1852 to control the railway station clocks and Greenwich Mean Time, or Railway Time as it was sometimes called, prevailed. In 1884 Greenwich was chosen as the prime meridian of the world and GMT became known as Universal Time. *See also* British Standard Time.

Gregorian Calendar. *See* Calendar.

Gregorian Chant, ritual music with a system of harmony suitable for church use. First established by Pope Gregory I.

Gresham's Law states that if good money, *i.e.*, money with the higher intrinsic value, and bad money are in circulation together, the bad money will tend to drive out the good money from circulation. For instance, the good money is more likely to be melted down or demanded in payment by foreign creditors.

Gretna Green, a celebrated village in Dumfries, just over the border from England, where runaway marriages were performed from 1754 to 1856, though only completely stopped during present century.

Griffin, in ancient mythology, a winged creature with an eagle's head and the body of a lion, found in ancient sculptures of Persia and Assyria. Its origin is traced to the Hittites.

Grilse, a young salmon that has only been once to the sea.

Grimm's Law, formulated by Jacob Grimm, an eminent German philologist, lays down a principle of consonantal change in the Germanic languages. For instance, Lat. *pater*, Eng. *father*, Ger. *Vater*; Lat. *frater*, Eng. *brother*, Ger. *Bruder*; Lat. *decem*, Eng. *ten*, Ger. *zehn*.

Grogram (French = *gros grain*), a kind of rough fabric made of wool and some other fibre, such as silk, mohair, or cotton, formerly much used for commoner kinds of wearing apparel.

Grotto, a natural or artificial cave. Among the most famous are the blue grotto of Capri and the stalactite grotto of Antiparos (Cyclades, Aegean).

Ground Wave, that part of the energy emitted by a radio transmitter which travels along the ground; as opposed to the sky wave which is reflected back to earth by the ionosphere. With the lower radio-frequencies, the ground wave can be picked up over several thousand miles; in the broadcasting band, over a hundred or so miles; it is virtually useless at high frequencies.

Grouse, game bird of the northern latitudes where some 20 species occur. They are stout, compact, ground-dwelling birds, protectively plumaged (the willow grouse turns white in winter), the male usually being larger and more brightly coloured than the female. The red grouse of the British moorlands has been introduced into Belgium and W. Germany. Of the same family are the blackcock, ptarmigan, capercaillie, American prairie-hen, and the common partridge. Grouse shooting begins in Britain on Aug. 12.

Guanaco, a large species of llama, common to South America, and utilised as a beast of burden.

Guano, the excrement of sea-birds, found in large quantities on the rocky islands of the western coasts of South America and Nauru Is. It forms a useful fertilising agent, being rich in phosphate and ammonia, and first came into use in 1841, since which time Peruvian guano has been a recognised article of commerce. Beds of guano from 50 to 60 ft. in thickness are not uncommon. Fish guano and bat guano from caves in South America and the Bahamas are also used as fertilisers.

Gudgeon, a small fresh-water fish of the carp family with 2 small barbels on the upper lip.

Guelph and Ghibelline, italianised forms of the German words "Welf" and "Waiblingen," the names of two rival princely families whose conflicts made much of the history of Germany and Italy during the Middle Ages. The feuds between these two factions continued in Italy during the campaigns of Emperor Frederick I., and later developed into the fierce struggles of the 13th cent. between emperor and pope. In Italy the Ghibellines supported the side of the German emperors and the Guelphs the cause of the pope. The present Royal Family of England and other Northern monarchies are descended by different routes from the Guelph George I, Duke of Brunswick-Lüneburg of the House of Hanover.

Guildhall, the place of assembly of the members of a guild, and at one time, when guilds were in full strength, was practically the Town Hall. The London Guildhall is to-day the hall of meeting for the City of London Corporation.

Guilds for the fostering and protection of various trades have existed in England since Anglo-Saxon times, and from the 12th to the 16th cent. exercised great influence and enjoyed many privileges. There were trades' guilds and craftsmen's guilds, and in all large cities and towns there was a guild hall. Their successes in the Middle Ages led to many monopolistic abuses, and in the end it became necessary to free the country from their restrictive power. The City Guilds (Livery Companies of the City of London) derive their name from the distinctive dress assumed by their members in the 14th cent. There are 83 Guilds in existence.

Guild Socialism. *See* Section J.

Guillemot, a genus of sea-birds of the auk family, common in Northern Europe, two species—the Common Guillemot and the Black Guillemot—being natives of our own sea coasts, nesting on the cliffs. Brünnich's Guillemot, an Arctic species, is a rare straggler in the British Isles.

Guinea, an English gold coin of the value of twenty-one shillings, current from 1663 to 1817, and deriving its name from the first guinea coinage having been struck from gold obtained on the coast of Guinea.

Guinea-Pig, a rodent of the cavy family about 10 in. in length and with a tail so short that it does not project outside the body. It makes an excellent pet, though easily frightened. Its ancestors were species of the wild cavy of S. America said to have been domesticated by the Incas of Peru.

Gules, a heraldic term, denoting a rose of red tincture, indicated by vertical lines drawn or engraved without colour.

Gulf Stream is confined entirely to the western side of the N. Atlantic and is the warm-water current flowing through the Straits of Florida from the Gulf of Mexico parallel to the American coast up as far as Cape Hatteras. From there it continues north-eastwards as a slower, broader, cooler (yet even so, relatively warm) drift of water, merging with the North Atlantic Drift and losing its identity about 40° N. Lat., 60° W. Long. It is a common error to attribute the

warmth of the British Isles and Western Europe generally to the Gulf Stream but this has no influence whatever except in so far as it feeds the North Atlantic Drift. Both the Gulf Stream and the North Atlantic Drift owe their movement to the direction of the prevailing winds, and it is the south-westerly airstream coming from warmer regions and passing over the surface waters of the Atlantic Drift that brings the warmth inland to influence the climate of Western Europe.

Gull. An extremely well-known, long-winged seabird with rather short legs and webbed feet. In almost all adults the body and tail are white whilst the back and most of the wings are grey or black. In the majority of cases the plumage of juveniles is partly or entirely dusky. Gulls are omnivorous, and are very useful as scavengers. They follow ships and quickly seize upon any refuse which may be thrown overboard. There are 44 species, which vary in size from moderately small to large. With certain exceptions, such as the Kittiwake in the North Atlantic, they are not found very far from land. They are sociable and mostly breed in colonies on cliff-ledges, on islands, beaches and sandhills, and among vegetation in swamps, sometimes a long way from the sea. The nest is usually substantial, and the eggs generally number from two to three. Of the 29 species breeding in the northern hemisphere, 14 occur in the British Isles. The pure white Ivory Gull is the most northerly of birds. Sabine's and the Swallow-tailed Gull have forked tails. Ross's Gull has a black ring round the neck and one species, Franklin's Gull, migrates from the North, where it breeds, to pass the winter in the Southern hemisphere.

Gums are glutinous compounds obtained from vegetable sources, soluble in cold or hot water, but not in alcohol. There are innumerable varieties. Gum Arabic is exuded from a species of acacia grown in Senegal, the Sudan, Arabia, India and other countries, and is a valuable commercial product, used in dyeing, ink-making, as a mucilage, and in medicine. India-rubber is an elastic gum. Gums are also made from starch, potatoes, wheat, etc., from seeds, bark, roots, and weeds. Many so-called gums are resins.

Gun-Cotton, a powerful explosive manufactured by subjecting a prepared cotton to the prolonged action of a mixture of three parts sulphuric acid and one part of nitric acid. It burns without explosion on ignition, but by percussion explodes with a force five times greater than that of gunpowder.

Gunpowder, also called "black powder," the oldest of explosive mixtures, consists of saltpetre, sulphur, and charcoal, intimately mixed, the proportions being varied for different intended uses.

Gunpowder Plot was a conspiracy by a desperate band of Roman Catholics in the reign of James I, to avenge the harsh treatment to which Catholics were subjected. Barrels of gunpowder were secreted in the vaults underneath the Houses of Parliament, and it was proposed to fire these when the King and his Ministers assembled on Nov. 5, 1605. The plot was betrayed and Guy Fawkes and his co-conspirators were arrested and executed. The date serves to perpetuate the ancient custom of burning the effigy of Fawkes, a custom in which young people are the most enthusiastic participants, with bonfires, fireworks, etc.

Gurnard, a sea-fish, with large, bony head and diminutive body, of which there are some forty species. They are plentiful in British waters.

Gymnasium, originally the name given in ancient Greece to the public places where Greek youth used to exercise and receive instruction. Plato, Aristotle, and other great teachers lectured there. The Greek institution was never very popular with the Romans, and it was not until the 18th and 19th cent. that the cult of combining physical with intellectual activity again found a place in educational systems. In Germany the name was applied to the classical grammar school; in this country and America to the halls where gymnastics were practised.

Gypsies, a nomadic race, believed to be of Indian origin; their language, Romany, is related to the languages of N.W. India. The Rom are spread over many parts of the world, but are most common in Europe where they appeared towards the end of the Middle Ages. The English name *gypsy* comes from the Spanish *gitano* = Egyptian; other European names are *Zigeuner* (Ger.), *zingaro* (It.), *fzigany* (Magyar), all resembling the Persian *zingar* = a saddler. Their history has been one of persecution. Hitler treated them like the Jews. In Britain since the war they have been kept increasingly on the move, but in 1968 Parliament passed a Bill to make the provision of sites a duty of local authorities. However, it is likely at the present rate of building to be many years before the 4,500 gypsy households have a site. Economic pressure has largely removed their traditional crafts of tinkering, basket-making, peg-making. The majority now deal in scrap-iron.

Gypsum, a whitish mineral consisting of hydrated sulphate of calcium. The finest gypsum is alabaster. When heated gypsum is converted into the powder called Plaster of Paris; the water it loses can be taken up when the plaster is wetted, and the reconversion of Plaster of Paris into gypsum accounts for the way in which the former sets hard. The name "Plaster of Paris" came from the location of important gypsum quarries in the Montmartre district of Paris. It was found after the flood disasters of Jan. 1953 that gypsum could undo the effect of sea-water. By spreading it for the rain to wash into the soil, thousands of acres of farmland in Holland and Britain were made productive again.

Gyroscope is a symmetrical rapidly rotating object, typically wheel-like, which because of its mass and rotation possesses a lot of the dynamical property known as angular momentum. Basic dynamical laws tell us that angular momentum is conserved and a consequence of this is that the axis of rotation tends to stay pointing in the same direction. Disturbing influences make a gyroscope's motion complicated but the general effect of the presence of a gyroscope attached to any body is to help to stabilise the body's motion. This is made use of in reducing the rocking of ships and in compasses and control systems in aircraft, torpedoes, and missiles.

H

Habeas Corpus, the name given to a writ ordering the body of a person under restraint or imprisonment to be brought into court for full inquiry into the legality of the restraint to be made. The first Habeas Corpus Act was passed in 1679, though nominally such a right had existed from Magna Carta, but some of the more despotic kings had disregarded it. In times of public peril the privilege of *habeas corpus* is sometimes temporarily suspended, many instances occurring in the history of Ireland and during the First and Second World Wars.

Haber Process, the important industrial process for synthesising ammonia from atmospheric nitrogen. Nitrogen and hydrogen are made to combine at high pressure (200 atmospheres or upwards) in an electric arc.

Haddock, one of the best-known fishes abounding in northern seas and averaging about 4 lb. in weight. Related to the cod. Largely used for curing, and sold as "finnan haddies."

Hade of veins, a mining term indicating the particular inclination that any vein, seam, or strata may have from the perpendicular; thus, in Weardale the veins mainly "hade" to the north.

Hadrian's Wall. *See* Roman Walls.

Haematite, ferric oxide, one of the principal iron ores, containing about 70% of the metal. It is usually found in kidney-shaped masses, and is specular, red or brown, in thin fragments, but greyish in bulk.

Haemocyanin, the respiratory pigment of crustaceans and molluscs. It functions like haemoglobin, from which it differs in containing copper instead of iron and being blue when oxidised instead of red. *See* F36(2).

Haemoglobin, the pigment containing iron which gives red blood corpuscles their colour. It is a respiratory pigment, having the property of picking up oxygen when the blood passes

through the lungs to produce the compound known as oxyhaemoglobin. In other parts of the body the oxyhaemoglobin breaks down, liberating oxygen, which is used in the oxidation process (respiration) that the body tissues carry on. *See* F36(2).

Hafiz, besides being the pseudonym of a famous Persian poet, is a title conferred upon any Mohammedan who has committed the whole of the Koran to memory.

Hafnium, a metallic element discovered by Coster and Hevesy in 1922 and important in the atomic-energy field. It occurs in most zirconium minerals to the extent of about 5 per cent.

Hag-fish, a blind, eel-like parasitic sea-fish with soft backbone; found within the bodies of other fish, and called sometimes the "borer," or "the glutinous hag-fish." Related to the Lamprey.

Hagiarchy, the rule or order of Saints.

Hagiology, a branch of literature that is wholly given up to the history of the saints, and the setting forth of the stories and legends associated with their names.

Hail, hard, roughly spherical balls of ice, consisting of white cores covered by layers of both transparent and opaque ice, frequently falling during thunderstorms. They usually do not exceed 1 in. in size, but hailstones larger than apples and weighing more than 2 lb. have been observed. The general theory of a hailstone is that near the top of a cumulonimbus cloud a raindrop becomes frozen, grows in size by condensation and through collisions with snow particles, and eventually becomes so weighty as to overcome the ascending air currents in the cloud. Falling, it first encounters supercooled water drops, immediately freezing on it, increasing the white core, and then at lower levels ordinary water drops, freezing more slowly, producing a layer of clear ice. Before the hailstone arrives at the ground gusts and lulls may transport it several times up and down both regions, adding alternate coatings of soft white and hard clear ice.

Hake, a fish of the cod family, found in large numbers in the seas of Europe, but not in high favour for the table with fastidious feeders.

Halcyon, a term associated in olden times with the kingfisher and days of soothing calm, "halcyon days" being a frequently used expression. The legend was that the kingfisher laid its eggs on the surface of the sea at the time of the winter solstice when the sea was unruffled. Halcyon is the Greek for kingfisher.

Halibut, one of the largest of the flat fishes, averaging when full grown from 4 to 6 ft. in length, and highly esteemed for the table. Specimens of still larger size occasionally occur. It is plentifully distributed. Its two eyes are on the right side of the head.

Hall-mark. A mark or group of marks, impressed by an assay office on gold or silver articles guaranteeing the standard of fineness of the precious metal used in them. These marks, which have been applied to silver made in London since the beginning of the 14th cent. and perhaps earlier, make it possible to establish the year and place of assay as also the name of the maker. English pieces of silver usually have not less than four marks, viz., (1) town mark; (2) maker's mark; (3) date letter; (4) sterling mark.

The town mark is rarely changed; in London a crowned leopard's head was used from the earliest days until 1820 with only minor modifications, except for the period 1697–1720 when a lion's head erased was substituted; since 1820 the crown has been omitted.

Until the late 17th cent. a symbol was often used as a maker's mark, from 1696 to 1720 the first two letters of the maker's surname, and subsequently the maker's initials. Owing to the destruction of the earlier mark plates at Goldsmiths' Hall no maker's name prior to the late 17th cent. can be identified with certainty.

The London date letter is changed at the end of May each year, so each letter covers seven months of one year and five months of the following. The London date cycle has usually consisted of twenty letters; the alphabet of each cycle is of different style, and the letters are enclosed in shields of different shape.

The sterling mark, the lion passant, was introduced in 1544 and continued in use until 1697, when the higher Britannia standard was introduced in order to discourage the practice current amongst goldsmiths of melting down coin of the realm to make plate. The leopard's head crowned and the lion passant were then replaced by a figure of Britannia and a lion's head erased. Though the regulation imposing the higher standard was withdrawn in 1720, a small amount of Britannia standard silver continued to be made and still is made.

From 1784 until 1890 a plate tax was levied on all silver assayed in Great Britain and an additional duty mark, the sovereign's head, was used during this period. A Jubilee mark bearing the head of George V and of Queen Mary was used in between the years 1933 and 1935, and in 1953 a coronation mark with the head of Queen Elizabeth was introduced.

The tables of hall-marks in Section N give the London date letter cycles from 1598 to 1955. The form of town mark and sterling mark used during each cycle is given at the head of each column. Where a major alteration took place in either of these marks during a date-letter cycle, the alternative forms are also shown. The date of the change can be established by reference to the notes above. At the bottom of each page the marks used by the major provincial, Scottish and Irish assay offices are shown. Owing to lack of space, the complete date-letter cycles are not shown, but two examples only from the 17th, 18th or 19th cent. Where a provincial assay office was established in the 17th cent. or earlier, the marks of one year in the 17th and 18th cent. respectively are shown, where the office was not established until the 18th cent., the marks of one year in the 18th and 19th cent. are given.

Halloween (Oct. 31), the eve of All Saints' Day, a time associated, especially in Scotland, with certain pleasing superstitions attractively set forth in Burns's famous poem "Hallowe'en." It is the night when young men and maidens are supposed, by observing certain rites, to have their future wives and husbands disclosed to them.

Hallucinogen, a drug which acts upon the brain to create sensory illusions or hallucinations with a variety of emotional effects. One of the most widely studied is LSD (*q.v.*) which will produce symptoms very similar to those found in some mental disorders.

Halo, a luminous circle usually of 22° radius, surrounding sun or moon, produced by the refraction and reflection of light by ice crystals of high cirrus cloud. It is a very common occurrence, in the British Isles almost one day in three. The inner side is red and the outer a whitish-yellow colour. "Mock suns," *i.e.*, patches of light at the same elevation as the sun are much rarer occurrences, sometimes being of great beauty and brilliance. Halo is the Greek for threshing-floor. *See* Coronae.

Halogens, the group name for the four non-metallic elements fluorine, chlorine, bromine, and iodine. The term "halogen" means "salt-producer."

Halteres, the modified hind-wings of the two-winged flies or *Diptera* (*e.g.*, the house-fly). The equilibrium in flight of these insects depends on the halteres, which are commonly called "balancers."

Hampton Court Conference, presided over at Hampton Court Palace by James I. in 1604 and which brought about his authorised translation of the Bible, had an important bearing on the religious differences of the time. James refused to grant tolerations to the Puritans. This sowed the seeds of civil war. Following the conference three hundred English Puritan clergy were ejected from their livings.

Hanaper Office, a former Chancery office, deriving its name from the fact that its writs and papers were kept in a hanaper (hamper). The Chancellor's officer thus came to be known as the Hanaper. The Comptrollers of the Hanaper were abolished in England in 1842.

Hand, a measure of four inches, the average size of the palm; used in reckoning height of horses.

Handfasting, an informal marriage custom once prevalent in Scotland, whereby a man and

woman bound themselves to cohabit for a year and a day, and at the end of that period either confirmed their contract by a regular marriage or separated.

Hansard, the title given to the official reports of Parliamentary debates, so named after Luke Hansard who in 1774 became partner in a firm of printers to the House of Commons. His son T. C. Hansard was first the printer and then the publisher of an unofficial series of parliamentary debates inaugurated by William Cobbett in 1803. In 1909 production was taken over by H.M. Stationery Office and today's volumes contain full, substantially verbatim, reports of what is said in both Houses of Parliament.

Hanseatic League was a confederation of North German towns established about 1241 for purposes of mutual protection in carrying on international commerce. The League became so powerful that it was able to dominate the foreign trade of Norway, Sweden, Denmark, and even to some extent of London. A branch was established in London and had its guild hall in Cannon Street for hundreds of years. The League existed down to the middle of the 17th cent. Hamburg, Lübeck, and Bremen are the only cities which, as free ports, still by commercial courtesy retain the name of Hanse towns. *Hansa* is Old High German for Association or Merchants' Guild.

Hapsburg (*Ger.* Habsburg), the ruling house of Austria, 1282–1918; held title of Holy Roman Emperor, 1438–1806, except for 1740–5. The aggrandisement of the Hapsburg family was mainly brought about by a series of fortunate marriages. In 1521 when the Hapsburg power was at its zenith, Charles V divided his dominions into two branches—Austrian Hapsburg and Spanish Hapsburg. The Hapsburg Danubian Monarchy dates from 1526 when the Hungarian and Bohemian crowns were united with the Austrian patrimony of the Hapsburg. The triple union lasted 400 years. The murder of the heir to the Hapsburg thrones, Francis Ferdinand, at Sarajevo in 1914, provoked the outbreak of the First World War. Francis Joseph's great-nephew, Charles, abdicated in 1918. (Prof. C. A. Macartney's authoritative work, *The Habsburg Empire, 1790–1918*, was published in 1969.)

Hare, species of the *Lepus genus*, distributed widely through the N. hemisphere. Noted for having four upper front teeth, one pair behind the other, short tufted tail, a cleft upper lip and longer ears and limbs than the rabbit. It does not burrow. The young are born with hair and able to see. A swift animal hunted with greyhounds in the sport called "coursing." *See* Game.

Harleian MSS. comprise some thousands of volumes of MSS. and documents, collected by the first Earl of Oxford (1661–1724) and his son Edward. After the death of the latter, his widow handed the MSS. over to the nation for £10,000, and they are deposited in the British Museum.

Harlequin, the buffoon of ancient Italian comedy. As adapted to the British stage, however, harlequin is a pantomime character only, in love with Columbine, appearing in parti-coloured garments and carrying a wand, by which he exercises a magic influence in thwarting the fantastic tricks of the clown and pantaloon.

Harmattan, a dry wind which may blow between January and May across the Sahara to the Gulf of Guinea. Although affording relief from the tropical heat, vegetation withers because of its extreme dryness and much irritation is caused by the clouds of fine dust which it carries.

Harmonic Motion, regular periodic motion of the kind exemplified by a ball bobbing up and down at the end of a spring, and by the piston in a steam engine. It may be simple (simple harmonic motion) or composed of two or more simple harmonic motions. In simple harmonic motion the acceleration is proportional to the distance of the moving body from its original rest position.

Harp-seal, the ordinary Greenland seal, with a dark harp-shaped marking on its back, hence its name. It abounds in Newfoundland waters and further northward towards the Arctic.

Harpy Eagle, a large bird of prey named from the winged monsters of Greek mythology, inhabiting the forest regions of Central and South America. There are eight species, one with handsome grey plumage and large crest which attacks and kills animals much larger than itself, and was called by the Aztecs "winged wolf."

Harrier, a bird of prey of the falcon family; of the various species distributed over the world, three breed in Britain: the moorland Hen harrier, the Marsh harrier, and Montagu's harrier. They are large birds with long tails, long legs, long wings, and gliding flight. They nest on the ground and eat small mammals, frogs, lizards, and small birds.

Hartebeest, common African antelope of a grey-brown colour, with ringed and knotted horns bending backward and tapering to sharp points; gregarious, of large size, and capable of domestication. There are several species.

Harvest Bug, a very small insect, of a dark red colour, which appears in large numbers in the fields in autumn, and is peculiarly irritating to animals and man by the tenacity with which it attaches itself to the skin and burrows underneath. Probably the larvae of spinning mites (Trombidoids). In the U.S.A. they are called "chiggers."

Harvest Moon, the full moon that occurs nearest to the autumn equinox, in September. It rises for several nights running about the same time, and yields an unusually brilliant series of moonlight nights.

Harvestmen are, like spiders, members of the arachnid class but belong to the distinctly different order of Phalangida. They are common in the countryside in autumn and have small oval bodies and eight long slender legs which besides being mere organs of locomotion also act as sense organs. Known as "daddy longlegs" in America.

Hashish, an Arabic word for the narcotic substance prepared from the hemp plant (*Cannabis sativa*). It is known by a variety of names, *e.g.*, bhang in India and marijuana in America.

Hatchment, in heraldry, is a square board, in vertical diagonal position, placed outside a house or on the tomb at the death of a member of a family and so arranged that it indicates the sex and condition of the deceased.

Hawfinch, a well-known European bird of the finch family, having a variegated plumage, a sturdy bill, and black-and-white tail. In England it is found in the Midland and Eastern Counties, and locally in Scotland.

Hawk. This name is applied to almost any diurnal bird of prey other than eagle, falcon, or vulture, but in its strict sense applies only to the *Accipiter* genus—the small Sparrow Hawk and the larger Goshawk, round-winged, long-tailed birds with barred under-parts. They prey upon small birds captured in flight and small mammals.

Hawk-moths, large species of moths, thick of body and strong of wing, which fly with rapid swooping motion, hence its name. There are numerous handsome species in Britain.

Hearth-Money was a tax laid on hearths (in all houses paying the church and poor rates). Charles II. introduced it in 1662, and it was repealed in the reign of William and Mary.

Heat, after prolonged controversy over whether or not heat is a "substance" (formerly called "caloric"), it was established in the 19th cent. that heat is a form of energy; it is in fact the combined kinetic and potential energy of the atoms of which a body is composed. Heat can be turned into other forms of energy, *e.g.*, a red hot body loses heat by radiating it in the form of electromagnetic waves ("radiant heat"—chiefly infra-red rays). Heat may also be transferred from one place to another by conduction and, in fluids, by convection. All three processes occur when a glowing fire heats a room. A unit quantity of heat is the calorie, which is the amount of heat sufficient to raise the temperature of 1 gm. of water by 1° C. In general, adding heat to a body raises its temperature. The number of calories required per gram of material to raise the temperature 1° C is called the *specific heat* of the material. However, adding heat may not raise the temperature but may instead cause a change of state, *e.g.*, from solid to liquid (melting) or liquid to gas (evaporation). The amount of heat required to

melt 1 gram of a solid is called the latent heat of melting. Similarly, there is a latent heat of evaporation. Strictly speaking, the specific and latent heats of a substance depend on how much its pressure and volume are allowed to vary during the measurements. Water has a high specific heat, and this makes the oceans a vast heat reservoir, a factor of great meteorological significance. The science of heat is called thermodynamics, and is of great importance in physics and chemistry. *See* F7.

Heath, flowering plants of the *Ericaceae* family. Heaths are widely distributed over uncultivated spaces of Europe and Africa. In Britain they are represented by heather (of which there are several species) and ling (*Calluna vulgaris*), which cover thousands of acres of moorland. Some of the African or Cape heaths are very beautiful and much prized by florists. One species of heath, *Erica arborea*, which grows in S. Europe and N. Africa has close-grained woody root-stock used for making briar pipes. *See* T7(3).

Heat Wave is a spell of very hot weather, due chiefly in the British Isles to a warm southerly current of air caused by the presence of an anticyclone over western or central Europe at the same time as a depression is stationary over the Atlantic. High humidity increases the discomfort.

Hegira, an Arab term signifying departure or flight, and used in reference to Mohammed's departure from Mecca for Medina, A.D. 622, from which date the Mohammedan era is reckoned.

Helicopter, heavier-than-air aircraft which obtains its lift from blades rotating above the fuselage in windmill-fashion. The first successful helicopters were the Focke-Wulf 61, a German machine (1936), and the VS-300, designed by Igor Sikorsky, flown in 1937. Helicopters can hover, and rise and descend vertically, in addition to being capable of horizontal flight.

Heliotrope, a favourite sweet-scented flowering plant, common in tropical and sub-tropical countries; the Peruvian heliotrope is the "cherry pie" of our summer garden borders. *See* T9(1).

Helium, a gaseous element first discovered by means of the spectroscope in the sun's atmosphere. This discovery, made in 1868 by the astronomer Sir Norman Lockyer, was followed in 1895 by Sir William Ramsay's proof that the element existed on earth. He found it in the uranium ore, clevite. Later it was established that helium is formed by the radioactive decay of many elements which emit α-particles (nuclei of helium atoms) and is contained in all radioactive minerals. The largest source of helium is natural gas, the richest in helium being the gas from certain wells in Utah, U.S.A. Next to hydrogen, helium is the lightest gas known, has a lifting power equal to 92% of hydrogen and the advantage that it is inert and non-inflammable. It is used for inflating airships. Ordinary air contains 1 part in 200,000 of helium. It was the last gaseous element to be liquefied, this being achieved by Onnes in 1908 in Leyden. Liquid helium has many remarkable properties only imperfectly understood. As well as being scientifically fascinating it is indispensable in cryogenics (*q.v.*) as a medium for cooling other substances to temperatures near absolute zero. Hydrogen fusion in the "H bomb" produces helium.

Hellebore, a plant of the *Ranunculaceae* (buttercup) family. The best-known British examples are the green and stinking varieties. There is also a garden kind which flowers in December called the Christmas Rose. Hellebore yields a bitter substance which forms a drastic purgative, but is now little used. *See* T9(1).

Hellenic Art. The art of ancient Greece may be roughly divided into three periods: the pre-historic period (c. 1500–1000 B.C.) of the bronze age Mycenaeans; the archaic period (c. 600–500 B.C.); and the classical period (c. 500–300 B.C.). Of the first period centred on Mycenae in Peloponnesus but extending to the coasts of Asia and the city of Troy we can mention only the massive stone gateways and the shaft graves of Mycenae, where the archaeologist Schliemann discovered painted vases, gold cups, bronze swords, and ornaments of what had once been a great, if primitive, civilisation. During the archaic period sculpture was the principal form of art expression. The magnificent male and female figures are reminiscent of Egyptian art, but are distinctive in liveliness of facial expression. The vase-paintings of this period became more elaborate, depicting scenes from mythology or ceremonial events. Typical of classical Greek art is the representation of the beautiful and healthy human body deliberately posed and often carrying out heroic or athletic acts. The vast majority of these statues are known to us only through Roman copies. The *Hermes* of Praxiteles (born c. 385 B.C.) is possibly the only existing statue which can be assigned with any degree of certainty to an individual artist. Almost the whole of the Greek genius in architecture was expended on temples which are all basically similar in design—a rectangle with a low-pitched gabled roof resting on side walls. The three orders Doric, Corinthian, and Ionic mainly referred to the type of column used, but naturally the whole building was influenced thereby. Some of the main buildings are on the Acropolis, a hill outside Athens, on which stand the Parthenon (from the outer frieze of which the Elgin marbles, now mostly in the British Museum, were taken), the Erechtheum, famous for its Porch of Maidens, and the gateway known as the Propylaea with its broad flight of marble steps. Apart from that on vases, no Greek painting has come down to us, although Greek painters existed and were noted in their time. All we have are copies in mosaic and fresco made by the Romans, at Naples and Pompeii. Of Greek literature in prose, verse, and the drama little can be said here. To the early period (*i.e.*, the archaic age) belong Homer's *Iliad* and *Odyssey*, Hesiod's long poem *Work and Days*, and Sappho's love poems, and Pindar's Odes. The period of Pericles in the 5th cent. B.C. produced more great literature than any comparable period in history: the philosophical writings of Plato and Aristotle, the tragedies of Aeschylus, Euripides, and Sophocles, the comedies of Aristophanes—all these are still part of the European tradition, and together with Greek architecture played a major part in the Renaissance (*see* Section J).

Hellenistic Art, the art of the period of Greek civilisation which began with the conquests of Alexander the Great (356–323 B.C.) and lasted until his former empire (which encompassed most of the Middle East and part of North Africa) was conquered by the Romans in 146 B.C. Culturally it was an important period because it spread Greek culture far beyond its original boundaries—even as far as the north of India, and its centres spread from Athens to the cities of Alexandria in Egypt, Antioch in Syria, and Pergamum in Asia Minor. But equally Eastern culture spread to the West: democracy was replaced by absolute monarchy, cosmopolitanism took the place of the Greek tendency to believe that all who were not Greeks were barbarians, and mystical philosophies took the place of Greek rationalism. This was a sensuous, secular, pleasure-loving, rootless society, and these tendencies were reflected in its art. Hellenistic sculpture was sensual, effeminate, and violently emotional, yet it depicted individuals and not always noble or beautiful ones. (Classical Greek sculpture was idealistic, showed types rather than individuals, and appealed to the intellect rather than the emotions.) Some of the best examples came from the school at Pergamum and later from the island of Rhodes, and the titles themselves speak of their nature: *The Dying Gaul*, *Gaul Slaying his Wife and Himself*, and the famous *Laocoön* (representing Laocoön and his two sons being crushed by two enormous serpents). All these date from about 240 to 50 B.C.—for the culture did not immediately end with the Roman conquest. The enormous frieze of the altar of the temple in Pergamum depicts a battle between gods and giants with tremendous realism and brutal violence far removed from the serene art of classical times. Portrait sculpture is typical of Hellenistic art, where it may almost be said to have been invented, since such ventures in the past had been idealistic rather than realistic. The great Hellenistic cities were geometrically planned and fine public buildings made their

appearance in which the slender and graceful Ionic or the ornate Corinthian columns took the place of the more austere and heavy classical ones. Alexandria was celebrated for its vast libraries and was the centre of a brilliant intellectual life (the Septuagint or Greek translation of the Bible was prepared here). Here too worked the mathematicians Euclid and Archimedes, the physicians Erasistratus and Herophilus, and the geographer Pytheas. But Hellenistic literature was a pale reflection of the glories of the past and we mention only the comedies of Menander and the pastoral verse of Theocritus of Syracuse.

Hemiptera, the order of insects to which belong the true bugs. Their wing structure is in most species incomplete, hence the term hemiptera. This order includes the familiar water insects, the water boatman and water skater, also the aphids, cicadas, leaf hoppers, scale insects. *See* T29(2).

Hemlock, a plant of the *Umbelliferae* family, growing in all parts of Britain, and containing a strong alkaloid poison. Used medicinally, this alkaline substance is of considerable service, being a powerful sedative. According to Pliny, hemlock was the poison used by the Athenians in putting criminals to death.

Hemp (*Cannabis sativa*), name of a plant native to Asia, now cultivated widely for the valuable fibre contained in the stalk or in some species in the leaves. Hemp fibre has been replaced by cotton for textiles and by jute for sacks and is now chiefly used for cordage and twine. It contains a resinous substance from which the narcotic hashish is made. The seed yields a valuable oil. The term hemp is also used for other fibre plants, including manila hemp from the Philippines, sunn hemp from India, sisal from W. and E. Africa and phorium from New Zealand.

Henbane, a plant found in Britain and other parts of Europe and Northern Asia. It belongs to the potato family *Solanaceae*, grows mostly on waste ground, and bears yellow-brown flowers veined with purple. The leaves yield a poisonous alkaloid substance which, medicinally prepared and administered, is of great use. Tincture of henbane is often preferred to laudanum.

Heptarchy, a word derived from the Greek *hepta*, seven, and denoting the seven kingdoms (*archai*) into which Anglo-Saxon England was divided before 900. The seven were Kent, Essex, Sussex, Wessex, Mercia, East Anglia, and Northumbria.

Heracleum, a plant of the *Umbelliferae* family, common in southern and central Europe, though only one species, the cow parsnip, grows in England. It has a bitter root, and from the juice of the stem an intoxicating liquor is occasionally prepared.

Herald, an officer of state empowered to make formal proclamations and deliver messages from the sovereign or other high personage whom he serves. In the developments which took place in armorial bearings, the herald was the functionary charged with the duty of their proper depiction.

Heraldry, the knowledge of armorial bearings, was mainly the outcome of the love of outward distinction which prevailed in mediaeval times. "Heraldry," says Stubbs, "became a handmaid of chivalry, and the marshalling of badges, crests, coat-armour, pennons, helmets, and other devices of distinction grew into an important branch of knowledge." The *shield*, or *escutcheon*, is the ground upon which armorial signs are traced, the colour of the shield being called the *tincture*, the signs recorded the *charges*. There are seven *tinctures—or* (gold), *argent* (silver), *gules* (red), *azure* (blue), *vert* (green), *purpure* (purple), and *sable* (black). The *charges* are classed as "Honourable" and "Subordinate" ordinaries, comprising lines and geometrical forms; and "Common" ordinaries, which latter includes all representations of natural objects. There is also a system of external signs, such as crowns, coronets, mitres, helmets, mantlings, wreaths, and crests, each having its distinctive significance. For other distinguishing marks see Hatchments, Quartering, Rampant, Pean.

Heralds' College or College of Arms, was incorporated by Richard III. in 1483. Its head is the Earl Marshal (an office hereditary in the family of the Dukes of Norfolk), and there are three Kings of Arms, six Heralds, and four Pursuivants. The business transacted is wholly connected with the tracing of genealogies and the granting of armorial bearings. In Scotland the Heraldic functions are performed by the Lord Lyon King of Arms.

Herbarium, a systematically classified collection of preserved plants. One of the largest in the world is at the Royal Botanic Gardens at Kew.

Heredity is the study of the transmission of physical and mental characteristics from one generation to another. Gregor Mendel (1822–84), a great experimenter in the field of inheritance, established the principle embodied in Mendel's law in his work published in 1866. The ideas which he then put forward were forgotten until the early years of this century, but today they form the basis of the modern study of genetics. Genes are the units of heredity; they are contained in the chromosomes of the cell nucleus. In human cells there are 46 chromosomes—22 pairs of characteristic shape and a 23rd (the sex chromosomes) similar in women and dissimilar in men, which unite in the process of fertilisation. An individual can only develop, even under the most favourable surroundings, as far as his inherited characteristics, *i.e.*, his genes will allow him to do so. It is in the development of personality that the interplay between heredity and environment becomes most apparent. *See* **The Evolution of Organisms, Section F, Part IV,** *also* **Q27.**

Hermaphrodite, animals or plants possessing both male and female reproductive organs, *e.g.*, snail, earthworms, most flowering plants.

Hermit Crab, a decapod, with a soft asymmetrical body which it protects by thrusting it into an empty gastropod shell, *e.g.*, whelk, which it carries about, only abandoning it when necessary for a larger one. Found in all seas, many live in commensal relationship with sea anemones, etc.

Heron, a large wading bird with long curved neck and pointed bill, is a member of the *Ardeidae* family, of which there are many species. Egrets and bitterns are included as herons. Herons are to be met with in marsh lands and near rivers and lakes, where they feed on fish and frogs. They nest in trees in large numbers, these colonies being called heronries. The common heron is native to England, and other species from the Continent are frequent visitors.

Herring, a common sea-fish, related to the sardine and pilchard, abounding in northern seas and found in large numbers round the British coasts. The herring fishing is the most important fish industry in this country, a large fleet being engaged in it. The fishing season proper lasts from May to October, the enormous shoals being followed as they move from place to place. The spawning season is about the end of August. One female herring may produce 20 to 50 thousand eggs, which sink to the sea-bed, where they develop.

Hibernation, the dormant condition in which numerous mammals, reptiles, amphibians, insects, plants, etc., pass the winter. The rate of metabolism slows down, and the body temperature drops to that of the surroundings. Work on these low temperatures and their physiological effect has led to improved surgical techniques. Animals of the torrid regions pass through an analogous period (aestivation) during the hot season, when the sources of food are dried up.

Hickory, several species of American tree of the walnut family, remarkable for its very hard, solid, heavy white wood, and bearing an edible, four-lobed nut.

Hieratic Art, a type of art (typified by the major part of the art of ancient Egypt) which is (*a*) exclusively religious, and (*b*) conventionally based on earlier forms and traditions.

Hieroglyphics are the earliest form of pictured symbolic expressions, and are supposed to have been introduced by the ancient Egyptians. They consist of rude depictions of animals, plants, signs, and objects, and in their later examples express, in abridged form, ideas and records from which significant historical information has been gleaned. The deciphering of

Egyptian hieroglyphics long formed an ardent study, but gradually the key to the riddle was discovered, and most of the ancient records can now be understood. Besides the Egyptian there are also Hittite, Minoan and Mayan hieroglyphic scripts. *See* Rosetta Stone.

Hi-Fi means high fidelity and refers to gramophones, tape recorders, and similar apparatus which will *faithfully* reproduce sounds. It is not too difficult these days to amplify electrical signals without distorting them much; it is more difficult to turn electrical impulses into exactly equivalent sound waves (with a loudspeaker, for example) or *vice versa* (with a microphone or gramophone pick-up). Pick-up and loudspeaker are therefore often the weak links in domestic hi-fi and faults in their design, deficiencies in the electronic amplifiers, imperfect gramophone motors can all contribute to audible results ranging from the tolerable to the execrable. Almost perfect sound reproduction is however available to enthusiasts possessing a suitable combination of discrimination, know-how, and financial resources. There are periodical magazines which provide guidance.

Hindi, the official language of India.

Hinduism. *See* Section J.

Hindustani, the spoken form of Hindi (written in Devanagari script) and Urdu (written in Arabic characters).

Hippogriff, a fabulous animal, like a horse in body, but with the head, wings, and front legs and claws of an eagle. The monster frequently appears in the romances of the Middle Ages.

Hippopotamus or "river-horse," the largest living representative of the hog family, widely distributed over Africa, where it lives in herds. It is of immense bulk, attaining a length of 12 ft. and a weight of 4 tons and stands about 5 ft. high. Its skin is hairless and about 2 in. thick, and it has a pair of tusks often weighing as much as 6 lb. It spends most of its time in the water, and lives entirely on vegetation, both aquatic and terrestrial. The pigmy hippopotamus, which occurs in forests and swamps in W. Africa, is only half the size.

Histology is the study of the structure of plant and animal tissues. These mainly consist of groups of cells with similar functions, *e.g.*, muscle, brain tissue.

Hittites, an ancient race (often mentioned in the Old Testament) who inhabited Cappadocia (region of Eastern Asia Minor) from the third to the first millennium B.C. Excavations have revealed that they attained a high level of civilisation round about 1350 B.C. The Hittites were rivals of Egypt, disputing with the Pharaohs the mastery of the Middle East. They were the first to smelt iron successfully.

Hobby, a bird of the falcon family, 12–14 in. long. Local breeding visitor to England and Wales, April–Sept.; irregular visitor to Scotland and Ireland. They winter in Africa.

Hog, the common name of animals of the Suina family, including the wild boar, pig, and sow. The wild boar, *Sus scrofa*, is the common ancestor. The skin of the hog is covered with bristles, the snout truncated, and each foot has four hoofed toes. Hogs are omnivorous feeders and eat almost anything that is given them.

Hogmanay, the Scottish New Year's Eve festival and a national holiday of the country. The custom of demanding Hogmanay bread is still upheld in many parts of Scotland.

Hogshead, a cask of varying capacity, also a specific measure. In the old English measure a hogshead was 63 old gallons of wine (= 52½ imperial gallons). Of beer 54 old gallons make a hogshead.

Holly, a hardy evergreen shrub, largely grown in England. Its bright dark green prickly curved leaves and clusters of red berries are familiar in all parts of the country, and used as house decoration between Christmas Eve and Twelfth Night, probably a relic from Roman and Teutonic customs. Its wood is white and hard, valued for carved work, while its bark yields a gummy substance which is converted into birdlime.

Hologram, a photographic record, taken under special optical conditions, of light reflected from a scene or object. The hologram is typically a piece of film. However it is nothing like a photographic negative of the ordinary kind; for one thing it will show an unintelligible pattern of light and dark patches. Nevertheless if it is illuminated (again under special optical conditions) the light coming through it will form a *three dimensional* image of the original object. Another radical difference between a hologram and an ordinary film is that if the hologram is cut up, each fragment can be used to construct the entire image. Holography, as a method of recording and reproducing photographic information, was conceived by Gabor in 1947 but was only fully realised in practice after the invention of the laser (*q.v.*), which made available powerful sources of coherent light. The use of laser light is one of the "special conditions" referred to above. Technical applications are being explored in many laboratories. Gabor received the 1971 Nobel prize for his discovery and invention.

Holy Alliance, an alliance ostensibly for conserving religion, justice and peace in Europe, but used for repressing popular tendencies towards constitutional government. Formed by Alexander I. of Russia, Francis I. of Austria and Frederick William III. of Prussia, at Paris on Sept. 26, 1815. Subsequently joined by all the sovereigns of Europe, except the Pope and the King of England. It ended after the 1830 revolution in France.

Holy Coat of Treves, a garment preserved in the Cathedral of Trèves and said to have been worn by Christ. It was brought from Jerusalem by the Empress Helena in the fourth century.

Holy Rood, an annual Roman Catholic festival held on Sept. 14 to celebrate the Elevation of the Cross in commemoration of its re-erection in Jerusalem by the Emperor Heraclius in 628 after retaking it from the Persians. Also included in the Church of England calendar.

Holyrood, the ancient royal palace at Edinburgh, dating from the 15th cent., and inhabited by many Scottish sovereigns, notably Mary Stuart, the rooms occupied by her (including the one in which Rizzio was murdered) being still shown. It is now known as Holyrood House and is still used as a royal residence.

Holy Roman Empire, the title which the German Empire received in 962 when Pope John XII. crowned Otto I. at Rome. It endured until 1806 when Francis II. became Emperor of Austria.

Holy Water, water blessed by a priest and kept in small fonts at the entrance to Roman Catholic churches, and used by worshippers going in, and out, or by priests in sprinkling.

Holy Week is the week preceding Easter Sunday, and includes the days of the Sufferings of Christ, ending on Good Friday.

Honey, the sweet syrup formed by bees from the nectar of flowers, the sucrose in the nectar being converted into a mixture of the simple sugars, glucose and fructose. Hybla, an ancient town of Sicily, on the southern slope of Mt. Etna, was famous for its honey.

> "For your words, they rob the Hybla bees
> And leave them honeyless." (*Julius Caesar*).

Honey-eater, an Australian bird (of which there are many species) provided with a long curved bill and tufted tongue. It lives by sucking the "nectar" from the flowers which abound in rural parts of Australia and New Zealand.

Hookah, an Oriental pipe for tobacco smoking, the smoke being drawn through the water of a goblet (commonly a coconut shell) by means of a long flexible tube.

Hoopoe, a remarkably handsome bird with vivid black and white-barred wings and tail and black-tipped crest which opens like a fan. Ranges over Europe, Asia, and Africa. It has bred in England and Wales and occurs in the British Isles in small numbers at all seasons. Other species are confined to Africa, Madagascar, and India.

Hops, the female "cones" of the hop plant used in brewing; their essential oils give beer an aromatic flavour, and their tannin and resin act as a preservative as well as accounting for the bitter taste desired. The hop is a perennial climber belonging to the mulberry family. The male and female organs are on separate plants;

as only the female flower-heads are commercially useful, female plants predominate in a hop garden, only a very few male plants being grown so that the female flowers can be fertilised.

Horizon, the limit of vision, the apparent line where sea and sky, or land and sky meet. This is termed the *sensible* or visible horizon. An ordinary person at the height of 5 feet can see for 3 miles, at 20 feet 6 miles, at 50 feet 9¼ miles, and at 1,000 feet 42 miles. The figures are approximate.

Horn *or* **French Horn**, a brass instrument of the trumpet family (*i.e.*, played by three valves) whose tube is very thin and long (Horn in F = 12 ft.). In consequence the tube is curled in a complicated manner. Owing to the sweet tone it is capable of producing, the Horn sometimes plays as part of the wood-wind.

Hornbill, large bird found in Africa and oriental regions, remarkable for its having an immense horned upward-curved helmet, growing over its downward curved beak. It inhabits tropical regions, and feeds on fruits. When the female has laid her eggs in the hollow of a tree, the male bird stops up the entrance, and keeps her imprisoned until the hatching is completed and the young ones are able to fly. There are about 45 species.

Hornblende, the commonest member of the amphibole group of minerals, a silicate of calcium, magnesium, iron and aluminium, of a dark green colour. It is a constituent of numerous rocks, including diorite, syenite, and hornblende schist.

Horned Viper, a curious African genus of *Viperidae*, with a small pointed bone over each eyebrow; a venomous species, found in Egypt, is thought by some to be identical with the "adder" mentioned in Genesis xlix. 17.

Hornet, a general name for many of the bigger wasps. It usually nests in hollow trees, and despite its rather fiercesome appearance does not sting unless unduly provoked.

Horology, the science of time-measurement, including the construction and management of clocks, watches, etc. Instruments of this kind are not known to have existed before the 12th cent. and until the introduction of the pendulum in the 17th cent., clocks were ill-regulated and inaccurate. The time-recording mechanisms of the present day include (*a*) the *clock*, which shows the hours and minutes by hands, and strikes the hours, and sometimes quarters; (*b*) the *timepiece*, which is not generally a fixture and shows the time, but does not strike; (*c*) the *watch*, which is a pocket time-keeper; (*d*) the *chronometer*, which indicates the minutest portions of time; (*e*) electric timepieces, mains electric clocks; (*f*) the highly accurate quartz-crystal and atomic clocks used for astronomical purposes. *See* **Clocks**.

Horse Chestnut, one of the large forest trees, with ample branches, and full foliage, and much esteemed for parks and ornamental grounds. The bark and fruit seeds yield substances of commercial value, but the timber is not worth much. The tree came originally from Asia about the 16th cent.

Horse Guards, the building in Whitehall which until 1872 was the headquarters of the Commander-in-Chief of the British Army. The archway is still sentinelled by mounted guards.

Horse Latitudes, the latitudes of the sub-tropical high pressure systems, between the trade winds and the prevailing westerlies, characterised by light variable winds and low humidity.

Hospitallers, Knights, were of the order of St. John of Jerusalem, at first devoted to the aid of the sick, but afterwards military monks, who became prominent figures in the Crusades of the 12th cent. They adopted the Benedictine black habit with the eight-pointed cross worn by the modern St. John's Ambulance Brigade. In 1309 they took Rhodes, but were expelled by the Ottomans in 1522. In 1530 the emperor Charles V gave them the island of Malta, which, as Knights of Malta, they held until 1798, when they were dislodged by Napoleon. The Knights still survive as a sovereign order, with headquarters in Rome. *See* **Templars** and **Teutonic Order**.

Hottentots, name given to certain African natives by Dutch settlers in the 17th cent. They used to occupy the greater part of Cape Colony, and though driven out a number still survive in S.W. Africa. Appear to be related to the Bushmen, though their culture is more advanced. In addition to herding, they practise some farming and know how to smelt iron.

Hounds are dogs that were originally bred and trained for hunting, such as the greyhound, foxhound, bloodhound, wolfhound, deerhound, beagle, harrier, etc., but now often kept also as domestic dogs. The greyhound, deerhound, and wolfhound hunt by sight, the others, with the bloodhound first in order, track by scent.

Hour-glass, a glass instrument tapering to the middle to a narrow orifice, through which a sufficient quantity of fine sand gravitates to mark an hour of time. When the sand has run through from one end, it can be reversed and made to count the hour in the opposite direction. The same kind of glass with smaller supplies of sand will indicate shorter periods, as an egg-glass, which runs its course in three minutes—time to boil an egg by, or to gauge the length of a telephone trunk call.

House Flies are world-wide and prolific. Their eggs are hatched within 24 hours of being laid, and full maturity is attained in a month. They feed mainly on decayed animal and vegetable matter.

Hovercraft, or air cushion vehicle, is a craft which is lifted on a pad of air underneath it. This pad or cushion must be at a pressure higher than that of the atmosphere and it is made by sucking in air above the craft and ejecting it in a downward stream all round the lower edge. The stream is guided by a flexible skirt and the high pressure air pad is contained partly by the skirt and partly by the air stream itself which forms a continuous air curtain all round the vehicle. Hovercraft are being intensively developed and there are variations in the basic scheme just described and also in the means of propulsion which can be by air or water jets or propellers. Hovercraft were devised by Cockerell in the 1950s and a full-scale example appeared before the British public in June 1959. Craft of over 100 tons are made commercially and much bigger ones conceived. The air pad support means that hovercraft can move over land, water, or marsh. Cross-Channel hovercraft were introduced in 1966.

Howler Monkey, a genus of South American monkey noted for a laryngeal conformation which enables it to emit a loud reverberant noise something between a yell and a howl, as the name suggests.

Huanuco-bark, a medicinal bark, brought from the Peruvian town of that name, and derived from the *Cinchona micrantha* tree. *See* **Cinchona**.

Huguenots, a name applied to the French Protestant communities of the 16th and 17th cent. Henry of Navarre, by the Edict of Nantes in 1598, granted them religious freedom, but more than a quarter of a century before—Aug. 24, 1572—thousands had been put to death in the massacre of St. Bartholomew. The revocation of the Edict of Nantes by Louis XIV. in 1685 drove thousands into exile in England, Holland, Germany, and America.

Humanism. *See* Section J.

Humble-bee or **Bumble-bee**, the common name of the insects of the genus *Bombus*, of the Hymenoptera order. They live in small communities comprising males, females, and drones, their habitations being underground. They do not have one queen bee only like the hive bee, but several females occupy the same nest, and these alone live through the winter, breeding and forming new colonies in the spring. Although this large bee buzzes loudly, it does not sting.

Humidity, the state of the atmosphere with respect to the water-vapour it contains. "Absolute humidity" is defined as the density of the vapour present, while "relative humidity," more frequently employed indicates the degree of saturation, *i.e.*, the ratio of the actual vapour pressure to the saturation vapour pressure at the particular temperature, expressed as a percentage.

Humming Birds are so called because of the humming noise made by the vibration of their wings in flying. They are of radiant plumage, and are among the smallest birds. The smallest bird in the world is the Fairy or Princess Helen's

humming bird of Cuba, whose body is only 2·25 inches long. There are from four to five hundred species, and they are confined wholly to North and South America, being most numerous in the tropical latitudes. They have long, slender bills and tubular tongues which reach down into flowers to suck up the nectar on which they feed.

Hummum, the original name for what is now called the Turkish Bath in this country. One of the first of these baths to be established in London was the Hummums in Covent Garden.

Hundred, the ancient divisional name given to a portion of a county for administration or military purposes. It is supposed to imply the territory occupied by a hundred families; or the space of a hundred hides of land, or the capacity of providing 100 soldiers. Each hundred had its hundred court, with powers similar to those of a manor court, but this was abolished in 1867 by County Court Act.

Hundred Days, the interval of time between Napoleon Bonaparte's entry into Paris after his escape from Elba and his departure after his abdication, extending from March 20, 1815 to June 28 During this period occurred the battle of Waterloo, June 18.

Hundred Years' War, a term applied to the almost incessant contest between England and France, lasting from 1338 to 1453, including such famous battles as Crécy, Poitiers, and Agincourt, and engaging successively Edward III., Henry V., and Henry VI., among English kings.

Huns, a fierce Asiatic race which swept over eastern Europe in the 4th cent. Under Attila about the middle of the 5th cent. they obtained control of a large portion of central and eastern Europe, forcing even Rome to pay tribute. Their defeat at Châlons-sur-Marne in 451 by a mixed army of Romans, Goths, and Teutonic tribes, and the death of Attila in 453, terminated their empire.

Hurdy-Gurdy, an Italian rustic so-called musical stringed instrument of the lute order, the sounds of which are produced by the action of a rosined wheel turned by the left hand, the notes being made by the fingering of the right hand.

Hussites. *See* Section J.

Hurricane. *See* Cyclone *and* Wind.

Hydra, an aquatic animal of simple structure, whose body is in the form of a cylindrical tube, with a disc-shaped base by which it attaches itself to any shifting substance. Its mouth is surrounded by tentacles by which it catches its food. The Hydra has the power of reproducing lost parts.

Hydrates are compounds containing water of crystallisation.

Hydraulic Ram, a form of automatic pump, used to raise water to a height by the action of its own falling velocity.

Hydraulics, the science of applied hydrodynamics, or water-machine engineering, ranging from pumps to marine engines.

Hydrocarbons are compounds of carbon and hydrogen. They include the *paraffins*, which are saturated compounds (*e.g.*, methane); the ethylene, acetylene and other series which are unsaturated; compounds with ring structures, *e.g.*, benzene, naphthalene, and anthracene. Petroleum is composed almost entirely of hydrocarbons. *See* F23.

Hydrochloric Acid, a solution of hydrogen chloride gas in water, and resulting in considerable quantities as a by-product of the soda-ash or salt-cake manufacture. Its solution forms the common hydrochloric or muriatic acid of commerce. It is present to the extent of nearly half a per cent. in the digestive juice secreted by the stomach.

Hydrocyanic Acid, cyanide of hydrogen or prussic acid; very poisonous, and of the odour of bitter almonds. It is formed by the action of acids on sodium or potassium cyanide. Used to kill wasps (and in the gas chamber in the U.S.A.). It is a very important chemical on account of the reactions of its derivatives in many synthetic fields. Discovered by Scheele in 1782.

Hydroelectric Schemes. The sun's energy has been indirectly exploited in the past by harnessing the energy of the winds and rain. The climate is due, essentially, to differential heating of the earth. The resulting convection currents in the air (the motion of which is complicated by the rotation of the earth) give rise to winds. Moisture is collected from the sea and deposited high up on mountains as rain So e of the gravitational energy may be collected as hydropower. Simple windmills or waterwheels are so undependable that they have not been used to any extent since the beginning of the Industrial Revolution. However, the modern form of the waterwheel—the hydroelectric generation plant—is extensively used in mountainous countries and about a third of the world's electricity is produced by this means. The essential requirements for a modern hydroelectric scheme are a river with a sufficient flow of water to provide the required power, a large " head " of water so that a cheap, compact turbine can be used and a dam so that water can be stored until it is required. In some cases a hydroelectric scheme is made economic by being associated with an irrigation or drainage scheme. Such multi-purpose schemes are especially important in India and Pakistan, where most hydro projects are of this type. Other well-known examples include the Snowy Mountains scheme in Australia and the Aswan High Dam in Egypt. Although over 90 per cent of the electricity in certain individual countries, notably Norway, Sweden, Portugal, Switzerland, and Uganda is produced from hydroelectric schemes, only a relatively small fraction of the total potential has been exploited. This fraction varies from about a third in Western Europe to a quarter in the United States to a very small fraction in Alaska, Canada, Africa, and the hinterland of Asia.

Hydrofluoric Acid is obtained by distillation of fluorspar with sulphuric acid, and is a compound of fluorine and hydrogen. Its action is highly corrosive; a valuable agent in etching on glass, and a rapid decomposer of animal matter.

Hydrogen, Symbol H, the simplest element, atomic number (*q.v.*) of 1, colourless, and the lightest of all substances. Cavendish in 1766 was the first to recognise that it was an element. It is 14·4 times as light as air, and is found in a free state in volcanic regions. It can be obtained by the action of metals on acids, and forms an explosive mixture with air, burning with oxygen to form water. Commercially it is used to produce the very hot flame of the oxy-hydrogen blowpipe for cutting metals; to fill balloons and airships; to harden certain oils and render them suitable for margarine- and soap-production. The gas can be liquefied, and the presence of the isotope deuterium was detected by Urey in 1931 in the residue of the evaporated liquid. The third isotope, tritium, is very rare. *See also* Deuterium, Tritium, *and* F22, F23.

Hydrography, the science of water measurement, as applied to seas, rivers, lakes, currents, rocks, reefs, etc., and embracing the whole art of navigation.

Hydrometer, an instrument for measuring the specific gravity of liquids, especially for ascertaining the strength of spiritous liquors and solutions. It is usually in the form of a glass bulb, to the lower end of which a smaller bulb, containing mercury, is attached, which forces the instrument to sink into the liquid which it is to test. The larger bulb has a scale fixed to it, and the indication on this scale of the sinking point shows the specific gravity. There are many varieties: Twaddell's—a pear-shaped bulb containing mercury: Beaumé's, of similar construction, but applicable to liquids both heavier and lighter than water: Sykes's, largely employed for determining the strength of alcohol: and Nicholson's, used for taking the specific gravities of solids.

Hydropathy, the method of treating disease with water, either by bathing or drinking. Natural springs of special chemical and therapeutic properties, such as sulphur springs, and other mineral sources, have been used since prehistoric times for this purpose. It is probably one of the most ancient methods of cure. Recently the beneficial effects of pure water treatment have been advocated. Hydropathic establishments have been set up in many health resorts.

Hydroponics, the culture of plants without soil. The plants are grown with their roots dipping into a solution of nutritive mineral salts; or they may be rooted in sand which is watered with such a solution.

Hydrostatics, the science of the pressure and equilibrium of liquids that are non-elastic.

Hydrozoa are a class of water animals of the *Coelenterata phylum* to which Hydra (*q.v.*) belongs. In one order of the Hydrozoa, free-swimming colonies showing marked division of labour between the individual units occur; this order includes the Portuguese man-of-war.

Hyena, a nocturnal carnivore with powerful jaws. The striped hyenas inhabit N. Africa, India, and S.W. India. The brown hyenas with long shaggy hair are natives of S. Africa. The spotted, or laughing hyena, noted for the peculiar cry from which its name is derived, is also confined to Africa.

Hygrometer, an instrument for measuring the amount of water vapour in the atmosphere. A simple form of hygrometer, known as the wet-and-dry bulb, consists of two vertical thermometers affixed to a frame. One bulb is exposed to the air, and the other is covered with muslin which dips into a water-bath to keep it moist. If the air is saturated, it takes up no moisture from the wet bulb and the two thermometers read the same. If the air is not saturated, evaporation takes place from the wet bulb, latent heat is absorbed from the air, and the temperature of the wet bulb is lower than that of the dry bulb. Relative humidity and dew-point of the air can then be derived from suitable tables. Hygrometers depending upon the expansion of human hair and gold-beater's skin and the deposition of dew on a polished surface, when cooled sufficiently, are also in general use. *See* Humidity.

Hymenoptera, the order of insects to which bees, wasps, hornets, ants and sawflies belong. They have a well-defined waist, two pairs of membranous wings coupled together, mouth parts modified for biting or sucking; the females possess an ovipositor used for depositing eggs and is sometimes modified for stinging. There are about 70,000 species in this order and many live in highly organised communities. *See also* Ichneumon Fly.

Hyperbola. A curve described by certain comets that go round the sun and never return.

Hypsometer, an instrument formerly used by mountaineers to find the height above sea-level by indirectly measuring the atmospheric pressure by determining the boiling point of water at the particular height. Based on the fact that as pressure decreases with height so the boiling point is lowered. Superseded by the aneroid barometer.

I

Ibex, wild goats of several species found in the mountain regions of Europe, Asia, and Africa. The male has exceedingly large curved ridged horns. The species that lives in the Alps is called the Steinbock or bouquetin.

Ibis, belongs to a family of birds related to the stork. The sacred ibis of ancient Egypt is now extinct in Egypt but is found in the lakes and swamps of the Sudan near the Upper Nile. It has white and black plumage and a long curved beak. Other species are found elsewhere, the Glossy Ibis (black plumage glossed with purple and green) occasionally visiting England.

Ibo, a large tribe of S.E. Nigeria, numbering between 5 and 6 million. Since the end of British rule they have been active in their struggle for national independence and under their leader, Ojukwu, embarked upon the secessionist state of Biafra and the unsuccessful civil war against Federal forces. The Hausa and the Yoruba are the other main Nigerian groups.

Ice is frozen water. It is a colourless, crystalline and brittle solid. Being only 92% as dense as water, it floats on the latter; the expansion which occurs as water changes into ice causes the fracture of water-pipes, though the fracture only becomes obvious when the ice melts and leaks out through the crack. The temperature at which ice forms is 0° C., 32° F. Ice can be melted by pressure, and the ease and smoothness with which one is able to skate on ice depend on this phenomenon.

Ice Ages. Periods during which the continents were partly or largely covered by ice-sheets and glaciers. The present-day ice-sheets of Greenland and Antarctica are relics of the most recent Ice Age, which began in the Pleistocene and ended about 10,000 years ago. Much of the southern hemisphere experienced an ice age at the end of the Carboniferous Period; ice ages are recorded from isolated localities during the Pre-Cambrian, but there is no evidence that these were simultaneous.

Icebergs are detached masses of glacier which subside into the sea and float as wind or current may take them. About one-ninth of an iceberg is above sea-level. The North Atlantic is the chief home of icebergs, which reach the ocean from the ice-clad plateaux of Greenland. Some of these floating masses of ice are of enormous proportions, and constitute in the spring and early summer seasons a great menace to the safety of ships, as was disastrously shown in the *Titanic* catastrophe of 1912. For some years past these menaces to N. Atlantic shipping have been kept under close observation by vessels specially detailed for this work.

Ice-breaker, a special heavy bow-plated ship for forcing a way through ice and used especially at ports of the Baltic Sea and the Great Lakes region of Canada which freeze during the winter months. The Soviet atomic ice-breaker *Lenin*, the first of its kind in the world, launched in Dec. 1957, is designed to cut a channel through ice of any thickness. Her icebreaking performance will allow the sea-route to the north of Siberia to be kept open throughout the year.

Icelandic Literature, the Old Norse literature, centred about Iceland, which includes numerous works of poetry, mythology, and history of interest and importance. Much of this literature is in the saga form. *See also* Edda.

Iceland Moss, a kind of lichen (*Cetrario islandica*) which grows in great quantities in the mountain regions of Iceland and other Northern countries. It possesses certain nutritive qualities and is of some value in medicine.

Iceland Spar, a colourless form of calcite (calcium carbonate), frequently found in association with metallic ores; it has the power to produce strong double refraction of light so that two images are seen of an object viewed through a piece of Iceland spar. It was formerly used in optical apparatus for producing polarised light.

Iceni, an ancient British race who in early times lived in Norfolk and other parts of Eastern England. Their most famous ruler was Queen Boadicea, who led her people against the Romans in A.D. 61.

Ice Plant, also called "dew plant" and "diamond plant." A South African mesembryanthemum commonly grown in British gardens. Introduced in 1690.

Ice Saints, St. Mamertus, St. Pancras and St. Servatius, so called because of the legendary cold on these Saints' Days, namely, May 11–13.

Ichneumon, the Egyptian mongoose, popularly known as "Pharaoh's Rat." It is of great use in checking the multiplication of reptiles. It is frequently domesticated.

Ichneumon Fly, a numerous group of parasitic hymenopterous insects abounding in many lands, and all having the peculiarity of depositing their eggs in the bodies of other insects. It destroys swarms of caterpillars, which become the unwilling hosts of its progeny.

Ichthyology, the natural history of fishes.

Ichthyosaurus was a gigantic marine reptile of the Mesozoic age. The fossils are mostly found in the lias formation. Some were over 30 ft.

Icons. Icons are religious paintings designed for devotional use either by the individual or in church rituals. In size they range from the very small to large ones in two or three panels on church screens dividing the nave from the chancel (these are known as diptych and triptych respectively). The icon style of painting derives from the tomb paintings of Hellenistic and Roman Egypt, where it had become the custom to leave a portrait of the dead over the mummy's face. Icons of the earlier periods are rare, those of the 6th cent. probably having been destroyed and those of the 9th–12th cent. mostly removed to Russia. They were essentially simple with the Virgin and Child, or the Virgin, Christ, and John the Baptist as subject. From the 13th cent. icons

were more complex, dealing with New Testament scenes or scenes from the lives of the saints, and by this time schools of painting, each with their own style, were arising in other countries, including Russia, which accepted the Eastern Church. The 16th-cent. icons begin to show Italian influence just as Italian painting was influenced by Byzantine. Most icons were painted on wood, but mosaic was sometimes used, and some icons were of metal.

Ides, in the ancient Roman Calendar, the 15th of March, May, July, October, and the 13th of all other months; always the eighth day after the Nones.

Idiom, an expression characteristic of a country, district, dialect or language, which usually gives strength and force to a phrase or sentence. The idioms of a language are its distinctive marks, and the best writers are the most idiomatic.

Idris, a famous giant belonging to the myths of Wales, commemorated by a chair of rock on the top of the Cader Idris mountain in Merionethshire.

Igneous Rocks are such as have been molten under conditions of great heat at some stage in their history: *e.g.*, granite, basalt. *See* F8(2).

Ignis Fatuus *or* "**Will-o'-the-wisp**," a phosphorescent light which may often be seen on summer and autumn evenings hovering over marshy ground or graveyards. Its nature is hardly understood, though it is generally believed to be the result of the spontaneous combustion of the gases from decaying organic matter. In olden times when marshy grounds were more common than now, this "dancing light" was very frequently visible and was regarded with superstition.

Iguana, large South American lizards, with a long tail, a scaly back and head, a thick fleshy tongue and a prominent dew-lap in the throat. Specimens of the different species average 4–5 ft. in length, and they live mostly in trees, though they are equally at home on land or in the water. The flesh of some species is good eating, as are also the eggs.

Iguanodon, a genus of extinct dinosaurs, whose fossils are found in the Jurassic and Cretaceous rocks. Iguanodons were 15–25 ft. long, and walked on their hind legs, the front legs being small and adapted for grasping the branches of trees on the leaves of which they fed.

Ilex, mentioned by classical authors, the holm- or holly-oak, which flourishes round the Mediterranean. To botanists Ilex is the genus to which the holly and maté plant belong. *See* T9 (2).

Iliad, the great epic poem of ancient Greece attributed to Homer (*c.* 700 B.C.). It consists of ancient folk tale and saga, welded into an artistic unity, having as plot the carrying off of Helen by Paris to Troy and the subsequent siege of Troy.

Illuminated MSS. of great value and beauty of decoration exist in most public museums and in many private collections, some of them being of great antiquity, especially those of ancient Egypt executed on papyri. Greek and Latin specimens are also numerous, and the British Museum contains fine examples of all these kinds and also an extensive collection of mediæval English MSS.

Illuminati. *See* Section J.

Ilmenite, a mineral widespread in igneous rocks: chemically it is an oxide of iron and titanium. Rich deposits have recently been found in the Allard Lake area of Quebec; the Travancore sands are also a source of ilmenite.

Immortality. *See* Section J.

Immortelles are wreaths, crosses, or other designs made from what are called everlasting flowers, which are obtained from certain plants of the Composite order, and retain their colours and compactness for a long time. Immortelles are largely used as mementoes for decorating graves, especially in France.

Impeachment, a special arraignment, usually before Parliament or other high tribunal of a person charged with some offence against the State. The custom in England was for the impeachment to be made in the House of Commons, and the trial to be before the House of Lords. The first instance occurred in 1376 when Lord Latimer was impeached. With present parliamentary procedure, impeachment is no longer necessary, since the Cabinet is responsible for the individual actions of its ministers, who, acting as a team, must carry the Commons with them, or resign, when it falls to the Leader of the Opposition to form a new Cabinet. Other famous impeachments were those of the Lord High Chancellor Francis Bacon (1621), Earl of Strafford and Archbishop Laud (1640), Warren Hastings (1788), the last being that of Lord Melville (1805). Under the constitution of the United States public officials may be impeached by the House of Representatives and tried by the Senate. The most famous case was that of President Andrew Johnson.

Imperialism. *See* Section J.

Impressionism, the name given contemptuously to the first modern movement in painting, being derived from the title of Claude Monet's picture *Impression: soleil levant*, which showed the play of light on water with the observer looking straight into the rising sun. Although intended to be the ultimate form of naturalism the inspiration of the school had been the scientific study of light with an attempt to render the play of light on the surface of objects. Feeling that putting a line around a form was bound to cause it to look unnatural, they used bright colours corresponding to the spectrum and unmixed on the palette, and noted that an object of any given colour casts a shadow tinged with the complementary one (*e.g.*, red-green, yellow-blue). Hence bright sunlight was represented in clear yellows and orange with violet shadows. The first Impressionist exhibition held in Paris in 1874 aroused derision with its paintings by Monet, Renoir, Sisley, Pissaro, Cézanne, and Degas among others. Impressionism subsequently led to the entirely artistic and anti-naturalist movement of Post-impressionism. Cézanne, who felt that he wanted to produce "something solid and durable, like the art of the museums," was only dubiously impressionist, as were also Degas and Renoir. Of course, in the wider sense of the word (*i.e.*, the recording of an ephemeral impression of a scene), Whistler, Turner, and even Rembrandt used the technique.

Impressment, the forced seizure of persons for military service resorted to by many countries before the establishment of conscription. Press gangs forcibly recruited men for British warships especially during the Napoleonic wars, but such measures were abandoned after about 1850.

Imprimatur, originally an official licence to print, and an important formula in the early days of printing. The term is now used in the wider significance of authority, or endorsement.

Incas, an Indian people who inhabited ancient Peru, founded a great empire, and reached a high level of civilisation: overthrown by the Spaniards in 1533.

Incense, an aromatic resinous substance which, under combustion, exhales a pungent odour, and is used, mixed with certain fragrant perfumes, in the celebration of Mass in Roman Catholic churches. Olibanum or frankincense is ordinarily the leading ingredient.

Incisors, the sharp-edged cutting teeth at the front of mammalian jaws. Rodents have long, sharp incisor teeth. Elephant tusks are modified incisors.

Income Tax, a tax on annual income charged under a number of headings.

In general, income tax is charged on all income which originates in the United Kingdom and on all income arising abroad of persons resident in the United Kingdom. The income-tax year is from April 6 to the following April 5. On 6 April 1973 a new unified system of personal tax replaced the old income tax and surtax. There is now no earned income relief, small income relief and age relief (personal allowances have been increased to allow for this) and no surtax (replaced by higher rates of income tax). The proposed basic rate for this single graduated tax is 33% for 1974/5 with a supplementary rate for higher incomes.

It is still necessary to distinguish between earned and investment income because taxpayers with an investment income of between £1,000 (£1,500 for over-65s) and £2,000 a year are surcharged by adding 10% to the rate of

Taxable income £	Rate %
0– 4,500	33
4,501– 5,000	38
5,001– 6,000	43
6,001– 7,000	48
7,001– 8,000	53
8,001–10,000	58
10,001–12,000	63
12,001–15,000	68
15,001–20,000	73
over £20,000	83

tax. Above £2,000 the surcharge is 15%. The top rate of tax on investment income is 98% (83% plus investment income surcharge of 15%).

A married couple may elect to have their earned income charged to tax as if they were single. In that case the husband's married allowance of £865 is replaced by the single personal allowance of £625.

Tax liability. Income tax at the basic and higher rates is charged on your taxable income, *i.e.*, that part which remains after all allowable deductions have been made.

Personal relief and allowances

Single person	£625
Married man	865
Wife's earned income (or, if less, amount of wife's earned income).	625
Children—age under 11	240
11–16	275
over 16	305
(Children's investment income is to be combined with parents' income with effect from 6 April 1975).	
Additional relief for widows, etc. with children	130
Dependent relative—	
single woman claimant (reduced by £1 for every £1 by which relative's income exceeds £351).	145
others	100
Daughter's services (old or infirm taxpayer)	55
Housekeeper	100
Blind person (reduced by the tax-free disability payments).	130

Elderly taxpayers over 65 with small incomes.

No tax payable unless total income exceeds £810 (single person), £1,170 (married couple); marginal relief.

Life assurance relief

15% (one-half of basic rate) of the qualifying premium;
80% on £10, or the actual premium if less.

Family allowance deduction

Personal allowances are reduced by £52 for each family allowance received (the so-called "clawback"). For those with higher incomes it is more beneficial not to claim the family allowance.

Note: Building Society interest is paid net of tax.

Independence Day, commemorates the adoption of the Declaration of Independence on July 4, 1776. July 4 is celebrated as a holiday in the U.S.

Index. The name given to a list of books, prepared by papal authority, which are declared to be dangerous to faith and morals, and therefore forbidden to Roman Catholics, called the *Index librorum prohibitorum*. One of the reforms of the Vatican Council was the closing in 1966 of the Curia office which judged writings for the Church's Index of forbidden books, though the Index itself still remains. The Pope ordered that nothing should be placed on the Index until the author had been given a chance of explaining his views. The first Index was issued by Pope Pius IV, in 1559.

India Office Library (since 1947 called the **Library of the Commonwealth Relations Office (Division B)**). This is an orientalist library, which specialises in Indian studies. It was founded in 1801 by the East India Company, and contains 20,000 manuscripts in European languages and in Sanskrit, Persian, modern Indian, and other oriental languages, and a quarter-of-a-million printed books, of which three-quarters are in oriental languages. There are also collections of drawings, photographs, and other objects of oriental interest. It was announced in 1965 that a judicial tribunal was to decide on legal ownership of the library.

Indian Mutiny. This turning-point in the history of modern India occurred in 1857–58. The ostensible cause was the serving out to the native troops of cartridges greased with animal fat, for contact with this was forbidden both by the Hindu and Mohammedan faiths. A rebellious feeling, however, had long been developing, and when the Sepoys at Meerut in May 1857 refused to obey the English officers, overpowered and put them to death, the mutiny spread like wildfire. The rebels took Delhi and Lucknow, and for many months terrible massacres and atrocities were committed; men, women and children were slain in thousands. Order was re-established in the autumn of 1858 when the governing power was transferred from the East India Company to the Crown.

Indian Summer is applied to a warm spell of weather occurring in the late autumn.

Indicators, substances which by a marked change in colour are used to indicate the course of a chemical reaction. Litmus paper, for instance, is red with acids and blue with alkalis. In biological work some radioactive substances are used as tracer elements.

Indigo, the substance obtained from the plant *Indigofera tinctoria*, a native of S. Asia, India being the chief producing country. The colouring matter is the result of the decomposition and fermentation of a glucoside contained in the plant. This is afterwards dried and becomes the caked indigo of commerce. Natural indigo has been eclipsed by artificial indigo, a coal-tar dye which came into commercial production at the end of the last century, which is cheaper and more uniform in quality.

Indium, a scarce lead-coloured metal, symbol In, found in zinc blende in Saxony and certain other ores. This element was discovered in 1863 by Reich and Richter. It is an important material in the manufacture of transistors.

Indulgence. In the Roman Catholic Church the remission granted by ecclesiastical authority to a repentant sinner of the temporal punishment still due after the guilt of sin has been forgiven by God. The indiscriminate sale of Indulgences by Tetzel and other Papal agents in the 16th cent. was one of the grievances which led to the Reformation (*see* Section J); the Council of Trent made such traffic unlawful.

Indulgence, Declaration of, was the proclamation by which James II. suspended the penal laws against Roman Catholics and Dissenters. It was issued in 1688, but the clergy as a body refused to obey, and the trial of the Seven Bishops and their acquittal by a jury followed. An invitation was thereupon sent to William of Orange to become King.

Industrialisation is simply a name for industrial development. It is customarily used in particular to designate the course of events in a hitherto underdeveloped country which is seeking to increase its wealth and productivity by the introduction of more advanced techniques and by the establishment of industries previously not carried on within it. The word usually covers not only the development of modern industrial production but also the provision of electric power-stations, irrigation works, and transport and other developments designed to improve production in any field by methods involving large capital investments. The outstanding example in our time of rapid industrialisation has been the Soviet Union, which, unable to get the capital from abroad, has had to carry it through by ruthless restriction of the people's consuming power so as to achieve an unprecedentedly high ratio of investment to total production. Industrialisation has in

practice meant a high concentration on the expansion of the basic heavy industries and of power supply, coupled with much slower development of the industries supplying consumers' goods and of agricultural production; but there is no reason why this should always be the case. It may well be that in most underdeveloped countries development can but be devoted largely to the industries making consumers' goods and to measures designed to increase agricultural production and productivity.

Industrial Revolution. The name, first given by Engels in 1844, to describe the radical changes that took place in Britain during c. 1730–1850 to transform a mainly agricultural country into one predominantly industrial. It began with the mechanisation of the textile industry (Hargreave's spinning jenny, 1764. Arkwright's water-frame, 1769, Crompton's mule, 1770, and Watt's steam-engine, 1785), with subsequent major developments in mining, transport, and industrial organisation. It was based on Britain's rich mineral resources, particularly coal and iron ore. With the use of the steam-engine as power, industry became concentrated round the coalfields and the great new industrial towns developed—Birmingham, Manchester, Newcastle and Glasgow. Britain became supreme in constructional ironwork (Telford, George and Robert Stephenson). Canals, bridges, railways, and ships were built, and great advances were made in the practical application of scientific principles. Aided by colonial exploitation Britain became the most prosperous country in the world. The new industrial capitalists began to replace the country squires as ruling class. But the great accumulation of wealth at one pole of society was matched at the other by poverty and misery, for child labour, long working hours, low wages, and slums were features of the industrial revolution in its infancy. As with all great technological developments, the industrial revolution produced related changes in all fields of social life—in politics, art, religion, literature, and morals, and with the rise of democracy, social reforms.

Inertia, a term used in mechanics for the property of matter by which it offers resistance to a change in its state of rest or in its state or direction of motion.

Inertial Navigation, an automatic method of dead-reckoning which at present finds its chief application in guided missiles, submarines, and aircraft. Navigation by this means is carried out with reference to inertial space (*i.e.*, space which is stationary with respect to the fixed stars) and not to the surface of the earth as in normal navigation (latitude and longitude). This is done by means of high-accuracy gyroscopes combined with highly sensitive accelerometers in an apparatus known as the Ship's Inertial Navigation System. The American nuclear-powered submarine *Nautilus* pioneered the new north-west passage under the polar ice pack by this method of dead-reckoning in Aug. 1958.

Inflorescence, a flowering shoot. Many arrangements of the flowers are possible and there are many kinds of inflorescence; *e.g.*, the spike, catkin, umbel, capitulum (in composites).

Inflation. *See* Section G.

Infra-red Rays *or* Radiation. This is the range of rays which come between the visible red rays and the ultra-short Hertzian radiation. The wave-lengths involved range from about 0·00076 millimetre (7,600 Angstrom units) to 0·4 millimetre. Infra-red rays penetrate haze; hence landscapes obscured by haze or cloud can be photographed using plates sensitive to infra-red. Many substances strongly absorb these rays and thereby become hot; this happens in toasting bread. Many industries use infra-red lamps for drying paints and lacquers. Very important to chemists, as a tool in the investigation of the structure of compounds, since various groups of elements absorb infra-red radiation at a characteristic frequency.

Infula, a sacred fillet, of woollen material, worn on the forehead by priests, magistrates and rulers in Roman times, also by persons fleeing for protection to sanctuary. Later, each of the two lappets of a bishop's mitre.

Ingoldsby Legends, a series of whimsical metrical tales full of droll humour written by the Rev. R. H. Barham, and first published in *Bentley's Miscellany* in 1837. The best known is the *Jackdaw of Rheims*.

Ink, a liquid pigment ordinarily made from an infusion of nut-galls, copperas, and gum arabic. Shumac is substituted for nut-galls for inferior inks. An acid is sometimes added to prevent oxidation, and for the blue-black inks a small quantity of solution of indigo serves for colouring. Copying ink contains glycerine or sugar, which keeps the ink moist. Lampblack used to be the leading ingredient in printer's ink but now new methods of manufacturing have been developed. Marking ink is composed of a solution of nitrate of silver, gum, ammonia, and carbonate of soda. For red, blue, and other coloured inks, colouring solutions are used, for example, Prussian blue. The earliest examples of ink writing (on wooden tablets) ever found in Britain were recovered from the well of a Roman villa (3rd cent A.D.) during excavations in 1954 at Chew Stoke, Somerset.

Ink Sac, a glandular organ found in squids and other cephalopods which contains an inky solution. When roused the animal discharges the contents of the ink sac into the water, to make a cloud through which its enemies cannot see. The pigment, sepia, comes from the ink sac of the cuttlefish.

Inlaying is the introduction of one class of substance into another in some artistic or other design, such as silver let into zinc, copper, or lead, and called *bidri*; the insertion of gold and silver into iron or steel, which is *damascening*; the mingling of brass with tortoiseshell, *buhl work*; the inlaying of woods, *marquetry*; of stone, *pietra dura*; and of the arrangement of small pieces of stone, for floors, walls, etc., *mosaic*.

Innocents' Day, a festival day in Roman, Greek, and Anglican Churches in commemoration of the killing of the children of Bethlehem by Herod, Dec. 28.

Inns of Court, the four bodies in London which enjoy the privilege of calling candidates to the bar after they have studied for a certain number of terms and passed certain examinations. The Inns are: the Inner Temple, the Middle Temple, Lincoln's Inn, and Gray's Inn.

Inquisition, a Roman Catholic ecclesiastical court which became a formidable weapon of the Church in the 13th cent. under Pope Innocent III. in dealing with charges of heresy. It was effectively set up in the various Catholic countries of the Continent, obtaining its fullest and most sweeping organisation in Spain in the days of Ferdinand and Isabella, when Torquemada was made Grand Inquisitor, and used its powers with terrible severity. *See* Auto-da-fé. In the 18th cent. its influence began to wane, and the jurisdiction of the Congregation of the Holy Office at Rome was limited to the suppression of heretical literature (*see* Index).

Insectivorous Plants, plants which trap insects with special mechanisms. Plant enzymes or bacteria digest the prey, providing the plants with nitrogen usually scarce in the soil in which they grow. The most common British species are the Sun-dew and the Bladderwort.

Insects. This huge class of invertebrate animals (*see* Arthropods, (F33)) includes about 100,000 species. Insects are ubiquitous except in the sea, only a very few species being adapted to marine existence. Characteristic features are: the body is divided into three parts, head, thorax, and abdomen: the head carries a pair of antennae, the thorax three pairs of legs, and usually two pairs of wings. The most primitive insects constituting the sub-class *Apterygota* are wingless. The other sub-class, *Pterygota*, is divided into the *Exopterygota* (*Hemimetabola*), which have a simple metamorphosis, *e.g.*, cockroach, and the *Endopterygota* (*Holometabola*), with a complex metamorphosis, *e.g.*, butterfly, bee. Although many are parasitic on man, animals and plants, innumerable animals and some plants use them as food, and many flowering plants are dependent on a variety of insects for pollination leading to the development of seeds and fruits. *See* F33(1), 38(2), T28(1).

Insignia, marks or badges of office or honour, such as stars, ribbons, crosses, medallions or other

designating objects, worn by members of special Orders or holders of prominent offices.

Instinct.—*See* F38(1).

Institut de France was formed in 1795, and after various modifications was in 1832 organised on its present basis. Its five academies are—the Académie Française, Académie des Inscriptions et Belles-Lettres, Académie des Sciences, Académie des Beaux-Arts, Académie des Sciences morales et politiques. It is restricted to 40 members.

Instruments, Musical. Musical instruments may be classified in a number of ways, but in general they fall into one of the three main classes, String, Wind, and Percussion, according to how the sound is produced. Stringed Instruments are those which produce the sound by the vibration of a string: (*a*) by plucking, as in Harp, Lyre, Psaltery, Zither, Lute, Guitar, Balalaika, Ukelele, Harpsichord; (*b*) by friction (bowed), as in Crwth, Rebec, Viol, Violin, Marine Trumpet, Hurdy-Gurdy; (*c*) by striking (hammered), as in Dulcimer, Pianoforte, Clavichord; (*d*) by wind (blown), as in the Aeolian Harp. Wind Instruments are those in which the air in the instruments is set in vibration: (*a*) by blowing into a tube (flue-voiced), as in Recorder, Pandean Pipe, Flute, Organ; (*b*) by means of reeds (reed-voiced), as in Oboe, Clarinet, Saxophone, Bagpipe, Cor Anglais, Bassoon, Organ reed-stops; (*c*) those in which the sound is produced by the vibration of the player's lips against the mouthpiece (lip-voiced), as in Bugle, Horn, Trumpet, Tuba, Trombone, Saxhorn, Flügelhorn, Cornet. In a modern orchestra these are known as the *Brass*: instruments of the flute, oboe, and clarinet families as the *Woodwinds*. Then there are the Percussion Instruments, which include the Drums, Cymbals, Tambourines, Castenets.

Insulator, a substance that will not conduct electric current. Many solids, liquids, and gases are important insulators—rubber, cotton, silk, plastics, porcelain, glass, air, oil. If the applied voltage is too high, all insulators will "break down", *i.e.*, conduct electricity perhaps with resulting breakage, puncture, or charring. Thermal insulators will not conduct heat; they are usually the same kinds of substance as electrical insulators.

Insulin is a hormone which controls the supply of sugar from the blood to muscles. The breakdown of sugar provides energy. In diabetes there is a lack of insulin, causing a build-up of blood sugar which can be released by the injection of insulin. It is secreted by the islet tissue of the pancreas, from which it was isolated in 1922 by Banting and Best. Dr. F. Sanger of Cambridge won the 1958 Nobel Prize in Chemistry for isolating and identifying its amino acid components. Prof. Dorothy Hodgkin and her team at the Dept. of Molecular Biophysics at Oxford have recently succeeded in determining the structure of insulin, a task which would not have been possible without the electronic computer. The discovery may lead to a better use of insulin.

Intaglio, engraving or carving on a sunken ground, a method frequently adopted in the ornamentation of stones and rings.

Intelligence. Intelligence has been variously defined as the innate potential of a person to learn and understand; to make appropriate judgments; to see the relationships between things; to profit from experience; or to meet adequately new problems and conditions in life. There are many lines of evidence to show that intellectual capacity is closely related to heredity and influenced by environmental factors. The idea of intelligence testing was first devised by the French psychologist Binet at the beginning of this century. He was asked by the French government to invent a test which would weed out backward children in state schools, and thus save public money and avoid holding back the work of the class by teaching children who were incapable of learning at a given standard. Briefly, a series of problems are given to a large number of children and it is thus found out which series can be solved by the average child of a given age-group; if a child of 7 can only pass the tests suitable to the average child of 6, then his mental age is 6. The intelligence quotient or I.Q. is discovered by dividing his mental age by his chronological age and multiplying by 100. A gifted child can usually be spotted at an early age. Although I.Q. tests are the standard method of estimating intelligence, they are not universally accepted as a criterion; a teacher's general judgment may be the best assessment. High intelligence may be inherited, but fail to develop to the full because facilities for education are not available. Recent research suggests that the growth of the brain may be permanently affected by undernutrition at the time of its fastest growth (the last weeks before birth, and, to a lesser extent, the first weeks after birth). At this vulnerable period even quite minor deprivation can effect the rate and ultimate extent of growth of the brain. This has significance not only for the severely undernourished babies in the poor parts of the world, but for babies of low birth weight in our own communities. *See also* Q28.

Interest is the payment made for the use of borrowed money over time. The rate of interest is the rate per cent per annum charged for such loans. There are many such rates, varying with the plenty or scarcity on borrowable money, with the length of time for which the loans are made, and with the degree of risk, if any, that the loans will not be duly repaid. Short-term loans are usually cheaper than long-term: the lowest rates are usually for "call money" repayable immediately on demand. These are used principally in short-term financial transactions, such as bill discounting. Bank loans, though usually made for fairly short terms, command higher rates. Long-term loans are made chiefly to public authorities, or as bonds or debentures to business concerns. The rates obtained vary with the demand and the supply of such accommodation.

Interferon, the name given to a substance discovered in 1957 by Drs. Isaacs and Lindenmann at the National Institute for Medical Research. It is produced by the interaction of viruses with living cells and has the important property of inhibiting virus reproduction. Its development may lead to a new approach to the therapy of viral diseases.

International Date Line, a line along the 180° meridian, marking the difference in time between E. and W. For the westward-bound traveller crossing the line the date would be put forward one day, for the eastward-bound, back one day. To avoid difference of date in adjacent land areas, the line deviates from the 180° meridian where this crosses land.

Introit, the psalm sung by the choir as the priest approaches the altar to celebrate the Eucharist.

Invention of the Cross, a Roman Catholic festival held on May 3, to celebrate the finding of the alleged True Cross at Calvary by the Empress St. Helena in 326. Also included in the Church of England calendar. *See* Holy Rood.

Iodine, a non-metal element, symbol I, member of the halogen family (*q.v.*), a substance formerly exclusively obtained from the ribbon-wrack seaweeds. These were burnt and the ashes (kelp) extracted with water. After concentrating the iodides, these were distilled with manganese dioxide and sulphuric acid to yield iodine vapour which was condensed in stoneware bottles. Nearly all iodine now in use is derived from the iodine salt present in Chili saltpetre (sodium nitrate). Iodine is used in photography, as an antiseptic solution in alcohol or potassium iodide (tincture of iodine), and in medicine. Discovered by Courtois in 1812

Ionic Order of architecture is one of the five classic orders, its leading characteristics being the volute of its capital, which has on each side distinctive curved or scrolled ends.

Ionosphere, a succession of ionised layers of the earth's atmosphere lying above the stratosphere. In this region free electrically charged particles —electrons and positive ions—occur in sufficient concentration to affect substantially the propagation of radio waves through the region. It extends upwards from a height of 60 miles to several hundred miles, being most concentrated at an altitude of 200 miles. The behaviour of the upper atmosphere is strongly influenced by the sun. A great deal of new information about

the ionosphere above an altitude of 150 miles (the topside ionosphere) has been obtained by the use of instruments carried in satellites. *See also* Atmosphere.

Ions, electrically charged atoms, or groups of atoms. Atoms of the metals lose electrons to become positively charged ions, *e.g.*, the sodium ion (Na^+) has one electron less than the atom. The non-metal ions are negatively charged, *e.g.*, the chloride ion (Cl^-) has one electron more than the atom. Similarly, a group like the sulphate ion (SO_4^{2-}) has more electrons than the constituent atoms. Thus, the hydrogen atom without its electron is a hydrogen ion or *proton* and the helium atom without its two electrons is a helium ion or *alpha-particle*. When an electric force is applied to certain solutions, the ions into which molecules of the dissolved substance are broken up are attracted to the oppositely charged electrodes, their movements constituting an electric current through the solution. In the same way gases, including air, conduct electricity by virtue of free ions (*see* F12(2)). Combustion, radio-activity, and ultra-violet and cosmic radiations produce ionisation. *See* F20(2).

Ipecacuanha, a flowering plant of the Brazilian forests. Various alkaloids are isolated from ipecacuanha, one is emetine, which is used in medicine to cause vomiting and so remove poisons from the stomach. Another is used as an expectorant in cough mixtures.

Iridium, a white and very hard metal, symbol Ir, discovered by Tennant in 1804. It occurs naturally as an alloy with platinum or osmium; tips for fountain-pen nibs have been made from the former native alloy. The former standard metre was composed of platinum–iridium alloy (*see* **Metre**) as are parts of scientific apparatus and surgical tools that must be non-corrodible.

Iris, the typical genus of the botanical order *Iridacae*, with tuberous rhizomes and sword-shaped leaves, many of the family having beautiful flowers. About 100 species of Iris are recorded from the northern temperate zone, the most common species wild in Britain being the yellow flag. Orris root, used in perfumery, comes from another iris species.

Iron is a metallic element, symbol Fe (Latin *ferrum*), occurring widely in nature in such ores as haematite, loadstone (magnetic iron oxide), spathic ore, and iron pyrites. It is extracted by a process known as smelting, with coke and limestone in a furnace. Its many uses are familiar, the most important being in the manufacture of cast- and wrought-iron products and of steels, which are alloys mainly of iron with added carbon and various metals. Iron rust is formed by the action of oxygen and water, and is a coating of iron oxide. *See* Smelting.

Ironclads, ships of war cased in iron or steel plates of sufficient thickness to resist projectiles. They were first introduced (1858) in the French Navy, and in 1860 the first British ironclad, the *Warrior*, was launched.

Iron Curtain. In a speech at Fulton, U.S.A., on March 5, 1946, Sir Winston Churchill used this phrase to describe the dividing line behind which, he said, lie all the capitals of the ancient States of Central and Eastern Europe—Warsaw, Berlin, Prague, Vienna, Budapest, Belgrade, Bucarest, and Sofia. These famous cities and the populations around them, said Sir Winston, lie in the Soviet sphere and are subject "to a very high and increasing measure of control from Moscow."

Ironsides were Cromwell's special troopers, so called because of their solidity and firmness in battle.

Irredentists, a political party organised in Italy about 1878 with the object of incorporating within Italy neighbouring regions. Also a person, group, or party advocating policies for the restoration to their country of territory formerly belonging to it but later lost.

Irrigation, an artificial method of providing water for the growth of plants on lands where the natural supply of water is deficient. The science has made immense progress during the last fifty years, and has been the means of bringing into profitable cultivation vast tracts of territory in India and Western America which had previously been arid wastes. The systems are various and are utilised according to the special conditions of the land to be irrigated, but the success which has attended these experiments has been very gratifying. In fact, irrigated lands are often more productive than lands which receive a fair amount of moisture from the elements; the irrigation supply can be distributed and regulated exactly according to requirements. Irrigation also serves the purpose of supplying *warmth* in winter; *e.g.*, in the English water-meadows, and in the more highly developed Italian *marcite* and winter-meadows, where the water is mostly applied in winter when there is plenty of rain. There are several other functions of irrigation; *e.g.*, washing out of excess salts.

Isinglass, a gelatinous substance manufactured from the swim bladders of certain fish; used to preserve eggs, to keep beer free from sediment, and to make a glue.

Islam. *See* Section J.

Isobars are the lines drawn on charts linking together points of equal barometric pressure.

Isochasms, lines connecting places at which there is an equal probability of seeing an aurora, taking the average over a number of years, based on the auroral catalogue of Fritz.

Isomers are chemical compounds having the same composition but different structural arrangements, and consequently different physical and chemical properties. For example, ethyl alcohol and methyl ether are isomers, since the molecules of both are built up of two atoms of carbon, six of hydrogen, and one of oxygen, *viz.*, C_2H_6O; ethyl alcohol, C_2H_5OH; and methyl ether, CH_3OCH_3.

Isotherms are lines drawn on charts through points of equal temperature.

Isotopes. When one talks of an element, say, uranium or lead, the name of the element is a generic name for a collection of uranium species and lead species. The different species are called isotopes. For any particular element, the number and arrangement of electrons around the nucleus are the same in all the isotopes, so all the isotopes have the same chemical properties. Soddy has described isotopes as "elements, the atoms of which have similar outsides but different insides." For example, in the nucleus of the uranium isotopes, U 235, U 238, and U 239, there are respectively 143, 146, and 147 neutrons, but all have 92 protons. The isotopes have different atomic weights, in this instance respectively 235, 238, and 239. But all have the same chemical properties. *See* F10(2)

Ivory, the dentine substance of which the tusks of the elephant, hippopotamus, walrus, etc., are composed. The tusks of the African elephant sometimes weigh as much as 100 lb., and reach a length of 8 or 9 ft.

Ivory Gull, a small, beautifully shaped sea-bird with striking all-white plumage and black legs which breeds on the rocky shores of the Arctic, being found farther north than any other bird; it occasionally wanders south in the winter.

Ivy, the well-known climbing shrub, chiefly evergreen; furnishing a sudorific, the berries having also emetic properties.

J

Jabiru, the Brazilian name for the giant stork of South America.

Jacamar, from *Jacameri*, the Brazilian name for a smallish bird with long, sharply pointed bill and brilliant plumage which inhabits the tropical regions of South America east of the Andes. These birds are seen sitting motionless on trees, darting off at intervals, like flycatchers, to catch insects on the wing.

Jacana, a tropical bird (the water-hen of Brazil and the warmer parts of America) of wide range, beautiful of plumage, with slim body and narrow wings, and long, pointed beak. It feeds on seeds and insects, inhabits marshy lands, and is related to the plovers.

Jack, a small schooner-rigged vessel, used in the Newfoundland fisheries; a pike; an oscillating lever; a device used in roasting meat.

Jackal, *Canis aureus*, a small wild dog related to the wolf and resembling a fox. The Common

Jackal is found in S.E. Europe, India, and Ceylon; other species inhabit Africa and Egypt. The jackal is a well-known scavenger. It hunts singly or in pairs, unlike the wolf, which usually hunts in packs.

Jackdaw, one of the smaller members of the Crow family. This European bird is typically black with grey collar. It is easily tamed, makes an amusing pet, and delights in making off with and taking to its nest bright objects, such as silverware.

Jacobins, a French revolutionary club or party, formed in 1789, and accustomed to meet at a Jacobin convent, hence the name. It became a controlling force in the Revolution, especially in the movement which led to the Terror. Robespierre was its chief spokesman.

Jacobites, adherents of the Stuart cause after the abdication of James II. First James himself, then his son (the Old Pretender), and later his grandson (the Young Pretender) tried to fan the flame of rebellion in Scotland and Ireland, but after the defeat at Culloden in 1746 the cause was lost. Also the name of the monophysite heretics of Syria (*see* Section J), so named after their leader Jacobus Baradaeus in the 6th cent. A.D.

Jade, a green mineral found in China, America, and New Zealand, and used for making vases, bracelets, and other ornamental articles. There are many varieties, and there is evidence that the stone was in common use in prehistoric times for weapons and utensils.

Jaguar, a South American carnivorous animal resembling the leopard, but much larger and more powerful, the largest of the Felidae.

Janeite, a devotee of Jane Austen and her writings.

Janissaries, an élite band of Ottoman foot soldiers who acted as the Sultan's bodyguard. They were conscripts, raised by the "tribute of children" from conquered Christian countries, mainly Serbia and Albania. First recruited under Murad I (14th cent.). They were not allowed to marry. They gained great power under the Ottoman Empire. In 1826 the Sultan Mahmud II had them massacred.

January, the first month of the year, named after Janus, the two-faced god of the Romans. It was the *Wolf monath* and *Aefter Yule* of the Saxons.

Jasmine, a graceful climber belonging to the olive family with odoriferous blossom, originally a Persian plant, but now acclimatised in many varieties in almost all parts of the world. Two species of jasmine (the common jasmine and the Spanish jasmine) yield oils used in perfumery.

Jasper, a precious stone of the chalcedony variety, opaque, and coloured red, brown, yellow and sometimes green. It was greatly esteemed by the ancients, the Bible having numerous allusions to it.

Jay, a gaily-coloured bird of the Crow family, of many species—the Blue jay of N. America, the Canada jay, sometimes called "whisky jack," the Siberian jay, and the British jay, fawn-coloured with black and whitish crest and bright blue feathers in the wings. It lives in woods and like the magpie, takes the eggs and young of small nesting birds.

Jazz, a rhythmical syncopated music characterised by a strong element of improvisation in the performance, probably originating among the Negro population of the Southern States of the U.S.A. It became popular during the first world war and, in a commercialised form, has held the popular field ever since. Modern dance music and popular songs are based on the jazz idiom, which has also had a profound effect upon contemporary music of a more serious kind.

Jean, a stout kind of twilled cotton cloth much worn in olden times, and resembling fustian. Blue *jeans*, adopted by American city youngsters from farmworkers, are now the fashion elsewhere and worn not only as overalls by workmen but by both sexes in leisure time.

Jelly-fish. The jelly-fishes, which have gelatinous, translucent bodies fringed at the margin with delicate tentacles, constitute the coelenterate order *Scyphozoa*. The mouth, with a squarish opening, is seen on the underside, and there are four horseshoe-shaped sex organs.

Jerboa, small jumping mammals of the Rodent order. These mice-like animals have long tufted tails and very long hind legs, the front legs not being used for locomotion.

Jeremiad, any utterance or writing in which sorrow or complaint is the chief characteristic, so named as recalling the style of the "Lamentations of Jeremiah," in the Old Testament.

Jerusalem Chamber, a room in Westminster Abbey, deriving its name from the circumstance of its having originally been decorated with a view of Jerusalem. Henry IV. died in this chamber, and the Committee for the Revision of the Bible met there in 1870 and later.

Jesuits, members of the Roman Catholic teaching order founded by Ignatius Loyola in 1534. A long and vigorous course of study is prescribed before they are admitted into the privileges of full membership. They are required to take the vows of voluntary poverty, perfect chastity, perfect obedience, and complete submission to the Pope. The Society played an important part in politics.

Jet, a deep black fossil substance admitting of a high polish and much used for jewellery, ornaments, and trimming. It is a form of lignite, the most important British deposit being found near Whitby, where jet manufacture has been an established industry for a long period.

Jet Engine, an aeroplane engine which derives its thrust from the high velocity of the gases it ejects. The essential units in a jet engine are a rotary compressor and a gas turbine, the latter driving the compressor. The first reliable, high-performance jet propulsion engine for aircraft was invented by Air Commodore Sir Frank Whittle.

Jet Stream, a meteorological term coined in 1946 to describe the relatively narrow belt of strong winds (100–200 m.p.h.) at levels in the atmosphere from 3 to 7 miles. These winds are important in forecasting weather, and can be a valuable aid to aircraft. From the ground, where there may be little wind, the jet stream can sometimes be seen as high cirrus cloud moving across the sky at high speed.

Jew's Harp. The name is believed to be a corruption of "jaws harp." This instrument consists of a metal frame with a central tongue of spring steel. The frame is pressed against the teeth, and the tongue of the harp is twanged with the finger, the mouth acting as a resonating chamber. By altering the shape of the mouth the resonant frequency and therefore the note can be varied.

Jockey Club, the governing body that, although possessing no legal status, frames rules and laws by which horse-racing and turf matters generally are regulated. The club-house is at Newmarket.

John Bull, the typical figure of an Englishman, bluff, big, and burly. Arbuthnot's *History of John Bull* is supposed to have originated the character.

John Dory, a fish found in most temperate seas and common in British waters. It is of a golden-yellow colour (*jaune doré*), has a high dorsal fin with long filaments projecting from the spines, very protractile jaws, and is much valued as a table fish. According to legend the dark spot on each side of its body is the thumbprint of St. Peter who took a coin from the fish's mouth (Matt. XVII. 24–7).

John o' Groat's House, W. of Duncansby Head, Caithness, popularly named as the northernmost point of Scotland. According to legend the house, which has now disappeared, was built in octagonal form by a Dutchman Jan de Groot who came to live there in the 16th cent. The site is marked and an inn was erected near it in 1876.

Jongleurs were minstrels and jesters who wandered from town to town singing songs, playing musical instruments, dancing, and giving entertainments in mediæval France and Norman England. Jongleurs were low-born in contrast to the Troubadours, who were often of the nobility.

Joule, a unit of energy in the SI system of units, defined as the work done when the point of application of a force of one newton is displaced through a distance of one metre in the direction of the force. Named after J. P. Joule (1818–89).

heat energy is called the mechanical equivalent of heat and was found by Joule to be 778 ft lbf in lb °F units, or $4{\cdot}18 \times 10^7$ ergs in gram °C units. *See* F17.

Judaism. *See* Section J.

Julian Calendar, named after Julius Cæsar, who in 46 B.C., finding the Roman year 90 days in advance of the real time, was the first to adopt the calculation of time by the solar year, the average length being fixed at 365¼ days. There was still an overplus of a few minutes every year, and this was rectified by the Gregorian Calendar, introduced in Italy in 1582 and adopted in England in 1752, from which date what is called the "New Style" begins.

July, the seventh month of the year, named after Julius Cæsar. It was the *Maed monath* (Meadmonth) of the Saxons.

June, the sixth month of the year, containing 30 days and deriving its name from Juno. It was the *Sear* (Dry) *monath* of the Saxons.

Jungle-Fowl, birds related to the peacocks and peacock-pheasants. At least four species are known from the jungles of India, Ceylon, and Java. The domestic chicken has been derived from the Red Jungle-Fowl (*Gallus gallus*).

Junkers, name of the ruling class of Prussia, military in spirit, who were the party of reaction and defenders of the landed interests. Supported Bismarck prior to the Franco-Prussian war and helped bring Hitler to power.

Jupiter, the largest and, after Venus, the brightest of the planets, 1,312 times the volume of the Earth but only 317 times its mass. It circles the sun in 11·86 years and its mean period of rotation is 9 hr. 55 min. Hydrogen, methane and ammonia have been detected in its atmosphere. Striking features are the coloured bands and the Great Red Spot of Jupiter's atmosphere. In 1610 Galileo made history by discovering the four major satellites of Jupiter, which he named Medicean planets after his patron Cosimo Medici; these are visible with good field-glasses. There are eight other Jovian moons. *Pioneer* 10 passed 81,000 miles above the planet's surface in Dec. 1973 sending back colour pictures and imformation as it flew out of the solar system. It was thought there might be a radiation hazard (electrons and protons from the solar wind are trapped by Jupiter's magnetosphere) but it seems the spacecraft followed a path swept clean by Jupiter's moons which prevented radiation damage. *Pioneer* 11 is expected to reach the planet in Dec. 1974 before speeding on to Saturn, and the other side of the solar system, which it will not reach until Oct. 1979.

Jurassic Formation, a series of rocks (the evidences of which are most marked in the Jura Mountains) coming between the Cretaceous and Triassic groups and including the Oolite and the Lias. It is a formation rich in fauna, abounding in echinoids, lamellibranchs, ammonites, and belemnites; large reptiles, marine and land, are common, as are the plants called cyads. In Britain the Jurassic outcrop extends from the Dorset coast to the Yorkshire moors. *See* F45.

Jury, a body of private citizens chosen and sworn to hear and pass verdict upon evidence brought forward at a trial, inquest, or inquiry. The origin of the English jury is obscure, but it is thought to have been introduced by the Normans. The jurors are the sole judges of the true facts upon the evidence laid before them. Under the Criminal Justice Act of 1967 their verdicts in criminal courts in England and Wales no longer have to be unanimous but may be by a majority of 10 to 2. The age limit has recently been reduced from 21 to 18 and raised from 60 to 65. In Scotland 45 jurors are summoned in criminal cases, of whom 15 are chosen by ballot, and majority verdicts are accepted: not guilty, not proven, and guilty. *See* D10(2).

Jute, the name given to the fibre of a plant grown largely in Bangladesh in the Ganges delta and used for the manufacture of coarse cloths, cordage, and packs. Calcutta is the biggest jute-manufacturing centre of the world, as Dundee was in the 19th cent.

Jutes, a Low German race who in the 5th cent. invaded the south-eastern part of England, establishing themselves in Kent and making Canterbury their capital.

Juvenile Courts.—This is a special kind of Magistrates' Court to deal with accused persons under the age of seventeen. The Magistrates chosen are specially qualified for the work, and where possible a woman is appointed as one of the Magistrates who constitute the Court (*see* D6). The Court is held in private away from the ordinary court room. The object of the Juvenile Court is to introduce into the trial a plan to reform the offender by providing for the care and protection which he may need, by removal from undesirable surroundings, and by subsequent education or training. In these objectives the Court has the co-operation of social workers, including Probation Officers (*q.v.*). Radical changes in methods of preventing and treating juvenile delinquency are contained in the Children and Young Persons Act, 1969, the result of the findings of two White Papers, 1965 and 1968. They emphasise the necessity of helping and supporting the child as far as possible in his own family and community, with resort to formal procedures only where he is exposed to moral danger, or control is necessary in the interest of society or of the child. The 1969 Act will be phased into operation and the Government have stated that initially children may continue to be prosecuted. The minimum age for prosecution will be raised to 12 when the Government is satisfied that "local authorities and other services have the necessary capacity to cope with this change". Children who are below prosecutable age will be dealt with by social casework or by care proceedings. Although the Act places restrictions on the prosecution of 14 to 17 year-olds, so that prosecution would be restricted to categories of offences to be prescribed and only if action by other means were inadequate, the present Government have announced that they do not intend to bring these provisions into operation.

K

Kakapo, the Maori name for the New Zealand owl-parrot, a peculiar and interesting species, possessing wings but not able to use them for flight (though it can glide); of sap-green plumage, nocturnal in its habits, and nesting in burrows. Still to be found in the larger forest areas of the South I.

Kangaroo, pouched (marsupial) mammals of Australia and adjacent islands. There are over 20 species, the smaller ones being known as "wallabies." Kangaroos leap in a succession of springy bounds 10–20 ft. long, the forefeet not touching the ground. They can reach a height of over 6 ft. and a weight of 200 lb. First seen by white men when Capt. Cook's expedition visited Australia in 1770. Related genera include the tree kangaroos, rat kangaroos, and the Tasmanian Jerboa kangaroo.

Kaolin *or* **Kaolinite,** a fine clay much used in the manufacture of high-class pottery. It results from the decomposition of felspar, and is found in China, Japan, Devon, Cornwall, at Limoges in France, and in parts of the United States.

Karst, geological formations typical of limestone regions in which the drainage is by underground channels. Rain water carries part of the limestone away in solution, leaving the surface dry and barren and pitted with innumerable hollows. The name comes from the Karst (Slav *Kras*) region of N.W. Yugoslavia where the rocks are massive pure limestone; the barren plateau is characterised by fissures, caves and subterranean rivers.

Kauri Pine, a large coniferous tree yielding a fine copal resin which ranges from Malay to New Zealand. The New Zealand Kauri, *Agathis australis*, is found only in the N. Island. Some of the best Kauri gum comes from fossilised pines and is dug out of the soil far from any living trees.

Kelvin. Lord Kelvin, an important 19th-cent. physicist, gave his name to the kelvin, symbol K, a measure of temperature on the absolute scale (*q.v.*). The Kelvin scale is a development of the scale invented by Celsius (*q.v.*) for everyday use, long known as the "centigrade" scale; the degree interval on both scales is the same.

Keratin, a hard protein material of which horns, nails, claws, hoofs, and reptiles' scales are made.

Kestrel, the most common British falcon, well known for its habit of hovering for minutes at a time with vibrating wings and then swooping down to attack mice and insects. The male has spotted chestnut-brown back, greyish head and tail, which has a broad black band near tip.

Ketones. A class of organic compounds, related to aldehydes, of general formula R_2CO (where R is an organic radical). The simpler ketones, especially acetone, are widely used as solvents for lacquers, synthetic rubber, and polymers, such as cellulose acetate and perspex. More complex ketones occur in nature, and some are used in the perfumery industry, muscone (from the musk deer (*q.v.*)) is an example.

Kew Gardens, officially known as the Royal Botanic Gardens, are among the most celebrated gardens in the world. They were started in 1759 by Princess Augusta of Saxe-Gotha, widow of Frederick, Prince of Wales, and mother of George III. They remained private property until 1841, when control passed to the Commissioners of Woods and Forests. They now cover 300 acres and are administered by the Min. of Agriculture, Fisheries, and Food. Since 1841 the gardens have been open to the public, and form one of the most attractive resorts near London.

Keys, House of, is the Manx representative assembly. *See* Tynwald.

Keystone, the stone which occupies the centre and highest point of an arch and is usually the last to be inserted.

Khaki, a clay-coloured cloth adopted for uniforms in the British Army in the time of the war with the Boers, and used in the first and second world wars. First used by Indian regiments.

Kilderkin, once a common liquid measure in England, representing 18 gallons.

Kilogramme, unit of mass, defined as the mass of the international prototype kilogramme of platinum-iridium kept at the International Bureau of Weights and Measures at Sèvres. A new determination of the imperial standard pound in terms of the international kilogramme was made recently by the National Physical Laboratory (1 international pound = 0·45359237 kilogramme).

Kilowatt. Unit of power, equal to one thousand watts. *See* Watt.

Kinetic Energy, the energy (*q.v.*) possessed by a particle or body in virtue of its motion. If the motion is destroyed, *e.g.*, by the impact of the body with an obstacle, the kinetic energy vanishes, being turned into some other form of energy such as heat and sound. If the body has mass m and speed v its kinetic energy (leaving out corrections due to relativity) is $\frac{1}{2}mv^2$.

Kinetic Sculpture, a development of equipoised sculpture (*i.e.*, sculpture independent of gravity in the sense of resting on a base either horizontally, vertically, or obliquely) intended to appear as "a weightless poising of volumes, relationships, and interpenetrations." Since in the literal sense this is impossible, the Constructivists (Pevsner, Gabo, and Moholy-Nagy) used glass and invisible wire as supports, giving the impression that their creations were in fact independent of gravity. However, the American, Alexander Calder, has made constructions of balls and wire which he calls "mobiles," and in this form they are now known to everyone as they delicately dangle and rotate suspended from the ceiling.

King Crab, remarkable arthropods now classified separately from both Arachnids and Crustacea which they resemble, inhabiting the sea coasts of America, Japan, India, and Malay Peninsula, carrying a shield-shaped shell, and having a long pointed spine projecting from the posterior. The body comprises three separate sections articulated together. These crabs—in America known commonly as the horseshoe crab because of their shape—are from 18 in. to 2 ft. in length. Fossil king-crabs are found as far back as the Silurian. There are about six living species.

Kingfisher, a well-known family of brilliant-plumaged birds, found in all continents, comprising some 250 species and sub-species. The British kingfisher, *Aceldo atthis*, haunts the rivers and streams, and is one of the most beautiful of native birds, having iridescent blue-green, white, and rich chestnut in its plumage and bright-red feet. All kingfishers have long, dagger-shaped bills. In the Malayan region, New Guinea, the Moluccas, and Australia the varieties are very numerous. The quaint *Laughing Jackass* of Australia is among the largest of the kingfisher family. The European kingfisher is the bird of the Greek legend of the Halcyon.

King-of-Arms, the name of the chief officials of the Heralds' College. There are several in England —the principal being those of the Garter, Norroy and Ulster, Clarenceux. *See* Heralds' College.

Kiosk, a word of Russian or Turkish origin meaning a small open pavilion of light construction much used in Eastern countries as a place of shade and rest. Similar structures are common in the streets of Paris as news and advertisement stands, and in London as telephone offices.

Kirimon (*Kiri no go Mon*) and **Kikumon** (*Kiki no go Mon*), the two Japanese imperial crests, the first a design of leaves, stems, and flowers of the Paulownia plant, and the other representing the sixteen-petalled chrysanthemum.

Kite, name of several birds of prey, widely distributed, related to the hawks and eagles, graceful in flight, and distinguished by their long wings and deeply forked tails. The red kite, light chestnut brown, once the most familiar bird of prey in Britain, seen scavenging the streets of London, is now the rarest, and found only in Wales. The Egyptian kite and the pariah kite of India, notorious for their daring thefts, are closely related to the black kite, a smaller European species, with less forked tail and blackish-brown plumage.

Kittiwake, a beautiful white and pearl-grey gull with black legs, dark eyes, and greenish-yellow bill. Its range is wide, and includes the British Isles, where it is a local resident. The flight of this only truly oceanic gull, which excepting in the breeding-season, is generally found offshore is graceful, swift, and buoyant. A triangular black patch, noticeable on the ends of the wings when open, is characteristic of the species, as is the call kitti-wake, from which the bird derives its name. It nests in colonies on the ledges of caves and steep cliffs.

Kiwi, flightless, stoutly-built birds of New Zealand, now very rare and carefully protected by the Government. They are little larger than a domestic hen, and lay astonishingly large eggs for their size. Incubation and care of chicks fall to the male bird. They have rudimentary wings concealed by the plumage, and the feathers are hair-like. They are nocturnal in habit.

Knighthood is a degree of honour or title common in Europe since the Middle Ages, and was at first exclusively a military order. In Great Britain the four main orders of knighthood are those of the Garter, the Bath, the Thistle, and St. Patrick; in addition to which there are several other orders, such as the Order of St. Michael and St. George, the Star of India, etc. There are also Knights Bachelors such as are not associated with any special order. The title is not hereditary, and therefore ranks below that of a baronet, though both are entitled to the prefix "Sir."

Knot, a nautical measure of speed (1 sea mile per hour), and formerly measured by a log-line, divided by knots at equal distances $\frac{1}{120}$ of a geographical mile. The number of knots travelled by the ship in half a minute corresponded to the number of sea miles it travelled per hour. A sea mile is equal to about $1\frac{1}{4}$ of a statute mile. Also, a grey and white wading bird, usually a winter visitor to Britain found in flocks on the coast.

Knout, a whip of many thongs, often fatal in its effects, formerly used in Russia for flogging criminals.

Koala, the Australian arboreal marsupial mammal that looks like a toy teddy-bear, with ashy-grey fur, bushy ears, and rudimentary tail. It feeds on the leaves and shoots of certain eucalyptus trees, and is not more than 2 ft. in length.

Kohl, a powder prepared from antimony or burnt almond shells, and in common use by the women of the East for darkening the eyelids.

Koto, a musical instrument in general use in Japan consisting of a series of 13 silken strings stretched

across a curved wooden surface, and played with the fingers. Each string is 5 ft. long, and has a separate bridge so fixed as to give the vibration necessary for the note it has to produce. It is a sort of horizontal harp, and in the hands of an expert player is capable of giving forth excellent music.

Kremlin, the citadel or walled city within a Russian city which during the Middle Ages served as an administrative and religious centre and offered protection. That of Moscow, now the headquarters of the Russian government, contains the cathedral where the Tsars were crowned, an imperial palace, and the bell-tower of Ivan the Great. Its walls which are topped with towers were built in the 15th cent.

Krypton, one of the rare gases, symbol Kr, occuring in the air to the extent of 1 part in 20 million. It was discovered in 1898 by Ramsay and Travers. It is used in gas-filled electric lamps.

Kusti, the sacred cord or girdle of the Parsees, consisting of 72 threads—the number of the chapters of the Izashue—and two branches, each branch containing six knots, together standing for the 12 months of the year.

Kyrie Eleison (" Lord, have mercy "), the name of a common form of prayer in the Anglican, Roman Catholic, and Greek Churches; also applied to the English Church responses after the recital of the commandments.

Kyrle Society, named after Pope's " Man of Ross," John Kyrle, founded by Miss Miranda and Miss Octavia Hill in 1875, and having for its object, the decoration of workmen's clubs, hospitals, etc. and the promotion among the poor of a taste for literature, music, and outdoor recreation.

L

Labarum, the standard of Constantine the Great, adopted after his conversion to Christianity, marked with his seal, and represented upon the coinage.

Labourers, English Statute of, was passed 1350–51, with the object of compelling labourers to accept a certain rate of wages and not leave their employers' service, the Plague having rendered labourers so scarce that they were in great demand and had been insisting on higher pay. These enactments were bitterly opposed and led to the " Peasants' Revolt," headed by Wat Tyler.

Labradorite, a felspar rich in calcium and of a pearly lustre on cleavage, found in masses in igneous rocks, the best samples of which come from Labrador.

Labyrinth, or **Maze**, a combination of roads and passages so constructed as to render it difficult for anyone ignorant of the clue to trace the way to the central part. The Egyptian labyrinth near Lake Moeris had 3,000 rooms, half of them subterranean and the remainder above ground. The labyrinth in Crete, according to Greek myth, was built by Dædalus to house the Minotaur. There was one at Lemnos, renowned for its stalactite columns; and another at Clusium constructed by Porsenna, King of Etruria, about 520 B.C. The labyrinth in which Fair Rosamond was concealed was at Woodstock. Hampton Court maze dates from the 16th cent.

Labyrinthodonts, gigantic fossil amphibians which get their name from the curious labyrinthine structure of their teeth, probably an evolutionary link between fishes and reptiles. They occur in the Carboniferous, Permian, and Triassic formations, and remains have been found in Britain and other parts of Europe. Their heads were several feet long, and their footprints, by which they were discovered, closely resemble the prints of the human hand.

Lac, a resinous matter deposited on the branches of a number of tropical trees by the females of the lac insect, the exudation including eggs and a viscous covering. At the gathering time the twigs are broken off and dried in the sun, when the insects die, and the lac that remains is termed *stick-lac*. From this, by the removal of extraneous accretions and dissolving, *seed-lac* is produced. *Shell-lac* is seed-lac after it has been melted and otherwise prepared, and this is the best known of the lacs, being used in printing and the manufacture of varnishes and sealing-wax, and for other commercial purposes.

Lace, a delicate fabric of linen, silk, or cotton threads, made by hand or machinery, and worked in various ornamental designs. The kinds of lace are many, deriving their distinctive names either from the method employed in production or from the place where any special variety was originally made. The best-known makes are pillow or bobbin-lace, woven and plaited by hand; needle-point lace, worked by the needle over a traced design; and machine lace, which practically dates from Heathcote's invention of the early part of the 19th cent. Some of the most famed laces are the following: *Alencon*, a needle-point lace; *Brussels*, a very fine kind, with needle-point sprigs and flowers; *Chantilly*, a silk variety with flowers and open-work; *Cluny*, a netlace with darned stitch; *Honiton*, a delicate kind with dainty sprigs and figures; *Mechlin*, generally made in one piece and very varied in design; and *Valenciennes*, or bobbin lace, of great durability, the pattern and ground of which are made at the same time, being one of the best and most costly of laces, now manufactured mainly in Belgium. Nottingham is famous for its lace.

Lace-Wings, insects with frail, transparent, and much-veined wings whose grubs eat large numbers of insect pests such as aphids. The eggs are borne at the ends of threads attached to plants.

Lachesis, a genus of venomous snakes of the rattlesnake family confined to tropical countries, and including the " deadly bushmaster," of Surinam, and several Crotalidae pit-vipers of Guiana and Brazil.

Lacquer, a varnish made from shellac and certain colouring matters, and utilised for imparting lustre to various surfaces of metal or wood. In China and Japan the production of lacquer ware of a decorative character has long been an important industry, bringing into use gold, coral, vermilion, sprinkled, and other lacquers, with pleasing effect.

Ladybird, the common name of a large family of beetles—the *Coccinellidae*. The insect is usually of a red or yellow colour with small black or coloured spots. Ladybirds are of good service to the gardener because their larvae feed on aphids. There are about 2,000 species.

Lady-Day, the day of the festival of the Annunciation of the Virgin Mary, Mar. 25. One of the four English quarter days.

Lagoon, a stretch of shallow water opening out upon the sea. Venice is built on lagoons.

Lake Dwelling, the name given to certain prehistoric habitations which were thought to have stood on platforms over lakes, like villages in certain Pacific islands. Recent excavations at the Lake of Burgäschi in Switzerland show that the prehistoric Swiss pile dwellings probably stood on the shores of lakes, not on platforms over the water.

Lakes are bodies of water collected in depressions of the earth's surface. The most notable lakes are the Great Lake series of North America, including Superior, Michigan, Huron, Erie, and Ontario, all discharging into the St. Lawrence River. Africa has an enormous area of lakes, including the Albert and the Victoria, forming the sources of the White Nile. Smaller lakes are numerous in other countries—Switzerland, Germany, Italy, England, Ireland, Scotland, all having their lake regions, where the scenery is invariably beautiful and romantic. The Kariba Dam (Rhodesia—Zambia border) is the largest man-made lake in the world.

Lake School, the name given, at first in ridicule, to a distinguished trio of poets—Wordsworth, Coleridge, and Southey—who made their homes in the English Lake District.

Lamellibranchs (Pelecypods), the class of aquatic, bi-valve molluscs to which the oysters, cockles, mussels, clams, and scallops belong. In these animals the body, which is compressed laterally, is enclosed in two hinged shells held together by muscular action. The gills are thin plates hence the name " lamellibranch." *See* F33(1), 38(2).

Lamination, stratification on a very fine scale, as in shales.

Lammas Day is one of the oldest of the Church

festivals, probably derived from the loaf-mass (hlafmæsse) of the Anglo-Saxons. It occurs on August 1. In the olden times it was the day when loaves were given in place of first-fruit offerings.

Lammergeyer, the bearded vulture of alpine regions, resembling an eagle in appearance. It has a white head with black tufts at base of the bill, and its general plumage is dark brown, nearly black. It is found in the remote mountain ranges from Southern Spain to China, and is becoming scarce.

Lampblack, a carboniferous pigment obtained from flame-smoke, and now produced in specially constructed furnaces in which bodies rich in carbon, such as tar, resin, petroleum, etc., are burned. The smoke or soot resulting is collected from the sides of the furnace, and forms lampblack. It finds use in making printer's ink, black paint, etc. Being a very pure form of carbon, it is also utilised in the manufacture of dynamo brushes and arc-lamp carbons.

Lamprey. Eel-like fish having no scales, bones, paired fins, or jaws. They attach themselves by their mouths to fish whose blood they suck. Together with the hagfishes, the lampreys are placed in a special class—the Cyclostomes. There are three British lampreys.

Lancelet. *See* Amphioxus.

"Lancet," the name of a noted English medical journal, established in 1823 by Dr. Wakley.

Land Crab, a family of crabs (*Gecarcinidae*) which live mainly on land, though migrating to the sea to deposit their eggs.

Land League, an association formed in 1879, with Parnell as president, for compelling a reduction in the rents of land, and a reconstruction of the land laws in Ireland, and in case of non-compliance refusing to pay rent. For a time this League exercised great political influence and was an important aid to the Home Rule agitation.

Landrail, popularly known as the Corncrake, was a regular summer visitor to Britain two generations ago, but no longer. Its harsh and piercing note was a familiar sound in English cornfields. It is decreasing almost everywhere.

Landslip, a sudden downward sliding under gravity of large masses of rock, soil, etc.; often set off by earthquake shock or saturation of a particular stratum with water. Many serious landslides have occurred from time to time. In 1618, an earthfall happened at Plurs, on Lake Como, involving the destruction of many buildings and the loss of numerous lives. In 1806 a portion of Rossberg mountain in Switzerland slipped from its position, and falling into the valley below buried many villages and hamlets and over 800 people. A chalk cliff from 100 to 150 ft. high and three-quarters of a mile long fell at Lyme Regis, in Dorsetshire, in 1839, doing great damage. Over 200 people were killed by a landslip in Naini Tal, in India, in 1880; and at Quebec, in 1889, a rocky eminence called Cape Diamond gave way, many buildings being destroyed and lives lost. Notable landslips in recent times have occurred at Amalfi (Italy) in 1924, at Murchiston (New Zealand) in 1929, and near St. Gervais (France) in 1970.

Langue d'oc and Langue d'oil, the two principal mediæval French dialects, *oc* and *oïl* being their respective words for the affirmative particle (modern French *oui*). *Langue d'oc*, spoken south of the Loire, was the language of the troubadours. Provençal, one of its dialects had a literary revival in the 19th cent. under the influence of the poet Frédéric Mistral. *Langue d'oïl* was spoken in northern France, and it was the dialect of the Paris region which developed into modern French.

Lantern Fly, bugs belonging to the family *Fulgoridae* in which the head is drawn out to form a lantern-like structure. In no instance is the "lantern" luminous, though naturalists used to think it was.

"Lantern of England." Bath Abbey possesses so many windows that it is called sometimes the "Lantern of England." Among numerous interesting monuments Bath Abbey contains that of Malthus, author of *Essay on Population*.

Lanthanum, a metal belonging to the rare earth group of metals, discovered by Mosander in 1839.

Lapis Lazuli, an azure-blue mineral, being a silicate of aluminium and sodium. The pigment ultramarine is made by grinding it, though artificial ultramarine has largely superseded it. The mineral (also called *lazurite*) has been used as a gemstone since ancient times.

Lapwing *or* **Green Plover**, familiar British bird on moors and marshlands with iridescent greenish-black plumage, white underparts, and black crest. Often called "peewit" from its cry. Protected under Protection of Birds Act, 1967.

Larboard is the old nautical term indicating the left-hand side of a ship, and changed by Admiralty order to "port" in 1844. Starboard is the right-hand side.

Larch, a familiar coniferous tree in the mountain regions of northern Europe, and though not native to Britain, the Common Larch is successfully cultivated in various parts of the kingdom. It is one of the best of all turpentine-yielding trees, and the bark is valued for tanning. The larch is an unusual conifer in being deciduous.

Lark, a family of song birds (*Alaudidae*) of many species, some of which—notably the skylark—are famed for their habit of soaring into the air, singing all the while. They build their nests on the ground in the open country and, except for the black lark of Russia, have streaked brown plumage. The skylark and woodlark are the best known British species, while the crested lark and shore lark are among the occasional visitors. Africa has the greatest number of larks; America has only one species, the horned lark.

Larkspur, the common name of the genus *Delphinium*, a favourite flower introduced into British gardens from Switzerland in 1573. The common larkspur is *D. consolida*.

Larva, the undeveloped form of any animal which, before maturity, undergoes metamorphosis, usually different from the adult in structure and habits.

Laser. A remarkable kind of light source that was discovered in 1960. With the laser it is possible to probe the behaviour of matter under the influence of enormous energy densities, range and survey vast distances to microscopic accuracy, and send millions of telephone and television messages between any two points that can see each other with telescopes. Laser light, in contrast to natural light, is coherent and can be expressed as a regular progression of waves carrying energy along a particular path. Thus the essential difference is that laser light is an orderly sort of wave motion in contrast to ordinary light which is inherently unsteady and therefore an inefficient carrier of information in time. The name *maser*, which is the microwave parent of the laser, derives from the expression "*m*icrowave *a*mplification by the *s*timulated *e*mission of *r*adiation." Upon application to light wavelengths the microwave part of the name lost its meaning and the term maser became generally descriptive of any device in which stimulated emission dominates.

Latent Heat is the quantity of heat required to convert 1 gram of a substance from one form into another. For example, when a solid changes into a liquid or a liquid into a gas, the addition of heat to bring about the change produces no rise in temperature, the energy being absorbed in the form of latent heat. An equal amount is released when the process is reversed. The latent heat of fusion of ice is about 79·6 calories per gram, that of the vaporisation of water about 539 calories per gram.

Lateran Councils were the religious conventions held in the Lateran basilica at Rome for deciding important questions of Church doctrine. The most brilliant was that of 1215, which pronounced in favour of a Crusade. *See* Ecumenical Councils.

Lateran Treaty, 1929, between Italy and the Vatican established the Vatican City as an independent sovereign state.

Laterite, a residual deposit formed in the tropics by weathering and decomposition of igneous rocks. Consists mainly of hydrated ferric and aluminium oxides and is difficult to cultivate.

Latin America. The Spanish-speaking, Portuguese-speaking, and French-speaking countries of N. America, S. America, Central America, and the W. Indies. *See* Section K.

Latitude of a point on the earth's surface is its angular distance from the equator, measured

on the surface of the earth in degrees, minutes, and seconds. Thus the equator is 0° Lat. and the poles 90° Lat. (N. or S.). First determined by Hipparchus of Nicaea about 160 B.C.

Laughing Gas. *See* Nitrous oxide.

Launce *or* Sand Eel, a family of eel-like sea fishes found in large numbers on the coasts of North America and Europe. There are two species common to British waters. These fishes are of a bright silvery hue, and live much in the sand underneath the water. They are prized as human food and as bait.

Laurentian Shield refers to the Pre-Cambrian rocks in the region of the Upper Lakes of Canada, nearly 2 million sq. m. in extent. Of enormous importance to Canada on account of the mineral wealth, forests yielding valuable timber and wood-pulp, and water-power.

Lava, the molten rock which is erupted from a volcanic vent or fissure. Also the same material which has cooled and solidified.

Lawn, very fine sun-bleached linen, in olden time called "cloth of Rheims."

Lead, a soft malleable metal, symbol Pb (Latin *plumbum*), occurring in numerous ores, which are easily smelted. Its most important source is the mineral galena which consists chiefly of lead sulphide; rarely is it found free. Lead is largely used in plumbing on account of its pliability, and in nuclear reactors as a shield against radiation because of its very high density. As an alloy element it combines in the formation of type metal, stereo metal, shot metal, pewter, and many other compounds. Oxides of lead are used in some types of glass and in the manufacture of paints (red lead). All lead compounds are poisonous. Leading producers of lead are the United States (Missouri), Australia (Broken Hill) and the Soviet Union.

Leaf Insect, a group of insects related to the locusts, grasshoppers and stick insects which in colour and form closely resemble leaves.

Leaf Miners, insect larvae which tunnel between the upper and lower skins of leaves. Most leaf miners are caterpillars of tiny moths; some sawfly larvæ have the same habit.

Leagues, or combinations of kings, countries, communities, have been frequent since the kings of Canaan united against the Israelites. Among the most famous leagues may be mentioned the Holy or Catholic League, which prevented the accession of Henry IV. of France until he became a Roman Catholic; and the League of Augsburg against Louis XIV. of France in 1686.

League of Nations, was founded on Jan. 10, 1920, with the object of promoting international peace and security. The original members were the signatories to the Peace Treaties at Versailles, and membership grew to fifty-three as new nations and ex-enemy States were admitted. Two notable absentees were the United States and Soviet Russia, the latter not being represented until 1934. Germany was a member from 1926 to 1933. The League had an Assembly which met at Geneva every year and a Council which met five or six times a year. The Permanent Court of International Justice sits at The Hague. The final Assembly of the League was held at Geneva between April 8 and 18, 1946. Its place has been taken by the United Nations. The International Labour Organisation, set up by the League of Nations met on April 20, 1944, at Philadelphia and resumed its old quarters at Geneva under the new organisation in 1946.

Leap Year *or* Bissextile, was fixed by Julius Cæsar, 45 B.C., the addition of one day in every four years bringing the measure of the calendar year even with the astronomical year with three minutes per year over. The Gregorian Calendar corrected this by dropping leap year at the centuries not divisible by 400. For instance, 1700, 1800, and 1900 were not leap years.

Learning.—*See* F38(1) Q16–20.

Leather was made in ancient Egypt, Greece, and Rome, and has through succeeding centuries played an important part in the service of man. It consists of the dressed hides or skins of animals after the process of tanning has been gone through. Untanned skins are known as pelts. Leather is classed either according to the skins from which it is made or the system of preparation employed. The best-known kinds are morocco, kid, Russian, chamois, Cordovan, grained, patent, russet, tan, calf, Hungarian.

Leech, an aquatic blood-sucking worm, mostly found in fresh-water ponds. Each end of the body is provided with a sucker, but that at the head end has jaws and teeth. The medicinal leech has three jaws. The leech attaches itself with avidity to animal bodies and sucks until glutted. Its saliva contains an anti-coagulant.

Leeward, a nautical term, meaning the sheltered side of a vessel—that is, the opposite side to that from which the wind is blowing.

Legion, a body of Roman troops, varying in numbers at different periods. A legion was divided into 10 cohorts, and every cohort into three maniples. Three legions composed the Roman army of occupation in Britain.

Legion of Honour, the French order for distinguished services, military or civil, was instituted by Napoleon I. in 1802, and confirmed and modified under later rules. There are five grades—Grands Croix, Grands Officiers, Commandeurs, Officiers, and Chevaliers.

Legume, the fruit typical of the pea, bean family, or *Leguminosæ*.

Lemming, small light-brown rodents with dark spots, abounding in Scandinavian countries and in Siberia, about 5 in. long, with a short stump of a tail. The migrations of the lemming are famous, probably caused by overbreeding when food is plentiful. So insistent is the urge to keep moving that these animals will march on into the sea in their thousands and be drowned.

Lemur, the most primitive member of the Primate order of mammals (to which man, apes, and monkeys also belong). They are noted for having strong pliant toes enabling them to use their feet as hands, and also well-developed thumbs on the hands. They have long squirrel-like tails, fox-shaped heads, and large staring eyes. True lemurs are confined to Madagascar; closely related are the "bush-babies" of S. Africa.

Lend-Lease. During the earlier phases of the Second World War the bulk of British investments in the U.S.A. had to be either sold or pledged to Americans in payment for dollar supplies. After the United States entered the war this drain was stopped by the Lease-Lend arrangement, under which Great Britain met the costs of American consumption in Great Britain, while the United States paid for British supplies from America. This arrangement was abruptly terminated on the ending of hostilities; and Great Britain and other belligerent countries found themselves without means of paying in dollars for indispensable American supplies, including the foodstuffs, materials and capital goods needed for economic reconstruction. In these circumstances Great Britain negotiated with the United States and also with Canada a large loan, which was used for buying dollar supplies and played an important part in helping the West European economies to maintain themselves and feed their peoples while they were carrying through the earlier stages of post-war reconstruction. These loans involved large charges for interest and amortisation in future years, but proved far too small to meet the dollar deficit for more than a short period. In face of this situation the United States launched the Marshall Plan (*q.v.*).

Lenses, pieces of transparent material designed to focus an image of an illuminated object. Usually of glass, but plastic lenses are common, and quartz, etc. are used for special purposes. The surfaces of the simplest lenses are parts of spheres. Lenses which are thickest, or thinnest, at the centre are called convex and concave respectively. Lenses of complex shape are often used in microscopes, etc. Electron lenses are arrangements of electric or magnetic fields which focus beams of electrons, *e.g.*, on to television screens.

Lent, the forty days' period of fasting that precedes Easter.

Lepidoptera, the order of insects with scaly wings and bodies, to which the 90,000 butterflies and moths belong.

Leptons. A group of particles which include electrons, neutrinos and muons. All are much

lighter than protons or any of the baryons. *See* F14.

Lepus, the constellation of the Hare, situated under the Orion group, and one of the constellations with which the ancients were familiar.

Lettres de Cachet, sealed letters which the kings of France issued to their agents to secure the imprisonment of distrusted or disliked persons without trial. Abolished in 1789.

Levée, a State reception held by the Sovereign or his representative and attended by men only.

Lewis, a contrivance for stone-lifting, the principle of which was known to the ancient Romans; it consists of two dovetail tenons of iron or other metal, expanded by an intervening key in a dovetail-shaped mortice in the stone, and shackled by a ringed bolt to the hoisting chain.

Leyden Jar, the earliest form of electrical condenser. Its invention is usually credited to Muschenbroeck of Leyden (1745). It consisted of a jar coated inside and out with tinfoil for about two-thirds of its height and having its inner coating connected with the top by a brass knob and chain. The jar was charged by connecting it to an electrostatic machine.

Lias, a geological term referring to the lower section of the Jurassic group, and mainly comprising shales and limestones.

Liberalism. *See* Section J.

Libraries, before the invention of printing, were few, and collected together at enormous cost. At Nineveh remains of libraries, consisting of tablets of baked clay, have been discovered. There were two libraries at Alexandria containing a vast collection of rolls or volumes, founded by Ptolemy I Soter (367–283 B.C.) and established by Ptolemy II Philadelphus (309–246 B.C.). Among the great libraries of later times may be mentioned the Vatican Library at Rome, moved to its present premises in 1588; the Royal Library in Paris which later became the Bibliothèque Nationale; The Astor Library, New York; and in England, the Bodleian Library, Oxford, and the British Library (see below). Since 1850 public libraries have been established in all the chief cities and towns of the kingdom. The first lending library was opened in Edinburgh in 1726. In most villages there is a "county library centre" to which collections of books are sent by the County Library. In Great Britain there are 24,000 centres of this kind in village clubs, halls, shops, schools, and even homes. In some counties there is a library van or the bibliobus, as it has been called by a French writer. This travelling library tours on a pre-arranged time-table so that everyone knows exactly when it will arrive. The British Library in London, the National Library of Scotland, in Edinburgh, that of Wales in Aberystwyth, the Bodleian Library of Oxford and the Cambridge University Library comprise the "copyright" libraries, entitled to receive a copy of each new book and journal published in Britain. The British Library Act 1972 brought together into a single organisation (a) the former British Museum Library (the books remaining in the Museum) and the Science Reference Library in Holborn and Bayswater, the whole now being known as the British Library, Reference Division; (b) the former National Lending Library for Science and Technology and its arts and humanities counterpart, the National Central Library, together now known as the British Library, Lending Division, and located at Boston Spa, Yorkshire. Reference Division will eventually be re-housed in a single new building in London, due for completion in the early 1980s. Lending Division which has an international reputation for rapid postal lending of journals and photocopies to institutions and libraries throughout the world, will remain in Yorkshire.

Libretto (It. booklet), the literary text of an opera or oratorio. Usually the composer and the librettist collaborate in the writing of an opera, but several composers (*e.g.*, Wagner) wrote their own librettos. Boito, librettist to Verdi for *Otello* and *Falstaff*, himself composed two operas, *Mefistofele* and *Nerone*. Most famous of Italian opera librettists was the poet and dramatist Metastasio (1698–1782). His librettos were set to music by many composers, including Gluck, Handel, Mozart, Rossini.

Licence is a permission given to do some act which without such permission, it would be unlawful to do. Licences are required for keeping dogs, for operating a television or radio set, for driving a motor vehicle, for killing game, for setting up as a bookmaker, for selling beer, wines and spirits, tobacco, etc. and for importing certain items such as arms, ammunition, radioactive materials, animals, plants, drugs, and explosives. The licence on a private motor car is £25 a year.

Lichens. In every lichen, two plants are associated, one being an alga and the other a fungus. The fungus derives its food from the alga; probably the alga gains too from the association being protected against desiccation by the fungus (an example of symbiosis). Lichens are the first plants to colonise bare rocks.

Life-Boat was invented by three men, Lionel Lukin who converted a coble into a boat for saving life in 1785; William Wouldhave, who discovered how to make a boat right herself if she capsized, and Henry Greathead, who built a life-boat, partly from Wouldbave's model, in 1789. This boat was stationed at South Shields, which was the first permanent life-boat station to be established. It was not until 1851 that the first life-boat able to self-right was built, and a motor was first installed in a life-boat in 1904. Modern motor life-boats have engines of from twin-18 h.p. to twin-80 h.p., with a speed of nearly 10 knots. All coastal life-boats in this country are maintained by the Royal National Lifeboat Institution founded by Sir William Hillary in 1824.

Light, a particular kind of electromagnetic disturbance capable of travelling through space, and some kinds of matter, and of affecting our eyes to cause vision. Its finite speed was first demonstrated by O. Römer, using observations of the eclipses of Jupiter's satellites in 1675. In 1860 Maxwell showed that light waves are electromagnetic. Since Einstein's theory of relativity (1905) it has been generally realised that the speed of light is a fundamental natural constant. Visible light with wavelengths between about 4 and 6×10^{-5} cm is only a small part of the electromagnetic spectrum. Subtle modern methods give the speed of light as $2{\cdot}997925 \times 10^{10}$ cm per sec (about 186,282 miles per sec).

Light Year. A measure of astronomical distance, equal to the distance light travels in the course of a year. A light year is thus 5·88 million million miles. *See also* F3(2).

Lighthouses, to warn ships of dangerous places and indicate coasts, points, harbours, etc., have existed since the building of the Pharos, a tower of white marble 600 ft. high, built by Ptolemy II Philadelphus at Alexandria about 280 B.C. In early lighthouses the lights were simple fires. The most famous and one of the earliest British lighthouses is the Eddystone (*q.v.*). Dungeness lighthouse, opened in 1960, is very modern in design, capable of automatic operation and the first of its kind to incorporate the xenon electric arc lamp as a source of illumination. The electric fog signal consists of sixty loud-speaker units built into the tower just below the lantern, giving a honeycomb effect. The lighthouses of England and Wales, the Channel Islands, and Gibraltar are under the control of Trinity House; Commissioners of Northern Lighthouses control those of Scotland; and the Commissioners of Irish Lights control the coasts of Ireland. Particulars of lights in all parts of the world are published for the guidance of navigation in the *Admiralty Lists of Lights*, compiled annually by the British Admiralty.

Lightning, the flash of a discharge of electricity between two clouds, or between a cloud and the earth, when the strength of the electric fields becomes so great as to break down the resistance of the intervening air. With "forked" lightning the actual path, often branched, is visible, while with "sheet" lightning the flash is hidden by the clouds which themselves are illuminated. "Ball" lightning or fireballs is the name given to the luminous balls which have been seen floating in the air during a thunderstorm. The Boys camera has provided much information regarding the sequence of events in a lightning discharge. It is found that a flash

consists of a number of separate strokes, usually four or five, and that the discharge of electricity to earth begins with a faintly luminous "leader" moving downwards and branching at intervals. As the ground is approached a much brighter luminosity travels back along the conducting channels, lighting up the several branches. The multiple strokes which follow in fractions of a second have the same "return" nature and are rarely branched. Lightning flashes to earth damage structures, cause loss of life and endanger overhead power systems, often interrupting electricity supply. Such storms generally affect radio transmissions and present hazards to aircraft. Thunder-clouds may develop energy far exceeding the capacity of our largest power generating stations.

Lightning Conductor, a metal rod, the upper part of which is of copper with a conical point, the lower portion being iron, which extends into the earth. Its effect is to gather to itself the surrounding electricity and discharge it into the earth, thus preventing its falling upon the protected building. In ships, lightning conductors are fixed to the masts and carried down through the ship's keel-sheathing. Benjamin Franklin was the first to realise the possibilities of lightning protection and, in 1752, carried out his famous experiment of drawing electricity from thunder-clouds, with the aid of a sharp-pointed conductor fixed to a kite.

Lillibulero, an old marching song composed by Purcell. With words by Wharton, it is said to have "sung James II out of three kingdoms." Used by the B.B.C. during the second world war as a station identification signal preceding news bulletins, and still in use to announce the Overseas Service programmes in English.

Lily Family (Liliaceae), one of the largest families of flowering plants, with 200 genera and 2,500 species. It includes the true lilies (*Lilium*), tulips and hyacinths. Vegetables belonging to the family are the onion and asparagus.

Limes, trees of the genus *Tilia*, including some 30 species spread over north temperate regions. The word is a corruption of "linden." Limes native to Britain are the small-leaved *T. cordata* and the broad-leaved *T. platyphyllos*. The hybrid *T. vulgaris* was introduced into Britain from the Continent during the 17th cent. and is frequently seen in streets and parks. Lime-wood was used by Grinling Gibbons for his fruit, flower, and bird decorations.

Limestone is carbonate of calcium. It is found in every geological formation, and is often highly fossiliferous. Marble is limestone that will polish after cutting.

Linen, a textile fabric manufactured from flax fibre, known to the ancient Egyptians, and first manufactured in England under Henry III. by Flemish weavers. The greatest linen-manufacturing region in the world is Northern Ireland (largely yarns and the lighter types of fabrics); Scotland produces coarse linens and canvas as well as household linens.

Ling, a sea-fish common on the coasts of Britain, and abounding in more northern waters. It averages from 3 to 4 ft. in length, and is a voracious feeder, living chiefly on small fish. Ling is also the name applied to *Calluna vulgaris*, the plant which most people called "heather."

Linseed, the seed of the flax plant, containing, apart from its fibrous substance, certain oily and nitrogenous matter of considerable commercial value. This yields linseed oil, and some of the residue is used to make cattle food.

Lion, the most impressive of the Cat family (*Felis leo* or genus *Panthera*). It is chiefly found in open bush country in Africa, being comparatively rare in Asia. Its large square head, its flowing mane (in the males only), and its tufted tail distinguish it. From tip to tip it can reach a length of 10 ft.; a weight of 500 lb. Only weak, old lions are liable to attack man, usually they avoid him.

Lion and Unicorn, the supporting figures of the royal arms of Great Britain, date from the union of Scotland with England (1603) at the accession of James I. (James VI. of Scotland), the lion representing England and the unicorn Scotland.

Liqueurs are essences combined with alcoholic liquid, and are of many kinds, named according to their flavourings or place of production, and include Maraschino, Chartreuse, Curacoa, Benedictine, Noyau, Kümmel, etc.

Liquid, the name given to matter in such state that it takes its shape from the containing vessel. The volume it occupies is independent of the container, however. *See* F17, 18 and Liquid Crystals, Section F, Part VI.

Litanies were first used in church processions in the 5th cent. The first English litany was commanded to be recited in the Reformed churches by Henry VIII., in 1544.

Lithium, a soft metallic element, symbol Li, similar to sodium. It is very reactive and is stored under paraffin oil. It is the lightest metal element.

Lithography, the art of drawing on stone and printing therefrom, was discovered by Alois Senefelder about 1796, and was introduced into England a few years later. Many improvements in the art have been made, especially in chrome-lithography and photo-lithography.

Litre, a metric measure, was abolished in 1964 as a scientific unit of volume, but remains as a special name for the cubic decimetre and as an everyday unit, *e.g.*, a litre of petrol.

Liturgy, the name given to the Church ritual, though strictly applying only to the portion used in the celebration of the Eucharist or Lord's Supper. The Anglican liturgy is laid down in the Book of Common Prayer (1662). Parliament gave its consent in 1965 for changes in the form of worship.

Liverworts (Hepatics), a class of simple green plants related to the mosses. There is no differentiation into stem and leaves. Liverworts are most common in damp situations, such as the banks of ditches.

Lizard, the name given to a diversified order of reptiles, of which there are about 1,600 species. Included among the lizards are the geckos, chameleons, glass snakes, skinks, and blind worms.

Llama, mammals related to the camels, from which they differ in small size, absence of humps, and more woolly coat. The domestic llama of S. America is used as a beast of burden, also providing wool, meat, and milk. *See also* Alpaca, Guanaco.

Loadstone *or* Lodestone, an oxide of iron, found chiefly in Sweden and Norway. Its scientific name is magnetite. It has the power of attracting pieces of iron and served as the first magnets used in compasses. One of the class of non-metallic magnetic materials nowadays known as "ferrites."

Lobby Correspondents are political correspondents of newspapers who do not report the actual proceedings of Parliament—this is done by Parliamentary Correspondents—but interpret political news and events.

Lobsters are marine crustacean animals existing in large numbers in the northern seas of Europe and America, and in fair proportion on some parts of the British coasts, especially in the neighbourhood of the Channel Islands.

Locarno, Treaty of, 1925, whereby Germany, France, and Belgium undertook to maintain their present frontiers and to abstain from the use of force against each other. Hitler broke the pact by re-occupying the Rhineland, the demilitarisation of which had been recognised by Germany.

Locust, insects of the grasshopper family, but much more powerful. They are inhabitants of hot countries, and often make their appearance in untold millions, like clouds, devastating all the vegetation that comes within their course. The locust-tree (*Ceratonia siliqua*) is supposed to have furnished food to St. John the Baptist in the wilderness, and its "beans" have accordingly been styled "St. John's Bread."

Loess, a deposit of silt or marl laid down by wind action. The biggest loess deposits are in Asia, the source of the dust of which they are composed probably being the deserts of Central Asia.

Log, a line used for reckoning the speed at which a ship is travelling. It was first used in the 16th cent. The line is divided into spaces of 50 ft. marked off by knots and measured by a half-minute sand glass, bearing the same proportion to an hour as 50 ft. bear to a mile.

Logarithms, a system of calculation invented by John Napier in 1614, and developed by

Henry Briggs a few years later. Thus if a number is expressed as the power of another number, *i.e.*, if $a = b^n$, then n is said to be the logarithm of a to base b, written $\log_b a$. Common logs are to base 10 and Napierian to base 2·7182818..., expressed as e. Their use represents a great saving of time.

Logical Positivism. *See* Section J.

Lollards. *See* Section J.

Lombards, a German people, originating on the Elbe, who settled in Italy in the 6th cent., occupying northern and central regions, and establishing a kingdom with Pavia as capital. They were conquered by Charlemagne in 774, but left their name to the region of Lombardy. Lombard Street, London, takes its name from the Lombard merchants and bankers who came to settle there in the 12th cent.

London Clay, geological stratum which occupies much of the London Basin and part of the Hampshire Basin. It represents the lower stratum of the Eocene. Outside the metropolis, brickfields utilise the clay for brickmaking. Water held down in the Chalk by this impervious stratum is tapped by a number of artesian wells in London. The tunnels of the Capital's underground railways run through the London Clay.

London University comprises nearly one-third of the academic activity of the United Kingdom, and is recognised as one of the great universities of the world. Originated in the foundation of a non-sectarian college in Gower Street in 1828. Among the chief colleges are: University, Kings, Imperial College of Science and Technology, London School of Economics, School of Oriental and African Studies, Queen Mary, Birkbeck, Royal Holloway, Bedford, Westfield, and Queen Elizabeth College. London University was the first to throw open all degrees to women (1878).

Long Distance Routes. The National Parks and Access to the Countryside Act 1949 provided for the establishment in England and Wales of Long Distance Footpaths and Bridleways. The following have been approved: Pennine Way (a magnificent hill walk of 250 miles from Edale in Derbyshire along the Pennines over the Cheviots to the Scottish border); Pembrokeshire Coast Path; Offa's Dyke Path (168 miles along the marches of Wales); South Downs Way (Beachy Head to Salisbury); South-West Peninsula Coast Path (North Cornwall, South Cornwall, South Devon, Somerset and North Devon, Dorset); Yorkshire Coast and North York Moors. The Pennine Way (the first long-distance footpath), the South Downs Way (the first long-distance bridleway), Offa's Dyke (one of the most important remaining earthworks of its kind in northwestern Europe), and the Yorkshire Wolds Way have been opened. *See also* National Parks.

Longitude of a point on the earth's surface is the angle which the meridian through the poles and that point makes with some standard meridian. The meridian through Greenwich is usually accepted as the standard meridian and the longitude is measured east or west of that line. As the earth revolves through 360° in 24 hrs., 15° longitude represent 1 hour's difference in apparent time.

Long Parliament (1640–60), marked the end of Charles I's 11-year attempt to govern without parliament. It carried through what has come to be called "the English Revolution" and was the parliament of the civil war (1642–49).

Lord Lieutenant is the Queen's representative in the county, and his office is now largely ceremonial. On his recommendation the magistrates or Justices of the Peace are appointed by the Lord Chancellor. The office was created in 1549 to take over the military duties of the sheriff.

Lords, House of, the Upper House of the British Parliament composed of Lords Spiritual and Lords Temporal. The former consist of the two Archbishops and twenty-four English Bishops and the latter of Peers and Peeresses. The full membership (1970) is 1060. The right of the Lords to veto Bills passed by the Commons is restricted by the Parliament Acts of 1911 and 1949. The Lord High Chancellor presides over the House of Lords. *See* Section C, Part II.

Louse, parasitic insect found on the skin of birds and mammals. The bird or biting lice belong to the order *Mallophaga*; the true or sucking lice to the order *Anoplura*. Two species of lice parasitise man, and one of these, the body louse, is a carrier of typhus.

Louvre, one of the old royal palaces of Paris, was built in its present form partly by Francis, I. and added to by later monarchs, Louis XIV. completing the edifice. Napoleon I. turned it into a museum and enriched it with the plunder of many foreign art galleries. The great extension to the Louvre building begun by Napoleon I. was completed under Napoleon III. in 1857. Much injury was done to the building during the Commune of 1871. Amongst other famous treasures it houses the Venus de Milo and Leonardo da Vinci's masterpiece, *La Gioconda*.

LSD (d-lysergic acid diethylamide). This hallucinogenic drug has achieved wide notoriety because of its use by certain people to give themselves abnormal mental experiences. Doctors have frequently warned against the dangers of its use. It is active in extremely small quantities and a dose as small as a fifty-millionth part of a gram can cause marked disturbances of the mental function in man. LSD has been used in the study of mental disease because it produces symptoms very similar to mental disorders such as schizophrenia.

Luddites, a combination of workmen formed in 1811, in a period of great distress, with the object of destroying the new textile machinery then being largely adopted, which they regarded as the cause of their troubles. Their first outbreak was at Nottingham, and was stated to have been started by a young apprentice named Ned Ludd. Afterwards, serious Luddite riots occurred in various parts of the country, especially in the West Riding of Yorkshire, where many people were killed, mills were destroyed, and numbers of rioters were tried and executed. Charlotte Brontë used the period in her novel, *Shirley*.

Lutecium, element of the rare-earth metal group discovered in 1907 by Urbain.

Lutheranism. *See* Section J.

Lynx, cats of sturdy build, with tufted ears and spotted fur, inhabiting many parts of the world, including Northern and Central Europe. They commit serious ravages among sheep and goats and are very fierce.

Lyon King of Arms, the President of the Scottish Lyon Court, and head of the heraldic organisation for Scotland.

Lyre-Bird, a remarkable family of Australian birds, the males of which possess a beautiful lyre-shaped tail. The bird is not more than 15 in. long, but its tail, displayed during its remarkable courtship dance, is 23 in. in length. There are two species: the Superb and Albert's Lyrebird.

M

Macaque. A family of monkeys which include the Barbary ape (specimens of which live on Gibraltar), the Rhesus macaque (the organ grinder's monkey and the one used for experimental work in the investigation of disease), the Bonnet monkey of southern India and Ceylon, the Crab-eating, and the Pig-tailed monkeys of south-eastern Asia.

Macaw, a genus of large parrots with brilliant scarlet and sky-blue plumage, with interminglings of green. Native to South and Central America.

Mace, originally a weapon of offence, now an ensign of authority borne before officers of state and other dignitaries. In the House of Commons the mace is handed to an official of the Crown by the Sergeant-at-Arms at the close of a parliamentary session.

Mach Number. Unit of flight speed. The ratio of speed of flight to speed of sound under same conditions of pressure and density. Speed of sound at sea-level is 762 m.p.h., so flight speed of 381 m.p.h. is equivalent to a Mach Number of ½. At supersonic speeds the Mach Number is greater than 1; subsonic speeds, less than 1.

Mackerel, a familiar sea-fish existing in large numbers in the northern waters of both hemispheres. In May and June immense shoals are to be found round the British coasts.

Macromolecules are very large molecules about 10,000 times or more as heavy as ordinary small molecules like hydrogen. Most are built up from a large number of simple sub-units, *i.e.*, are polymers (*q.v.*). The term macromolecule is often used in biology, *e.g.*, starch and cellulose are biological macromolecules, both built from glucose sub-units. Other important ones are proteins and nucleic acids. The properties of macromolecules depend on the sub-units of which they are composed.

Madder, one of the most important of dye-stuffs, largely used in producing Turkey-red dye, but now superseded by synthetic alizarin. Natural madder is the root of the *Rubia tinctorum*.

Maelstrom, a great whirlpool. The most famous is that off the coast of Norway, between the islands of Moskenēs and Mosken, of the Lofoten group, the power of which has been much exaggerated.

Mafia. A term which is connected with Italo-American organised crime. Historically, remoteness from the central government of Italy encouraged the growth in Sicily in the 19th cent. of *mafiosi*, key-men who gained power through fear and violence. Contemporary police records give details of *mafia* behaviour in defending their authority. Emigration of vast numbers of southern Italians to the United States led to a new type of urban *mafioso* who became connected with gangsterism and vice. Sometimes called the *Cosa Nostra*, the organisation has infiltrated city governments by bribing officials and is reputed to be in control of drug smuggling and many other illegal operations. Some Italo-American *mafiosi* have returned to Sicily.

Magellan, Clouds of, the name given to a pair of small galaxies, satellite systems of our own galaxy, visible only from the southern hemisphere. On account of their relative nearness to the earth (186,000 light-years), they are receiving much attention from astronomers.

Magenta, a blue-red aniline dye discovered in 1859 by Sir W. H. Perkin, and named after the great battle of that year between the French and Austrians.

Magic. *See* Section J.

Magistrates *or* Justices of the Peace preside over courts of petty sessions, and are appointed by the Lord Chancellor on the recommendation of the Lord Lieutenant of the County. Most J.P.s are laymen and are unpaid. In certain big towns a legally-qualified, paid, full-time magistrate is appointed, known as a stipendiary magistrate. In London stipendiaries are known as Metropolitan Stipendiary Magistrates. J.P.s are no longer appointed over the age of 60 and they must retire when they reach 70. There are now arrangements for the training of magistrates. By the Justices of the Peace Act, 1968, *ex officio* J.P.s are abolished, except for the Lord Mayor and aldermen of the City of London. *See* Section D, Part III.

Magma, molten rock material rich in volatile constituents prior to its eruption at the surface. On eruption and loss of volatiles it becomes lava.

Magna Carta was sealed by King John at Runnymede on June 15, 1215, in obedience to the insistent demands of the barons, and has been confirmed many times by later monarchs. It was not a revolutionary document. It laid down what the barons took to be the recognised and fundamental principles for the government of the realm and bound king and barons alike to maintain them. Its main provisions were that no man should be punished without fair trial, that ancient liberties generally should be preserved and that no demands should be made by an overlord to his vassal (other than those recognised) without the sanction of the great council of the realm.

Magnesium, a metallic element, symbol Mg, first isolated in 1808 by Sir Humphry Davy, who prepared it by electrolysing the chloride. Its chief ores are magnesite and dolomite. Industrially it is obtained by electrolysis. Many important light alloys contain magnesium. The metal burns with a very bright light, and for this reason it is used in photographers' flash bulbs and also in firework manufacture.

Magnetic Pole. Either one of two regions of a magnet where the attraction appears concentrated.

Magnetic Storms, large irregular disturbances superimposed upon the normal magnetic field of the earth. They may occur at any time, but are most frequent during equinoctial months and in years of sunspot maxima. World-wide in extent, magnetic storms are most pronounced in the polar regions, being due apparently to intense electric currents located in the upper atmosphere near to the zones of greatest auroral frequency. One theory attributes the high ionisation of these belts to solar radiation. Magnetic storms cause radio fade-outs and interfere with telegraphic communication.

Magnetism, originally the name given to the quality of attraction for iron possessed by lodestone (*q.v.*). Now known to be a phenomenon inseparably connected with electricity (F18). Strong magnetic attraction is possessed by a comparatively small class of substances; iron, nickel, and cobalt are the most common elements, but there are several less well known, *e.g.*, gadolinium. Many alloys have valuable magnetic properties which make possible numberless technical devices. New magnetic substances are always being developed (*see* Ferrite). The earth acts like a huge magnet with its axis inclined at about 11° to the axis of rotation, the magnetic poles being on the Boothia Peninsula (North Canada) and South Victoria Land (Antarctica). The magnetic field at the surface consists of the regular field of a magnetised sphere with an irregular field superimposed upon it. Variation in the magnetic forces occurs from place to place and from time to time, and maps showing the distribution over the globe of points of the same declination (*i.e.*, the angle which the magnetic meridian makes with the geographical one) are of the utmost importance in navigation. In the south-east of the British Isles, at present, a magnetic needle points 9° and in the north-west 14° west of true north. Little is known regarding the origin of the main (regular) field of the earth, but it is believed that the irregularities are due to the presence of intense electric currents in the upper atmospheres and local magnetisation of rock strata. In 1967 the discovery was claimed of isolated magnetic poles, *i.e.*, north and south magnetic poles existing separately, just as positive and negative electrical charges exist separately. If this is confirmed it will probably rank as one of the most important experimental results of the 20th cent., because of its significance for the theory of electromagnetism and fundamental particles.

Magnetohydro-dynamics. A current-carrying wire always experiences a force if it is in a magnetic field. This is the well-known electrodynamic force, and electric motors work because of it. If the current is carried in a fluid, *e.g.*, a liquid metal or a plasma, these forces cause bodily movements of the fluid, which are in general very difficult to calculate. The forces are then called *magnetohydro-dynamic forces*. Now magnetic fields are themselves produced by electric currents; so a current flowing in a fluid produces a magnetic field, which then reacts on the fluid itself by means of the magnetohydrodynamic forces. In the Harwell machine Zeta, used in studying the technical problems of thermonuclear reactions, this effect acts so as to constrict the electric discharge on to the axis of the tube and thus keeps it away from the walls. This action is assisted by an extra magnetic field produced by a separate current flowing in metallic conductors outside the tube. Thus the hot plasma is contained by magnetohydro-dynamic forces and not at all by the material tube wall. In practical devices of the future magnetic forces may have to sustain plasma pressures of 60 atmospheres—a pressure for which a thick steel wall would normally be used! *See also* Plasma Physics.

Magnificat, the hymn of the Virgin Mary, given in Luke 1, 46 beginning in the Vulgate with the words "Magnificat anima mea Dominum" ("My soul doth magnify the Lord"), and used in the services of all Christian Churches.

Magnitude in astronomy is a measure of the apparent brightness of a star, which is inversely proportional to the square of its distance. A low number indicates a bright star, and a high one a faint star. The *absolute magnitude* is a

measure of *real* brightness, *i.e.*, the brightness a star would have at a standard distance away of 32·6 light years. The distance can be calculated if the apparent and absolute magnitudes are known.

Magnolia, species of the family *Magnoliaceae* comprising many beautiful trees, and shrubs with large and fragrant flowers, and chiefly native to North America and Asia. Introduced in 1688.

Magpie, a well-known bird of the crow family, of glossy black and white plumage, famed for its mischievous propensities.

Magyars, the Hungarian race who came to eastern Europe from S.W. Asia and settled in Hungary in the 10th cent. Their language belongs to the Finno-Ugrian group.

Mahdi, an Arab leader of great influence, invested with powers akin to those of a Messiah in the Mohammedan mind. The title was taken by Mohammed Ahmed, who overran the Egyptian Sudan, and in 1885 captured Khartoum.

Mahogany, a fine hard wood susceptible of a very high polish, and distinguished for the beauty of its colour and markings. Obtained chiefly from the trees of the genera *Swietenia* (Spanish or Cuban mahogany) and *Khaya* (African mahogany) of the family Meliacaea. According to tradition Raleigh had a mahogany table made for Queen Elizabeth.

Maidenhair Tree *or* **Ginkgo.** This tree takes its name from the shape of its leaves, which resemble those of the maidenhair fern. Widely cultivated in China and Japan. It is the only survivor of an order of gymnosperms which flourished in Mesozoic times. Botanically interesting because the male gametes are motile.

Malmaison, château at Rueil-Malmaison, a western suburb of Paris. It derives it name from having been inhabited in the 11th cent. by the Norman brigand Odon, and afterwards, according to the tradition, by evil spirits, exorcised by the monks of St. Denis. It was the residence of Napoleon and of the Empress Josephine after her divorce. She died there in 1814 as the result of a chill caught while showing the Russian Emperor round the grounds. In 1900 it was given to the nation.

Malmsey, a strong, sweet wine originally made in Greece, but now also in Spain, Madeira, and the Azores; known also as Malvoisie.

Maltose, a sugar formed in cereal grains during germination. It is produced by hydrolysis of starch, and further hydrolysis converts the maltose into glucose.

Mamluks, commonly known as Mameluks, were originally—in the 13th cent.—a bodyguard of Turkish and Circassian slaves in the service of the Sultan of Egypt, and attained such influence that in 1250 they were strong enough to appoint one of their own body to the throne of Egypt. After that a succession of Mamluk Sultans reigned down to 1517. Then the Turks annexed Egypt, and the Mamluks were taken into the service of the Beys. They again came to the front after Napoleon's conquest of Egypt, and for a time resumed governmental sway; but in 1811 they were decoyed into the citadel of Cairo and massacred by order of Mehemet Ali.

Mammoth, extinct elephants of gigantic size. In 1799 the first perfectly preserved specimen was found in Siberia in a block of ice. It was in prehistoric times an inhabitant of Britain and other parts of Europe, as well as of Asia and America.

Mammoth Cave of Kentucky, about 10 miles long, is one of a series of spacious caverns formed in the limestone rock formation, and is from 40 to 300 ft. wide and at one point 300 ft. high. Stalactites and stalagmites abound.

Manatee, an aquatic mammal of the sea cow (Sirenia) order of mammals, averaging when full grown from 10 to 12 ft. in length, with shovel-shaped tail, and four limbs and nails which almost give the appearance of arms and hands. In spite of their ungainly aspect, these creatures are believed to have given rise to the legend of mermaids.

Manchus, the original nomadic race inhabiting northern Manchuria who invaded China early in the 17th cent. A Manchu dynasty occupied the imperial throne of China from 1644 to 1911.

Mandarin, the name given to a powerful Chinese official, civil or military, under the old régime, whose rank was shown by the wearing of a button on the cap. Mandarin is the major language of N. China.

Mandible, the lower jaw in human anatomy. The two parts of a bird's beak are known as the upper and lower mandible. The term is also used for biting jaws in arthropods.

Manganese, a metallic element, symbol Mn, discovered by Scheele in 1774. It is silver-white, not very hard (it forms a hard alloy with carbon), brittle, and tarnishes when exposed to air. Its chief ore is pyrolusite (manganese dioxide). Steels containing manganese are very tough, and used for making machine parts.

Maniple, eucharistic vestment worn over left arm.

Manna, a tree of the ash genus, *Fraxinus ornus*, growing in the South of Europe and in the East and exuding a sweet substance which is gathered, boiled, and eaten.

Manometer, instrument used to measure gas pressure. Usually a U-tube containing water or mercury, one end open to the atmosphere, the other to the gas whose pressure is to be measured. More sensitive for small pressures than the Bourdon gauge.

Manors were estates originally granted in Anglo-Saxon times as rewards for knightly service, and included the privilege of a special court with jurisdiction, criminal and civil, within the manorial territory. *See* **Court-Leet.**

Mansion House, the official residence of the Lord Mayor of London, stands opposite to the Bank of England, and was erected in 1739–53 from the designs of George Dance.

Mantis. Large insects belonging to the same order as the locusts and grasshoppers. The manner in which the forelegs are held, as though in suppliance, has gained for these insects the common name of "praying mantis." They are distributed throughout the warmer countries of the world.

Manx, the Celtic dialect (Manx Gaelic) of the Isle of Man, now on the point of extinction.

Maoism. *See* Section J.

Maoris, the race found in New Zealand at the time of its discovery by Captain Cook in 1769. They are believed to have migrated from Polynesia about 1350. Up to 1871 they were frequently in arms against the European settlers but their high intelligence and stamina enabled them to adapt themselves and the New Zealand laws have encouraged equal citizenship. They number 223,300 (1971). Today in New Zealand a pure Maori is a rarity.

Maple, trees native to the northern hemisphere. There are over 100 species. The sycamore is the best-known species growing in Britain. The sugar maple abounds in Canada and the eastern parts of the United States. The sugar is tapped by boring holes in the tree in Feb. and Mar., and the juice that escapes is collected and evaporated. The maple-leaf is the Canadian national emblem.

Maquis, name of the dense scrub in Mediterranean France and Corsica, providing good cover for bandits and outlaws. The French resistance movement adopted the name Maquis during the German Occupation, 1940–45.

Marble is limestone in its hardest and most crystalline form. There are many varieties—33 were used in the building of the Paris Opera House—but white is the purest and rarest. White marble was used by the ancient Greeks for their temples and statues. Among the famous marbles of Italy are the Carrara and Siena marbles, which were used by Renaissance sculptors. Devonshire and Derbyshire yield some beautiful marbles and Connemara furnishes a serpentine-marble.

March, the third month of the year, and the first of the old Roman Calendar. It was named after the god Mars, and was the *Hlyd* (storm) *monath* of the Anglo-Saxons.

Mardi Gras, the last day of the Carnival in France, Shrove Tuesday.

Marionettes are puppets moved by strings. They originated in the *Fantoccini* of the 15th cent. which had such a vogue in Italy and elsewhere on the Continent. The English *Punch and Judy* is a version of Punchinello.

Marlinspike, a pointed iron tool used by sailors to

splice wire. The instrument used when rope splicing is called a fid.

Marmoset, small monkeys confined to the New World. Very squirrel-like in appearance, with long bushy tails, and thick woolly fur, they are pretty little animals and the smallest of all monkeys. There are claws, not nails, on their digits, the big toe excepted.

Marprelate Tracts, seditious pamphlets written with great maliciousness by a group of Elizabethan puritans about 1586, and intended to discredit the episcopacy, caused a great sensation in their time, and led to the execution of their supposed author, John Penry.

Marquess *or* **Marquis**, the title next in precedence to that of duke. The first English marquess was Rovery de Vere, Earl of Oxford, who received the honour from Richard II, in 1385.

Marquetry, a kind of inlaying in which thin layers of coloured woods are wrought into a design, and mainly used in ornamental floors.

Mars, the fourth nearest planet to the sun (*see* F7). There used to be much speculation among scientists about certain dark lines which some observers had seen on the surface of the planet; photographs gave no support to the theory of an artifically constructed network of canals, but it seemed possible they represented areas covered by some simple form of vegetation of the lichenous type. However, the *Mariner* probes have increased our knowledge and raised new questions. *Mariner 9* carried out an extensive study of Mars in 1971/2 covering 85 per cent of the surface in great detail. Important new findings showed that water had played an active rôle in the planet's evolution and that it was not, as scientists had concluded from the *Mariner 6* and *Mariner 7* probes, a dead and featureless planet, but one with its own distinctive character. Photographs revealed four major geological regions: volcanic; equatorial plateau marked by deep canyons, with evidence of water erosion; large cratered terrain like the moon (photographed by the 1969 probes); and a polar region with terrace-like formations and deep grooves. The Soviet Union has also sent spaceships to Mars to pioneer new techniques of planetary exploration. Mars has two small moons—Phobos and Deimos.

Marseillaise, the French national hymn, written and composed by Rouget de L'Isle, a French engineer officer, who was inspired to write it in 1792 to encourage the Strasburg conscripts. It immediately became popular, and received its name from the fact that it was sung by the Marseillaise troops while marching into Paris.

Marshalsea Prison, a once well-known house of detention in Southwark. It stood near St. George's Church, and was originally a prison for royal servants convicted of offences, but from 1842 to 1849 was a debtors' prison. It was abolished in 1849. Dickens described it in *Little Dorrit*.

Marsh Gas. *See* Methane.

Marsh Tortoise, an amphibious animal of the order *Chelonia*, spread over many countries and inhabiting ponds and small rivers. There are 42 species, and they are all carnivorous.

Marston Moor, near York, was the scene of the famous battle between Prince Rupert and Cromwell on July 2, 1644. Cromwell's victory was the turning-point in the Civil War.

Marsupials, members of the order of pouched animals. Except for the oppossums of America, all marsupials occur in Australasia, and include the kangaroos, wallabies, and wombats.

Martello Towers, circular forts erected on the coasts of England and Jersey early in the 19th cent. as defences against the threatened Napoleonic invasion. So called from the circular fort at Mortella (Corsica), which resisted an English fleet in 1794.

Marten, carnivorous animals of the weasel family; one species (the Pine Marten) was once common in Britain. Most famous for their fur are the Siberian Sable and the American Marten.

Martial Law is a term loosely employed to indicate the suspension of the administration of normal civil law and its replacement by military authority when this is rendered desirable by such circumstances as war or rebellion.

Martin, a well-known bird-visitor to Britain. It belongs to the swallow family, and the two species that spend their summers here are the house-martin, which makes its nest of mud under the eaves of houses, and the sand martin, which builds in sandy banks.

Martinmas *or* **St. Martin's Day**, falls on Nov. 11, and is one of the Scottish quarter days. St. Martin was a popular Saint with our ancestors, and Martinmas was a busy time for the mediæval housewife. It was the date when "Martlemas Beef" was dried in the chimney, and enough bacon and mutton cured to last until the spring, because, owing the the scarcity of winter fodder, fresh meat could seldom be obtained. This diet of dried meat without vegetables caused scurvy, King's evil, leprosy, and other maladies. Originally the goose belonged to Martinmas, not to Michaelmas, the legend being that when Martin was elected Bishop of Tours he hid himself, but was betrayed by the cackling of geese. He died in the 4th cent. The spell of fine weather sometimes occurring at Martinmas is called St. Martin's Summer.

Martyrs. People who suffer death in testimony to their faith. Stephen was the first Christian martyr in 39. The first English martyr was St. Alban, 286, and in Tudor times many eminent churchmen went to the stake. The Smithfield martyrs' memorial church used to be St. Peter's, St. John Street, Clerkenwell. When that church was demolished the memorial moved to the Church of St. James, Clerkenwell Green.

Marxism. *See* Section J.

Mason and Dixon Line, boundary line between Pennsylvania and Maryland, for long a source of dispute, drawn up by two English surveyors, Charles Mason and Jeremiah Dixon, between 1763 and 1767. It came to designate the boundary dividing the slave states from the free states of America, and is still used in distinguishing the "North" from the "South".

Masques were light dramatic compositions set to music and performed on special occasions. One of the best-known examples is Milton's "Comus," which was given at Ludlow Castle in 1634.

Mass, the service in the Roman Catholic Church in which are enacted and enshrined Christ's words and actions at the Last Supper. It is high or low, i.e., performed with full choral service, or merely by the rehearsal of prayers without singing. Mass was first celebrated in Latin in the 4th cent., and was introduced into England in the 7th cent. The use of a vernacular language was sanctioned by the Second Vatican Council (1965).

Mass Spectrograph, an instrument for separating isotopes. It works by sorting electrified particles according to their masses; the particles stream through a magnetic and possibly an electric field, and the lightest particles undergo the greatest deflection.

Massorah, a collection of criticisms on the Hebrew text of the Scriptures, and rules for its correct interpretation.

Mast, a long round piece of timber or tubular steel or iron, standing upright in a vessel, and supporting the yards, sails, and rigging in general. The earliest ships had only one mast, carrying a simple sail. The number increased until there were 4 or 5, or even more. Above the lower mast of a sailing-ship comes the topmast, and above that, the topgallantmast and royalmast. The position of each mast is indicated by a prefix, as foremast, foretopmast, foretopgallantmast, foreroyalmast, mainmast, maintopmast, etc. The foremast is in the fore of the ship, the mainmast in the centre, and the mizzen nearest the stern. In large vessels nowadays the mast does not extend to the keel, as it formerly did, but is usually stopped at the second deck.

Master of the Revels was an important Court official upon whom devolved the arrangement of Court festivities. The office is at least as old as the time of Edward III. By 1737 it seems to have died.

Master of the Rolls, one of the English judges, formerly a judge of Chancery, but since 1881 a judge of the Court of Appeal only. In addition he has charge of the rolls or records of Chancery and ranks next to the Lord Chancellor and Lord Chief Justice.

Mastodon, an extinct order of quadruped closely resembling the elephant in structure, but larger.

Materials Science is a blend of science and technology; it is the use of scientific research methods to study and improve materials for practical use. The deeper understanding so obtained enables scientists to design new substances with hitherto unknown combinations of properties that are useful in engineering, aircraft, nuclear power, surgery, etc. Materials science institutes or university departments will usually contain an assortment of chemists, physicists, metallurgists, ceramicists, engineers, and others because materials science brings to bear on materials a great many specialised techniques. The scientific study of materials is bringing continual improvement in metals, ceramics, plastics, fibres, and many valuable combinations of these.

Mathematics is a body of knowledge expressed in a language of symbols. *Pure* mathematics studies the propositions that can be deduced in this language by applying definite rules of reasoning to sets of axioms. In *Applied* mathematics, the mathematical language is used, often with great effect, to discuss problems of the real world, such as mecnanics, statistics, and science generally. In range, subtlety, complexity, and depth mathematics is unsurpassed among the intellectual disciplines and its study has attracted some of the most brilliant men in history.

Matins, the first of the canonical hours or services of the day in the Roman Catholic Church and Morning Prayer in the Anglican Church. The daily service in the Roman breviary (*q.v.*) consists of eight offices or "hours," fixed by canon, for prayer and devotion. Formerly Matins was recited or sung at midnight, Lauds at sunrise, Prime at 6 a.m., Terce at 9 a.m., Sext at midday, Nones at 3 p.m., Vespers at sunset, and Compline before retiring for the night. Lauds are now commonly joined to Matins.

Mau-Mau, a secret, anti-European, terrorist movement which agitated the Kikuyu tribe of Kenya during the years 1953–57. Mau-mau was a symptom of native insecurity and discontent; emergency powers were lifted in Nov. 1959, an large-scale reforms were instituted. Kenya attained independence in Dec. 1963 with Mr. Jomo Kenyatta as Prime Minister.

Maundy Thursday, the day before Good Friday, commemorates the Last Supper. "Maundy" derives from Christ's command (mandatum) to his disciples on that day to love one another. It was the custom in the monasteries for the monks to wash the feet of the poor on this day, and for many centuries the sovereigns of England, through their almoners, have distributed money, food, and clothing to "as many old men and as many old women as the Sovereign is years of age." The Royal Maundy ceremony is still observed, special silver money granted by the Royal Almonry is coined for the occasion and the distribution takes place in Westminster Abbey.

Mausoleum, a special place of sepulture, generally for the reception of the remains of members of a royal or other family of distinction. The name is derived from the tomb of King Mausolus at Halicarnassus, erected about 350 B.C., and forming one of the seven wonders of the world.

Mauve, a colouring matter produced from lichens by Dr Stenhouse in 1848, but in 1856 obtained from aniline by William Perkin (1838–1907), who gave it the name Mauveen. This was the first synthetic organic dyestuff ever to be produced, which led to the building up of the great synthetic dyestuffs industry (which Germany dominated before the First World War).

May, the fifth month of the year, but the third of the ancient Roman calendar. Supposed to be named after Maia, the mother of Mercury, to whom sacrifices were offered on the first day of this month. In England in former days May Day was made the occasion of many festivities, including the crowning of the May Queen, dancing round the Maypole, etc.

"Mayflower," the name of the ship which in 1620 conveyed the Pilgrim Fathers, 101 in number, from England to America. *See* Pilgrim Fathers.

May Fly. *See* Ephemoptera.

Mazarin Bible, an edition of the Latin Vulgate, acknowledged as the masterpiece of the Gutenberg press (1456). It was the first book completely printed from movable types. It is called the Mazarin Bible because the first copy to capture the attention of scholars was found in the library of Cardinal Mazarin, in Paris. Sometimes called the Gutenberg or the 42-line Bible.

Mean. In statistics and mathematics generally understood to be the arithmetic mean. The geometric mean between two quantities is the square root of their product. *See* Average.

Mechanical Equivalent of Heat. *See* Joule.

Medals, as decorations for military service, were first issued in this country by Charles I., who ordered medals for gallantry to be distributed to certain soldiers in 1643. Medals were also issued to officers and men who were victorious against the Dutch fleet in 1653. After Lord Howe's victory in 1794 a naval medal was instituted. Medals were also struck for the victory of Waterloo, and since that time special medals have been issued in connection with all our wars. The Victoria Cross, a special reward for personal gallantry in the Navy, Army, and Air Force, was instituted in 1856. The George Cross for gallantry instituted in 1940 ranks next to the Victoria Cross. The Military Cross was instituted in 1914.

Median. *See* Average.

Medlar, a tree of which the fruit is about 1 in. in diameter and hard fleshed when gathered, but after being stored for a few weeks it softens. It has a peculiar flavour. Its large white flowers give it a decorative appearance.

Meerschaum, a white or yellow-white earthy mineral, found in beds in Asia Minor, Greece, and other places, is a silicate of magnesium allied with water. Its chief use is in making pipe-bowls.

Megalith, a prehistoric monument, consisting of a large single stone or a group of such stones, in a circle as at Stonehenge or in burial chambers as at New Grange, Ireland. Megalithic monuments have been constructed by different peoples in different parts of the world since the third millennium B.C.

Meiosis, a special type of cell division by which the gametes or sex cells are generated, resulting in the sperm or ovum receiving only half the number of chromosomes found in a somatic cell. *See* Mitosis.

Mendelian Law. The first statistical rules of inheritance, determining the ratio of variation of characteristics in the offspring of differing individuals, and the classification of characters discontinuously inherited, were first formulated by the Austrian monk Gregor Mendel. The results of his most important experiments in the crossing of peas were published in 1866, and showed that when two races are crossed, the resultant hybrids will exhibit the dominant features of one parent, but the offspring of the second generation will show those of both grandparents. *See* Section F, Part IV.

Mendicant Friars, certain religious orders which spread over Europe in the 13th cent., and comprised the Franciscans, Dominicans, Augustines, and Carmelites. Originally they depended entirely on alms.

Mercator's Projection, a method of indicating meridians and parallels of latitudes on maps, introduced by Mercator in the 16th cent., and still universally used in navigators' charts.

Mercury, one of the smaller planets and the nearest to the sun, being 36 million miles distant. It has no satellite. *See* F7.

Mercury *or* **Quicksilver**, symbol Hg (Latin *hydrargyrum*) is one of the oldest-known metals, whose chief ore is the sulphide, cinnabar, found in certain parts of Spain, China Japan, Mexico, and South America. It is liquid at ordinary temperature and is used in the construction of barometers and thermometers. Alloys of mercury are called amalgams. It is also of great value in medicine. The metal is used in the mercury-vapour (or "sunlight") lamp, since the vapour gives a bright yellow-white glow in an electric discharge.

Mercy Killing. *See* D9(2).

Meridian, an imaginary circle extending through the North and South Poles and any given place. When the sun is at its midday height at any place it is "on the meridian"; hence the terms ante-meridian (a.m.) and post-meridian p.m.). *See also* Greenwich Mean Time.

Merino Sheep were imported into England from Spain in 1788, and had great influence in improving native breeds, especially in regard to the quality of the wool.

Merit, Order of, founded by King Edward VII in 1902 as a special distinction for eminent men and women without conferring a knighthood upon them. The Order has twenty-four British companions in addition to foreign honorary members limited in number, as the choice of members is, by the Sovereign's pleasure. Lord Kelvin was the founder companion. Dr. Sarvepalli Radhakrishnan (1963) is an honorary member. Florence Nightingale (1907), Professor Dorothy Hodgkin (1965) and Dame Veronica Wedgwood (1969) are the only women to have received this coveted decoration.

Merovingians, the name given to the family that ruled over France from about 500 to 750. Clovis was first of the line and Childeric the last.

Mesons (from Greek *meso* = middle), a family of unstable particles of mass between that of an electron and that of a proton. Some are positive, some negative, some neutral. No stable meson is known, the longest-lived particle having a lifetime of only two-millionths of a second. The first of these particles was discovered in cosmic radiation in 1937 and called the mu-meson or *muon*. In 1947 a heavier type was discovered called the pi-meson or *pion*, which behaved like the meson predicted on theoretical grounds by Yukawa in 1935. The pion is connected with the theory of nuclear forces. *See also* F13, 14.

Mesozoic. The geological era which includes the Triassic, Jurassic, and Cretaceous rocks. *See* F45.

Metabolism, the general term for the physical and chemical processes occurring within a living organism. *See* F26.

Metalloid, an element which has properties intermediate between those of a metal and a non-metal. Arsenic is a metalloid.

Metamorphic Rocks are such geological deposits as have undergone alterations of structure and mineral reorganisation. The most active agents in producing these metamorphic changes are heat, water, and pressure. *See* F8(2).

Metamorphosis, period of development from egg to adult, during which the animals have different forms, as found, *e.g.*, in the life histories of frog and butterfly.

Meteorites. The word meteor originally signified any natural phenomenon, but in modern usage meteors are small bodies coming from interplanetary space which become luminous by friction on entering the earth's atmosphere. Popularly called "shooting stars." Larger meteors are known as fireballs. Some of these reach the ground. The object which has been a meteor in flight then becomes a meteorite. In some meteorites iron is the predominating element, others are like rock. The iron meteorites are more common amongst those which have been preserved, but falls of rock-like meteorites occur more frequently. At l'Aigle in France in 1803 from 2000 to 3000 meteorite stones fell; this fall is famous because it convinced scientists that meteorites really came from outside our atmosphere. (The largest meteorite stone actually known to have fallen to earth is one which descended in Emmott County, Iowa, in 1870, weighing 437 pounds.) A meteorite weighing no less than 36½ tons found in Greenland is now in New York. On June 30, 1908, an enormous object fell in Siberia in a sparsely-inhabited region. A hot blast destroyed all trees within a radius of about 5–10 miles, the explosion waves being recorded by barographs as far distant as London, Washington, and Batavia. For the next few nights there was in Europe in the northern sky brilliant illumination due to sunlight falling on clouds of dust at a great height in the atmosphere. Whether this dust had accompanied the object in its journey through space like the tail of a comet or whether the dust had come from Siberia is unknown. (Many Russian astronomers now believe this Siberian meteorite, as it is commonly called, was the nucleus of a small comet.) When the place where the object fell was visited in 1927 some 200 craters were found, but no considerable meteorite has been recovered. Meteorites are possibly débris from the disintegration of a body in the solar system.

Meteorology, the science of the atmosphere considered as a heat engine. Deals with weather, climate, optical phenomena, atmospheric electricity, physical processes such as radiation and precipitation, the dynamics and structure of cyclones, anticyclones, etc. Wide application to problems of aviation, agriculture, commerce and shipping. Meteorological observing stations are in operation all over the world, and on the simultaneous or synoptic reports of their instrument readings and estimates of pressure, temperature, humidity, speed and direction of wind, rain, character and amount of cloud, visibility, etc., forecasts, gale, snow and frost warnings are based. Instruments carried by earth satellites (*e.g.*, *Tiros*, *Nimbus*) outside the atmosphere can make systematic observations on a world-wide basis of the atmospheric circulation, through observation of cloud cover and of the thermal radiation into space from the atmosphere. Such observations together with the use of computers are of great importance for weather analysis and forecasting. The main communications centre for the U.K. is at the headquarters of the Meteorological Office at Bracknell, Berkshire, where the collection, editing, and re-transmission of weather messages continue according to strict schedules day and night throughout the year.

Methane. The simplest hydrocarbon, compounded of one carbon atom and four hydrogen atoms. This gas occurs over marshes and swamps, where it is liberated in the decay of vegetable matter. It is the main constituent of natural gas, and also occurs in coal-mines, where it is called "fire-damp" because of the explosive character of its mixture with air. Formerly this natural gas was removed from the coal seams and ran to waste; now in many countries (including Britain) it is being used for commercial purposes.

Methodism. *See* Section J.

Methylated Spirit, a mixture of 90 parts by volume ethyl alcohol, 9½ parts wood naphtha (methyl alcohol), ½ part crude pyridine, together with small amounts of petroleum oil and methyl violet dye. Industrial methylated spirit consists of a mixture of 95 parts by volume ethyl alcohol and 5 parts wood naphtha. It is used as a solvent and a fuel.

Metre. *See* English Verse, Section M.

Metre, unit of length in the metric system; since 1960 the wavelength of the orange-red light of krypton 86 has been adopted as the basis of the international unit of length. Before that (since 1889) the platinum–iridium bar kept at Sèvres was the international prototype metre.

Metric System, the system of weights and measures based on the gramme and the metre, smaller and larger units being decimals and multiples of the primary units respectively. A decimal currency was adopted in France in 1795 and the metric system of weights and measures in 1799. (In that year the quadrant of the earth was surveyed and the standard metre adopted.) Nevertheless the change was accepted slowly, and as late as 1837 the French Government had to pass a law forbidding the use of the old measures. Since then the metric system has been adopted in most of the continental countries and is used universally in scientific work. Although there have been many attempts to get the system adopted in Britain, it was not until 1965 that the Government encouraged the adoption of the metric system of weights and measures. The change-over to decimal coinage was made in 1971; the change to the metric system of weights and measures should be completed by 1975. *See* Section F, Part VI, and N7 for SI units.

Mezzotint, an engraving from copper or steel produced by instruments which burnish and scrape away portions of the surface, and yield an impression effectually graded in light and shade.

Mica. The mica of commerce is a nearly transparent mineral, which has great heat-resisting power, and can be split into thin plates. The most important micas are muscovite (potassium mica), the commoner variety, phlogopite (mag-

nesium mica), and biotite, the magnesium and iron mica.

Michael, St., and George, St., an order of knighthood originally founded for the Ionian Isles and Malta in 1818, and reorganised in 1869, so as to admit Crown servants connected with the Colonies. The Earl of Derby, Earl Russell, and Earl Grey were the first of the new knights.

Michaelmas Day, the festival day of St. Michael and All Angels, Sept. 29th, one of the English quarter days.

Microbe, a term proposed by Sédillot in 1878 to denote any microscopic organism, vegetable or animal, or found on the borderland between the two great natural kingdoms. The term is commonly used, but not by scientists.

Microelectronics, a rapidly developing technology of the 1960s which reduces entire electronic circuits to minute size and embeds them in tiny chips of solid material. These are then called integrated circuits. A circuit consisting of, say, a dozen transistors and fifty resistors can be built into a small piece of semiconductor (*q.v.*) measuring not more than a couple of millimetres in any direction. Hundreds of these circuits can be made simultaneously in penny-size wafers of silicon about one-hundredth of an inch thick. There are great advantages in cheapness, reliability, robustness, and speed of electronic performance. The small size is in itself an advantage in space vehicles and medical instruments. Applications to missile control systems, computers, and communications equipment are no doubt only the first fruits of this new achievement of the current technological revolution.

Micrometer, an instrument for measuring minute distances; usually attached to the eye-pieces of a microscope or telescope, and consisting of two very fine hairs or wires stretched across the field of view, one fixed, the other movable. It was invented by William Gascoigne in the 17th cent. and improved by later inventors. Sir Joseph Whitworth made one in 1858 to measure the millionth part of an inch.

Micro-organisms, the collective term applied to several types of organism, the most important of which are fungi, viruses, bacteria, and protozoa. It is a classification of convenience in biological studies. These organisms are generally simple in their environmental requirements (*e.g.*, have simple nutritional needs) and in cellular organisation. This makes them very suitable for modern biological research. Much of the information on the nature of the genetic code (F31) was obtained from experiments on these organisms.

Microphone, device for converting the acoustic energy of sound waves into waves of electrical energy, used in sound amplifying systems. Developed independently by Edison (1877) and Hughes (1878).

Microscope, invented about 1590 by Janssen, and improved by Galileo, Fontana, and others, is an instrument which by a lens system magnifies minute objects. Microscopes are simple, compound, and binocular. *See also* Electron Microscope.

Middle Ages (*c.* A.D. 400–1500), usually considered to be the period between the decline and fall of the Western Roman Empire and the fall of Constantinople to the Turks (*see* A4-7). The period covers (*a*) an earlier part ending with the 12th cent. (sometimes called the Dark Ages) when science was dead, when theology was the main preoccupation, and when the language of the learned West was Latin; and (*b*) a later age of Arabian influence when alchemy and astrology (at that time indistinguishable from astronomy) were central interests, technology was advancing, and Greek learning was transmitted by Arab scholars. Characteristic features of the mediaeval scene were monasticism (Sec. J), the Crusades (*q.v.*), Gothic art (*q.v.*), feudalism (Sec. J), and the supremacy of Islam in the field of learning. The period came to an end with the general decline of Christendom and the ushering in of the Renaissance (Sec. J). The term "Middle Ages" was coined by the 17th-cent. German historian Christoph Keller.

Midrash, name given to the homilectical interpretatation of some of the Hebrew Scriptures in which allegory and legendary illustration were freely used. Compiled by Jewish rabbis from *c.* A.D. 200.

Millenary Petition was presented to James I. in 1603, on behalf of nearly 1,000 Puritan Ministers against certain of the rites and ceremonies of the Church of England. The Hampton Court Conference was the outcome of this petition.

Millennium, a period of a thousand years. The term is specifically used of the period of a thousand years during which, according to Rev. xx. 1–5, Christ will reign in person on earth. The Millenarians are a sect that interprets the "Millennium" as beginning with the commencement of the 6001st year from the Creation, which, according to Archbishop Ussher (1581–1650), was in 4004 B.C.

Millipede. Arthropods (F33) allied to the centipedes, from which they differ in having two pairs of legs to each body segment (except the first three) instead of one pair. Worm-like in shape but with a pair of antennae on the head, they can do much harm to garden plants. *See* T29(1).

Millstone-Grit, a series of grits and sandstones of deltaic origin underlying the coal measures of the Carboniferous system and attaining in England a thickness in parts of 5,000 ft. It is from this rock that millstones have been made from time immemorial.

Mimicry, protective similarity of an animal to another animal or to inanimate objects. Examples of the former are the hover flies, which mimic wasps and bees; of the latter, leaf insects, stick insects, and caterpillars that look like dead twigs.

Mink. Semi-aquatic mammals closely related to polecats. There is one American species and one European. The fur, which varies light to dark brown, is soft and thick, and is among the most valuable of commercial furs. They now live in the wild in the British Isles.

Minnesingers were minstrel poets of Germany who, during the 12th and 13th cent., composed and sang verses of heroism and love. They were of knightly rank, the counterpart of the French troubadours. *See* E3(2).

Minnow, a small fresh-water fish of the carp family abounding in all the waters of Europe; it has a mottled back and slivery belly, and forms a popular bait for trout.

Minstrels were originally specially appointed instrumentalists and singers—pipers, harpers, and gleemen—engaged by barons and manorial lords to amuse their tenants. Later, minstrels assumed nomadic habits, made their way into the houses of the great, and were generally welcome. By Elizabeth's time, however, they were too numerous, and were classed as "rogues and vagabonds," along with actors.

Miracle Plays, popular in England in the 15th cent., were usually religious in character, representing some of the dramatic incidents of the Bible. Staging of plays was one of the many activities of the Guilds of those days.

Mirage, an optical illusion often observed in desert regions when the objects on the surface of the earth often some distance away appear as if reflected in a surface of water. Mirage is due to the unequal heating of the different parts of the atmosphere, which bends the light rays, and so produces distorted images.

Mishna, the first part of the Talmud, setting forth the "Oral Law" of the Jews.

Missal, the name of the mass-book of the Roman Church compiled 492–96 by Pope Gelasius I. and revised by Gregory I., 590–604. The present Roman Missal was sanctioned by the Council of Trent 1545–63. In the Anglican Communion the Book of Common Prayer superseded the Missal in 1549.

Mistle Thrush receives its name from its partiality to the mistletoe-berry. Larger than the song-thrush, with spotted breast rather than speckled.

Mistletoe, a parasitic evergreen with white berries used as a decoration at Christmas-time. The familiar mistletoe of Europe is the *Viscum album*, which grows on the boughs of lime, willow, apple, poplar, maple, ash, hawthorn, but seldom on oak-trees. It was sacred to the Druids, and in Norse mythology it was a mistletoe dart that killed the god Baldur.

Mistral, a cold, dry, northerly wind peculiar to the French coast of the Mediterranean.

Mitosis, cell division whereby each daughter cell receives the same number of chromosomes as the parent cell. When the gametes (sex cells) are formed a special type of division occurs (meiosis) in which the number of chromosomes is halved. *See* F30(2)

Mitre, the twofold pointed head-dress of bishops and certain abbots of the Western Church, and occasionally of other ecclesiastics.

Moa, the name for several species of ostrich-like extinct birds related to the New Zealand kiwi. The largest species, *Diornis maximus*, stood 8 ft. 7 in. high. Became extinct about 500 years ago.

Moabite Stone, a stone of the 9th cent. B.C. containing the earliest known inscription in Phoenician characters, and discovered in the highlands of Moab in 1868. It is now in the Louvre, Paris. It records the campaign between Moab and Israel, a differing account of which is given in the Old Testament.

Moderator, a material used to slow down neutrons in an atomic pile. Examples of moderators are pure graphite and heavy water. *See* Nuclear Reactors.

Mohole Project, a scheme to bore through the earth's crust to take samples of the mantle rocks beneath. Drilling trials, led by an American team of geophysicists, began in 1961 near the island of Guadalupe off the Mexican coast in the Pacific. The project, however, was cancelled in 1966 on account of the escalating cost. Russian geophysicists started on a similar experiment, boring through land rocks where the digging is much deeper and higher temperatures are met with. The name "Anti-Cosmos" was given to the project. The boundary between the earth's crustal and mantle rocks is known as the Mohorovičić Discontinuity, or, more simply, as the Moho. The technology of deep sea drilling came from this project. *See* F8(1).

Molasses, sugar-cane juice in its uncrystallised form after boiling. The crystallised part is the raw sugar. Used to make rum.

Mole, a small burrowing animal with long, sensitive nose, about the size of a small rat, with short legs and forefeet armed with strong claws for digging in the earth. Their subterranean dwellings are of curiously ingenious construction, and they do not often leave them except to make raids on mice, frogs, snails, etc. The earth-worm, however, is the mole's chief item of food. Not to be confused with the vole which has a blunt nose.

Mole, or gram molecular weight. *See* F21(8).

Molecular Biology, a rapidly expanding branch of science mainly concerned with cell structure and function at a molecular level, in particular with genes and enzymes and the interaction between the two. Recent work in Britain has led to the unravelling of the structure of DNA, the hereditary substance of the genes, and has played a major part in uncovering the molecular mechanism of the transfer of hereditary information and the nature of the genetic code. Crystallisation of the first enzyme (urease) took place in 1929; the gene as a definite chemical entity was discovered in 1943. *See* F26–32.

Molecule. A group of atoms held together by chemical forces. *See* F12(2), 20, *also* Macromolecule.

Molybdenum, symbol Mo, a fairly hard white metal with properties resembling those of chromium. Its commonest ore is the sulphide, molybdenite. The chief use of the metal is in the manufacture of alloy steels.

Monasticism. *See* Section J.

Monazite, a cerium mineral containing some thorium. Occurs as grains, often as sand ("monazite sands"), derived from granites. Deposits occur in India (Travancore), Russia, Norway, Madagascar, S. Africa, Brazil, U.S.A.

Monday, the second day of the week, called by the Anglo-Saxons *Monandaeg* (moon-day).

Mongoose, species of mammals related to the civets, feeding on vermin and reptiles. These animals, which have long tails and short legs, occur in Africa and Asia (especially India). The biggest mongoose is the Egyptian ichneumon, and this has been introduced into the W. Indies because of its ability to kill large poisonous snakes.

Monitor, a family of lizards most resembling dragons. There are about 30 species widely distributed over the tropical parts of Asia, Australia, and Africa.

Monroe Doctrine, a principle of American policy declining any European intervention in political affairs of the American continent, outlined by President Monroe in 1823. At the same time interference was disclaimed with existing European colonies in the Western Hemisphere. The American Civil War hampered the application of the doctrine for some time, but afterwards the United States firmly insisted on it. The Doctrine is not international law, but a national policy of the U.S.A.

Monsoons, regular persistent winds which blow at certain seasons in middle latitudes, mainly in South and East Asia. Their occurrence is related to the great changes of pressure which take place between summer and winter over the land mass. In India the south-west monsoon (June–Oct.) is moisture-laden from its long passage over the sea and in the higher regions, especially there is heavy rainfall. Sudden reversal of the wind results in the cold north-east monsoon (Oct.–March) which is dry on account of the shelter afforded by the mountain ranges to the north. Frequently the term "monsoon" is applied to denote the associated rainfall without reference to the actual winds.

Monstrance, an ornamental transparent receptacle in which the Sacred Host is carried in procession or exposed for adoration.

Month, the 12th part of the calendar year. A lunar month is the interval of new moon to new moon or full moon to full moon; mean length, 29 days, 12 hours, 44 minutes, 2·87 seconds. A sidereal month represents the time of the moon's revolution from a given star back to the same again, 27 days, 7 hours, 43 minutes, 11·5 seconds. In English law, since 1926, a month, unless otherwise expressed, means a calendar month.

Monument of London, a 202 ft. column, overlooking Billingsgate, designed by Wren and erected (1671–77) to mark the starting-point of the Great Fire of London (1666). The original inscription upon it ascribed the fire to "the treachery and malice of the popish faction," which stood down to 1831, when the words were erased as objectionable. The black marble staircase has 345 steps (311 to the balcony).

Moon, the earth's satellite, 2,160 miles in diameter and 238,857 miles distant from the earth. It rotates in the same time as it revolves round the earth (27 days 7 hours 43 minutes), so that the same face is always presented to the earth. The lunar surface is pockmarked by innumerable collisions with solid particles of all sizes. Unlike the earth, it is unprotected by any atmosphere and for aeons of time it has been exposed to every kind of cosmic influence including the parching effect of solar radiation. All moonlight derives from the sun but on the whole it is a pretty poor reflector. The exploration of the moon by means of rockets began in 1959 when the Russian *Luna* 2 crashlanded on the plains of the *Mare Imbrium*. 1969 will be remembered as the year of the U.S. *Apollo* triumphs when man first set foot on the moon. The samples of lunar rock and dust brought back to earth by the *Apollo* astronauts and the Soviet *Luna* unmanned automatic stations are being studied by lunar scientists. Lunar iron has been found to be almost completely free from impurities and therefore immune to rusting and corrosion. The exploration of the moon at close range by means of spacecraft was made possible only by parallel developments in several branches of technology—rocket propulsion, long-range radio and television transmission, electronic computer control.

Moorhen, a widely distributed bird of the rail family, a common resident in the British Isles. The adult is blackish with white under tail-coverts, a white line on the flanks, and a yellow-tipped bill. The frontal shield and the base of the bill are vermilion. It bobs its head, flirts its tail, and dives well. The nest is usually placed close to the water's edge or on an overhanging branch. In feeding the young the parents are sometimes helped by their offspring of a previous brood of the season. In N. America the bird is known as the Florida Gallinule.

Moors, the name given to the Moslems who live in N.W. Africa and to those who once lived in Spain. In 711 Moorish Arabs invaded Spain and spread beyond the Pyrenees into France, where they were driven back by the end of the century. Spain, however, remained virtually under Moorish domination until the 11th cent., and during that period was the most civilised and prosperous part of Western Europe. In the arts and sciences the impact of Moorish culture was profound and lasting. Examples of the brilliant splendour of Moorish architecture are still to be seen in Toledo, Córdoba, Seville, and Granada. During the long struggle for the Christian reconquest thousands were killed and expelled, and in 1492 Granada, their last remaining kingdom, was forced to surrender. They were virtually exterminated by the Inquisition, and the last were expelled in 1609.

Moose, the largest members of the deer family. The N. American Moose stands 5½–6½ ft. high, and has huge palmate antlers. There is another New World species, occurring in Alaska. The European species is known as the elk.

Morse Alphabet, a system of dots and dashes, intended to be used in combination with the indicator in telegraphy; but usually read by sound, the receiving operator writing down the words in the system as transmitted. This system of signals was invented by the American inventor and artist Samuel Finley Breese Morse (1791–1872) of Charlestown, Massachusetts.

Mosaic, art of arranging small pieces of coloured glass, marble, or other materials in such a fashion as to produce a decorative pattern. Some of the best examples of Byzantine mosaics are to be seen at Ravenna, Rome, Venice, and Sicily.

Mosque, a Mohammedan church, the greatest being that of Santa Sophia at Istanbul, now converted into a museum of Byzantine art.

Mosquito, small two-winged flies with long legs and slender body. Their larvae are aquatic. The females of some species are blood-suckers, and thus come to transmit the blood parasites which cause malaria and yellow fever, for example. *See* **DDT** *and* **Gammexane**.

Mosses. Most mosses live in moist habitats, but there are some species that can withstand desiccation and are adapted to live on rocks and tree trunks.

Moths, of the insect order, *Lepidoptera*, differing from butterflies which have clubbed antennae, in having feathery, sometimes thin, pointed antennae, rarely clubbed. Most are nocturnal, and the pupae are usually brown and enclosed in a cocoon unlike those of the butterfly, which are usually naked. *See also* **Lepidoptera**.

Motion, Laws of. According to Newton: (1) A body continues in its state of rest or uniform motion in a straight line except in so far as it is compelled by external forces to change that state. (2) Rate of change of momentum is proportional to the applied force, and takes place in the direction in which the force acts. (3) To every action there is an equal and opposite reaction. These laws are the basis of almost all engineering and everyday mechanics. Corrections to them have been made by relativity and the quantum theory. *See* **F15, 16**.

Mule, a cross between a male ass and a horse mare; a hinny is a cross between an ass mare and a horse stallion. Also the name of the spinning machine invented by Crompton in 1779 which combined the principle of Hargreaves' spinning jenny with the machine invented by Arkwright.

Mullions, the vertical bars dividing the lights in a window, forming a highly decorative feature in the Tudor period of English Gothic architecture. The cross-beam or horizontal bar of wood or stone in a mullioned window is styled a transom. *See* **Windows**.

Munich Agreement. In Sept. 1938 Mr. Neville Chamberlain and M. Daladier, British and French Premiers, reached agreement with Hitler at Munich for the dismemberment of Czechoslovakia, primarily for the benefit of Germany. Czechoslovakia itself was not consulted, nor Russia who with Britain and France had jointly pledged themselves to uphold the independence of Czechoslovakia. Hitler had been threatening that country for some time, but every concession had been met by further demands. After three visits to Germany, during which Hitler raised his demands, the British and French statesmen gave way. Mr. Chamberlain declared on return that he had secured "Peace in our Time." The Agreement was the subject of much controversy. Hitler seized Czechoslovakia in March 1939.

Muscles. *See* **F34(1)**.

Musk Deer, a small deer of the Himalayas, standing about 20 in. high. It is grey in colour, slightly brindled, and carries a small pouch in the abdominal region, containing what is commercially known as musk, an article which is of great value in the manufacture of various perfumes. The active constituent of musk, muscone, is now made synthetically. The species was becoming rare on account of its slaughter for its musk.

Mutton Bird, an Australasian name of controversial origin for a shearwater or petrel, *e.g.*, the Short-tailed and Sooty Shearwaters and the Great-winged, Kermadec, and White-headed Petrels. The young are taken by hand from their burrows for human food.

Myrrh, a resinous substance obtained from a tree of the natural order *Amyridaceae*, growing plentifully in Abyssinia and Arabia. Its use for embalming, medical, and aromatic purposes may be traced back to the most remote times.

Mysteries, Greek, secret mystic ceremonies of the ancient Greeks, religious drama accompanied by dancing, the most well known being the Eleusinian and Orphic ceremonies.

Mystery Plays were mediaeval religious dramas performed at great ecclesiastical festivals, particularly in France and Bavaria, staging the Nativity, Passion, and Resurrection. *See* **Section M, Part VI.**

N

Nadir, one of the two poles of the horizon, the other being the zenith. The nadir is the pole vertically below the observer's feet.

Nahum, one of the books of the Minor Prophets of the Old Testament. It is a prophecy of doom on the approaching sack of Nineveh which fell in 612 B.C. to the Medes and Babylonians.

Nantes, Edict of, was a decree promulgated by Henry IV. of France in 1598, giving full freedom of worship to the Protestants of the country. It was the revocation of this edict in 1685 by Louis XIV. that drove hundreds of thousands of French Huguenots to this country.

Naphtha, a liquid combustible believed to have been one of the ingredients of "Greek fire." Naphtha is a light, highly inflammable oil obtained by distilling petroleum, shale oil, or coal tar. The petroleum naphtha consists of a mixture of paraffins; that from shale contains olefines as well as paraffins. Coal-tar naphtha contains xylol.

Naphthalene is an aromatic hydrocarbon; it is obtained from coal tar, and its derivatives are much used in the manufacture of colours for dyers and printers. "Moth balls" are made of naphthalene.

Narcotic, a medical dictionary definition is that a narcotic is a drug that produces stupor, complete insensibility, or sleep. In terms of drug addiction, a narcotic has been defined as altering and distorting the user's perception of himself and of the external world, being taken primarily for that purpose. *See* **P22–24**.

Nardus, a genus of coarse grasses, growing on bleak upland heaths and hill slopes. *Nardus stricta*, known as "mat-weed," is a British species.

Narghile, an oriental tobacco pipe so constructed that smoke passes through water and up a long flexible tube before reaching lips of the smoker.

Narrative Art, a type of art popular during the late 19th cent. based on the principle: "every picture tells a story"—*e.g.*, such paintings as the little Royalist boy surrounded by his anxious family and confronted across a table by the Roundheads bearing the title: "When did you last see your father?" The term, although often applied derisively, suitably describes many works of considerable artistic merit: *e.g.*, Hogarth's *Marriage à la Mode*, his series of eight engravings entitled *A Rake's Progress*, the Bayeux Tapestry, and many Babylonian and Egyptian friezes.

Naseby, Battle of, was fought on June 14, 1645, between the Royalists under the command of Prince Rupert and the King, and the Parliamentarians under Fairfax and Cromwell. It resulted in a complete defeat for Charles.

National Anthem, a musical composition with words, officially adopted for ceremonial use as an expression of patriotism and loyalty to a national cause. The national anthem of the United Kingdom, "God save the King", probably dates from late-17th cent. to mid-18th cent. It was sung in 1745, the year of the landing of the Young Pretender.

National Assembly, the name taken by the body responsible for the opening stages of the French Revolution and subsequently by other sovereign bodies in France and elsewhere.

National Covenant, an oath and declaration subscribed to by the Scottish Presbyterians in 1638 to maintain their religion against Charles I.'s episcopalianising designs.

National Gallery, established in 1824 at Pall Mall, London, with the Angerstein Collection of 38 pictures, purchased for £60,000 as a nucleus. The existing building which was opened in 1838 has been enlarged several times. The National Gallery at Millbank, the Tate Gallery, was given to the nation by Sir Henry Tate in 1897.

Nationalisation is the taking over by the State of the ownership and operation of an industry or service—*e.g.*, coal-mining, railway transport, gas, and electricity. Where this is done without revolution, compensation is usually paid to the previous owners at what is regarded as a fair market price; the compensation is sometimes paid in cash, but more often in fixed-interest-bearing bonds issued either by the State or by the administration of the nationalised service, which is usually a publicly appointed Board or Corporation acting, with greater or lesser autonomy, under the direction of a Minister responsible to Parliament. In some cases the State becomes a partner with private investors in the ownership of a particular enterprise, *e.g.*, oil companies, such as the former Anglo-Iranian and some recent French examples. Nationalisation is usually brought about by a separate Act of Parliament relating to each industry or service taken over. These Acts, in Great Britain, include provision for joint consultation at all levels between the administering boards or commissions and the workers employed and their Trade Unions. When, as in the Soviet Union, nationalisation occurs as an outcome of social revolution no compensation is paid to the dispossessed owners.

National Parks. Under the National Parks Act 1949 a National Parks Commission was set up to create National Parks in England and Wales. Ten have been established: Peak District, Lake District, Snowdonia, Yorkshire Dales, Exmoor, Brecon Beacons, Dartmoor, Pembrokeshire Coast, North Yorks Moors, and Northumberland. They cover an area of some 5,260 square miles, or 9 per cent of the total area of England and Wales. It is not intended to change the character of these territories but to control their development so as to harmonise with the two dominant principles: (*a*) that the characteristic beauty of the landscape within the Park area shall be preserved and (*b*) that the visiting public shall have ample access and facilities for recreation and enjoyment. The establishment of a new national park has been proposed for mid-Wales. The Commission also has power to designate areas in England and Wales outside the national parks as "areas of outstanding natural beauty." Thirty-two areas had been designated by 1974: Gower, Quantock Hills, Lleyn, Surrey Hills, Dorset, Northumberland Coast, Cannock Chase, Shropshire Hills, Malvern Hills, Cornwall, N. Devon, S. Devon, E. Devon, E. Hampshire, Isle of Wight, Forest of Bowland, Chichester Harbour, Solway Coast, Chilterns, Sussex Downs, Cotswolds, Anglesey, South Hampshire Coast, Kent Downs, Norfolk Coast, Dedham Vale, Suffolk Coast and Heaths, Wye Valley, Arnside and Silverdale, Lincolnshire Wolds Mendip Hills, North Wessex Downs. Under the Countryside Act, 1968, the National Parks Commission has been reconstituted as the Countryside Commission. *See also* **Long Distance Routes.**

National Physical Laboratory, situated at Teddington, is one of the world's largest and best-equipped laboratories. It was first established in 1900 under the control of the Royal Society. It conducts research in its three main groups: Measurement, Materials, and Engineering Sciences, and maintains British primary standards and physical units.

National Portrait Gallery, established in 1856, and now located in a building in St. Martin's Lane adjoining the National Gallery. Contains portraits of eminent people in British history and a valuable collection of medals and autographs.

National Trust, founded in 1895. "A non-profit-making organisation incorporated by Act of Parliament for the purposes of promoting the permanent preservation of lands and buildings of historic interest or natural beauty for the benefit and access of the people." As a consequence of gifts of public-spirited individuals the Trust now owns many acres of magnificent scenery and property, including mediaeval castles, bird sanctuaries, ancient monuments, birthplaces and homes of famous men, and classic examples of domestic architecture, preserved for the enjoyment of present and future generations. Since 1946 lands and houses of interest to the nation may be given to the National Trust in lieu of death duties.

Nativity. There are three nativity festivals of the Christian Church: Christmas, 25 Dec., festival of birth of Christ; the birthday of the Virgin Mary (8 Sept.); and of St. John the Baptist (24 June).

Natterjack, a curious warty, prominent-eyed, brown toad (*Bufo calamita*), having a bright yellow line down the middle of its back. It utters a muttering sort of croak, hence its name.

Natural Law. *See* **Section J.**

Naturalism in painting has been defined as "a direct and spontaneous approach to nature"—to landscape primarily. Constable, Turner, and Boudin were among the great naturalist painters of the 19th cent. *See* **Section I** for naturalism in drama.

"Nautical Almanac," published under the authority of the Admiralty, is always issued four years in advance, and contains information specially prepared for the use of navigators and astronomers. It first appeared in 1767.

Nautilus, a term now applied only to the pearly-shelled nautilus, the sole surviving example of the four-gilled section of the *Cephalopoda*. Its fossil relatives are called Ammonites. The spiral shell is divided into a number of compartments, the animal living in the last and largest chamber. There are three or four species, all living in tropical seas. The Paper Nautilus is not related to the Pearly Nautilus, belonging to the same order as the octopus.

Nave is the body or main open portion of a cathedral or church, and extends from the chief entrance to the choir, or chancel, and is usually flanked by aisles. A nave, in mechanics, indicates the "hub" or central part of a wheel.

Neandertal, the name of the valley lying between Düsseldorf and Wuppertal, where in a limestone cave a now famous skull of a very early species of prehistoric man was discovered in 1856. Fossils of Neandertal man have been found over a wide area, and from archaeological evidence he began to disappear from Europe during the last Ice Age, about 40,000 B.C. *See* **Section F, Part V.**

Necromancy, "the black art," was in olden times much believed in, and supposed to be an occult power by which its practitioners could converse with the spirits of the dead and learn the future.

Negroes are the dark-skinned, woolly-haired races, natives of tropical Africa, or descendants of such natives. There are many different racial types, including the Ashanti of Ghana, the Kikuyu of Kenya, the Yoruba of Nigeria, the Pygmies (nomadic hunters living in the equatorial forests), the Bushmen of the Kalahari Desert, the Hottentots of South Africa (who have largely lost their identity), the so-called Bantu peoples of Central and Southern Africa, and many others. Their culture is rich in folklore, and they have great artistic gifts in music, dancing and sculpture. About 25 million people of Negro descent are in N. and S. America, the European slave trade having taken them there from their homes in W. Africa.

Negus, the name given to any mixture of wine and water, and said to have been named after Colonel Francis Negus about 1714. The sovereign of Abyssinia is styled the Negus.

Nekton, term used to differentiate actively swimming aquatic organisms (*e.g.*, fishes) from the "drifters" or plankton.

Nelson Column, in Trafalgar Square, London, designed by Mr. William Railton, was chosen from among a number of designs—temples, obelisks and various sculptural groups—sent in as a result of a competition held in 1839. The erection of the column was begun in 1840. Twenty-six years later the lions designed by Landseer were set up at the foot of the completed column. The statue of Nelson himself was made by E. H. Bailey and the bronze reliefs at the base executed by Carew, Woodington, Ternouth, and Watson, representing the Battles of the Nile, St. Vincent, Copenhagen, and Trafalgar. Height 170 ft., executed in Portland stone instead of granite, as originally planned, at a cost of £46,000.

Néné or Hawaiian Goose. At the Severn Wildfowl Trust at Slimbridge Mr. Peter Scott has saved this bird from extinction.

Neo-Classical School of Art, a French school of painting and sculpture belonging to the late 18th and early 19th cent. and founded by Jacques David, the Academician, republican, and later admirer of Bonaparte. His classicism probably arose from his republican sympathies, which caused him to paint such works as the *Oath of the Horatii* (Louvre) drawing analogies between revolutionary France and Rome. Because of these views he revolted against the romantic and sensual art of Watteau and Greuze and equally against the realism of Chardin. Among his many famous pupils was Ingres, who later assumed leadership of the school.

Neodymium, an element belonging to the rare earth metal group. Discovered by Welsbach in 1885.

Neo-Impressionism, a development of Impressionism (*q.v.*) by Seurat and Signac during the 1880s who devised the method of painting known as *pointillism* (the application of pure colours in minute touches to form a composite whole, based on a knowledge of the laws of colour and optics). One of the best-known examples of this technique is Seurat's *Sunday Afternoon on the Grand Jatte.*

Neon, inert gas present in air to the extent of about 1 part in 65,000. The crimson glow produced when an electric discharge passes through the gas is familiar in advertising signs.

Neoprene, generic name for a class of synthetic rubbers made from acetylene.

Nepotism, the bestowal of patronage by reason of relationship rather than of merit. It had its origin in the custom of certain Popes to enrich their families out of the offices of the Church.

Neptune. Apart from Pluto this is the most distant of the planets, estimated to be about 2,793 million miles from the sun, and taking about 165 years to revolve around it. Discovered by the German astronomer Galle on Sept. 23, 1846, after its existence had been predicted by Leverrier and Adams.

Neptunium, element 93, one of the four new elements discovered during the progress of the atomic bomb project in the second world war. Neptunium is formed when a neutron enters a nucleus of Uranium 238, and it decays radioactively to yield plutonium.

Neutrino, a neutral particle which carries energy and spin and although possessing little or no mass plays an important part in the interaction of other fundamental particles. The discovery that there are in fact two distinct neutrinos, each with its counterpart, was discovered in 1962 as a result of an experiment made with the 30,000 million-electronvolt proton accelerator at Brookhaven. *See* F14.

Neutron, a neutral particle present in all atomic nuclei except the hydrogen nucleus which is a single proton. In the development of nuclear science and technology the neutron has played a most important role and neutrons produce the radioisotopes now widely used in medicine, agriculture, and industry. Neutrons and protons are termed nucleons. *See* F10, 14.

New Deal. The measures taken by President Roosevelt in U.S.A. in 1933 to overcome the great economic crisis which broke out at the end of 1929 and to restore the social security threatened by it. The measures were drawn up by a group of experts called a Brains Trust and they provided for recovery by a programme of public works, including large-scale construction of houses and large-scale assistance to farmers. Loans were granted and authorities formed to stimulate activities which reduced the workless from 17 millions to between 7 and 10 millions. Unemployment relief was regulated and enlarged; and social insurance (which for decades had been a subject of dispute, being held to be contrary to American principles of self-help) was introduced. Many of the changes have become a permanent part of American legislation though some laws were repealed by the U.S. Supreme Court as being unconstitutional.

Newgate Prison, now pulled down and replaced by the Central Criminal Court, opened in 1907, was situated near the point where once stood one of the old London city gates. There is a record of a prison upon this spot in the 13th cent. Later a new one was built by the executors of Richard Whittington, but this was destroyed by the Great Fire in 1666. Still another new prison on this site was erected between 1778 and 1780. In the Gordon Riots of the latter year it was destroyed by fire and re-erected. It was not used as a prison after 1880.

News Letters were an early form of newspaper, popular in the time of Charles II. They consisted of items of news and gossip collected at the various coffee-houses and other places of public resort. They often included blank pages on which readers wrote their private letters.

Newspapers. The first news-books to be published at regular intervals in Britain appeared in 1662 with news of what was going on abroad translated from German and Italian news-sheets. Licence to print was obtained from the Star Chamber, which until its abolition in 1641 allowed only the printing of foreign news. With the lifting of the ban on domestic news the Press became free. In the reign of Queen Anne English newspapers employed writers of great intellectual power and versatility. Despite the newspaper tax introduced in 1712, the number of newspapers published in London in 1776 had increased to 53, though the standard of writing was below that of earlier times. The development of the Press was greatly assisted in the 19th cent. by the abolition of the "taxes on knowledge," by the introduction of the cheap postal system, and by improvements in printing, distribution, collection of news, and advertising. The *London Gazette*, founded in 1665 (and still appearing twice weekly as the official organ of the Government), is the oldest newspaper living. *The Times*, known throughout the world, began as the *Daily Universal Register* in 1785, and adopted its present title in 1788. The *Manchester Guardian* (renamed *Guardian* in 1959), once a provincial but now a national newspaper with a world-wide reputation, began as a weekly in 1821, and became a daily in 1855. The *Scotsman*, founded as a weekly in 1817 and established as a daily in 1855, and the *Glasgow Herald*, which began as the *Glasgow Advertiser* in 1783, are the leading Scottish newspapers. The London Press, which is national, publishes 10 daily, 2 evening, and 7 Sunday newspapers.

Newt, amphibians of lizard shape and mottled markings. There are three British species, the largest being the Great-Crested Newt (*Triturus cristatus*), which attains a length of 6 in.

Newton, the unit of force in the SI system of units. Under its influence a body with a mass of 1 kilogramme will accelerate at a rate of 1 metre per second each second.

Newton's Rings. Concentric circular rings, due to the phenomenon of interference, which are seen around the point of contact of a slightly convex lens with a flat plate of glass.

New Towns. Under the New Town Act 1946 and subsequent Acts 33 new towns have now been designated in Britain; 23 are in England and Wales, six in Scotland and four in Northern Ireland. They are: Basildon, Bracknell, Crawley, Harlow, Hatfield, Hemel Hempstead, Milton Keynes, Northampton, Peterborough,

Stevenage and Welwyn (to relieve housing problems in the Greater London area); Aycliffe, Corby, Cwmbran, Peterlee and Washington (to serve the special needs of their areas); Newtown (to help stem rural depopulation in mid-Wales); Runcorn and Skelmersdale (to meet the overspill needs of Liverpool and north Merseyside); Telford and Redditch (to take population from Birmingham); Warrington (expanded to take people from Manchester). A new regional city is to be built in the Preston–Leyland–Chorley area of Lancashire and at Llantrisant in Glamorgan a new town has been proposed. The six Scottish new towns are Cumbernauld, East Kilbride, Glenrothes, Irvine, Livingston and Stonehouse. In Northern Ireland Craigavon is being developed as a new city; Antrim and Ballymena are becoming centres of economic growth; Londonderry and the surrounding district have been designated as an area of special development. The population of the new towns in Great Britain is about 1·7 million. The expansion of large existing towns like Northampton, Peterborough and Warrington means that they are becoming regional centres.

New Year's Day, Jan 1. The first New Year's festival of which we have record is that constituted by Numa 713 B.C., and dedicated to Janus.

Nibelungenlied, the German epic of the early 13th cent. comprising numerous mythical poems or sagas of which several English translations exist. Wagner's *The Ring of the Nibelungs* was based largely on Norse legends and on the Nibelungenlied.

Nicene Creed, a summary of the principles of Christian faith, first issued in 325 by the Council of Nicaea (summoned by the emperor Constantine the Great) for the purpose of thwarting the Arian heresy and asserting the godhead of Christ. Date of Easter fixed at Council of Nicaea.

Nickel, silver-coloured metal, symbol Ni, fairly soft though harder than iron. Chief source of the metal is the nickel sulphide in iron–copper pyrites deposits in Ontario. Chief uses are: in electroplating, in coins, as an element in alloy steels. A novel method of making pure nickel (by treating the metal with carbon monoxide and heating the resulting liquid, nickel carbonyl) was developed in 1890 by Mond. This discovery led to many technical advances in industrial chemistry, one of which is the production of catalysts for a variety of processes.

Niello Work was in considerable vogue in the Middle Ages, and is said to have suggested the idea of engraving upon copper. It was produced by rubbing a mixture of silver, lead, copper, sulphur, and borax into engravings on silver, and some highly decorative results were obtained.

Night Heron, a stocky, short-legged heron of black and white plumage, red eyes, and yellowish legs, crepuscular except in breeding season, and an occasional visitor to Britain.

Nightingale, a familiar singing bird which visits the southern counties of England every summer, and is sometimes found as far north as Yorkshire. It is a shy brown bird, not often seen, but the song of the male, usually heard in the late evening or at early morn, is of remarkable sweetness and variety. After its wooing period is over its song ceases.

Nightjar, nocturnal, insectivorous bird, owl-like in appearance, with mottled brown plumage of "dead leaf" pattern, and a churring song. It is a common breeding visitor to the British Isles, Apr. to Sept., and lays its eggs on bare ground.

Niobium is a metal element, symbol Nb, related to vanadium. Technical development has been slow because of its rare occurrence, although niobium is now used in ferrous alloys to increase resistance to corrosion and produce steel which can be used at high temperatures.

Nitre *or* **Saltpetre**, is now mostly manufactured by the double decomposition of sodium nitrate and potassium chloride. Its chief use is the manufacture of gunpowder and fireworks. It has been manufactured in England since 1625.

Nitrogen, a non-combustible gaseous element, symbol N, devoid of taste or smell, and constituting nearly four-fifths of the atmospheric air. Nitrogen compounds are essential to plants and animals, and are used in fertilisers.

Nitro-Glycerine, an explosive yellow fluid produced by mixing small quantities of glycerine with a combination of one part of nitric acid and two parts of sulphuric acid. By itself it is a dangerously explosive substance to handle. In 1867, Nobel produced dynamite, a safe explosive made by absorbing nitro-glycerine in kieselguhr.

Nitrous Oxide, a compound of nitrogen and oxygen possessing mild anaesthetic power. Termed "laughing gas" on account of its exhilarating effect. It is still used in dentistry, and for minor operations and has proved useful in a new technique for finding leaks in water mains.

Nobel Prizes. The Nobel Foundation was established at the beginning of the century to give effect to the wishes expressed by Alfred Nobel in his Will. By the terms of the Will the judges are the Swedish Academy of Science, the Caroline Medico-Surgical Institute, the Swedish Academy, and five members of the Norwegian Storting. The award of a Nobel Prize is accepted as the highest form of international recognition in the field in which it is given: physics, chemistry, medicine, literature, peace, and, since 1969, economics.

Nones were dates of the Roman calendar which fell on the 5th of each month, excepting Mar., May, July, and Oct., when they fell on the 7th.

Norman Architecture is English Romanesque (*q.v.*), which flourished from the time of the Norman Conquest and was gradually superseded through a transition period (*c.* 1175–1200) by the introduction of the pointed arch characteristic of the Early English (first Gothic style). Typical of Norman churches are the round arches, thick walls, massive cylindrical columns, with throughout the basic pattern of the square and the circle. Some churches (*e.g.*, the Temple church in London or the chapel at Ludlow Castle) are wholly circular. Roofs in the early days were flat and towers, usually placed at the "crossing," were square but occasionally round; the spires of all these towers have perished, but it seems likely that they were squat and pyramidal.

North-East Passage, from the North Atlantic to Bering Strait has been rapidly developed by the U.S.S.R. in recent years as a northern sea route to render accessible vast areas of northern Siberia. Attempts to find a north-east passage were made by Englishmen and Dutchmen in the 16th cent. but they were always defeated by the ice, for the sea is completely frozen for some 3,000 miles for 9 months of the year. A Swede succeeded in sailing from Europe to Japan via the Arctic in the late 19th cent. *See also* Arctic Exploration.

North-West Passage, from the Atlantic to the Pacific through the Arctic Seas, has been the dream of navigators for centuries. Attempts to find it were made in the 16th and early 17th cent. by John and Sebastian Cabot, Frobisher, Gilbert, Davis, Hudson, and Baffin. Two centuries later Ross, Parry, Franklin, and others made the attempt; but it was not until 1903–5 that Amundsen, discoverer of the South Pole, made the complete voyage in the *Gjoa*. The Canadian icebreaker *Labrador* was the first deep-draft vessel to traverse the North-West Passage (1954) and the U.S. tanker *Manhattan* was the first commerical vessel to do so (1969).

Notre Dame, the famous Paris cathedral, was founded in 1163, and is one of the finest specimens of Gothic architecture in Europe. The best descriptions of the buildings are to be found in Victor Hugo's *Hunchback of Notre Dame*.

November, the 9th month of the year originally, but from *c.* 700 B.C., when Numa added Jan., and Feb., it became the 11th month.

Nuclear Energy. Atomic nuclei consist of protons and neutrons joined in various proportions (F10). The heaviest naturally occurring nucleus contains 238 particles (92 protons, 146 neutrons) and is uranium 238 (U^{238}); the lightest is hydrogen, which consists of 1 proton. Neutrons and protons attract one another by very strong forces which are not at all well understood; they are called *nuclear forces*. Consequently it requires energy to be supplied if a nucleus is to be pulled apart into its constituent particles. The energy is required to overcome the attractions of the nuclear forces. Conversely, when the particles rush together to form a nucleus,

energy is released in the form of heat or radiation. The energy released when protons and neutrons coalesce to form a nucleus is called *Binding Energy*. The binding energy of a nucleus divided by the number of particles involved is called the binding energy per particle, which we will call B. It is very difficult to overestimate the importance of B to the human race. B varies from nucleus to nucleus, and the exact form of its variation is only roughly understood at the present time. But the most significant thing is that B is greatest for elements of medium atomic weight and lowest at the heavy (uranium) and light (hydrogen) ends of the periodic table. This means that if middleweight nuclei can be formed either from heavy ones or from light ones, B increases and *energy is released in either case.*

Nuclear Fission. *See* F12(1).

Nuclear Fusion. If light nuclei are hurled at high speeds into intimate contact they sometimes coalesce and release binding energy (*see* Nuclear Energy). This has been studied in laboratories where powerful and energy-consuming machines accelerate small numbers of particles for purely experimental purposes. If useful amounts of energy are to be gained these fusion reactions will have to occur on a bigger scale in an apparatus from which the resulting heat can be extracted in a controlled way. The one "useful" fusion device so far made is the thermonuclear bomb ("H-bomb"). Thermonuclear is the important word. If a suitable gas can be raised to a very high temperature the nuclei are stripped of their electrons and all particles move with very high speeds. The gas is then called a plasma. High enough temperatures will make speeds great enough for fusion reactions to occur and nuclear energy to be released. This is a thermonuclear reaction. For example, in deuterium gas, at temperatures over a million degrees Centrigrade, the deuterium nuclei (*i.e.*, heavy hydrogen nuclei consisting of 1 proton joined to 1 neutron) interact to produce helium nuclei. To obtain a net gain in energy from this process, the temperature must be raised to about 300 million degrees C and maintained long enough; otherwise the energy released is less than that required to heat the fuel and to make up for heat losses. Many attempts to study the staggering technical problems are being made, and fusion research is very active in Britain, the U.S.A. and Russia.

Nuclear Power Stations. Britain generates about 11 per cent of her electricity for public supply in nuclear power stations. The Atomic Energy Authority has three main stations which produce electricity for the national grid: the AGR station at Windscale, Cumberland, the experimental fast breeder station at Dounreay, Caithness, and the Steam Generating Heavy Water Moderated Reactor (SGHWR) at Winfrith, Dorset. The nine nuclear power stations operated by the electricity authorities are at Berkeley, Gloucs. (1962), Bradwell, Essex (1962), Hunterston "A", Scotland (1964), Hinkley Point "A", Somerset (1965), Trawsfyndd, Wales (1966), Dungeness "A", Kent (1966), Sizewell, Suffolk (1966), Oldbury, Gloucs. (1968), Wylfa, Anglesey (1970). They have all been developed from the classic Calder Hall type, burning natural uranium inserted in a graphite moderator and cooled by carbon dioxide gas. They are called Magnox stations because the fuel elements of natural uranium rods are encased in magnesium alloy cans. A second nuclear power programme is based on the AGR at Windscale, and include the reactors now under construction at Dungeness "B", Hinkley Point "B", Hunterston "B", Seaton Carew and Heysham. Further stations are planned at Sizewell and Portskewett (Monmouthshire). The first to start working will be Hinkley Point "B" in 1974. The urgent energy situation means that development of nuclear power in electricity production will be speeded up. A decision has yet to be taken on the type of station for the third stage of the nuclear power programme in the 1980s.

Nuclear Reactors are pieces of apparatus designed to permit nuclear chain reactions to occur under controlled conditions. (Uncontrolled chain reactions are dangerous, *e.g.*, atomic bombs.) The success of a reactor depends on the neutrons reaching the U^{235} nuclei to produce more fissions and not being wasted in irrelevant processes or simply escaping through the wall of the apparatus (neutrons are quite difficult to contain). The neutrons leaving the scene of fission are rapidly moving, and they stand more chance of causing another fission if they are slowed down. Consequently a material other than the uranium has to be present to facilitate this, and it is called a moderator. A useful moderator is pure graphite. Thus a reactor may consist of alternate blocks of uranium and graphite. If the reactor is too small so many neutrons escape that there are not enough to keep the chain reaction going. The reactor must therefore be greater than a certain *critical size.* In order to intensify or damp down the chain reaction, it is arranged for pieces of neutron-absorbing material, such as cadmium, to be inserted or withdrawn as required. While the chain reaction is proceeding countless numbers of fissions are occurring, each one liberating energy which turns into heat. The temperature therefore increases, and to prevent a catastrophic rise, cooling has to be provided. The reactor therefore has cooling pipes through which a fluid coolant is pumped. The coolant carries the heat away and, in a reactor designed to produce electrical power, the heat is taken to steam-raising boilers and the high-pressure steam is led to turbines which drive the electric generators. What has been briefly described is the type of reactor first used for serious power production at Calder Hall. This is a graphite-moderated, gas-cooled reactor using as fuel natural uranium (*i.e.*, fissile U^{235} greatly diluted with U^{238}). Other thermal types of nuclear reactor are the advanced gas-cooled reactor (AGR), the high temperature reactor (HTR), the steam generating heavy water (SGHWR) and the light water reactor (LWR). It is also possible to make reactors work without slowing the neutrons with a moderator; these are called *fast reactors.* The design of the prototype fast reactor (PFR) at Dounreay is based on experience gained with the Dounreay experimental fast breeder reactor which was the first in the world to produce electricity on a commercial scale (1962) and has achieved the highest power output of any of its type in the world. These fast reactors can produce new nuclear fuel in the course of their operation and therefore offer great economies; but they are more difficult to develop than thermal reactors. The fuel is made from the mixed oxides of plutonium and uranium. Nuclear fuels for nuclear reactors are manufactured and reprocessed at Springfield in Lancashire, Capenhurst in Cheshire and Windscale in Cumberland. The alternative method to nuclear fission is nuclear fusion (*q.v.*). The problem of achieving a controlled thermonuclear reactor is one of the outstanding challenging problems of applied physics and although considerable understanding of the phenomena involved has been gained, the solution is still as distant as ever. *See also* Breeder Reactor and Nuclear Reactors, Section F, Part VI.

Nucleic Acids. Living matter is built up of cells, each of which has a nucleus surrounded by cytoplasm. Cell nuclei are composed chiefly of substances called nucleoproteins, which consist of a protein attached to a nucleic acid (this original name is still used, although nucleic acids are found in the cytoplasm as well as the nucleus). Nucleic acids are complex organic structures made up of chains of compounds called nucleotides (F29(1)). Nucleotide molecules have a sugar group attached to a nitrogenous base and a phosphate group. Only two sugar groups are found in the nucleotides, ribose, giving rise to ribonucleic acids (R.N.A.s, found mainly in the cytoplasm) and deoxyribose, which forms deoxyribonucleic acids (D.N.A.s, found mainly in cell nuclei). Seven different nitrogenous bases have been isolated, so that a number of different nucleotides are possible. A repeating, regular pattern of nucleotides is linked by the phosphate groups, forming nucleic acids. The functions of nucleic acids are of fundamental importance. They are concerned in the process of trans-

mission of inherited qualities in reproduction and in building up body proteins. *See* F28(2).

Nuremberg Trial. On Nov. 21, 1945, an International Military Tribunal, consisting of one American, one British, one Russian, and one French member, began the trial of twenty-four Nazi leaders. There were four counts: the conspiracy of Nazism; wars of aggression; war crimes; and crimes against humanity. Twelve were condemned to hanging of whom ten were hanged on Oct. 16, 1946. Goering committed suicide; Bormann is now presumed dead; Papen, Schacht, and Fritsche were acquitted. The rest received varying terms of imprisonment.

Nuthatch, name of a number of tree-creeping birds, plump, with short tail, bluish-grey plumage, and black stripe under eye. Nest in holes and wedge nuts in bark of trees, hammering them to get a kernel. There are three European species, one, *Sitta europaea*, resident in England.

Nylon, a generic term for any long-chain synthetic polymeric amide which has recurring amide groups as an integral part of the main polymer chain, and which is capable of being formed into a filament in which the structural elements are orientated in the direction of the axis. The first nylon of commerical interest was made in 1935, and the world's first nylon factory—in the United States—began production in 1940.

O

Oak, a tree of the genus *Quercus*, including some 300 species distributed over the northern hemisphere and into the tropics. Two species are native to Britain, where the oak is the commonest tree (1 in 3)—*Q. petraea*, more common in the west and north on shallower, lighter soils, and *Q. robur*, more common in the south on deeper, heavier soils. Oak timber is much prized for its strength and durability, and from the time of the Spanish Armada to Nelson's day was in great demand for naval construction. It has always been used for building, flooring, furniture, and cabinet work. The oak is attacked by many insects, the round nut-like oak galls, or oak-apples, being produced by the sting of certain minute gall wasps.

"Oaks," a famous race for three-year-old fillies run at Epsom two days after the "Derby."

Obelisk, a tapering monolithic column, square at the base and pyramidal at the top, regarded by the ancient Egyptians as a sacred stone and usually found at the entrance to the sun temples. Many were transported from Egypt and set up at various times: there is one in the Place de la Concorde in Paris, and one on the Thames Embankment in London—Cleopatra's Needle—originally erected at Heliopolis, centre of the sun-cult, by Tuthmosis III *c.* 1500 B.C.

Observatories existed in ancient Babylon and Egypt. They were erected on tombs and temples. The most famous observatory of Egypt was that of Alexandria, erected by Ptolemy Soter, 300 B.C. It was not until the 16th cent., however, that an observatory adequately equipped for astronomical investigations was built. This was at Cassel. Tycho Brahe's observatory at Uranienburg was erected in 1576. The Royal Observatory at Greenwich was completed in 1675. Mount Wilson Observatory in California has had a 100-in. reflector telescope working since 1917 but Mount Palomar Observatory, also in California, has a 200-in. reflector—the largest in the world, completed in 1949—which can reveal remote galaxies out to a limiting distance of 2,000 million light years. It is known as the *Hale* telescope in memory of Dr. George Ellery Hale, the founder of the Mount Wilson Observatory. The 98-in. telescope, the *Isaac Newton*, for the Royal Greenwich Observatory at Herstmonceux Castle was completed in 1967. A number of observatories are devoted to meteorological and geophysical work, the most important in the British Isles being those at Eskdalemuir (Dumfries), Kew, Lerwick, and Valencia (Eire). *See also* Astronomy *and* Telescopes.

Occam's Razor. *See* Section J, Q8(1).

Ocean, comprises the great body of water which covers five-eighths of the surface of the earth, and has an average depth of 2 miles. The principal oceans are the Pacific, Atlantic, Indian, and Arctic. The greatest ocean depth is in the Pacific, in the Mindanao Deep, 37,782 ft. *See* F8(2).

Ocean Currents are well-defined streams running over certain portions of the ocean and caused mainly by wind-friction, slope of the sea surface and differences in density of the water, all movements being influenced by the deflective forces due to the earth's rotation. The climatic importance of the great ocean currents is that they constitute one of the means whereby heat is transferred from lower to higher latitudes.

Ocelot, the most common wild cat of S. America. It is about 4 ft. in length, including tail, and of a grey or tawny colour and spotted. Closely related to the Leopard cats.

Octane Number, the index of the knock-rating of petrol. It is based on the arbitrary scale in which iso-octane (which does not cause "knocking") has a value of 100, and normal heptane (which is prone to "knocking") has a value of 0. A good fuel for modern cars must have an octane number greater than 80.

Octarch, the kings of the English heptarchy, Hengist(455) being the first, and Egbert (800) the last.

October, the 10th month, but the 8th in the old Roman calendar. It was held sacred to Mars.

Octopus, a genus of marine molluscs with eight tentacles that bear suckers.

Odyssey, Homer's epic setting forth the incidents of the wanderings of Odysseus on his way back to Ithaca after the Siege of Troy.

Œil-de-bœuf, meaning bull's eye, is the name of a small octagonal vestibule lighted by a small round window in the palace of Versailles. The term is used in architecture for a small round or oval window in friezes, roofs, or domes of buildings.

Oersted, a unit of magnetic-field intensity in the c.g.s. system.

Ohm's Law, propounded by G. S. Ohm in 1826, is expressed in the equation: electromotive force (in volts) = current (in amperes) × resistance (in ohms). The ohm is the unit of electrical resistance in the metre-kilogram-second system.

Oil. The great expansion in energy demand over recent years has been met to a large extent by petroleum oil. This contains a wide range of hydrocarbon molecules of varying complexity. The various components are separated from each other by making use of their different boiling points. Crude oil is heated in the base of a fractionating tower; the various components condense at different temperatures in trays at different levels of the tower. The fraction of a given composition can be increased by "cracking" or breaking down the heavier hydrocarbons into lighter ones. The total world reserves of petroleum oil are still uncertain since large parts of the world are still not fully prospected. However, such information as exists suggests that total reserves from all sources may be between 5×10^{11} and 10^{13} tons of oil. The cutback and the rise in the price of Middle Eastern oil since the 1973 Arab–Israeli war has unleashed a worldwide energy crisis which will affect future economies. The United Kingdom can look forward to producing all her oil needs by 1980 from North Sea and Celtic wells. *See* World Energy Resources, Section F, Part VI.

Okapi, nocturnal ruminant mammal, smaller than the giraffe, chestnut brown in colour with zebra-striped legs, native to the African Congo.

Olbers' Comet was discovered in 1815 by Olbers the German astronomer. Olbers also discovered the asteroids Pallas and Vesta (1802–07).

Old Red Sandstone, the continental rocks formed during the Devonian. *See* F45.

Olefines, a series of hydrocarbons, in which the hydrogen atoms are double the number of carbon. The first member of the series is ethylene.

Oléron Laws or Judgments, were a code of maritime laws, introduced into England in the reign of Richard I. in the 12th cent. Oléron is an island off the west coast of France, opposite the mouth of the Charente.

Olive. This small tree, whose fruit yields olive oil, is a native of the eastern Mediterranean countries, but has been introduced into cultivation elsewhere. Its oil is used for cooking, in packing sardines, and in soap making; the green unripe fruit is pickled for table olives.

Olympiads were periods of four years which

elapsed between each celebration of the Olympic games, held at Olympia in honour of Zeus. These festivals included competitions in literature, art, drama, rhetoric, music, and gymnastics, and they were continued, with intervals, from 776 B.C. to A.D. 394. Athletic revivals have taken place at Athens 1896, Paris 1900, St. Louis 1904, London 1908, Stockholm 1912, Antwerp 1920, Paris 1924, Amsterdam 1928, Los Angeles 1932, Berlin 1936, London 1948, Helsinki 1952, Melbourne 1956, Rome 1960, Tokyo 1964, Mexico City 1968, Munich (1972), and it is planned to hold the 1976 Games at Montreal.

Onomasticians are scientists who study the fascinating subject of names—names of places and names of people—to find out their origins. They tell us, for example, that Cambridge is an Anglo-Norman corruption of *Grantabrycg* = bridge over the Granta; that Harrow-on-the-Hill was an early Anglo-Saxon settlement—"heathen temple on the hill"; that we owe the ridings of Yorkshire to the Vikings (Old Norse *thrithungr* = third part); that in Scotland *-ton* and *-toun* indicate not a town but a hamlet or village. Onomasticians are also concerned with the international standardisation of place names.

Onyx or Sardonyx, a variety of chalcedony built up of different-coloured layers, which are parallel and straight (not curved as in agate).

Oolite, a geological term for the Jurassic oolitic limestones existing through a long stretch of country extending from Yorkshire to Dorsetshire. It abounds in fossils of molluscs and reptiles. The term "oolite" derives from the fact that these rocks are made of egg-shaped particles of calcium carbonate.

Opal, a mineral consisting of hydrous silica, occurring in numerous varieties and colours. Precious opal displays a beautiful internal opalescence, the result of the interference of light waves on the surfaces of layers differing in their water-content. Opal miners are called gougers. Chief source, the Andamooka and Coober Pedy fields of South Australia.

Opera. *See* Section E.

Opium was known to the ancients, and used by them as a medicine. It is obtained from the poppy (*Papaver somniferum*), the unripe "head" or seed capsule of that flower yielding a juice which when dried becomes the opium of commerce. The poppy is cultivated in India, Persia, Turkey, Macedonia, and China for the sake of this juice, which yields various alkaloids, such as morphine, narcotine, codeine, etc. These days the drug is rarely used medicinally. *See also* P22(2).

Opossum, marsupial mammals found in the more southerly of the United States, South America, and Australasia. They are arboreal except for the water-opossum, which eats fish.

Optics, the branch of physics which investigates the nature and properties of light and the phenomena of colour. Burning lenses were known to the ancient Greeks and Ptolemy wrote a treatise on optics A.D. 150. Lenses as visual aids were known in ancient China but eyeglasses were not in use until the 13th cent. Spectacles were in more general use after the invention of printing in the 15th cent. The camera obscura was invented in the 16th cent. and the telescope and microscope at the beginning of the 17th cent.

Oracles were in ancient times supposed to be words spoken by the gods, and it was the custom on important occasions to consult them about the future. The Greeks had the Oracles of Zeus at Dodona, and Apollo at Delphi, while the Romans consulted the Oracles of Mars, Fortune, and others.

Orange, a fruit growing in most sub-tropical climates and in universal demand. It is grown on an evergreen tree that attains a height of about 20 ft. at maturity.

Orang-utan, one of the largest of the anthropoid apes, found only in the swampy forests of Borneo and Sumatra. When full-grown it stands over 4 ft. in height and weighs about 150 lb.

Orchestra, a group of instruments and instrumentalists whose playing is under the direction of a conductor. The composition of a typical symphony orchestra is as follows: STRINGS: 1st Violin (16), 2nd Violin (16) Viola (12), Violoncello (12), Double Bass (8). WOOD-WIND: Flute (3–4), Piccolo (1), Oboe (3), Cor Anglais (1), Bass Oboe (1), Clarinet (3), Bass Clarinet (1), Bassoon (3), Contra-bassoon (1). BRASS: Horn (6), Trumpet (5), Trombone (3–4), Tuba (2). PERCUSSION: Timpani (3–6), Side Drum (1), Bass Drum (1), Cymbals (1), Harp (2).

Orders in Council are issued by the sovereign on the advice of a few selected members of the Privy Council. They must not seriously alter the law of the land. Another class of Orders in Council are issued by authority of an Act of Parliament for the carrying out of its provisions.

Ordination, the ceremony of installing ministers or clergymen in clerical offices, has existed from the earliest times. In the Anglican and Roman Catholic Churches the rites of Ordination are performed by bishops; among Nonconformists the power of ordination rests with the governing bodies of the different Churches.

Organ is a musical wind instrument of ancient origin whose tones are produced by the vibrations of air in pipes of varying length. Basically, an organ consists of a number of pipes grouped in rows or ranks according to their special tone-character. The air is fed by bellows or, in modern organs, by a rotary fan, electrically driven. Each rank is controlled by a slider, and the knob that controls the slider is called a stop. The organist pulls out the stops to give the tones he wants, the other pipes being kept out of action by the slider. When a particular note on the keyboard is depressed the player may hear, by pulling out the appropriate stop, not only the normal pitch but the note in several octaves. A stop of which the notes are of normal pitch is called an 8-foot stop, a 16-foot stop would give an octave lower, a 4-foot stop an octave higher, and a 2-foot stop two octaves higher. The hand keyboard is called a manual, and the foot keyboard the pedal board. The basic tone of an organ is its diapason tone, and is normally of 8-foot length and pitch. Most large organs have four manual keyboards and one pedal board. The most important manual is the great organ which comprises the majority of basic stops. The next in importance is the swell organ, so called because the pipes are enclosed in a box fitted with movable shutters operated by a swell-pedal. The effect provides a controlled crescendo or diminuendo. The tone of a typical English swell has a reedy character. The third manual controls the choir organ—a collection of stops suitable for vocal accompaniment. The fourth manual controls the solo organ—a group of stops which, singly or in combination, may provide a solo melody which the remainder of the organ accompanies. The pedal keyboard controls most of the bass stops. In some very large organs there is a fifth manual controlling the echo organ. This is a small group of stops usually set high in the roof of the building to give the effect of distant music. Most church organs have two or three manuals. Modern cinema organs may have some normal stops but rely chiefly on a number of effects unknown to the straight organ.

Organic Chemistry. The chemistry of compounds containing carbon and usually associated with living organisms. *See* F24–5.

Oriel Window is a window projected from the front of a building, rectangular, triangular, or pentagonal. The ordinary bay window and bow window are varieties of Oriel. When an Oriel window does not reach to the ground it usually rests upon moulded sills supported by corbels.

Oriflamme, the name of the original banner of the abbey of St. Denis, and adopted by Louis VI. as his standard. It remained the national emblem of France for three centuries. The flag was of red silk, the outer edge being cut in the form of flames.

Original Sin, according to Christian doctrine the corruption that is born with us, as a result of Adam's fall.

Orioles, brilliantly coloured birds, members of the passerine family *Oriolidae*, found in the tropical regions of Asia, Africa, and Australia. The golden oriole, perhaps the most beautiful of them all, with brilliant yellow plumage, black wings and tail, winters in Africa, visits England, and is known to have nested here.

Orion, a famous constellation of the heavens, comprising nearly a hundred stars, all visible to the naked eye. It contains three stars of the second magnitude in a line, and these are called "Orion's Belt."

Ormer, a shellfish (*Haliotis tuberculata*) which occurs in the Channel Islands and on parts of the French coast. It is considered a great delicacy.

Ornithology, the scientific study of birds.

Ornithorhynchus. *See* Duckbill.

Orogeny, large-scale earth movements, including faulting and folding and sometimes igneous activity, which produce a linear belt of mountains, *e.g.*, the Alpine orogeny in Europe which produced the Alps.

Orphism. *See* Section J.

Orphrey, the name of an ornamental border of gold and silver embroidered on ecclesiastical vestments.

Orrery, an instrument used in the 18th and early 19th cent. which showed the motions of the planets round the sun and the satellites round their primaries. The first orrery made was named after Charles Boyle, Earl of Orrery.

Orthodox Eastern Church. *See* Section J.

Osborne House, near Cowes, in the Isle of Wight. Queen Victoria's favourite winter-residence, and where she died. It was given to the nation by Edward VII., and is now a convalescent home.

Osier, a species of willow growing in damp soils and yielding branches utilised in basket-making.

Osmium, a very hard, bluish-white metal, symbol Os, of the platinum group and one of the heaviest of known metals. It is obtained from certain sands of South America, California, Australia, and Russia. The alloy of osmium and iridium (osmiridium) provides long-wearing tips for gold fountain-pen nibs.

Osmosis, The process by which absorption of liquids through semi-permeable membranes takes place. A solution exerts osmotic pressure (O.P.) or suction in proportion to concentration but also depending on kind of dissolved substance. The roots of the higher plants are covered with fine root-hairs, within the cell-walls of which the sap is normally of a higher concentration than the dissolved matter in the surrounding soil. The root-hairs, therefore, draw into themselves these weaker salt-solutions. (The explanation of water and salt exchanges is complicated by the selective ability of some cells (*e.g.*, roots) to accept or reject particular dissolved substances along with the water. The absorption of salts by a plant is selective, each plant selecting through the semi-permeable membranes of its root-hairs those substances which are most suited to itself.)

Osprey (*Pandion haliaëtus*), a large and magnificent bird of prey, dark brown above and nearly white below. The head is whitish with a dark band from eye to nape. To the British Isles it is a rare passage migrant. In 1959, thanks to the energy and vigilance of the Royal Society for the Protection of Birds, a pair nested in a Scots pine in Inverness-shire and reared three young. Since then more young ospreys have been safely fledged in this sanctuary. The food consists almost entirely of fish, which the bird seizes with its talons. The so-called osprey plumes do not come from this bird but from the egret.

Ostrich, the largest living bird, related to the rhea, emu, and extinct moa, now found only on the sandy plains of Africa and parts of S.W. Asia. The male has beautiful white plumes on wings and tail. The wings are useless in flight, but the birds have a fleetness of foot exceeding that of the swiftest horse. An ostrich's egg weighs 3 lb.

Otary, any seal which has external ears (as opposed to the *true seals* which lack them). The eared seals make up the family *Otariidae*, which includes the Sea-Lion and the Fur-seal of the N. Pacific.

Otter, an aquatic carnivorous mammal widely distributed over Europe, and at one time very common in England and Wales. The otter averages about 2 ft. in length, exclusive of tail, has web-feet, and is a very expert swimmer. Otters are harmless and their hunting is a cruel and senseless blood sport.

Ounce, a carnivorous member of the cat family, spotted like a leopard and having a long bushy tail. It is only found at high altitudes on the Himalayas, and is often called the "snow leopard."

Outcrop. Where a bed of rock appears at the surface of the ground, there is an outcrop of the particular rock. Outcrop coal is surface coal; the mining of such coal is called open-cast mining.

Oviparous, a zoological term referring to animals which lay eggs to be hatched outside the body of the parent.

Ovipositor, the organ by means of which female insects lay their eggs.

Owls, nocturnal birds of prey, distributed over the greater part of the world. Their forward-looking eyes, embedded in rings of feathers, give them a characteristic "owl-like" appearance, and their plumage, usually a mottled blend of browns and greys, is so soft that their flight is almost noiseless. Owls live on small mammals, reptiles, birds, insects, and fish, and are very valuable birds to the farmer. British owls include the barn owl (screech owl), short-eared owl, long-eared owl, tawny owl, little owl. Snowy owls have recently nested in the Shetland Is.

Ox, the popular name of the mammals included in the genus *Bos*. They are hollow-horned ruminants and hoofed quadrupeds, and include the various classes of domestic cattle as well as the different wild species. The adult male is called a bull, the female a cow, and the young a calf. The best-known breeds of domesticated cattle are the Durham or Shorthorn, the Angus, the Jersey, Ayrshire, Suffolk, and Hereford.

Oxalic Acid, an organic acid obtained from numerous plants, such as sorrel and rhubarb, and produced artificially for commercial purposes from sawdust, treated with caustic potash or caustic soda. It combines with metals to form oxalates; used in the manufacture of ink.

Oxford Clay, a geological formation consisting of a bed of blue clay hundreds of feet thick, and forming the lower portion of the Upper Jurassic. It makes good bricks.

Oxford University. The early history of the university is obscure. There was a school at Oxford as early as 1115 and it is known that Robert Pullen, a theologian from Paris, lectured there in 1133. Allusions to Oxford as the most celebrated centre of learning in England occurred in a work of Gerald of Wales in 1184–5. The earliest colleges to be founded were University College (1249), Balliol (about 1263), Merton (1264). In 1571 the university was reorganised and granted a Charter of Incorporation by an Act of Elizabeth. Other colleges and halls with their dates of foundation are: All Souls (1438), Brasenose (1509), Christ Church (1546), Corpus Christi (1517), Exeter (1314), Hertford (1874), Jesus (1571), Keble (1868), Linacre (1962), Lincoln (1427), Magdalen (1458), New College (1379), Nuffield (1937), Oriel (1326), Pembroke (1624), Queen's (1340), St. Antony's (1950), St. Catherine's (1962), St. Cross (1965), St. Edmund Hall (1270), St. John's (1555), St. Peter's (1929), Trinity (1554), Wadham (1612), Wolfson (1965), Worcester (1714), Campion Hall (1962), St. Benet's Hall (1964), Mansfield (1886), Regent's Park (1958), Greyfriars Hall (1953). The women's colleges are:—Lady Margaret Hall (1878), Somerville (1879), St. Hugh's (1886), St. Hilda's (1893), St. Anne's (1952). Women were not admitted to degrees (though allowed to sit for examination) till 1920.

Oxygen is the most abundant of all terrestrial elements, symbol O. In combination, this gaseous element forms about 46% of the earth's crust; one-fifth of the atmosphere; eight-ninths by weight of all water. Discovered independently by Scheele (*c.* 1773) and Priestley (1774). It is colourless, tasteless, and odourless, and forms the chief life-supporting element of animal and vegetable life.

Oyster, a bivalve mollusc, of the genus Ostrea, having very numerous species and abounding in nearly all seas. The shell is rough and irregular. Oysters are exceedingly prolific, spawning in May and June. In England and Scotland deep-sea oysters are not allowed to be sold between June 15 and Aug. 4, and other kinds between May 14 and Aug. 4. In Ireland, no oysters may be taken between May 1 and Sept. 1, except in certain waters. The Whit-

stable oyster beds have existed since pre-Roman times; " clocks " are dead oysters.

Oystercatcher, a wading bird with black-and-white plumage and long, orange bill, inhabiting estuaries and sea-shores. Feeds on mussels, shell fish, etc., but not oysters.

Ozone, a modified form of oxygen, containing three atoms of oxygen per molecule instead of two. It is prepared by passing oxygen through a silent electric discharge. When present in air to the extent of 1 part in 4 million parts of air it kills bacteria, and has been used for this purpose in ventilating systems, *e.g.*, that of underground railways. It is present in extremely small quantities in the lower atmosphere but is comparatively plentiful at heights of about 20 miles. The belief widely held that seaside air is particularly rich in ozone is untrue. As ozone absorbs ultra-violet light of certain wavelengths spectroscopic methods, involving the analysis of sunlight, are chiefly used in ozone determinations. *See also* Atmosphere.

P

Paca, a genus of large rodents found in Central and South America, and resembling the guinea-pig. It is of nocturnal habits, has a streaked and spotted fur, and lives on fruits and plants.

Pacific Ocean. The first European to recognise the Pacific as distinct from the Atlantic was the Spanish explorer, Vasco Nuñez de Balboa, who discovered its eastern shore from a peak in Panama in 1513. The first European to sail upon it was Magellan, who entered it by the strait that bears his name in 1520. Sir Francis Drake was the first Englishman to sail upon it in 1577. The world's greatest known ocean depth is in the Mindanao Trench, off the Philippines, 37,782 ft.

Pagan, a person who does not worship God; a heathen. The word is derived from the Latin *paganus* (a countryman or uncultivated person). In the Middle Ages the term was used largely to describe Mohammedans (Moors, Saracens, etc.).

Pagoda, the name given in China, India, and other Asiatic countries to a high pyramidal tower, usually, but not necessarily, connected with a temple.

Palaeontology, the science which is devoted to the investigation of fossils: animal (palaeozoology) and plants (palaeobotany). By studying the markings and fossils of living things in the stratified rocks, palaeontologists have been able to establish with astonishing accuracy a record of the evolution of life through geological time. The geologist at the same time with the evidence of the fossils has been able to work out the order and the age of the rocks. *See also* F45.

Palatinate, a term formerly applied to two German electorates or provinces, the Upper and Lower Palatinates. They are now provinces of Bavaria.

Pale, the name given to the part of Ireland colonised by the English and comprising portions of the counties of Louth, Dublin, Meath, and Kildare. The Anglo-Saxon rulers were styled " Lords of the Pale."

Palimpsests are ancient MSS. or parchments which have been partly effaced and used for fresh writings. Many valuable MSS. were thus lost, but sometimes the second writing has been washed out, enabling the original writings to be decipbered. Among such restorations are a dialogue of Cicero's, a portion of a book of Livy, etc.

Palladium, a scarce metallic element, symbol Pd, similar to platinum, with which it is usually found. It is an expensive metal, with desirable properties as a catalyst in reactions involving hydrogen, since it has a remarkable capacity for absorbing this gas; for example, coal gas and air will inflame in the presence of palladium at room temperature. It forms a silver-white alloy with gold, and this is used in some kinds of jewellery. It is used in expensive watches to make non-magnetic springs.

Pallium, a vestmental ornamentation of white wool presented by the Pope to archbishops on their appointment, and the sign of Papal confirmation.

Palm, a large straight-trunked plant or tree common to tropical countries, and usually fruit yielding, such as dates, coconuts, etc. Many commodities useful to man are obtained from plants of the Palm family (*Palmaceae*).

Palm Sunday, the Sunday before Easter, upon which occasion it is customary to carry palms to the churches in some countries, in commemoration of Christ's entry into Jerusalem for the Feast of the Passover, when the people went forth to greet Him with palm branches.

Panama Canal. In 1903 the United States signed a treaty with Panama (which had previously seceded from Colombia) which gave the United States rights in perpetuity over a ten-mile-wide strip of land extending across the isthmus for the purposes of building and running the canal. The canal connects the Atlantic and Pacific Oceans, is just over fifty miles long (with sea approaches), and the depth varies from 41 to 85 ft. It is constructed above sea-level, with locks, and has been available for commercial shipping since Aug. 3, 1914. Studies are in progress for the building of a new sea-level canal to replace the present one.

Panda, *or* Cat-Bear, is related to the Raccoon, Dogs and the Bear. There are two kinds, the Red or True Panda, resembling a large domestic cat, which lives in the eastern Himalayas and S.W. China, and the Giant Panda, which is more like a bear in appearance and inhabits the mountains of western China. Both frequent the dense bamboo forests of these regions.

Pangolin, the scientific name of the " scaly ant-eater," a toothless mammal, found in W. Africa and S.E. Asia. It has a long extensible tongue which it uses in catching ants and termites, its chief food. When attacked the pangolin rolls itself into a ball, and its scales assume the form of sharp spikes. Pangolins have an Order of their own—the Pholidota, the scale-bearers.

Pantagruel, the leading character in one of the satires of Rabelais.

Pantheon, the famous temple in Rome, originally consecrated to the gods, built by Agrippa in 27 B.C. and rebuilt in the 2nd cent. by Hadrian. Its splendid dome and portico make it one of the most interesting architectural monuments of ancient days. Since the 7th cent. it has been used as a Christian church.

Panther, another name for the leopard, *Panthera pardus*, related to the lion, carnivorous, active climber, found in India, and other parts of Asia, also in Africa.

Papal Infallibility. *See* Section J.

Paper has been known in one form or another from very early times. The papyrus reeds of the Nile swamps served the ancient Egyptians for sheets upon which to inscribe their records. The Chinese and Japanese, centuries later, were using something more akin to modern paper in substance, an Asiatic paper-mulberry, yielding a smooth fibrous material, being utilised. With the spread of learning in Western Europe the necessity of a readier medium made itself felt and paper began to be manufactured from pulped rags and other substances. The first known English paper-mill was Sele mill near Stevenage, built about 1490, which produced the paper for an edition of Chaucer in 1498. Other mills were set up under Elizabeth, using linen and cotton as raw material. Other papermaking staples were later introduced, such as surat, esparto grass, and wood-pulp. The chief raw material in the world paper industry is wood-pulp, the main exporters being the timber-growing countries of Canada, Sweden, and Finland. Canada is the world's chief producer of newsprint and supplies a large proportion of U.S. requirements.

Papier mâché means pulped-paper and is a composition of paper pulp and other substances, to which, when moulded into form, coatings of japan, with gilt and coloured inlayings, are added. Elegant and decorative objects are made of papier-mâché. A ceramic papier-mâché is very durable.

Papyrus, the earliest known paper made in Egypt at a very remote period from a large species of reed, *Cyperus papyrus*. This plant is to be found all over tropical Africa, especially in the " sudd " region of the White Nile.

Parachute, the umbrella-shaped safety device used in emergency by the crew and passengers of

aircraft. The first parachute descent from a great height was made in 1797 by André Garnerin who dropped 3,000 ft. from a balloon. Rate of descent for a parachute jump is about 18 ft/sec.

Paraclete (the Holy Ghost, or Comforter), the name used in the English translations of St. John's Gospel, and adopted by Abelard to designate the convent in Champagne founded by him, and of which Héloise became the abbess.

Paradise, a Persian word used by the translators of the Old Testament to designate the Garden of Eden, and since meaning any place of happiness.

Paraffin, a mixture of hydrocarbons of higher boiling point than petrol. Paraffin was first obtained by distillation of coal, the process being discovered about 1830. About 1848, Mr. James Young procured it from mineral oil, and Irish peat also yielded it. The main source of paraffin supply to-day is crude petroleum. Used in the manufacture of candles, for waterproofing and numerous other purposes.

Parakeets, various small parrots of vivid plumage native to Australia, Polynesia, Asia, and Africa. One of the loveliest of the parakeets is the budgerigar of Australia.

Parallax, the change in direction of a body caused by a change in position of the observer. If the parallax is measured (in degrees of angle) and the distance between the two observation points is known the distance of the observed body can be calculated. The distance of heavenly bodies has been found this way. The first stellar distances were so obtained in 1838 by Henderson, Struve, and Bessel. Stellar distances are so great that even when the two observations are made at opposite points of the earth's orbit round the sun the parallax is always less than 1·0″ of arc. *See* Aberration.

Parchment, made chiefly from the skins of animals, usually of goats and sheep, was employed in olden times before printing was invented and superseded papyrus as writing material. Vegetable parchment, invented by W. E. Gaine in 1853, though not equal in strength and durability to skin parchment, is about five times stronger than ordinary paper. Vellum is parchment made from the skins of young calves or lambs.

Paris University, of which the Sorbonne forms a part was founded in the 12th cent. and is one of the greatest educational institutions of Europe.

Parliament, is the name given to the supreme legislature of the United Kingdom. It consists of the Queen, the Lords spiritual and temporal, and the Commons. It meets in two houses: the House of Lords (the Upper or Second Chamber) and the House of Commons. It derives from the Anglo-Saxon *Witans* (*see* Witan). The Statute of Westminster (1275) first uses "parlement" of the Great Council in England, which comes from the French word meaning discourse. *See* Central Government, Section C, *also* D8.

Parliamentary Correspondents sit in the Press Gallery of the House of Commons and describe its proceedings for the news media either by impressions or a summary of the debate.

Parquetry, the name of a style of flooring consisting of small rectangular wooden blocks laid down according to geometrical pattern.

Parrot, the popular name of a widely distributed family of tropical birds, including the African grey parrot, the green parrot of South America —both familiar cage pets in this country—and the various parakeets, cockatoos, macaws, lories, etc. Many of these birds possess a remarkable gift of imitating sound, especially that of the human voice.

Parsec, unit of distance used by astronomers for expressing distances between stars; equivalent to about three and a quarter light-years.

Parthenogenesis. The development of animals from unfertilised eggs. The drones of the honey bee are parthenogenetic, and the phenomenon is also common among aphids.

Parthenon, the famous Temple of Athena on the Acropolis at Athens, was built under the rule of Pericles between 447 B.C. and 432 B.C. It was made wholly of marble without mortar. The famous sculptured friezes, known as the Elgin Marbles, are now in the British Museum.

Partridge, a well-known British game bird. Close time: Feb. 2 to Aug. 31. Two species are common in Britain.

Passeriformes, the order of perching birds which includes about half the known species.

Passport is an official document issued to a person by his own government, certifying to his citizenship and permitting him to travel abroad. Passports to British subjects are granted by the Foreign Office, authorise bearer to leave the country and guarantee him the state's protection. Passports now cost £5.—and are issued for a period of 10 years. Passports for children under 16 are issued for 5 years in the first instance, renewable then for a further 5 years without fee on production of new photographs, etc. A simplified form of travel document (British visitor's passport) is issued for British subjects wishing to pay short visits to certain foreign countries for a fee of £1 50, valid for 12 months.

Patricians, the aristocracy of ancient Rome.

Paul's Cathedral, St., is the third cathedral church to be built on the site. It was preceded by a Norman building which was practically destroyed by the Great Fire in 1666. This followed a Saxon church which was burnt in 1086. The present building was designed by Sir Christopher Wren. The foundation stone was laid in 1675 and the structure was completed in 1710. It cost a little under £748,000. Its central feature is the dome, crowned by its cupola and lantern with the golden ball and cross. It escaped serious damage during the air raids of the second world war, but many of the surrounding buildings were laid waste.

*p*C Value, introduced by Dr. C. L. Whittles in 1935 as a measure of salinity of aqueous solutions (soil extract, irrigation water, etc.); defined as the negative logarithm of specific electrical conductivity in reciprocal ohms. Alone or joined with *p*H (below) is useful as an index of osmotic pressure (*see* Osmosis) and related hindrance to plant growth resulting from excess of fertiliser or soil salts. If manuring is balanced, growth is best about *p*C 3.3. *See* F22(2).

Peacock, a bird of large size and beautiful plumage, its characteristic feature being a tail of brilliant "eyed" feathers, which it can erect and spread out, the males possessing resplendent feathering to a much greater extent than the females. It is related to the pheasant; one species is found wild in the forests of India, and another inhabits Burma and the Malayan regions, in Africa there is the Congo Peacock.

Pean, a term in heraldry indicating one of the furs borne in coat armour, the ground of which is black, with ermine spots of gold.

Peanut, Ground Nut *or* Monkey Nut. A member of the pea family native to S. America, but now cultivated in many parts of the world. After pollination, the flower stalk bends down and buries the pod containing the peas ("nuts") in the ground. The oil from these "nuts" can be used for margarine manufacture.

Pearl is produced by certain shelled molluscs, chiefly the oyster. The inner surface of the shells of the pearl oyster yield "mother-of-pearl," and distinct pearls are believed to be morbid secretions, caused by some external irritation. Many fine pearls are found in the actual body of the oyster. The Persian Gulf, Ceylon, the north-west coast of Western Australia, many Pacific islands, and the Gulf of Mexico are among the most productive pearl-fishing grounds. In ancient times Britain was renowned for its pearl fisheries, the pearls being obtained from a species of fresh-water mussel. Western Australia has produced a 40-grain pearl, the finest the world has seen. The largest pearl ever found was the "Beresford-Hope Pearl," which weighed 1,800 grains, over six times as much as the oyster that produced it.

Peat, decayed vegetable matter found mostly in marshy positions, and common in Ireland and Scotland. Peat is coal in its first stage of development; burnt for fuel in many cottage homes.

Peccary, a pig-like animal native to the Americas. There are two species: the collared peccary and the white-lipped peccary, the latter being a vicious and dangerous animal.

Pelican, a genus of bird with long depressed bill pouched underneath, thus able to hold fish in

reserve. It has immense wings and webbed feet. Eight species.

Pemmican, venison or other meat, sliced, dried, pounded and made into cakes, used by explorers and others when out of reach of fresh meat.

Penguin, a genus of flightless, fish-eating sea-birds of the southern hemisphere. They are stout-bodied, short-necked, and of small, moderate, or large size. The Emperor and King Penguins make no nest but protect and incubate the single egg by carrying it in the down feathers between the feet and the body. Other species brood in the usual way and may lay as many as three eggs. Penguins use their flippers for swimming under water. All 17 species are bluish-grey or blackish above and white below. They are very sociable and breed in colonies.

Penicillin. An antibiotic drug produced by the mould *Penicillium notatum*, and discovered by Sir Alexander Fleming in 1928. It is one of the most effective chemotherapeutic agents known. The mould produces a number of penicillins, all of which are effective antibiotics. *See* P4(2), 9(1).

Peninsular War lasted from 1808 to 1814. Fought in Spain and Portugal (the Iberian peninsula) by the British, Spanish, and Portuguese forces, chiefly under Wellington, against the French. The latter were defeated.

Pentagon, government office in Washington (the largest in the world), housing many thousands of military and civilian workers in the War Department of the United States (Army, Navy, and Air Force).

Pentateuch, the first five books of the Old Testament—Genesis, Exodus, Leviticus, Numbers, and Deuteronomy. Referred to in the Gospel of Mark as " the book of Moses."

Pepys Diary, by Samuel Pepys, was first published in 1825. It gives a picture of the social life of the period 1 Jan. 1660 to 31 May 1669. He bequeathed the manuscript, together with his library, to Magdalene College, Cambridge.

Perch, a well-known family of fresh-water fish, with dark striped sides. The common perch of British rivers and lakes falls an easy prey to the angler because of its voracity.

Perfumes are essences or odours obtained from floral and other substances. The chief flower perfumes are those obtained from rose, jasmine, orange flower, violet, and acacia. Heliotrope perfume is largely obtained from vanilla and almonds. Among the aromatic herbs which yield attractive perfumes are the rosemary, thyme, geranium, lavender, etc., while orange peel, citron peel, musk, sandalwood, patchouli, and other vegetable products are largely drawn upon. In recent times chemistry has been called into play in aid of the perfumer, and many of the popular perfumes of to-day are chemically prepared in simulation of the scents of the flowers or other natural substances the names of which they bear. *See* Musk Deer.

Perigee, the smallest distance of the earth from any of the heavenly bodies; opposite of apogee (*q.v.*).

Perihelion. That point in a planet's orbit when it is nearest to the sun; opposite of aphelion. The earth is at perihelion in mid-winter, about 3 January.

Peripatus, an animal which stands as a link between the annelid worms and the arthropods. Wormlike with short unjointed legs it breathes by a system of air tubes like those in insects. Certain other points of internal structure point to a relationship with annelid worms. There are some fifty species, the best known being the S. African *Peripalus capensis*.

Perjury, the offence of giving false evidence. The ancient Romans threw the perjurer from the Tarpeian Rock, and after the Empire was Christianised, those who swore falsely upon the Gospel had their tongues cut out. The usual punishment in England from the 16th to the 19th cent was the pillory, fine, and imprisonment.

Permian Formation, a group of rocks lying between the Trias and the Carboniferous strata. It has three subdivisions, Upper, Middle and Lower Permian. *See* F45.

Per Procurationem signature means that the subject of the correspondence has been put into the writer's care by his principal for him to use his personal judgment in the matter, and that he is authorised to sign on behalf of his principal. Normally contracted to *per pro* or *p.p.*

Peruke, the name given to the wigs worn by men in the latter half of the 18th cent. The custom of wearing wigs was gradually superseded by powdering the natural hair. Wigs are still worn by the Speaker of the House of Commons, judges, and barristers.

Petrel, the name given to a member of a large, widely-distributed family of sea-birds of great diversity of size and colouring and distinguished by tube-like external nostrils. They usually skim low over the waves, and some, for this reason, are known as shearwaters. The storm petrel or Mother Carey's chicken occasionally patters along the surface, and is often called Little Peter—a reference to St. Peter walking on the water. Except when breeding, petrels are always at sea. They mostly nest in holes and crevices on islands and lay one egg, which is invariably white. The storm petrel, Leach's petrel, Manx shearwater, and the fulmar petrel are resident in the British Isles. *See also* Mutton Bird.

Petroleum. *See* Oil.

Pewter, alloy of tin and lead formerly used for making household utensils and ornaments.

***pH* Value**. Introduced in 1909 by the Danish chemist Sorensen to indicate hydrogen-ion concentration on the basis of electrical conductivity and a view of ionisation since discarded; is now taken as a logarithmic scale of acidity or alkalinity of aqueous solutions: acidity 0–7, neutrality at 7·0, alkalinity 7–14. The *pH* of blood is about 7·6 (faintly alkaline). *See* F22.

Phalanger, pouched marsupial mammals. They are arboreal and superficially resemble squirrels. There are two genera of flying phalangers or flying squirrels, which have a remarkable membrane along each side of the body enabling the animals to glide through the air. The members of the phalanger family are confined to the Australasian and oriental regions.

Phalangid, a member, of the arachnid family Phalangida: popularly known as " harvesters."

Phalanx, a name applied by the ancient Greeks to a body of troops drawn up in close array, with overlapping shields, and eight, ten, or more rows deep. The Macedonians stood sixteen deep. A Greek phalanx consisted of 8,000 men.

Pharisees and Sadduces. *See* Judaism, Section J.

Pharmacopoeia, an official publication containing information on the recognised drugs used in medicine. Each country has its own pharmacopoeia. The British Pharmacopoeia (B.P.) is published under the direction of the General Medical Council. The Pharmaceutical Society issues the British Pharmaceutical Codex (B.P.C.); there is also an International Pharmacopœia (2 vols.) which is issued by the World Health Organisation.

Pharos, the name of the first lighthouse, built by Ptolemy II. about 280 B.C., on the Isle of Pharos, at the entrance to the harbour of Alexandria. It was 600 ft. high, and one of the " seven wonders."

Pheasant, game birds related to the partridges, quails, peacocks, chickens, and turkeys, distinguished by their brilliant plumage and long tapering tail. First found by the Greeks in Georgia where the River Phasis flows through to the Black Sea. Close time: Feb. 2 to Sept. 30.

Phillippics, the orations delivered by Demosthenes, 352–341 B.C., against Philip of Macedon—remarkable for their acrimonious invective. The word was also used for Cicero's speeches against Antony. In modern use, any impassioned invective.

Philosopher's Stone. *See* Alchemy, Section J.

Phosphorus is a non-metal element, symbol P. Most familiar as a waxy, yellow solid which is spontaneously inflammable in air. It has chemical similarities to arsenic, like which it is very poisonous. It was discovered by Brandt in urine in 1669. It is found in most animal and vegetable tissues. It is an essential element of all plants and of the bones of animals. In combination with various metals it forms different phosphates, which are largely utilised as manures. The chief commercial use of phosphorus is in the preparation of matches.

Photoelectric Cell, a device which gives a useful electrical response to light falling on it. There are several kinds depending on the different effects which light may have on a suitably

chosen solid (usually a semiconductor), viz., the emission of electrons from the surface ("photo-emissive cell"); change in electrical resistance ("photoconducting cell"); generation of electric current from a specially designed sensitive structure ("barrier layer" or "photo-voltaic cell", "solar battery"). Different cells respond differently to lights of various wavelength and must be chosen for each application. *See also* Solar Battery.

Photogrammetry, the science of measurement from photographs taken from an aircraft. Aerial photography has many uses and is of great value to military intelligence and for map-making.

Photon. When light behaves like a stream of discrete particles and not like waves, the particles are called photons. *See* F13(1), 14.

Photosynthesis. *See* F28, F41(1).

Phrenology. *See* Section J.

Phylloxera, a genus of plant-lice related to the aphids, which attacks the grape vine. Many vineyards of France, in common with the rest of Europe, were replanted with native vines grafted on immune stocks from California in 1879 after being ravaged by the insect (which came from America). Curiously enough, the remedy also came from America, the vine stocks there being immune to *phylloxera*.

Picts, inhabitants of Scotland in pre-Roman times, are held by some historians to be a branch of the old Celtic race, by others to have been of Scythian origin. They occupied the north eastern portion of Scotland, and were subdued by the Scots in Argyll in the 9th cent., Kenneth MacAlpin becoming king of a united kingdom of the Picts and Scots—the kingdom of Alban.

Pike, a familiar fresh-water fish abundant in the temperate regions of both hemispheres. It forms good sport for the angler in rivers and lakes, and sometimes attains a weight of from 20 to 30 lb. It is extremely voracious, is covered with small scales, and has a ferocious-looking head.

Pilchard, a fish of the herring family, but with smaller scales and more rounded body. It appears off the Cornish coasts in vast shoals every summer.

Pilgrimage, the undertaking of a journey to a distant place or shrine to satisfy a religious vow or secure spiritual benefit, was resorted to in early Christian times The first recorded pilgrimage is that of the Empress Helena to Jerusalem in 326. In the Middle Ages pilgrimages became common, and were undertaken by monarchs and people of rank in all Christian countries. Moslems have been making pilgrimages to Mecca since the death of the Prophet, such duty being enjoined by the Koran. Among the great centres of Christian pilgrimages are Jerusalem, Rome, the tomb of Becket at Canterbury, and the holy places of Lourdes and La Salette in France.

Pilgrimage of Grace (1536), the rising in Lincolnshire and Yorkshire in the reign of Henry VIII against religious innovations and the dissolution of the smaller monasteries, which overlapped with discontents caused by taxation, rising prices, enclosures and land speculation. The insurrection was followed by many executions.

Pilgrim Fathers, the 101 English Puritans, who, after living some years in exile in Holland, to escape persecution in their own country, set sail for America in the *Mayflower*, Sept. 6, 1620, landing at Plymouth, Mass., Dec. 4. They founded the settlement of Plymouth, and are regarded as the pioneers of American colonisation although 13 years earlier a small Virginian colony had been established.

"Pilgrim's Progress," Bunyan's famous allegory, written in Bedford gaol. The first part was issued in 1678. It is the greatest work of its kind. *See* Section M, Part VI.

Pillory, a wooden instrument of punishment in use in England until 1837. It consisted of a pair of movable boards with holes through which the culprit's head and hands were put, and was usually erected on a scaffold. While a person was undergoing this punishment the mob generally pelted him with stones and rubbish, sometimes to his serious injury. People convicted of forgery, perjury, or libel were often condemned to the pillory, but from 1816 to 1837 the only offence for which it could be inflicted was perjury.

Pine, a conifer of the genus *Pinus*, which flourishes all over the northern hemisphere and includes 80–90 species, which afford valuable timber and yield turpentine and tar. The Scots Pine, *Pinus silvestris*, with its blue-green, short needles, set in pairs, and its rosy-orange branches, is native to Britain, as it is to the whole of Europe. It provides the red and yellow deal in everyday use.

Pitcairn Islanders were originally the mutineers of the *Bounty*. They took possession of the island in 1790, and it was not until 1814 that their whereabouts was ascertained, accidentally, by a passing ship. The mutineers, under their leader, Adams, had settled down to a communal existence, married Tahitian women, and increased so in numbers that in the course of years they were too many for the island to support, and in 1856 they were removed by the British Government to Norfolk Island. A small number returned to Pitcairn.

Pitchblende *or* Uraninite, a relatively scarce mineral. It is nearly all uranium oxide, but lead, thorium, etc., are also present. Pitchblende from Joachimstal in Czechoslovakia was the material in which radium was discovered by the Curies. Pitchblende also occurs in Saxony, Rumania, Norway, Cornwall, the Congo, and at Great Bear Lake in Canada.

Plainsong, a style of musical composition sung in unison (all voices singing the same tune without harmony), familiar in the Western Church from very early times and still performed, principally in the Roman Catholic Church. Though restrained and contemplative in spirit, it is capable of expressing deep emotion. *See* E3(2).

Planetarium, a complex optical system which projects into the interior of a dome a replica of all the phenomena of the sky that can be seen by the naked eye, *e.g.*, sun, moon, planets, stars, comets, meteors, aurora, eclipses, and clouds. There is a planetarium in the Marylebone Road, London, and another (opened in 1966) at Armagh Observatory, N. Ireland.

Planets, the name give to such celestial bodies as revolve round the sun in elliptical orbits. The name was first used by the Greeks to indicate their difference from the fixed stars. There are nine planets, Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune, Pluto. Many important questions can be answered by means of probes sent to the neighbourhood of the planets. These include the measurement of the magnetic field, if any, of the planets, the study of their atmospheres, much of which can be done without actually penetrating to the surface. With instruments landed gently on the surface it is possible to investigate surface conditions and composition by many methods. Even without a soft-landing information on these questions can be obtained by photography and subsequent transmission of the picture back to earth by some form of television scanning. For example, the American Mars probe, *Mariner IV*, transmitted pictures of the Martian surface in 1965 when it was at its closest approach to the planet, and the Russian *Venus IV* in 1967 made a soft-landing on Venus. *See* F7, *also* under their names.

Plankton, a word which first came into biological use in 1886 to describe the usually microscopic plants and animals floating, swimming, and drifting in the surface waters of the sea. To be distinguished from *nekton* (swimming animals like fishes and squids) and *benthos* (plants and animals living on the sea bottom, like fixed algae, sponges, oysters, crabs, etc.). Of great economic importance, providing food for fish and whales.

Plantagenets, the kings who reigned in England between 1154 and 1485 and included the Houses of Lancaster and York. More correctly they are styled Angevins, from Anjou, of which Geoffrey, father of Henry II., was Count, and whose badge was a sprig of broom (*Planta genista*).

Plasma Physics is the physics of wholly ionised gases, *i.e.*, gases in which the atoms initially present have lost practically the whole of the electrons that usually surround their nuclei, so that the gas consists of a mixture of two components, positively charged ions and negatively

charged electrons. The physical properties of a *plasma* are very different from those of an unionised gas. In particular, a plasma has a high electrical conductivity and can carry large currents. *See also* Nuclear Fusion.

Plastics, a broad term covering those substances which become plastic when subjected to increased temperatures or pressures. The Plastics Industry is based on synthetic organic examples of this group. There are two classes of plastics: the *thermoplastic*, which become plastic every time they are heated (*e.g.* cellulosic plastics) and *thermosetting*, which undergo chemical change when heated, so that once set they cannot be rendered plastic again (*e.g.* Bakelite). Plastics are composed of long-chained molecules, *e.g.*, polyethylene.

Platinum, a metal element, symbol Pt. It is a scarce white metal generally allied with iridium, osmium, ruthenium, and palladium. It can only be melted in an oxyhydrogen or electric furnace, but can be rolled out into a film-like sheet, or drawn out to the finest wire; being resistant to acids it is termed a noble metal.

Platonic Solids, five regular solid figures known to the ancient world. They are: the tetrahedron (4 triangular faces), cube (6 square faces), octahedron (8 triangular faces), dodecahedron (12 five-sided faces), icosahedron (20 triangular faces). All the faces and angles of each solid are identical.

Plebeians were the ordinary citizens of Rome as distinct from the patricians. There was a long struggle between the two orders for political equality.

Pleiades, famous cluster of stars in the constellation of Taurus. Of the seven principal stars in the group, one is rather faint, and many myths have sprung up about this "lost pleiad".

Pleistocene the geological period that succeeded the Pliocene. During the Pleistocene, also known as the *Great Ice Age*, there were four cold periods, when the ice sheets covered northern Europe and N. America, separated by warm periods when the glaciers drew back into the mountains. From recent studies based on rock magnetic measurements the transition to Pleistocene took place about 1,850,000 years ago.

Pliocene, the geological period preceding the Pleistocene, and the last major division of the Tertiary strata. It began about fifteen million years ago. *See* F45.

Plough Monday, the first Monday after the Epiphany, when in olden times the rustic population returned to work after the Christmas festivities.

Plover, wading birds, widely distributed over marshy places of Europe. Several species occur in Britain, including the Golden-plover, which breeds on the moors of Devon, Somerset, Wales, N.E. Yorkshire, and Scotland, and the Ringed plover, Kentish plover, and Dotterel.

Pluto, the last planet to be discovered; existence established by C. W. Tombaugh at the Flagstaff Observatory in Arizona in Jan. 1930 from reckonings made by P. Lowell in 1914. It is the most distant of all the known planets; diameter about 3,650 miles. Mean distance from the sun estimated at 3,671 million miles.

Plutonium, a chemical element, symbol Pu, capable of nuclear fission in the same way as Uranium 235. Not until after it had been synthesised in atomic piles during the second world war was it shown to occur in infinitesimally small traces in nature. Its synthesis in the atomic pile depends on the capture by Uranium 238 nuclei of neutrons; immediate product of this reaction is the element neptunium, but this undergoes rapid radioactive disintegration to plutonium. Because of its explosive power and poisonous character, an American scientist once remarked: "If ever there was an element which deserved a name associated with hell, it is plutonium."

Poet Laureate is the poet attached to the royal household, an office officially established in 1668, though its origins go back to the early Middle Ages, when minstrels were employed at the courts of English kings. Chaucer, Skelton, and Spenser, though not court poets, were all unofficial poets laureate. Ben Jonson has been called the first "official laureate" (1616), but the office was not officially recognised until 1668, when Dryden was formally granted the office. It is customary for the poet laureate to write verse in celebration of events of national importance. Sir John Betjeman succeeded Cecil Day-Lewis as poet laureate in 1972.

Pogrom. Russian word meaning "destruction." First used to describe the Tsarist attacks on the Jews in 1881 in Russia. In 1938 Hitler ordered a general pogrom in Germany: all synagogues were destroyed and nearly all Jewish shops and homes, Jewish hospitals and children's homes suffered. During the subsequent war Jews of central Europe were systematically exterminated in cold blood by the Nazis.

Poitiers, Battle of, was fought on Sept. 19, 1356, during the Hundred Years' War, when Edward the Black Prince gained a complete victory over John, King of France who was taken prisoner and brought to London.

Polecat, an animal of a dark-brown colour, about 18 in. in length, exclusive of tail; the ears and face-markings are white or light brown. It is carnivorous and belongs to the weasel family. Like the skunk, it emits an offensive odour.

Pole-Star is of the second magnitude, and the last in the tail of the Little Bear constellation. Being near the North pole of the heavens—never more than about one degree from due north—it always remains visible in the Northern hemisphere; hence its use as a guide to seamen.

Police, a regular force established for the preservation of law and order and the prevention and detection of crime. The powers they have vary from country to country and with the type of government; the more civilised and democratic the state, the less police intervention. England, compared with countries abroad, was slow to develop a police force, and it was not until 1829 that Sir Robert Peel's Metropolitan Police Act established a regular force for the metropolis, later legislation establishing county and borough forces maintained by local police authorities throughout England and Wales. Up to that time police duties were discharged by individual constables and watchmen appointed by local areas in England and Wales. Under the Police Act, 1964, the former 121 regular police forces in England and Wales have been reduced, by amalgamation, to 47. In Scotland there are 20: 4 burgh forces, 15 combined forces, and one county force. In England and Wales the forces are defined according to area of responsibility:

1. County forces (5), under a Police Committee.

2. County Borough forces (6), under Watch Committees, elected by the borough councils.

3. Combined forces (34) covering more than one county or borough, under a body representing the constituent areas.

4. The Metropolitan Police Force, covering a 15-miles radius from Charing Cross, but excluding the City of London, under the control of the Home Secretary.

5. The City of London force, under a committee of the Common Council.

Apart from the amalgamation of police forces in the interest of efficiency, other reforms recently introduced include the centralisation of criminal records, the introduction of personal radios, and the organisation of the neighbourhood beat system under which officers in cars can patrol their areas. Central authority rests with the Home Secretary in England and Wales and the Secretary of State for Scotland in Scotland. In Northern Ireland the police force is responsible to the Secretary of State for Northern Ireland. (Since March 1972 Northern Ireland has been ruled direct from Westminster.)

Pollution of the atmosphere is due chiefly to the incomplete combustion of fuels, especially coal, large particles of soot being deposited fairly quickly close to their place of origin and smaller particles (including smoke) remaining suspended in the air for a long time. Corrosion of exposed objects and damage to buildings result from the production of sulphuric acid. The introduction of more efficient furnaces, the washing of flue gases and the introduction of smokeless zones have assisted

in the abatement of smoke and other forms of pollution. Atomic weapon tests add to the load of pollution in the atmosphere (*see* **Fall-out**). "Smog" (smoke-laden fog) which reduces visibility to zero and affects the respiratory organs, is liable to occur when the air near the earth is cooled below the dew-point temperature by radiation on a still, cloudless night when an accumulation of smoke over a large city cuts off daylight and produces gloom, and absence of wind or vertical currents prevents the lower layers of the air from getting away. Such conditions are associated with the smoke-laden atmosphere of large industrial towns during a winter anticyclone. During the great London smog of 1952 there were 2,000 deaths over and above those expected for the time of year. Since the Clean Air Act of 1956 pollution by smoke and sulphur dioxide has continued to diminish in London, winter sunshine has increased by 50 per cent., and fish now live in the Thames. In 1969 a special Secretaryship of State was created to deal with a wide range of functions relating to the physical environment in which people live and work, including pollution (air, waters in rivers and around coasts, noise, pesticides harmful to food and wildlife). In his 1969 Reith lectures Dr. Fraser Darling said "most pollution comes from getting rid of waste at the least possible cost."

Polonium, a radioactive element, symbol Po, discovered by Madame Curie in 1898, and named after her native land of Poland.

Poltergeist. *See* **Section J.**

Polymerisation is the linking together of small molecules to make a large long-chain molecule. The general name for polymers of ethylene is Polythene, a wax-like plastic solid which because of its special qualities is used in a variety of ways today.

Polytheism. *See* **God and Man, Section J.**

Pomology, the science of fruit-growing.

Pontifex, the title assigned in ancient Rome to members of the college of pontifices. "Pontifex maximus" was the official head of Roman religion. It was as "pontifex maximus" that Julius Caesar revised the calendar in 46 B.C., and when after the rise of Christianity the popes took over the title the revision fell to them.

Pope, The, the head of the Roman Catholic Church, recognised by that Church as the lawful successor of St. Peter. He is elected by the body of Cardinals. Since 1870, when the King of Italy deposed the holder from temporal power, no pope had left the Vatican between appointment and death until 1929, when peace was made between the Church and State in Italy and compensation was paid to the Holy See for the loss of temporal power. Cardinal Montini, Archbishop of Milan, was elected Pope Paul VI in 1963 on the death of Pope John XXIII.

Porcelain. The word is thought to be derived from the Italian *porcellana*, indicating the texture of a piglet. The majority of porcelain made on the continent was of "hard-paste", or true porcelain, similar to that discovered by the Chinese as early as the T'ang Dynasty (A.D. 618–907). It was composed of *kaolin* (china-clay) and *petuntse* (china-stone) which when fired in a kiln at a temperature of *c.* 1300° C. became an extremely hard and translucent material. The recipe of "hard-paste" porcelain remained a secret of the Chinese until 1709, when it was re-discovered in Europe by Johann Böttger of the Meissen factory (popularly known as Dresden). Aided by disloyal Meissen workmen, factories were later established at Vienna, Venice and in many parts of Germany. Plymouth and Bristol were the only English factories to produce this type of porcelain, from 1768 to 1781. Elsewhere, both in England and France, the material manufactured was known as "soft-paste" or artificial porcelain which was made by blending varying white-firing clays with the ingredients of glass. The French factory of Sèvres began to make some hard-paste porcelain by 1768 and by the 19th cent. such porcelain was the only type being made throughout the whole of the continent. In England Josiah Spode is credited with the introduction of "bone-china" about 1794. This hybrid-paste was quickly adopted by many other factories and today remains the most popular type of English porcelain. *See* **Pottery and Porcelain Marks, Section N.**

Porcupine, a rodent whose back is covered with long, sharp, black and white spikes, which form a powerful means of defence. There are two families of porcupines; one is confined to the Old World and the other contains the American porcupines.

Porphyry, a form of crystalline rock of many varieties that in ancient Egypt was quarried and used for the decorative portions of buildings and vessels. The term is applied generally to the eruptive rocks in which large well-formed crystals of one mineral are set in a matrix of other minerals.

Porpoise, a highly intelligent marine mammal of the dolphin and whale family, and a common inhabitant of northern seas. Porpoises travel in shoals, their progression being marked by constant leapings and plungings. Their average length is from 4 to 5 ft. There are several species, nearly all being confined to northern oceans.

Port, a special kind of red Portuguese wine, taking its name from Oporto. It was little known in England until the Methuen Treaty of 1703, when it was permitted to be imported at a low duty.

Portcullis, a strong, movable timber or iron grating let into the wall of the gateway to a feudal castle, and capable of being lowered or raised at will. It formed an effective protection against attack in the days before firearms.

Portland Vase, one of the most renowned specimens of ancient art, long in the possession of the Portland family. In 1810 it was loaned to the British Museum. Here it was shattered in 1845 by a stone from a maniac's hand, but has been skilfully restored. It is said to have been found in the 17th cent. in an ancient tomb near Rome. It was purchased from the Barberini family in 1770 by Sir Wm. Hamilton, subsequently sold to the Duchess of Portland. The vase, which is actually a two-handled urn, stands about 10 in. high, is of transparent dark blue glass, ornamented with figures cut in relief in overlaid white opaque glass. It was purchased by the British Museum in 1945.

Portreeve in olden times was an official appointed to superintend a port or harbour, and before the name of mayor was used the chief magistrate of London was styled the Portreeve.

Positivism. *See* **Section J.**

Positron, the "positive electron," an atomic particle having the same mass but an electric charge equal but opposite to that of an electron. It was discovered in 1932. *See also* **F14.**

Post-Impressionism, a term introduced by Roger Fry to describe the exhibition of paintings sponsored by himself in London (1910–11) officially entitled "Manet and the Post-Impressionists." The exhibition included paintings by Manet, Cézanne, Gauguin, Van Gogh, Seurat, Signac, works by Matisse, Rouault, and the *Fauves* (*q.v.*), and sculpture by Maillol. In a second exhibition, held in 1912, Picasso and the Cubists were also represented. The term therefore refers to the movement in modern art which reacted against the transient naturalism of the Impressionists by concerning itself primarily with colour, form, and solidity. Most artists today would include Cézanne, Van Gogh, and Gauguin as the main Post-Impressionists and maintain that it prepared the way for Fauvism, Cubism, and Expressionism.

Potassium, a metal, symbol K (German *Kalium*). It is similar to sodium, like which it reacts violently with water. It was discovered by Sir Humphry Davy in 1807, and now generally obtained by the electrolysis of fused potassium hydroxide or chloride/fluoride mixture. Its principal minerals are carnallite and kainite, and it is relatively common in rocks, accounting for about 2½% of the earth's crust. An essential element for healthy plant growth; the ashes of plants are relatively rich in potassium.

Potsdam Agreement was signed by Truman, Stalin, and Attlee in Aug., 1945. By this Agreement a Council of Foreign Ministers was established, representing the five principal Powers: China, France, Soviet Russia, the United Kingdom, and United States of America, with the task of drawing up the peace treaties for submission

to the United Nations. It laid down, *inter alia* that German militarism and Hitlerism should be destroyed; that industrial power should be so reduced that Germany would never again be in a position to wage aggressive war; that surplus equipment should be destroyed or transferred to replace wrecked plant in allied territories; that Germany should be treated as an economic whole; and that local self-government should be restored on democratic lines as rapidly as was consistent with military security. The Potsdam Agreement became a dead letter with the creation of a communist régime in the Russian zone of Germany, and marked the beginning of the "cold war."

Prado Gallery, the great public picture collection of Madrid, containing a superb collection of paintings by Velasquez, Murillo, Raphael, Titian, Dürer, Van Dyck, Rubens and Goya.

Pragmatism. *See* Section J.

Prefect, chief magistrates in ancient Rome. The title is now applied to the chiefs of administration of the departments of France.

Pre-Raphaelite Brotherhood was the name given to their school of thought by three British artists, Dante Gabriel Rossetti, J. E. Millais, and W. Holman Hunt, who in 1848 revolted against the academic art of their time and advocated a return to the style of the Italian painters prior to Raphael—the simple naturalism of the Primitives, such as Botticelli, Fra Angelico and Fillipo Lippi. Thus they avoided the use of heavy shadows and painted on a white ground in bright colours—a technique which aroused the ire of those used to the dark and murky canvases of the contemporary romantic artists. Although they held these principles in common the three members of the "P.R.B.", as it was popularly called, were really quite different in other respects. Thus Rossetti (who for some reason is always thought of as the typical Pre-Raphaelite) produced works of a highly romanticised mediaevalism which, apart from certain aspects of technique, bear not the slightest resemblance to the sentimental naturalism of Millais or the much more dramatic realism of Holman Hunt (*e.g.*, in *The Scapegoat*). The Brotherhood was later joined by a number of lesser artists, but its works are not commonly accepted with enthusiasm to-day when the general feeling is that they are sentimental and religiose rather than the product of deeply-felt emotions. Ruskin in his writings defended their work but the movement came to an end in 1853.

Presbyterianism. *See* Section J.

Press-Gang, a body of sailors employed to impress men into naval service, frequently resorted to in England, especially during the war with France in the early 19th cent. Press gangs were not used after about 1850.

Primitive Art. The word "primitive" has a number of different meanings: (1) the art of prehistoric communities (*e.g.*, the famous animal cave-drawings of the Aurignacians, *c.* 25,000 B.C., at Altamira in Spain); (2) the art of modern primitive communities (*e.g.*, Bushman rock-paintings); (3) child art; (4) peasant art which springs from a spontaneous desire to impart beauty to objects of daily use and shows a tendency towards abstraction. Peasant art has many features in common the world over, the woodcarving of the Norsemen being almost indistinguishable from that of the Maoris; (5) the modern school of primitive painting in which naiveté of presentation is either the aim of a highly sophisticated mind (*e.g.*, the self-taught French painter Le Douanier Rousseau (d. 1910)), or arises naturally from a simple one (the American "grandma" Moses (d. 1961) who began to paint in her seventies).

Printing by movable types was first used in Europe in 1454 by Johann Gutenberg, a citizen of Mainz. The invention is also claimed for Laurens Koster of Haarlem. It was introduced into England by Caxton, who set up a printing press in Westminster in 1476. Gothic characters were first used, being superseded by Roman letters in 1518. In 1798 Earl Stanhope replaced the wood printing press by one of iron. In 1814 Friedrich Koenig applied the principle of steam power to the press. Mr. John Walter, of *The Times* newspaper, was the first to use the steam press. Improvements were introduced by Applegarth and Cowper in 1828 and great strides were made in 1858 when the Hoe machine was put on the market. Then came the Walter press in 1866 which printed on continuous rolls of paper from curved stereotyped plates. The Monotype machine casts single letters and the Linotype whole lines. The term letterpress is used for all printing methods using plates where the characters stand in *relief*. The other main printing methods are *intaglio* and *planographic*.

The Privy Council is the Sovereign's own council, consisting of about 300 persons who have reached eminence in some branch of public affairs (Cabinet ministers must be Privy Counsellors), on whose advice and through which the Sovereign exercises his or her statutory and a number of prerogative powers. From it have sprung many organs of the constitution and many of our government departments have grown from committees of the Privy Council. For example the Judiciary or courts of justice have grown from the Sovereign's Council sitting as a Court of Justice, and today the Judicial Committee of the Privy Council is a body of distinguished lawyers acting as a Court of Appeal from courts of the Commonwealth.

Probation Officers are attached to particular Courts, sometimes a Magistrates' or a higher court. Sometimes an offender is not sentenced to punishment, but is released "on probation," that is on the condition that he behaves well and follows directions given by the Court or by a probation officer. Such an officer is a trained man (or woman) who advises, assists, and befriends people who are placed under his supervision by a court of law. The probation officer, by his assessment of the social background of the offender, can advise the court upon the wisdom of putting the offender on probation. The probation officer by his understanding can go befriend an offender as to provide a basis for his rehabilitation. He undertakes the "after care" of those released from prison or Borstal. A juvenile offender, or in need of care, may be made subject to supervision by a probation officer or local authority. *See also* Juvenile Courts.

Productivity. Physical productivity is the output of products during a time unit, *e.g.*, so many products per man hour, or day, or year. Total productivity is the sum of all the units of product created during the given time. Labour productivity is the part of the total that is attributed to labour as a factor of production. Productivity of capital is the element attributed to capital as a factor. Productivity of land is the element attributed to the natural powers of the soil, as distinct from what is contributed by the application to it of capital or labour. The term productivity is also used to refer not to the quantity of output, but to its money value.

Propane, a colourless inflammable gas made of carbon and hydrogen; formula C_3H_8. It is easily liquefied and transported liquid in cylinders and tanks. In this form it is familiar as a "portable gas supply" for domestic and industrial uses. It is sometimes mixed with butane (*q.v.*) for this purpose. Propane occurs in natural gas and is a by-product of oil refining.

Proteins are the main chemical substances of living matter: they are a part of every living cell and are found in all animals and plants. Proteins have many functions, and occur in structural matter such as bones, tendons, skin, hair, and hoof, and in some vitamins and hormones. Lean meat, fish, and eggs are almost entirely proteins. Their composition varies with the source, but all proteins are basically constructed of carbon, hydrogen, oxygen, and nitrogen, and some contain sulphur, phosphorus (nucleoproteins), and iron (haemoglobin). Proteins are built up of very long chains of amino-acids connected by amide linkages (the synthetic polymers such as "nylon" and casein plastics (from milk) are built up of the same linkages). Enzymes, which bring about chemical reactions in living cells, are proteins having specific properties. *See* F27(1).

Proton, a basic constituent of the atomic nucleus, positively charged, having a mass about 1836 times that of the electron. It is a positive hydrogen ion. *See* F10(2), 14.

Prout's hypothesis. The English chemist William

Prout (1785–1850) advanced the idea that all atoms are made of hydrogen, and their weights are exact multiples of the weight of a hydrogen atom. With the modification that neutrons as well as protons occur in the nucleus, Prout's belief, though rejected for many years, has been substantially vindicated.

Provost, a Scottish official similar in rank to an English mayor. The Provosts of Edinburgh, Glasgow, Aberdeen, Perth, and Dundee are styled Lords Provost. The title of provost is also given to the heads of certain colleges.

Prud'hommes (Prudent Men), **Councils of**, were French trade tribunals, of masters and workmen, formed to decide on disputes. Originally a mediaeval institution, they were revived by Napoleon in 1806, and were carried on by the Third Republic.

Psalms, Book of, for many years attributed to David, but present-day scholars are of opinion that the psalms were written by a series of authors at different times and for different purposes, and that few, if any, were written by David. The Holy Scriptures contain 150.

Psychedelism. *See* Section J.

Psychic Research. *See* Section J.

Psychoanalysis. *See* Section J.

Ptarmigan, birds of the grouse family, one species of which inhabits the Scottish Highlands. In the winter the bird assumes a white plumage.

Ptomaines, amino acids produced during the putrefaction of proteins of animal origin. Not a cause of food poisoning, as was once generally supposed, which is almost invariably due to certain specific bacteria.

Publicans, under the Roman Empire, were people who farmed the public taxes. It is this class of officials that is alluded to in the "publicans and sinners" phrase in the New Testament.

Public Corporations, statutory bodies which operate major industries and services in the public interest, *e.g.*, UK Atomic Energy Authority, Bank of England, B.B.C., Electricity Authorities, Gas Council, National Coal Board, British Steel Corporation, British Railways Board. They are accountable to Parliament but their staffs are not civil servants. The Post Office became a public corporation in 1969, responsible to the Minister of Posts and Telecommunications.

Public Schools. The Public Schools Act of 1864 named nine "public" schools: Eton, Harrow, Rugby, Winchester, Westminster, Shrewsbury, Charterhouse, St. Paul's, and Merchant Taylors. Today the term embraces many more, and can be applied to all those schools which are financed by bodies other than the State and whose headmasters belong to the Headmasters' Conference as distinct from the Headmasters' Association. There are about 200 such schools in Britain, including among others: Bedford School (founded 1552); Bradfield College, Berks. (1850); Charterhouse, Godalming (1611); Cheltenham College (1841); Christ's Hospital, Horsham (1553); City of London (1442); Clifton College, Bristol (1862); Dulwich College (1619); Eton College (1440); Felsted, Dunmow, Essex (1564); Haileybury College (1862); Harrow (1571); King Edward's, Birmingham (1552); King's School, Canterbury (600); Malvern College (1865); Manchester Grammar School (1515); Marlborough College (1843); Merchant Taylors' (1561); Mill Hill (1807); Oundle (1556); Radley College, Abingdon (1847); Repton, Derbyshire (1557); Rugby School (1567); St. Albans (948); St. Paul's (1509); Sevenoaks School (1418); Sherborne (1550); Shrewsbury School (1552); Stonyhurst College (1593); Stowe School, Bucks (1923); Tonbridge (1553); Uppingham, Rutland (1584); Warwick (914); Wellington College (1859); Westminster (1560); Winchester College (1382). Public schools for girls include: Christ's Hospital, Hertford (1552), Cheltenham Ladies' College (founded by Miss Beale in 1853), North London Collegiate School (founded by Miss Buss in 1850), Roedean (1885), Wycombe Abbey (1806).

Pulsars, cosmic objects discovered in 1967 by the radio astronomy group at Cambridge; of great scientific interest because they are probably made of highly compressed matter. Unlike quasars (*q.v.*) they are near objects—all are contained in the Milky way. *See* F5.

Puma, a carnivorous mammal of the cat family found in the New World from Canada to Patagonia.

Pyramids of Egypt, on the west bank of the Nile, are vast stone or brick-built structures with inner chambers and subterranean entrances, built by the Pharaohs as royal tombs and dating from about 3000 B.C. The most celebrated are at Gizeh built during the 4th dynasty. The largest, originally 481 ft. high, is called the Great Pyramid, one of the seven wonders of the world, built by the Pharaoh Khufu, better known as Cheops, and there he was buried, 100,000 men, according to Herodotus, being employed for 20 years upon it. Chephren, successor of Cheops, erected the second pyramid, and the third was built by Mycerinus, a son of Cheops. The pyramid at Meidum built by King Snefru, founder of the 4th dynasty, is the most imposing of all. American and Egyptian scientists are cooperating in a project to X-ray (by means of cosmic rays) the interior of the Pyramid of Chephren.

Pythons, large snakes, non-poisonous, and destroying their prey by crushing it. Some species average 30 ft. in length, and prey upon deer and other small mammals. Found in Asia, Africa, and Australia. They lay eggs.

Q

Quadrant, an astronomical instrument for measuring altitudes, superseded for navigational purposes in modern times by the sextant. It consists of a graduated arc of 90° with a movable radius for measuring angles on it.

Quai d'Orsay. An embankment in Paris where the French Foreign Office is situated.

Quail, an edible bird of the partridge family, of which only one species, the Common Quail, is found in England. It is not more than 8 in. long. It is found in most of the warmer regions of the world. In England and Wales the Quail is covered by the Wild Bird Protection Acts.

Quair, an old name for a pamphlet or little book.

Quantum Theory. The rapid development of quantum theory has been almost entirely due to the experimental and theoretical study of the interactions between electromagnetic radiation and matter. One of the first steps was taken when it was discovered that the electrons emitted from metals due to the action of ultraviolet radiation have an energy which is not related to the intensity of the incident radiation, but is dependent on its wavelength. Einstein showed in 1905 that this could only be explained on the basis that energy is transferred between radiation and matter in finite amounts, or *quanta*, which are inversely proportional to wavelength. *See* F13(1).

Quarks are hypothetical subnuclear particles recently postulated by theoretical physicists concerned with the so-called elementary particles. There are supposed to be three kinds, all carrying electrical charges which are fractions of those carried by familiar particles like electrons and protons. This and other special properties of quarks make them suitable for explaining the existence of the large number of other particles referred to on F13, 14. The physical existence of quarks may be demonstrated by experiment at any time and if this happens it will be an exciting truimph for speculative theoretical physics.

Quartering, in heraldry, is the disposition of various escutcheons or coats of arms in their proper "quarters" of the family shield, in such order as indicates the alliances with other families.

Quartermaster, a military officer charged with the provisioning and superintendence of soldiers in camp or barracks, and holding the equivalent rank to a lieutenant. The Quartermaster-General is an officer who presides over the provisioning department of the whole army. A Quartermaster in the Navy is a petty officer responsible to the Officer of the Watch; at sea for the correct steering of the ship and in harbour for the running of the ship's routine.

Quarto, a sheet of paper folded twice to make four leaves, or eight pages; abbreviated to "4to."

Quartz is a common and usually colourless mineral, occurring both crystallised and massive. In

the first form it is in hexagonal prisms, terminating in pyramids. When pure its specific gravity is 2·66. It is one of the constituents of granite, gneiss, etc. Among the quartz varieties are *rock crystal* (colourless), *smoky quartz* (yellow or brown), *amethyst* (purple), *rose quartz* (pink), and *milky quartz* (white). Quartz veins in metamorphic rocks may yield rich deposits of gold. Mining for gold in the rock is termed quartz-mining.

Quasars, or in preferred terminology, quasi-stellar radio-sources, form a new class of astronomical object, first identified in the period 1960 to 1962. They have enormous energy output, and are at vast distances. Many are strong sources of radio waves and fluctuate in intensity. Their nature and cosmological significance presented the major astronomical problem of the 1960s. In the view of Professor Philip Morrison, of the Massachusetts Institute of Technology, quasars are the condensed remains of entire galaxies, while pulsars (*q.v.*) seem to be the ashes of a star that has exploded. Both, he suggests, contain a core of highly concentrated magnetised material. *See* F5.

Queen Anne's Bounty, established by Queen Anne in 1704 for the augmentation of the maintenance of the poor clergy. Since April 1, 1948, Queen Anne's Bounty and the Ecclesiastical Commissioners ceased to exist and became embodied in the Church Commissioners for England.

Queen's (or King's) Speech is the speech prepared by the Government in consultation with the Queen and delivered by Her Majesty in person or by her deputy, at the opening or closing of a Parliamentary session.

Quicksilver. *See* Mercury.

Quinine, a vegetable alkaloid obtained from the bark of several trees of the *Cinchona* genus. It is colourless and extremely bitter. The drug, sulphate of quinine, is one of the most valuable medicines, forming a powerful tonic. It is anti-periodic, antipyretic, and antineuralgic. In cases of malaria it is the most efficacious remedy of natural origin known.

Quirinal, one of the seven hills of Rome.

Quisling, term which came into use during the second world war to denote traitor, collaborator, or fifth-columnist. After Vidkun Quisling, who became head of the puppet government after the German invasion of Norway in 1940.

Quorum, the number of members of any body or company necessary to be present at any meeting or commission before business can be transacted. The House of Commons needs a quorum of 40, the Lords a quorum of 3.

R

Rabbi, a Jewish term applied to specially ordained officials who pronounce upon questions of legal form and ritual, and also generally accorded to any Jewish scholar of eminence.

Raccoon, plantigrade carnivorous-mammals common to the American continent. There are several species. The common Raccoon (*Procyon lotor*) is about 2 ft. long, with a bushy ringed tail and sharp snout. Its skin is valuable.

Race. In the old text-books anthropologists were much concerned with the differences between the various races of Man: they described the Black Man (Negro), the Yellow Man (Mongol), the Red Man (American Indian), the Brown Man (Indian), and the White Man (European). Those who study Man from this point of view further subdivide each group into others. Thus White Man may be divided into Nordic, Alpine, and Mediterranean; Black Man into Hamitic, Bushman, and so on. Each of these groups tends to have physical traits which its members hold in common, although, of course, there are no *pure* racial types. All existing races have been fairly thoroughly mixed. What, in view of recent experience, is really important, is that races or even nations do not have psychological traits—at least not *innate* traits. Anthropology dismisses all theories of a superior race as unscientific: there is not the lightest evidence that one race differs in any way from another in its psychological potentialities; Jews, Irish Scots, Italians do differ (so do the inhabitants of Edinburgh and London): but their differences are due to their situation and not to anything inborn. *See* Physical Anthropology, Section F, Part V.

Raceme, an inflorescence in which the main stem bears stalked flowers, *e.g.*, lupin, foxglove. The youngest flowers are at the tip of this axis.

Radar. The basic principle of radar is very similar to that of sight. We switch on a light in the dark, and we *see* an object because the light waves are reflected from it and return to our eye, which is able to detect them. Similarly, the radar station *sees* an object because the invisible radio waves sent out from the transmitter are reflected from it and return to the receiver, which is able to detect them. Thus radar is the use of radio signals that man broadcasts.

The utilisation of radio waves for the detection of reflecting surfaces began with the classical experiment of the late Sir Edward Appleton in 1925, which he conducted in order to demonstrate the existence of the Heaviside layer in the upper atmosphere. During the course of the last war developments took place which tremendously improved the methods and instruments used. As in the case of so many of the inventions primarily developed for the purpose of waging war, many useful applications have been found for radar in times of peace, and, in particular, it has proved of great service as an aid to aerial and marine navigation, and in meteorology and astronomy. Radar astronomy investigates the solar system with the echoes of signals sent out from the Earth.

Radiation, energy emitted in the form of a beam of rays or waves, *e.g.*, acoustic (sound) radiation from a loudspeaker, radiant heat from a fire, β-radiation from a radioactive substance. The radiation of electromagnetic waves from a body depends on its temperature, the amount of energy radiated per second being proportional to the fourth power of the absolute temperature. The hotter the body, the shorter the wavelengths of the radiation; thus the colour of a glowing body depends on its temperature. Of paramount importance to us is radiation from the sun. Amongst other radiations, the sun sends ultra-violet, visible, and infra-red (heat) waves. The principal gases of the atmosphere are transparent to practically all of the solar and sky radiation and also that which the earth re-transmits to space. Carbon dioxide and water vapour, however, strongly absorb certain types, the latter, as clouds, playing an important rôle in regulating the temperature of the globe. The cooling of the ground on a clear night is a result of the outgoing long-wave radiation exceeding that coming down from the sky; at sunrise cooling ceases as the incoming radiation becomes sufficient to compensate for the loss of heat.

Radiation, Cosmic. *See* F3(2).

Radio. The theory of electromagnetic waves—of which the radio wave is one—was originated by the British physicist James Clerk Maxwell (F12). He showed that both electrical and optical phenomena in space are essentially similar in character, and that the waves if short in wavelength are those of light, and if of longer wavelength those of radio waves. Heinrich Hertz made many useful discoveries about the waves themselves, and about their behaviour under differing conditions, and also about the apparatus for producing them. Marconi developed the use of radio waves as a practical means of communication.

Radio methods are vital for the transmission of observed data from space vehicles back to earth, a process known as "telemetering." This is done by converting the observations into electrical pulses which actuate a suitable radio transmitter so that it radiates a signal, in coded form, which can be received at a ground station and decoded. The transmission of such a signal can also be remotely controlled by means of signals from the earth. Photographic and television techniques may also be employed for obtaining the desired information and sending it back to earth, as in the case of the Russian picture of the reverse side of the moon and the American pictures of the lunar surface. The information may be stored within the spacecraft for a time, and

then, upon receipt of a particular radio signal from the earth transmitted by the spacecraft at a time convenient for its reception. Soviet scientists, by a special technique, were able in the case of their *Venus IV* probe (Oct. 1967) to parachute an instrumented canister from the spacecraft so that it could descend slowly to the surface of the planet—a feat described by Sir Bernard Lovell, who was recording the enterprise at Jodrell Bank, as "an experiment of classic elegance." *See also* Radio Astronomy, Telemetry.

Radioactivity is the spontaneous transformation of atomic nuclei, accompanied by the emission of ionising radiations. It was discovered in 1896 by Becquerel, who noticed that salts containing uranium sent off radiations which, like X-rays, can blacken a photographic plate. Two years later Marie and Pierre Curie discovered several new chemical elements which possessed the same property, but many times more intense than uranium, the most important of these was radium. Shortly afterwards it was established, mainly by Rutherford, that three types of radiations called α-, β-, and γ-rays, are emitted from radioactive substances. It was also Rutherford who, jointly with Soddy, deduced that the emission of the radiations is associated with the spontaneous disintegration of atoms which result in the transformation of one radioactive substance into another. A series of such transformations ends when a stable element is produced. All of the heavy radioactive elements can be arranged in three radioactive series, called, the uranium, thorium, and actinium series. Initially, radioactivity was thought to be a property confined only to a few elements occurring in nature. In 1934, however, Irene and Frederick Joliot-Curie discovered that ordinary elements can be transformed into radioactive forms by subjecting them to bombardment with α-particles. Following this, it was found that beams of other fast particles produced in accelerators can also render ordinary substances radioactive. Nowadays it is known that radioactivity is a general property of matter; any chemical element can be produced in one or more radioactive forms, or isotopes. *See* F11.

Radio Astronomy. The science of radio astronomy makes use of radio apparatus and techniques for the observation of events occurring in far distant parts of the universe, and, in so doing, is able to enlarge upon the observational field of optical astronomy in a remarkable way. By means of radio telescopes it is possible to observe parts of the universe so far distant that the radio waves received have taken thousands of millions of years to travel from their source to the earth, and thus to observe happenings which may have occurred near the beginning of the history of the universe. Thus radio astronomy works with signals that are broadcast by objects in space.

There are two main types of radio telescope. The first, known as the interferometer, uses aerials spaced at large distances so as to cover a wide tract of ground. This has a high "resolution" but suffers from the disadvantage that it can "observe" only a very limited area of the sky overhead, as the earth turns upon its axis. The second, and "steerable," type, is that of the radio telescope at Jodrell Bank, Cheshire, which consists of an enormous concave metal bowl, with the radio aerials at its centre. This, though it has a lower "resolution," can be directed or "steered" on to any part of the sky which is above the horizon, and so can undertake a much more comprehensive observational programme. It can be used either to receive radio waves coming from desired sources or to transmit them and then pick up the echo from, for example, the moon or a planet, as in radar.

One source of radio waves which can be detected by radio telescopes is our own sun, whose behaviour under "quiet" and "abnormal" conditions can be observed in this way. Some of the planets also appear to emit radio waves from parts of their surface. But much more remarkable are the waves which are received from quasars (*q.v.*).

Radiosonde, a weather station in miniature carried aloft by a free balloon to heights normally in the neighbourhood of 10 miles. Signals representative of values of atmospheric pressure, temperature and humidity are transmitted simultaneously by radio to ground receiving apparatus. The position of the balloon at any instant can be determined by radar, enabling the speed and direction of the upper winds to be deduced.

Radium, a radioactive metal, symbol Ra, discovered by Marie and Pierre Curie in 1898. Atomic weight 226. The Radium Institute, founded and equipped by Lord Iveagh and Sir Ernest Cassel, was opened in 1911 for the treatment of patients and research into the effect of radium on the human system. Radiotherapy (use of X-rays from radium) is used in the treatment of cancer.

Radon, a radioactive gaseous element, symbol Rn, formed by radioactive decay of radium. Its discovery completed the series of elements known as the inert (or rare) gases.

Rail, a well-known genus of the *Rallidae* family, including the Water Rail, the Moorhen, Corncrake, and Coot, resident in the British Isles.

Rain. When moist air rises into lower temperatures and becomes saturated, condensation takes place on the numerous hygroscopic particles present in the atmosphere. If the temperature is above freezing a cloud of small droplets is formed, and as the air continues to rise they grow in size until the weight is great enough to make them fall to the earth as rain. The formation of large raindrops has been attributed to coagulation of smaller drops of different sizes, while another mechanism depends upon the presence in the cloud of ice crystals as well as water drops. In temperate latitudes snowflakes falling from the freezing level melt in the warmer air below, producing large raindrops which grow in their flight through the lower part of the cloud.

Rainbow, a beautiful colour effect visible to an observer with back to the sun and facing a rain shower, caused by the refraction and reflection of sunlight in minute water-droplets in the air. From high in the air it would be possible to see a rainbow as a complete circle, but from the ground the most that can be seen is a semicircle when the sun is just on the horizon; the higher the sun is, the smaller the arc of the rainbow. When conditions are suitable two bows are seen, the secondary with the colours of the spectrum reversed. The colours of the rainbow are seven: red, orange, yellow, green, blue, indigo, and violet—the colours of the spectrum. *See also* Aurora.

Raingauge, an instrument consisting of a deep metal funnel whose stem dips into a graduated glass jar from which the depth of the rain water collected can be read. Continuous records of rainfall are provided by self-registering instruments.

Rain Making is a facility long desired by mankind, especially in the drought-ridden regions, and attempted throughout history by numerous non-scientific means. Since the Second World War it has been proved that clouds can sometimes be made to rain or snow by dropping into them from an aeroplane very cold particles of solid carbon dioxide or certain chemicals. This makes the moisture of the cloud form tiny ice crystals which grow big and finally fall out of the cloud. The process is quite complicated and not fully understood and the practical exploitation is somewhat chancy at present, but experiments have been made in many countries and the United States has a considerable programme of study. As well as scientific there are commercial and legal problems; premature commercial exploitation has resulted in disillusionment in some cases.

Rambouillet, a royal French château (14th cent., rebuilt 18th cent.), near Paris, and the official summer residence of the President of the French Republic. Also the name of the famous literary salon of the Marquise de Rambouillet (1588–1665).

Rampant, in heraldry, is a term applied to the figure of an animal with forelegs elevated, the dexter uppermost. When the animal is shown side-faced it is *rampant displayed*, when full-face, *rampant guardant*; when looking back

rampant reguardant; and when in sitting position *rampant sejant*.

Rape, a cruciferous plant yielding coleseed or rapeseed, extensively grown in all parts of Europe and India. Rape oil or colza is made from the seeds, and the leaves and refuse are used for sheep-food. Rape oil is a yellow, thick oil, of considerable commercial importance as a lubricant and for other purposes. It was at one time much used as an illuminant.

Rare Gases (also called **Inert Gases**). These are a group of elements which are chemically inert, comprising helium, neon, argon, krypton, xenon, and radon. Cavendish in 1785 noticed that there was in air some gas which was not oxygen, nitrogen, or carbon dioxide, but it was not until 1894 that the first of the rare gases was found by Rayleigh and Ramsay. This they called argon (inert). After the discovery of helium in 1895 Kayser, Rayleigh and Travers soon isolated the other gases except radon, which was later detected as a radioactive decay product of radium. Some of these inert gases are used to fill electric-light bulbs, and helium is used in balloons, since it is very light.

Rat, a well-known order of rodent embracing many species. The *brown rat* appeared in Europe early in the 18th cent., coming from the East and entering by way of Russia; now it is widespread and met with in Britain and all parts of the Continent. The *black rat*, which was the common rat before the arrival of the brown species, is a smaller animal and now comparatively scarce. There are numerous other kinds, all of them gross feeders, and existing in such numbers in many places as to constitute a pest.

Rationalism. *See* Section J.

Rattlesnake, venomous snakes which obtain their name from the possession of a rattle in the end of their tail, consisting of horny pieces so arranged that when vibrated they make a rattling sound. They are only found in N. and S. America.

Raven, a black-plumaged bird of the crow family, with raucous voice and massive bill. Occurs in many parts of Europe, Asia, and America. Ravens are easily domesticated and form interesting pets. Dickens had one which he described in *Barnaby Rudge*.

Ray, fish with a very flat body and broad and fleshy pectoral fins, related to the sharks. There are about 140 species. In Britain they are generally called *skate*.

Razorbill, a sea-bird of the auk family, having a high, furrowed bill and black-and-white plumage. It inhabits rocky cliffs during the breeding season, and at other times is mostly out on the open sea.

Realism is a vague term. As a movement in art it can be said to have started with Gustave Courbet in the mid-19th cent. in his revolt against the classicism of Ingres and the romanticism of Delacroix. He was a man of strong radical views, and like Zola, Balzac, and Flaubert in literature, turned to the actuality of everyday life, recording it with frankness and vigour. Some young English painters, notably Bratby, of the "kitchen sink" school, practise what some describe as social realism. In another sense, realism is an attitude concerned with interpreting the essential nature of the subject, revealing truths hidden by the accidentals of ordinary visual appearance. Thus form becomes more significant than content. Beginning with Cézanne and Van Gogh this trend passes on to Cubist and Abstract painting. *See also* Section J (philosophy), and Section I (dramatic term).

Record Office, in Chancery Lane, London, the place where the Public Records of England are preserved, including Domesday Book, the various Rolls of Charters, and important historical documents.

Rectifier, an electrical device which will allow electric current to flow in one direction only and can therefore be used for turning alternating current into direct current. Since electricity is usually supplied in alternating form and frequently needed in direct form, rectifiers are of very common use both in industry and the home, for example in radio and television and for battery chargers. Rectifying properties are possessed by a number of different devices, one of which is a thermionic diode (*see* Valve). Very large valves filled with mercury vapour are often used for rectifying heavy currents for industrial purposes. Many other rectifiers use semiconductors in close contact with metals or with other semiconductors because such junctions have the property of passing electric current easily only in one direction.

Recusants, people who refused to attend the Anglican Church or to acknowledge the ecclesiastical supremacy of the Crown in the 16th and 17th cent.

Red Crag, the name given to a strata of gravel or sand, containing certain fossil mollusc deposits, found on the Suffolk and Norfolk coasts.

Red Cross. *See* Geneva Convention.

Redstart, a small bird of the Thrush family of handsome plumage and striking song. Two species visit Great Britain; the Common Redstart, with bright chestnut rump and tail, white forehead, and black cheeks, favours wooded country, and the Black Redstart, with black breast and throat, chestnut tail and white wing bars, prefers rocky ground or bombed buildings, and breeds in S. England.

Redwing, a bird of the Thrush family which finds its way to this country for the winter. Resembles the song thrush, but distinguished by smaller size, buffish-white eye-stripe, chestnut flanks and underwings. It has bred in Scotland and on Fair Isle.

Redwood *or* **Sequoia.** This genus of coniferous tree comprises two species of Redwoods occurring in N.W. America. Specimens of one species, the Giant Redwood, reach a height of over 300 ft. and a thickness of 36 ft. The age of the largest, the General Sherman tree, is put at 3,500 years.

Referendum and Initiative, two methods by which the wishes of electors may be expressed with regard to proposed legislation. It is developed to the highest extent in Switzerland. In a referendum some specific matter is referred to the electors. The Initiative is the means by which electors can compel their representatives to consider a specific issue. After consideration by the legislature it must then be submitted to the electorate for approval (*i.e.*, a referendum). Gen. de Gaulle made use of the referendum in seeking the consent of the French nation for his policies. In a democracy a referendum should be preceded by a programme of education and public debate.

Reformation. *See* Section J.

Reform Bills. The principal Bills have been passed for the reform of the Parliamentary franchise. The first was the great Reform Bill of 1832, introduced by Lord John Russell and enacted under the Whig administration of Lord Grey. In addition to a sweeping redistribution of seats, this Act greatly extended the franchise but still left many people without the right to vote. The second Bill, passed by Disraeli in 1867, by giving the vote to workers in towns, established household suffrage. A third Bill, passed in 1884 under a Gladstone ministry, removed the distinction between borough and county franchises, enfranchised agricultural workers, and thus gave the vote to all men over 21. Women had to wait until 1918 to get the vote at the age of 30. The Representation of the People (Equal Franchise) Act, 1928, gave them the right to be registered as Parliamentary electors at the age of 21, thus making England into a true democracy. The Representation of the People Act, 1948, abolished the representation of the universities and the separate representation of the City of London and the business-premises vote. The Representation of the People Act, 1969, reduced the minimum voting age from 21 to 18 at both parliamentary and government elections.

Refraction. The change of direction which light rays and other rays undergo when passing from one medium to another. The phenomenon is due to the fact that in different media light (and other forms of radiation) has different speeds.

Refractory, a substance capable of standing high temperatures and therefore useful for making furnaces and allied apparatus. Some insulating refractories are fire-clay, alumina, porcelain, carborundum, graphite, and silica. Some refractory metals are platinum, molybdenum,

tungsten, tantalum, and the alloys nichrome, chromel, alumel.

Reindeer, a genus of deer horned in both sexes, occurring only in northerly regions. It has an average height of 4 ft. 6 in., is very fleet of foot, and the Laplanders utilise it for draught purposes and for food.

Relativity. The laws of relativity have been substantially proved and have revolutionised our ideas as to the nature of space, time, matter, and energy and forced us to think along new lines. In 1949 a new theory by Einstein was announced which sets forth in a series of equations the laws governing both gravitation and electromagnetism, which is said to bridge the gap that separates the universe of the stars and galaxies and the universe of the atom. At present the one is explained by relativity, and the other rests on the quantum theory. *See* F15.

Relief in sculpture is of three kinds—high relief (*alto-relievo*), in which the figures stand out to the extent of one-half of their natural proportions, low-relief (*basso-relievo*) when the figures project but slightly; and middle-relief (*mezzo-relievo*), when the projection is intermediate.

Renaissance. *See* Section J.

Republican Party of the United States was born by the fusion in 1854 of the group who called themselves National Republicans, having split from the Democrats over tariffs in 1825, and the northern Democrats, both of them being opposed to slavery. It came to power when Abraham Lincoln was elected President in 1860 and won 14 of the 18 presidential elections held between 1860 and 1932. It was defeated in 1932 largely as a result of the economic depression and reached its lowest ebb in the years of Roosevelt's New Deal (*q.v.*). The Party went on being defeated every four years until Eisenhower's victory in 1952. Nixon narrowly failed to defeat Kennedy in 1960 and Goldwater was decisively beaten by Lyndon Johnson in 1964. In 1968 and again in 1972 Nixon was successful in winning the Presidency. The Party has its interventionist and its isolationist wings, its hawks (conservatives) and its doves (liberals). The symbol of the party is an elephant, the invention of Nash, a cartoonist, in 1874.

Requiem. Properly a mass for the dead, the term is extended to cover musical settings by Palestrina, Mozart, Verdi, and others.

Reredos, the ornamental screen at the back of the altar or communion table. It is often of a highly decorative character and is an architectural feature in many churches in Spain. Other examples are to be found in the following cathedrals in England: Southwark, St. Albans, Winchester, Durham, and Liverpool.

Resins, natural resins are vegetable compounds largely employed in the industrial arts. They comprise india-rubber, amber, mastic, copal, etc. "Synthetic resins" is a term sometimes used as a synonym for "plastics."

Reuter, an international news agency, organised since 1941 as a trust and owned by the newspapers of Britain, Australia, and New Zealand, founded by Baron J. de Reuter in 1849.

Rhea, a large flightless bird, the "ostrich" of S. America, distinguished from the ostrich proper by smaller size, longer beak, larger wings, no tail and 3 toes instead of 2. There are 2 species.

Rheology, the science of flow. *See* F17(2).

Rhesus Factor. *See* Index to Section P.

Rhinoceros, a large hoofed quadruped, of which there are nine existing species native to the river and marsh regions of Africa, India, Borneo, and Java. It is remarkable for its thick hide and upturned snout, from which springs a long horn. The white rhinoceros, which is scarce, is the biggest species, attaining a length of 10–12 ft. and a height of from 5 to 6 ft.

Rhodium, a metallic element, symbol Rh, discovered by Wollaston in 1804. It is found in platinum ores in small amounts, generally less than 2 per cent. With platinum it gives a very hard and durable alloy. It is also used, instead of silver, in putting the reflecting layer on a mirror.

Ribbon Fish *or* **Oarfish**, a deep-sea fish, deriving its name from its ribbon-like shape. Though many feet in length, it is only an inch or two thick. The ribbon fish is rarely met with because of its habitat, and most of what is known about it has been learnt from specimens occasionally cast ashore during storms.

Rice, a grain-yielding grass, of which thousands of strains are known today, extensively cultivated in China, India, and certain parts of America, and forming the main food of the peoples of China, Japan, India, and the Malayan regions. Some 95 per cent. of the world's rice is produced and consumed in the Orient. The grain with the husk is known as "paddy." Arrack, an alcoholic liquor, is made from fermented rice seeds.

Rime, a crystalline deposit of ice formed on objects exposed to wet fog at the same time as frost.

Rinderpest *or* **Cattle Plague**, is a highly contagious disease affecting cattle, sheep, and other ruminants. In Europe the disease has been eradicated, but it was formerly very widespread and caused great loss of life amongst cattle. The disease is caused by a filtrable virus, and is attended by fever and congestion of the mucous membranes.

Ring Dove *or* **Wood Pigeon**, a blue-grey bird, distinguished from other pigeons by larger size (16 in.), white wing-bar, glossy green-and-purple neck, and white half-collar. It is very common in Britain

Rituale, the book of rites used in the Roman Catholic Church for the administration of certain sacraments and other church ceremonies. Like the Roman breviary, it dates in its present form from the Council of Trent.

RNA. (Ribonucleic Acid). *See* **Nucleic Acids.**

Roaring Forties, name applied to the prevailing westerly winds over the oceans in the temperate latitudes of the Southern Hemisphere.

Robin (or Redbreast). A small bird with olive-brown upper parts and orange-red forehead, throat, and breast; both sexes look alike. The young are speckled, lacking the red breast. Its wide European distribution includes the British Isles, where it is the national bird. It also occurs in N. Africa and W. Asia. The nest is placed in a great variety of situations including holes in banks, trees, and walls; in sheds, amongst ivy, and sometimes in old tins. Nesting-boxes are readily adopted, but care should be taken to ensure that the entrance-hole is small enough to exclude starlings. Robins are pugnacious and defend their territories with vigour. Their attractive appearance, trustful disposition, engaging ways, and sweet song make them extremely popular. The name robin is also applied to a number of very different birds, one of which, the American Robin, occasionally wanders to Europe.

Rock Dove, the grey pigeon *Columba livia* of Europe and Asia, ancestor of the domestic pigeons as Darwin was the first to show.

Rockets for use in war were first studied by Sir William Congreve early in the 19th cent., and proved very destructive in siege operations. They were invented by the Chinese as long ago as the 11th cent. The Germans devised the huge V2 rocket, carrying a ton of explosive, which was used near the end of the war to bombard London. Rockets are propelled by the burning of fuel (*e.g.*, oxygen or nitric acid), the exhaust, being ejected at high velocity, thrusts the rocket forward. For the study of the properties of the atmosphere vertical sounding rockets are used. Rocket flight in outer space was first presented as practicable by the Russian rocket expert, K. E. Tsiolkovsky, in 1903. The provision of sufficient launching velocity involves the use of rocket motors with adequate thrust. To launch a satellite into an orbit circulating within a few hundred miles of the surface a velocity of 18,000 m.p.h. must be imparted. This may be done by using a multi-stage launching system. When the first-stage motor has burned out it drops off, so that, when the second-stage motor ignites, it does not have to support the weight of the first-stage, and so on. If the launching velocity is increased to 25,000 m.p.h. the vehicle will not return to the neighbourhood of the earth but pass out of the range of the earth's gravitational pull completely. Unless the launching velocity reaches 100,000 m.p.h. it will not escape from the sun and will become an artificial planet. *See also* **Space Research.**

Rock Magnetism. The study of naturally occurring magnetism in rocks is a subject which has gained considerable importance in recent years.

There are two principal reasons for this. One is that this so-called "fossilised magnetism" may be able to tell us more about the past history of the earth's magnetic field. The other is that after many years of heated dispute between geologists rock magnetism promises to settle once and for all the controversy as to whether or not the continents have changed their relative positions in past times (continental drift theory (*q.v.*)). This branch of geophysical research, in addition to its academic interest, may well have important economic consequences. It might, for instance, become possible to locate mineral deposits once accumulated under special conditions at certain latitudes but now drifted to other places. Salt and similar deposits formed by the continuous evaporation of solutions in hot countries are one example; oil may well be another. There has been a *steady* change in rock magnetisation direction with geological time. It is now known with some accuracy that the most recent reversal took place 700,000 years ago. It has been found that the older the rock, the farther removed is its fossil magnetisation from the present field.

Rococo, an architectural style which was, in effect, the final stage of **Baroque** (*q.v.*). The name first came into use about 1830 to describe the period 1720–70 and means "shell-shaped" (French *Rocaille*), since the shell was a favourite motif in Rococo ornamentation. About the beginning of the early 18th cent. the heavy older type of Baroque began to show even less restraint than had characterised it in the past; it became still less utilitarian, and showed a kind of playful lighthearted vitality which manifested itself in a wealth of ornamental invention. Baroque was flamboyant and robust, Rococo frivolous. In architecture Rococo is naturally found in those areas where the Baroque had flourished, *i.e.*, Munich, Prague, Vienna, and Dresden. In painting, the best expressions of Rococo are to be seen in the works of the French painters Watteau (d. 1721), Boucher (d. 1770), a favourite of Mme de Pompadour, and famous as a decorator of boudoirs, and Fragonard (d. 1806). (As in the case of Baroque, it was typical of Rococo that the sculpture, painting, and the decorative arts of a building all expressed the same spirit.)

Roe, popular name given to organs in fish which produce eggs and sperms. "Hard roe" is that of the female and consists of eggs; that of the male is the soft roe or milt.

Roebuck, a deer that was formerly common in the forests and parks of Britain, but is now only found at large in the northern parts of Scotland.

Roller, a tropical Old World bird of the *Coraciidae* family, related to the hoopoe, kingfisher and bee-eater, of strikingly brilliant blue, chestnut, greenish-blue plumage. There are fifteen species, one of which breeds in the far north and visits the British Isles on its migrations to and from its winter quarters in Africa.

Romanesque Architecture, prevailed throughout Europe from the mid-10th to the 13th cent., and implies an art which developed from that of the Romans. Notable in Romanesque style were the rounded arch and masonry vaulting. Romanesque led to the graceful and more complex Gothic (*q.v.*). The Italians never regarded Gothic highly and Romanesque churches, generally based on the basilican plan (oblong with double colonnades and a semi-circular apse at the end), continued to be built there until the beginning of the 15th cent. Some of the best examples can be seen at Pisa (11th cent.), Florence (San Miniato, 1013), Lucca (12th cent.), and Milan (the 12th cent. San Ambrogio, most famous of all). In Germany Romanesque architecture flourished longer than in France or England; the most famous churches are in the valley of the Rhine, at Cologne (completely destroyed during the second world war) Mainz and Speyer. In France Romanesque churches are found in Burgundy, Provence and Normandy. For English Romanesque *see* **Norman Architecture**.

Roman Roads, highways constructed by the Romans. They were of great durability. The best known British roads were Ermine Street (London, Lincoln, York), Fosse Way (Lincoln through Leicester, Cirencester, Bath, Exeter), Watling Street (London to Shropshire).

Romanticism, a term for a movement in the arts—whether in music, painting, sculpture or literature—which seeks to give expression to the artist's feelings about his subject rather than to be concerned with form or reality. The romantic view is that art is nature seen through a temperament; the realist view is that art is a slice of life. In painting Delacroix (1798–1863) is the romantic artist par excellence with his uncontrolled expression of the passions and love of the exotic. In literature the Romantic movement reached its finest form in the works of Goethe, Schiller, and Heine; in the poetry of Byron, Keats, Wordsworth, Shelley and Blake; and in the writings of Victor Hugo. Since Romanticism is partly a matter of temperament in the artist just as Classicism is, it may be found at all times and places, although whether or not it becomes predominent depends on contemporary taste. Cubism, for example, with its attention to form is classical, whereas Surrealism with its attention to content is romantic. *See also* **Romantic Movement, Section J.**

Roman Walls were built as frontier barriers under the Emperors Hadrian (76–138) and Antoninus Pius (86–161). Hadrian's works, linking Wallsend-on-Tyne with Bowness-on-Solway, comprised a twenty-foot stone wall, ditches, turrets, "milecastles" fortresses, and a double earthen mound, or "Vallum." Impressive ruins are still visible at Chesters and Housesteads. Antoninus Pius, Hadrian's successor, made a further advance, but the turf wall which he built between Forth and Clyde was soon abandoned. Septimius Severus (146–211) restored Hadrian's wall after the assassination of Commodus and the subsequent civil wars. It was finally abandoned between 380 and 390.

Rood Screen, an ornamental partition, separating the choir from the nave in a church, and supporting a crucifix or rood.

Rook, a member of the crow family, abounding in most parts of the British Isles and found in Europe, Asia, and N. Africa. It has been introduced into New Zealand. Rooks usually nest in colonies in tall trees. They are highly intelligent birds, and their ways have long been the subject of much careful study.

Rosary, a circular chain of beads, used by Catholics when reciting a particular form of sustained prayer. Each bead represents an entire prayer, and the combined prayers constitute the Rosary.

Roses, Wars of the (1455–85), between the rival houses of York and Lancaster, for the possession of the English crown, began in the reign of Henry VI. and ended with the death of Richard III. on Bosworth Field. The emblem or badge of the Lancastrians was the red rose and of the Yorkists the white rose. All rivalry between the Roses ended by the marriage of Henry VII., the Lancastrian, with the Princess Elizabeth, daughter of Edward IV., the Yorkist.

Rosetta Stone, discovered in 1799 by the French at Rosetta in Egypt, and deposited in the British Museum. It is a piece of black basalt about 3 ft. long, and contains a decree of the Egyptian priests of Ptolemy V. Epiphanes (205–181 B.C.) in (1) hieroglyphics, (2) demotic, and (3) Greek characters. It was by means of the three different inscriptions on the same stone that hieroglyphic writing was first able to be deciphered.

Rotten Row, a corruption of *route de roi* (king's drive), the famous riding resort in Hyde Park.

Rouge et Noir, a well-known gambling card game played on a table divided into two sections and marked with two black and two red lozenges. Any number of players can take part, and the money is staked on the red or black spaces. The cards are dealt out, first to Noir, until the pips aggregate more than 30; then in like manner to the Rouge, and the packet coming nearest to 31 wins the stakes.

Roulette, a gambling game played on a table carrying a revolving wheel divided into 37 compartments. Each compartment bears a number, 0 (zero) and 1 to 36. The numbers are mixed and do not follow any particular order. Of these 37 numbers 18 are black and 18 are red, whereas zero is green. The players stake their money on any compartment, colour, or combination of numbers they please.

The wheel is whirled round and a ball is set rolling in the opposite direction, dropping finally into one of the compartments, thus deciding the winning number and colour.

Roundhead. In the reign of Charles I. and later, a Puritan or member of the Parliamentary party who wore his hair cut short. It was originally a term of derision applied by the Royalists, who usually wore ringlets.

Round Towers, high circular towers with conical roof and massive masonry walls, built during the early Middle Ages (*c.* 10th cent.) It is believed that they served as refugees and lookouts. These buildings are numerous in Ireland, and three remain in Scotland, including that at Brechin which is attached to the church.

Royal Academy of Arts was founded in London in 1768, under the patronage of George III. The early exhibitions of the Academy were held first in Pall Mall, and after in Somerset House, where the exhibitions continued to be held until 1836, when the National Gallery being built, the Academy moved its quarters to that building. In 1869 the present Royal Academy at Burlington House was opened. The Academy numbers (1973) 67 R.A.s and 24 A.R.A.s. List of presidents: Sir Joshua Reynolds (1768), Benjamin West (1792) James Wyatt (1805), B. West (1806), Sir Thomas Lawrence (1820), Sir M. A. Shee (1830), Sir C. Eastlake (1850), Sir F. Grant (1866), Lord Leighton (1878), Sir J. E. Millais (1896), Sir E. J. Poynter (1896), Sir Aston Webb (1919), Sir F. Dicksee (1924), Sir William Llewellyn (1928), Sir E. Lutyens (1938), Sir A. J. Munnings (1944), Sir Gerald F. Kelly (1949), Sir A. E. Richardson (1954), Sir Charles Wheeler (1956) and Sir Thomas Monnington (1966). The Academy holds an exhibition of pictures, statuary, and architectural designs every summer.

Royal Hospital, Chelsea, built by Wren, was opened in 1694 as an institution for invalid soldiers.

Royal Institution, established 1799, and incorporated by Royal Charter in 1800 for "the promotion, extension, and diffusion of Science and of Useful Knowledge." It was in the building of the Institution that Faraday conducted his experiments. Today it has extensive research laboratories. Famous also for its Christmas lectures designed for a juvenile audience. Director, Prof. Sir G. Porter, F.R.S.

Royal Society was founded in 1660 and incorporated by Royal Charter in 1662, Viscount Brouncker being named the first president. Its *Philosophical Transactions* date from 1665. Among those who served as president of the Royal Society are Sir Christopher Wren, Pepys, Sir Isaac Newton, Sir Joseph Banks, Sir Humphry Davy, Prof. T. H. Huxley, Lord Rayleigh, Sir Archibald Geikie, Sir J. J. Thomson, O.M., Prof. Sir C. S. Sherrington, O.M., G.B.E., Lord Rutherford, O.M., Sir William Henry Bragg, O.M., Sir Henry Dale, O.M., Sir Robert Robinson, O.M., Lord Adrian, O.M., Sir Cyril Hinshelwood, O.M., Lord Florey, O.M., Lord Blackett O.M. (1965), Sir Alan Hodgkin, O.M. (1971).

Rubber, produced from the juice of certain trees and shrubs of tropical countries, is in such extensive demand now for tyres and other purposes that rubber plantations have been established in almost every part of the world where rubber can be grown, particularly in Indonesia and Malaysia. The Amazon is the original source of all present-day rubber. In recent years great advances have been made in the production of synthetic rubber.

Rubicon, a small river falling into the Adriatic, and forming one of the Italian boundaries, the crossing of which anciently involved decisive action and constituted a declaration of war. Thus the phrase "crossing the Rubicon", denoting an act from which there is no withdrawal.

Rubidium, a metallic element, symbol Rb, most closely resembling potassium. It is silver-white and very soft, and was discovered in 1861 by Bunsen and Kirchhoff, using the spectroscope. It is rare, occurring in small amounts in the mica called lepidolite and in potash salts of the Strassfurt deposits in Germany.

Rubrics are instructions in regard to the ceremonies of the Church, appearing in red in the Prayer Book.

Ruby is a deep red variety of Corundum (aluminium oxide); one of the most valued of precious stones. Burma yields some of the finest, and rubies of inferior colour are found in Siam, Ceylon, South Africa, and Brazil.

Rudd, a fresh-water fish of wide distribution, plentiful in the rivers of Britain, and found in most other parts of Europe, also in Asia Minor. It is of a reddish-gold colour, with a greenish-blue beard.

Ruff, a bird related to the common sandpiper, at one time common in the Fen districts. The males have a ruff of feathers round the neck in the breeding season. The female is the Reeve.

Ruffe *or* **Pope,** a small fresh-water fish common in most parts of central Europe, and similar in appearance to the ordinary perch. It is found in British rivers.

"Rule, Britannia!" the national sea-song of England, was written by James Thomson (1700–48), the author of the "Seasons," and set to music by Dr. Arne about 1740. The poet's words were "Britannia, rule the waves!" but it is usually rendered "Britannia rules the waves."

Rum, an ardent spirit distilled from molasses, and containing from 40 to 50 per cent. of alcohol. It is chiefly manufactured in the West Indies, and derives its special flavour from a volatile oil.

Ruminants, animals that chew the cud, being provided with a compartmented stomach, enabling them to swallow food, and later to bring it back to the mouth for mastication; *e.g.*, sheep, goats, oxen, etc. While in the rumen, or storage compartment, some digestion of food, especially cellulose, takes place by bacterial action.

Runcible spoon, a kind of fork used for pickles having three broad prongs. The word was used by Edward Lear about 1870 as a nonsense word and may be derived from *Rouncival* meaning large or huge from the bones said to have been dug up at *Roncesvalles* where Roland fell. Rouncival peas are the large peas called "marrowfats."

Runes, certain characters of an alphabet found in inscriptions in the Germanic languages, discovered cut upon stone monuments and implements found in many parts of Europe, including England. The runic alphabet originally had 24 letters. Scholars agree that some of the runes derive from Greek and others from Latin.

Ruskin College, the first residential college for working people, founded at Oxford in 1899 by Mr. Walter Vrooman, an American.

Rusts, parasitic fungi, some common species of which have reddish spores which in a mass have a rusty appearance. A well-known species is the Wheat Rust (*Puccinia graminis*), which has an alternative host in the barberry.

Ruthenium, a greyish-white metallic element, symbol Ru, discovered by Claus in 1845. It is harder and more brittle than platinum, in whose ores it occurs.

Rutile, mineral titanium dioxide. It is found in many igneous rocks, and in gneisses and schists. Its commonest colour is reddish-brown.

S

Sabaoth, a Hebrew word, meaning an army or host, and applied sometimes to the Supreme Being, *e.g.*, "the Lord of Hosts" (Rom. ix. 29).

Sabbath and Sunday. Sunday, or the Lord's Day, is the first day of the week in the Christian year. It was substituted for the Jewish Sabbath in the 1st cent. A.D. as the Christian day of worship in commemoration of the Resurrection. The Sabbath, in the Jewish system, was the last day of the week (Saturday in the Christian calendar), designated as the day of religious rest in the fourth commandment of the Decalogue. It was the Puritans at the time of the Reformation who applied the term Sabbath to the Christian Sunday and the two terms have been used indiscriminately ever since.

Sabbatical Year was instituted by the Jews in ancient times for the purpose of giving the soil a rest from cultivation. This was every seventh year. In universities a sabbatical year is a year of absence from duty for the purpose of study and travel, granted to professors at certain intervals.

Sable, a furred mammal of the weasel family

mainly inhabiting Siberia. It is bright brown in colour, and has a long, bushy tail. American sable is a marten.

Saccharin, a white crystalline solid manufactured from toluene, 550 times as sweet as cane sugar. It is used as a sweetening agent; as a substitute for sugar when sugar is forbidden, as in certain diseases, or when there is a shortage. It has no value as a food.

Safety Lamp, as used in coal mines, was invented by Sir Humphry Davy in 1816. The flame is enclosed in a cage of fine-meshed wire which allows air to enter and promote burning, but conducts away the heat generated in combustion so that no product of combustion escapes at a temperature high enough to ignite explosive gases in the mine.

Sainfoin, a widely cultivated forage plant, especially adapted for sheep. It is of strong, leafy growth and bears bright red flowers. It belongs to the same family of flowering plants as peas and beans.

St. Elmo's Fire, a glowing brush-like discharge of electricity which takes place from sharp-pointed objects on mountains or the masts of ships exposed to the intense electric fields of thunder-clouds.

Saints' Days. In the liturgy of the Roman Catholic church a saint is commemorated and his intercession sought on a special day (saint's day), usually the anniversary of his death. Pope Paul has decreed that from 1 January 1970 the following saints are to be dropped from the calendar: Christopher, Catherine of Alexandria, Alexis, Pudenzia, Susan, Margaret, Viviana, Eustace, Martina, Venantius, and Domitilla. Many others, including our own Saint George, and Nicholas (Santa Claus) have been demoted though they may be venerated locally. There are now only 153 saints' days in addition to those in honour of the Apostles, Saint Joseph and the Virgin Mary. The festival of All Saints is on 1 November.

Salamanders are amphibia superficially resembling lizards, from which they differ in having a moist skin and no scales.

Salic Law was probably instituted in France in the 5th cent. for the purpose of excluding females from inheriting the Crown. The Bourbons introduced the same law into Spain, but this was abolished by decree in 1830 to enable Isabella II. to succeed.

Salmon, a fish notable for its habit of returning from the sea to spawn in the river where it was itself hatched. Their origin can be inferred from the chemical composition of certain blood proteins. Salmon from the two sides of the Atlantic migrate to communal feeding grounds off Greenland.

Saltpetre. *See* Nitre.

Salvarsan, the organic arsenical compound arsphenamine, which Ehrlich discovered was able to kill inside the human body the spirochæte germ that causes syphilis. Also known as "606." It has been superseded by neosalvarsan.

Salvation Army. *See* Section J.

Sanctuaries were places where offenders against the law were free from arrest, and previous to 1697, when sanctuaries were suppressed, several parts of London were treated as sanctuaries. The chief of these refuge localities was in Whitefriars. There were others in the Minories, Mitre Court, the Savoy, Westminster, and the Mint. Other sanctuaries were at Beverley and at St. Burian's in Cornwall.

Sanderling, small wading bird of sandpiper family; breeds in tundra regions of far north, and is seen on sandy beaches of Britain as a winter visitor. Conspicuous white wing stripe and, like Curlew, Sandpiper, Knot, Dunlin, and other members of sandpiper family, has marked change of plumage between winter and summer.

Sandpiper, small- to medium-sized wading birds of several species whose migratory powers are so great that they are found in most parts of the world. They include the Common Sandpiper, a bird about 7 in. long, greenish-brown head and back, white under-parts; beak long and slender. Other species met with in Britain are the Green, Purple, Wood, and Curlew-Sandpipers.

Sans-culottes (French = without knee breeches), a term applied by the French aristocrats to the revolutionary leaders during the French Revolution who wore long trousers instead of knee breeches.

Sanskrit is the language of ancient India, spoken by the Brahmins, and existing in early Oriental literature. It was the language of literature and government and is now confined to temples and places of learning. Its relationship to the modern Indian languages is rather like that of Latin and Greek to modern European languages.

Saponin. The term is a generic one applied to a range of organic compounds which produce frothy, soapy solutions. Saponins are extracted from the soapwort root, horse chestnut seeds, etc. Saponin is the basis of the "foam" used for fire fighting; it can be used like soap to make insecticides and fungicides adhere to the leaves of plants. Also used as detergents.

Sapphic Verse, a form of verse said to have been invented by Sappho, the lyric poetess of Lesbos, who flourished about 600 B.C.

Sapphire, a valuable deep blue variety of Corundum (aluminium oxide) found mostly in India, Ceylon, and Northern Italy. Synthetic sapphire is often used for gramophone styli.

Saracen, the name given in classic times to the Arab tribes of Syria and adjacent territories. In the Middle Ages the current designation among the Christians for their Muslim enemies.

Sarcophagus, the name given to a stone coffin, such as was used by the ancient Egyptians, Greeks, and Romans, for receiving the remains of their famous dead These sarcophagi were often decorated with rich carvings and sculptures.

Sardonyx. *See* Onyx.

Sassanides were a dynasty of Persian rulers descended from Artaxerxes from 226 to 652.

Satellites are small planets revolving round the larger ones. The moon is the earth's only satellite. Jupiter has twelve; Saturn, nine; Uranus, five; Mars, two; and Neptune, two. Of the 1,750 objects in orbit round the earth in mid-1969, 371 were artificial earth satellites.

Satin-Bird, one of the bower birds of Australia; the male is silky blue-back and the female greyish green. *See* Bower bird.

Satinwood, the timber of a tree plentiful in India and Ceylon, and valued for cabinet work. It is of fine grain and very hard. Varieties also exist in the West Indies, Florida, and Tasmania.

Satrap, the name given in ancient times to a Persian Governor of a Province.

Saturday, the seventh day of the week (the Jewish Sabbath), derived its name from Saturn, or, as some hold, is called after the Saxon idol, Saterne, which was worshipped on this day.

Saturn, a planet, the sixth from the sun, from which it is distant about 886 millions of miles, and around which it makes a revolution in about twenty-nine and a half years. It is about 71,500 miles in mean diameter, or nine times as large as the earth, and rotates on its axis in ten and a quarter hours. It is surrounded by a series of rings composed of myriads of tiny satellites. It has at least nine small satellites. *See* F7.

Saturnalia, festivals held in ancient Rome in honour of the god Saturnus. They were made the scene of boisterous festivities, and were continued for several days at the end of December.

Sawfish, a large marine ray found in tropical America and Guinea, whose snout often attains the length of several feet, and is provided with saw-like teeth. This "saw" is swung from side to side among a shoal of fish which form the food of this ray.

Sawfly. These insects are considered to be the most primitive members of the order (*Hymenoptera*) to which the bees and wasps belong. In appearance they resemble somewhat the latter, but there is no waist separating thorax and abdomen. The ovipositor is never used as a sting; usually it is saw-like so that the female can use it to make incisions into tissues of plants where the eggs are laid. The larvae look like caterpillars of butterflies and moths. One of the commonest species occurs on gooseberry bushes.

Saxons, a Teutonic race originally inhabiting what is now Holstein. By the 7th cent. they had, with the Angles and Jutes, conquered and colonised most of England.

Scald, the name of the Norse poets, who were

similar to the bards of Wales. They had to celebrate the achievements of their warriors and leaders.

Scallop, marine bivalve molluscs of the genus *Pecten*, which is widely distributed. The scalloped edge to the shell results from a pattern of radiating grooves. Related to the oyster.

Scandium, a metal element, symbol Sc. It was discovered in 1879 by Nilson, and occurs in small quantities in certain rarer minerals such as wolframite.

Scapular, a vestment hanging from the shoulder to the knees, worn by members of certain Roman Catholic orders. The name is also given to two small pieces of cloth worn over the shoulders by lay members of the Church in honour of the Virgin.

Scarabaeidae, a family of beetles (Scarabs) widely distributed through Africa and Asia and the inner parts of Europe. It is to this genus that the "Sacred Beetle" of the Egyptians belongs, and numerous representations of it are found on ancient monuments.

Sceptre, the staff or rod constituting the symbol of supreme authority. Tarquin, the elder, was the first Roman to assume the sceptre in 468 B.C. The French kings of the 5th cent. made a golden rod their sceptre.

Schism, an ecclesiastical term for division in a church. The Great Schism was the separation of the Greek Church from the Latin, finally established in 1054. The Western Schism was the division in the Roman Catholic Church from 1378 to 1417, when there were two lines of popes, one at Rome and one at Avignon, which arose over the election of Urban VI. and Clement VII. to the papacy and was more a matter of persons and politics than a question of faith.

Schist, the geological name of certain metamorphic rocks composed for the most part of minerals with thin plate-like crystals (*e.g.*, mica) so that the layers of a schist are closely parallel. Quartz occurs in schists, and where it preponderates the term "quartz schist" is applied.

Scientific Units. The International Bureau of Weights and Measures at Sèvres near Paris, is the custodian of accurate scientific measurement in terms of internationally agreed units. Methods of measurement are continually being improved and measurements of new kinds coming into use. In defining units certain principles have evolved which can be expressed as a statement of priorities:

(i) units should be so defined that measurements made in one laboratory should be reproducible in another with as much consistency as possible;

(ii) units of all kinds should, so far as practical, form an interrelated system based on as few fundamental units as possible;

(iii) the fundamental units adopted should have a natural basis, independent of particular man-made objects such as metal bars or weights. An invariable universal natural standard was achieved for the metre in 1958 when it was defined in terms of the wavelength of a line in the spectrum of krypton–86. *See* S.I. Units.

Schoolmen, the great scholastic philosophers of the Middle Ages who devoted themselves to the study and exposition of questions of religious inquiry, and attempted to reconcile the teaching of the Church with that of Aristotle. The chief Schoolmen were Archbishop Anselm, Albertus Magnus, Thomas Aquinas, Peter Lombard, Duns Scotus. *See also* Section J.

Scorpion. The scorpions constitute an order of the arthropods. Distinctive features are the pair of powerful claws at the head and a "sting" at the tail, which curves over the back in attack or defence so that it points forwards. The poison injected by the sting is potent, causing instant death in spiders, centipedes, etc., and acute discomfort to humans. The idea that a cornered scorpion can sting itself to death is a myth; scorpions are immune to their own poison.

Scorpion Fly. The scorpion fly, of which there are less than 500 species, constitute a separate order of insects, the *Mecoptera*. They have 2 pairs of membranous wings, and gain their popular name because in some species the end of the abdomen is turned up, though it does not function as a sting.

Scree *or* Talus, the mass of loose, angular rock fragments which accumulate towards the bottom of hill-sides and mountain-sides. These fragments have been detached by weathering processes, in particular frost action.

Scythians, nomadic conquerors and skilled horsemen of ancient times (9th–3rd cent. B.C.) who inhabited much of Southern Europe and Asiatic Russia.

Sea Anemones *or* Actinaria, an order of marine animals of the cœlenterate class *Anthozia*. They form a large and varied group of about 1,100 species and occur in many beautiful colours, flower-like in form.

Sea Butterfly, marine molluscs which propel themselves by two "wings," or side expansions of the foot. They constitute the order called *Pteropoda*.

Sea Cow. *See* Manatee.

Sea Cucumbers *or* Holothurians. These animals constitute the class of echinoderms called *Holothuroidea*. They are elongated and worm-like, with a ring of about twenty tentacles round the mouth. There are about 500 species.

Sea Eagle, a genus of flesh-eating birds related to the true eagles, kites, and other birds of prey. Examples are the Bald Eagle, emblem of the U.S.A., White-tailed Eagle (Grey Sea Eagle), and Steller's Sea Eagle of the Pacific coast of Asia. Last known in Britain in 1911.

Sea Elephant *or* Elephant Seal, a curious genus of seal, the males of which possess a proboscis a foot or more in length that suggests an elephant's trunk. They are found on the coast of California and in certain parts of the Southern Ocean; their blubber has a commercial value.

Sea Gravimeter, a new instrument to determine the density of the earth's crust beneath the oceans of the world. Designed by Dr. A. Graf of Munich and Dr. J. Lamar Worzel of Columbia University, it can detect changes of one-millionth of the value of gravity at the earth's surface and is being used in the oceanographical research programme of the I.G.Y.

Sea Hare, a genus of molluscs (*Aplysia*), so-called because of resemblance to a crouching hare. The shell is thin curved plate largely sunk in the animal's body. They have four tentacles, occur in Britain in the laminaria or ribbon-wrack zone, and discharge a purple fluid when molested.

Sea Horse, a sea-fish (*Hippocampus*), very numerous in the tropics and comprising some twenty species. Their bodies are ringed and they have prehensile tails. Their heads are horse-shaped, and they swim in a vertical position.

Sea Lily. A class of echinoderms, the sea lilies may be roughly described as "stalked starfishes." There are about 400 living species, and several thousand extinct species are known. Otherwise called Crinoids.

Sea Mouse, a genus of marine worms called *Aphrodite*, oval in shape, 8 or 9 in. long, iridescent, covered with fine bristles.

Sea Squirts *or* Tunicates. These animals are placed in the sub-phylum called *Urochorda*; found growing in rounded, jelly-like masses on rocks near low-water level. They get their name through the water jets they discharge.

Sea Urchin, species forming the class *Echinoidae*. The body is globular and covered with spines which may be used for both defence and locomotion. The main organs of locomotion are, however, the tube feet, as in starfishes. Much has been learnt of recent years by marine biologists from experiments with the purple sea-urchin *Arbacia*.

Seasons comprise the four natural divisions of the year, and are due to the inclinations of the earth's axis to the plane of the elliptic. *See* Section N.

Secondary Sexual Characters. Characters of animals which are distinctive of sex, but have no direct connection with the reproductive process. Examples are: the mane of the lion and the antlers of some deer.

Secretary Bird, so called because of the quill-like plumes about its ears, is a bird of prey related to the eagles and vultures; common in Africa, and

of considerable service as an exterminator of snakes. It is a large bird about 4 ft. in height.

Sedimentary Rocks. *See* F8(2).

Seismology, the branch of geophysics devoted to the study of earthquakes and other earth movements. The instruments used for the registration of earth tremors are termed seismographs and consist in principle of a pendulum system, the supporting framework following the ground movement and the bob remaining at rest, thus setting up a relative movement between two parts. In order to record the displacements completely, at one station, three seismographs are necessary to show the two horizontal and the vertical components of the motion. Apart from detection and study of waves from earthquakes, sensitive seismographs are now widely used in geophysical prospecting, particularly in the search for possible oilfields.

Selenium, a non-metallic element, symbol Se, related to sulphur, it is a dark red colour, and solid, found associated with sulphur, iron, pyrites, etc., though only in small quantities. It is a semiconductor (*q.v.*) and its special electrical properties have led to its use in photoelectric cells and rectifiers. Selenium is widely used in the chemical industry as a catalyst (*q.v.*) in producing aromatic hydrocarbons from less useful hydrocarbons. Also used in making some types of glass.

Semiconductors, substances with numerous special and useful electrical properties a few of which are:

(i) they conduct electricity much better than do insulators, but much less well than metals (hence their name);

(ii) their power to conduct depends strongly on their temperature—which makes them useful for temperature sensitive devices;

(iii) they are sensitive to light—hence their use in photoelectric cells and solar batteries;

(iv) when in contact with metals, or with other suitable semiconductors, they form a boundary layer which conducts electricity much better one way than the other—this is the basis of many rectifiers some of which, called crystal diodes, are an important component in radios and electronic devices;

(v) their electrical properties can be greatly influenced by putting in minute amounts of impurity, this enables semiconductor devices, especially transistors, to be made with carefully selected properties.

Semiconductors were known to Faraday, but the semiconductor age really arrived with the invention of the transistor (*q.v.*) in 1947. The ubiquitous transistor is only one of very many semiconductor devices which perform a variety of functions in technical apparatus of all kinds. Semiconductors used in technology are usually small crystals, frequently of germanium or silicon, and their robustness and small power consumption often make them superior to other devices, such as thermionic valves, which they often replace. Other semiconducting materials are cadmium sulphide, selenium, lead telluride, indium antimonide. *See also* F19.

Senate, the higher governing Assembly of a Legislature. The word, applied primarily to the Roman council, is also used to denote the upper chamber in the legislatures of France, the United States, and other countries. In certain universities the governing body is also called the Senate.

Sensitive Plant. A species of Mimosa (*Mimosa pudica*), whose leaves are extremely sensitive to touch, shaking, and burning.

Sepia, the " ink " of the cuttlefish. *See* Ink Sac.

September, the ninth month of the year, and the seventh of the old Roman calendar; hence the name, from Septimus. The designation was several times changed by the Emperors, but none of the new names survived for long.

Septuagesima Sunday, the third Sunday before Lent.

Septuagint, the Greek translation of the Old Testament made by Alexandrian Jews between 250 B.C. and 100 B.C. from Hebrew texts now lost. There are many differences between the Septuagint and the Massoretic version (A.D. 900), and therefore it is of great value for textual criticism. The symbol for the Septuagint is LXX.

Serfs, the name given to the slaves formerly existing in Russia, who answered to the condition of the feudal " villeins " of England. They were attached to the soil and were transferred with it in all sales or leases. Serfdom existed in Prussia until 1807 and in Russia until 1861.

Serpentine, a mineral: chemically a hydrous silicate of magnesium. Green serpentine is used as an ornament stone. Fibrous serpentine is called asbestos.

Serval, a small carnivorous animal of the lynx order, with black spots on a tawny ground. It is numerous in Africa, preys upon the smaller animals of the deer family, and is sometimes styled the " Tiger Cat."

Set, both in everyday speech (as in tea set, chess set) and in mathematics, a set is a collection of things. The members of the set can be specified by listing them or by describing the properties necessary for membership of the set, *e.g.*, the set of ginger-haired boxers. Set theory is a very important branch of mathematics founded by a great mathematician, Georg Cantor (1845–1918). Its development has influenced many other branches of mathematics. Perhaps one reflection of its fundamental nature is to be found in the fact that many schoolchildren, even of tender age, are now learning set theory and confounding parents who did not hear of it at school when they were there.

Settlement, Act of, passed in 1701, assigned the Crown to the House of Hanover in case of Anne's death without children. The decision represented the determination of the squires and the Anglican Church never again to trust themselves to a Roman Catholic king.

Seven Champions of Christendom, as set forth in mediæval literature, were St. George of England, St. Andrew of Scotland, St. Patrick of Ireland, St. David of Wales, St. James of Spain, St. Denis of France, and St. Anthony of Italy.

Seven Churches of Asia, referred to in the Revelation of St. John, were those of Ephesus, founded by St. Paul in 57, Smyrna, Pergamos, Thyatira, Sardis, Philadelphia (Lydia), and Laodicea (Phrygia), all in W. Asia Minor.

Seven Wonders of the World were: 1, the Pyramids of Egypt; 2, the tomb of Mausolus, King of Caria (hence the word mausoleum); 3, the Temple of Diana at Ephesus; 4, the Walls and Hanging Gardens of Babylon; 5, the Colossus at Rhodes; 6, the Ivory and Gold Statue of Jupiter Olympus; and 7, the Pharos, or Watch Tower, built at Alexandria by Ptolemy Philadelphus, King of Egypt.

Seven Years' War was waged by Frederick the Great and England against Austria, France, and Russia, from 1756 to 1763. It resulted in the secession of Silesia to Prussia, of Canada to England, and in the strengthening of our Indian Empire.

Sexagesima Sunday is the 2nd Sunday before Lent.

Sextant, an instrument which has superseded the quadrant as a measurer of angles between distant objects. It is of special importance in navigation and surveying, and contains 60 degrees described on a graduated arc. A small telescope is attached and there are also a couple of mirrors which reflect the distant objects so as to enable them to be accurately observed. The invention is attributed to John Hadley, and to Thomas Godfrey independently, about 1730. Even today it is still the best instrument for telling where you are at sea.

Shad, a marine fish belonging to the same genus as the herring. It is found along the Atlantic Coast of the U.S.A., and ascends rivers to spawn.

Shagreen, shark's skin: also untanned leather of peculiar grain made from skins of wild asses, camels, and horses.

Shalloon, a kind of cloth manufactured from wool and worsted, and used chiefly for women's dresses and coat linings. It gets its name from the fact that it was originally made at Chalons.

Shamrock, the three-leaved clover-like plant native to Ireland and its national emblem.

Shark, a large and powerful ocean fish, comprising many species, very widely distributed, but most numerous in tropical seas. They have formidable teeth and are the most carnivorous of all fishes. They usually attain a large size, the

whale-shark being often of a length of 50 ft. Commercially the shark yields shagreen from its skin, the fins are made into gelatine, and an oil is obtained from the liver.

Sheep, a well-known family of ruminants of great utility as wool-producers, and for food. From the earliest times sheep have been a source of wealth to England. So much were they valued in the 15th and 16th cent., that their exportation was frequently prohibited. Sheep are classified under (1) longwools; (2) shortwools; and (3) mountain breeds. Most of the longwools carry Leicester blood in their ancestry and the shortwooled Down breeds carry the blood of the Southdown. The Southdown produced the present Suffolk, one of the most popular breeds. Cheviot is an important mountain breed. Of the foreign breeds the most valued are the Merino sheep of Spain, which yield a fine long wool. Australia, U.S.S.R., Argentina, India, U.S.A., New Zealand, and S. Africa are the chief wool-producing countries in the world.

Shelduck, a handsome genus of surface-feeding ducks, one of which, the common shelduck, is an inhabitant of this country. It is a beautiful white-and-chestnut plumaged bird with dark-green head and neck and red bill. Another species, the ruddy shelduck, appears in Britain only occasionally.

Shellac. This resin is the secretion of the lac insect (*Coccus lacca*), which occurs in forests of Assam and Siam. It is used for making varnish and in the manufacture of gramophone records. *See also* Lac.

Sherardizing. Process for coating steel or iron parts with zinc to prevent corrosion; this is done by heating the parts in a closed rotating drum containing zinc dust.

Shilling has been an English coin from Saxon times, but it was not of the value of 12 pence until after the Conquest. It is interchangeable with the 5 new pence decimal piece which came into circulation in 1968.

Ships have existed from prehistoric times. There is mention of one that sailed from Egypt to Greece in 1485 B.C., and in 786 B.C. the Tyrians built a double-decked vessel. No double-decked ship was known in England, however, before the *Royal Harry* was built by Henry VII., and it was not until the 17th cent. that shipbuilding was carried on in this country as a prominent industry.

Ship-worm. *See* Teredo.

Shoddy, the name given to a kind of cloth mainly composed of woollen or worsted rags, torn up and re-fabricated by powerful machinery. It was first made at Batley in Yorkshire about 1813, and became a very important industry employing many thousands of people at Batley and the neighbouring town of Dewsbury.

Shot, the name given to solid projectiles fired from guns. In the time of Henry V. stone shot was used, later leaden shot, then iron shot, and finally steel shot, introduced by Sir Joseph Whitworth.

Shrike, a large and varied family of birds of hawk-like behaviour found in all continents except S. America. The Red-backed Shrike, which winters in Africa, is a breeding visitor to England and Wales. It is commonly called the "Butcher Bird" from the way it impales its prey (small birds and insects) on thorn-twigs. The other species on the British list are the Great Grey Shrike, the Lesser Grey Shrike, the Woodchat Shrike, and the Masked Shrike.

Shrove Tuesday, the day before the first day of Lent, receiving its name from the old custom of shriving, or making confession, on that day. In England the day has always been associated with the making of pancakes.

Sicilian Vespers, the term applied to the terrible massacre of French people in Sicily in 1282. The French under Charles of Anjou were then in occupation of the island, and had been guilty of many cruelties. It began at Palermo on Easter Monday at the hour of vespers and resulted in the expulsion of the French king and the introduction of Spanish rule.

Silence, Tower of, or *dakhma*, a tower about 25 ft. high, built by the Parsees for their dead. The corpse is taken inside by professional corpse-bearers and left to be consumed by vultures. Parsees do not burn or bury their dead, and the *dakhma* is to protect the living and the elements from defilement.

Silhouette, a form of black profile portrait, invented by Etienne de Silhouette in 1759, and formed by an outline cutting made with scissors or other sharp instrument from cloth, paper, or other flat substance.

Silicon, an important non-metallic element, symbol Si, it is related to carbon. Next to oxygen, it is the most abundant constituent of the earth's crust (27% by weight). It occurs in many rocks, and its oxide occurs in many forms (*e.g.*, quartz, sand, flint, agate, chalcedony, opal, etc.). Coming into use as a semi-conducting material for making transistors and similar devices.

Silicones are synthetic organic derivatives of silicon which because of their high resistance to heat and moisture have special uses, *e.g.*, lubricants, heat-resistant resins and lacquers, and water-repellent finishes. Silicones are compounds in which the molecules consist of chains of atoms of silicon and oxygen alternately. Silicones were developed in the United States from discoveries first made by Prof. F. S. Kipping at Nottingham University. Manufacture began in Britain in 1950, and in the form of fluids, resins, rubbers, and greases they find wide use in industry. The largest plant in Europe is in Glamorgan.

Silk, the name given to a soft glossy fabric manufactured from the fine thread produced by the silkworm. It was known to, and highly prized by, the ancients, being at one time paid for, weight for weight, with gold. The manufacture of silk was carried on in Sicily in the 12th cent., later spreading to Italy, Spain, and the south of France. It was not manufactured in England before 1604; but when certain French refugees established themselves at Spitalfields in 1688, the industry was developed and became of importance. In the 18th cent. the Lombes of Derby achieved great success in this industry. Japan, China, Italy, Korea, and the Soviet Union are the chief silk-producing countries.

Silkworm, the larva of a species of moth, *Bombyx mori*. It is native to China, and has been cultivated with success in India, Persia, Turkey, and Italy. The silkworm of commerce feeds on mulberry leaves and produces a cocoon of silk varying in colour from white to orange. The cocoon is the silken habitation constructed by the worm for its entrance upon the pupal condition, and to obtain the silk the pupa is killed by immersion in hot-water.

Sill, a sheet-like mass of igneous rock which has been intruded parallel with the stratification of the country rock, cf. a dyke.

Silurian. This geological period is one of the major subdivisions of the Palaeozoic era. Its beginning is estimated at 440 million years ago, and the period lasted about 40 million years. Maximum thickness of the Silurian strata in Britain measures 15,000 ft. *See* F45.

Silver, a white precious metal, symbol Ag (Latin *argentum*), found in a free state, also in certain combinations, and in a variety of ores. The chief silver-producing regions are the Andes and Cordilleras. Peru, Bolivia, and Mexico have yielded vast supplies of the metal since the 16th century, and Colorado and Nevada in the United States have also been very prolific in silver yield. In England standard silver (that used for coinage) formerly contained 92½ per cent. fine silver and 7½ per cent. alloy, but when the price rose to 89½*d.* per oz. and the coins became worth more than face value, the Coinage Act of 1920 was passed, reducing the fineness to half. To provide silver bullion for industry and for a fund towards the redemption of our silver debt to America, it was decided in 1946 to replace the United Kingdom silver coinage by one made of cupro-nickel (75 per cent. copper, 25 per cent. nickel). Maundy money, however, is of the original silver standard. Silver chloride and bromide are light-sensitive compounds and are used in photography.

Simony, the offence of trading in church offices, has been contrary to English law since the time of Edward VI. Elizabeth also promulgated laws against simony. In 1879 a Royal Commission reported on the law and existing

practice as to the sale, exchange, and resignation of benefices. The position is now controlled by the Benefices Act 1898, the Amendment Measure 1923, and the Benefices Rules 1926.

Sinn Fein (*Irish* = ourselves alone), Irish nationalistic movement founded in 1905 which developed into a mass republican party and triumphed in the establishment of the Irish Free State. A small extremist group has survived which represents politically the outlawed I.R.A.

Sins, The Seven Deadly or **Capital Sins** are pride, avarice, lust, anger, gluttony, envy, sloth.

Sirius, the dog-star, so called because of its situation in the mouth of the Dog (Canis Major): it is the brightest of all the fixed stars, and is also one of the nearest to us.

Sirocco, a warm, southerly, often dust-laden, wind blowing across Mediterranean lands from the Sahara, in advance of an eastward-moving depression over the Mediterranean.

Siskin, a small bird of the finch family, common in Northern regions, nesting in Britain. The common Siskin has a yellow-green colour and is a lively, swift-flying bird with a stout bill.

Sistine Chapel, the chapel of the Pope in the Vatican, renowned for its frescoes by Michelangelo.

S.I. Units (Système International d'Unités) form an internationally recognised system of metric units for scientific and technical quantities. The basic units of length, time, mass, electric current, temperature, and luminous intensity are, respectively, the metre, second, kilogramme, ampere, kelvin (*see* **Absolute Temperature**), and candela. The S.I. was recommended for general adoption by a number of international organisations such as the General Conference on Weights and Measures (1960). Many countries have made or are making the S.I. the only legally recognised set of units. Gt. Britain's intention to "go metric" will bring widespread use of S.I. units in its train. These units command the widespread though not absolutely unanimous support of industrialists, technologists, and scientists. Many have urged that their adoption will be a triumph of commonsense and end the confusing multiplicity of units on the world scene. *See* **Section N.**

Six Articles, The Statute of the, was passed in 1539 for compelling adhesion to the chief doctrines of Roman Catholic faith: transubstantiation, communion in one kind only for the laity, vows of chastity, celibacy of the clergy, private masses, and auricular confession; those who refused to subscribe to the Articles were treated as heretics. The Act was repealed in 1547.

Skate, a genus of sea-fishes related to the Rays.

Skink. The skinks constitute a large family of lizards with large smooth scales, under each of which is a bony plate. The largest species, found in Australia, is about 2 ft. long. Some skinks have adopted a burrowing habit and degeneration of the limbs is associated with this. The Common Skink is a small species about 5 in. long, living in the deserts of N. Africa.

Skua, falcon-like marine birds related to the gulls, found throughout the world. Known as "Robber Birds" because they steal not only the young and eggs of other birds (including penguins) but also their food, which they force them to disgorge in mid-air. The Arctic Skua breeds as far south as Scotland. The Great Skua breeds in both Antarctica and Arctica. Other species are the Pomarine, the Long-tailed, and McCormick's Skua.

Skunk, a North American mammal of the weasel family, with short legs and long bushy tail. All fifteen species are black and white, some being striped and the rest spotted. It secretes and ejects at will a foul-smelling fluid.

Sky. The blue colour of the sky on a summer's day is the result of the scattering of light waves by particles of dust and vapour in the earth's atmosphere. Blue light having almost the smallest wavelength in the visible spectrum (0·00004 cm.) is scattered laterally about 10 times as much as the red (0·00007 cm.).

Skyscraper. Owing to lack of ground space, increasing cost of land, and growth of modern cities, buildings are being made higher than broader; hence the name. The structures are constructed of a steel framework usually clothed in concrete or reinforced concrete. The first modern skyscraper of steel skeletal construction was the Home Insurance Building in Chicago, designed (1883) by William Le Baron. The New York skyscapers include the Empire State Building (102 stories, 1,472 ft.), Chrysler (77 stories, 1,046 ft.), Rockefeller Center (70 stories, 850 ft.), and 60 Wall Tower (67 stories, 950 ft.). The tallest building in Britain is the 580 ft. Post Office radio tower (basic diameter 52 ft.) near Tottenham Court Road, London.

Slate, fine-grained clayey rocks which have undergone metamorphism. They cleave easily, and it is this property of cleavage which makes them a valuable source of roofing material. Important quarries producing mainly green slate are in the Coniston–Ambleside area of the Lake District.

Slavery. In its earlier forms, as in the times of ancient Greece and Rome, in the feudal ages, when vassalage and villeinage existed, and in the serfdom of Russia and other northern nations, slavery was attended by many inhumanities and evils; but perhaps in the negro slavery system which prevailed in the British colonies for upwards of 200 years and in certain parts of the United States up to 1865, it attained its highest point of cruelty. In 1833 the Act of Emancipation was passed, emancipating all slaves in British territories, though slavery continued to be tolerated in northern Nigeria, Sierre Leone and in the Anglo-Egyptian Sudan long after that date. Even today slavery and forced labour are still prevalent in some parts of the world.

Slide Rule, an instrument which consists of two logarithmic scales sliding alongside each other. By its use multiplication, division, extraction of roots, etc., are speedily carried out.

Sloth, a curious family of mammals, only found in Central and South America. They dwell almost entirely in the trees, proceeding from branch to branch with their bodies hanging downwards, their weight being supported by their large hook-like claws. They eat foliage.

Slow-Worm, a species of lizard found in Britain which lacks legs. Silver with longitudinal brown stripes, it lives almost entirely on slugs.

Smelting. The process of heating an ore with a reducing agent to convert ore into metal, and with a flux to convert rocky impurities into a slag that will float on top of the molten metal. Slag and metal can then be tapped separately. An example is iron smelting; the reducing agent is coke, and limestone is added as the flux; the smelting is carried out in a blast furnace.

Snake. The snakes constitute the important reptilian order *Ophidia*. Snakes have a scaly, cylindrical, limbless body, lidless eyes, forked tongue, and the upper and lower jaws joined by an elastic ligament. Their locomotion is accomplished by means of the excessive mobility of their numerous ribs. All snakes have teeth used for seizing prey, and the poisonous varieties are furnished with poison fangs in the upper jaw. These fangs are hollow modified teeth and the venom passes into them from a special gland situated behind the angle of the mouth. Some 2,500 species of snakes are known, divided into 13 families. There are 3 British species—the grass-snake, smooth-snake, and adder.

Snipe, a wading bird, long-legged, with long, slender, straight bill, brown plumage, and zigzag flight. The Common Snipe breeds locally throughout Britain; the Great Snipe and small Jack Snipe are occasional visitors. The close season is Feb. 1 to Aug. 11.

Snow. When water vapour condenses at high levels at a temperature below freezing, a cloud of ice particles is formed. If these frozen droplets are small, they fall slowly and gradually assume a feathery crystalline structure, reaching the earth as snowflakes if the temperature remains below freezing.

Socialism. *See* **Section J.**

Soda, carbonate of sodium, is now mainly obtained by certain processes of manufacture from common salt. It was formerly obtained from the ashes of plants. Bicarbonate of sodium is the primary product in the Solvay or Ammonia-soda method for commercial manufacture of soda; it is also formed when carbon dioxide is passed into strong soda solution. The bicarbonate is used in medicine and in the preparation of baking powder.

Sodium, a metallic element, symbol Na (Latin *Natrium*), first obtained by Sir Humphry Davy in 1807 from caustic soda by means of the electric battery. Its chloride is *common salt*; the deposits of salt (*e.g.*, in Cheshire and at Stassfurt) have come into existence through the drying up of inland seas. Salt occurs in sea-water to the extent of about 3 per cent.; the Dead Sea contains about 22 per cent. The blood of animals is maintained at a level of about 0·6% sodium chloride. That there is sodium in the sun's atmosphere was confirmed in 1859 by Kirchhoff from his spectroscopic observations. Liquid sodium metal has properties which make it suitable as a coolant in some nuclear reactors; a technique of handling this very reactive liquid has had to be developed.

Solar Battery, one of the innumerable devices made possible by the development of semi-conducting materials, notably germanium and silicon. This device creates an electric current from light falling on it. The current can be put to use or stored in storage batteries. The energy of the current is derived from the sunlight, and the solar battery is thus an *energy converting* apparatus. Solar batteries have provided power for the instruments in satellites.

Solar Wind, a continuous stream of electrically charged particles blowing outwards from the sun, supplemented from time to time by intense outbursts from particular regions of the sun's surface. These streams of protons and electrons on encountering the earth's magnetic field distort it and cause magnetic storms and aurorae.

Soldering is a means of joining together two pieces of material, usually metals, by melting a third metal (the solder) into the joint. The solder solidifies in the pores of the other metals and holds them together. The materials to be joined are not themselves melted so the technique requires less heat than welding. Solders are alloys; there are many kinds depending on the materials to be joined and the strength of joint desired. *See* Welding.

Solstice, an astronomical term indicating the point at which the sun is most distant from the equator. *See* Seasons, Section N.

Soundings at sea, to determine depth at any point, have been taken in all seas, and with considerable accuracy. A deep reading was that of the *Challenger* expedition in 1873, near St. Thomas's in the North Atlantic, when 3,875 fathoms were sounded. In 1851 H.M.S. *Challenger* recorded the then maximum ocean depth in the Marianas Trench (W. Pacific) by echo-sounding as between 5,882 and 5,940 fathoms. Another deep was located in the S. Pacific in 1952–53 of 5,814 fathoms in the Tonga Trench, 180 miles S. of Tonga Tabu. Since then even greater depths have been recorded, in the Marianas Trench and the Mindanao Deep. *See* Pacific Ocean.

Southern Cross, popular name of *Crux*, a constellation of the Southern hemisphere, consisting of four bright stars in the form of a Latin cross. It has been called the pole-star of the south and is indispensable to seafarers.

South Sea Bubble, the name given to a series of financial projects which began with the formation of the South Sea Company in 1711 and ended nine years later in disaster after a mania of speculation. The idea behind the parent scheme was that the state should sell certain trading monopolies in the South seas in return for a sum of money to pay off the National Debt (which stood at £51,300,000 in 1719 when the scheme started). The idea fascinated the public, fabulous profits being dreamt of, and the price of the stock rose out of all proportion to the earnings of the Company. Many dishonest speculative ventures sprang up in imitation with the inevitable result that thousands were ruined. All classes had joined in the gamble and a Committee of Secrecy set up by the House of Commons in Dec. 1720 to investigate the affairs of the Company proved that there had been fraud and corruption on a large scale in the affairs of the Company. Sir Robert Walpole who had been an opponent of the scheme from the outset dealt with the crisis.

Space Flight. The Soviet Union was the first country to launch a man into space and bring him safely back to earth. This epoch-making event took place on April 12, 1961, when Yuri Gagarin, tragically killed in an air crash in 1968, circled the earth in a spaceship weighing about 4½ tons. It was launched by rocket in an elliptical orbit with greatest height 187 miles and least 109 miles. The inclination of the orbit to the equator was 65 deg. 4 min. and the period of revolution was 89 min. 6 sec. Since then, the Russian *Vostok* cosmonauts Titov (17 orbits), Nikolayev (64 orbits), Popovich (48 orbits), Bykovsky (81 orbits), Tereshkova, the first woman space traveller (48 orbits), the *Voskhod* cosmonauts Komarov, Feoktistov and Yegorov (16 orbits), Belyaev and Leonov (17 orbits), the American *Mercury* astronauts Glenn (3 orbits), Carpenter (3 orbits), Schirra (6 orbits), Cooper (22 orbits), the *Gemini* astronauts Grissom and Young (3 orbits), McDivitt and White (62 orbits), Cooper and Conrad (120 orbits), Borman and Lovell (206 orbits), Schirra and Stafford (15 orbits), Armstrong and Scott (6·6 orbits). Stafford and Cernan (44 orbits), Young and Collins (43 orbits), Conrad and Gordon (44 orbits), Lovell and Aldrin (60 orbits) were among the first to complete successful missions in space. Leonov was the first to perform the extra-vehicular (EVA) experiment (1965), *i.e.*, to leave an orbiting spaceship and float freely in space. Russia was the first to achieve an automatic docking (link-up) between two unmanned spacecraft in orbital flight (Oct. 1967), and of two manned spacecraft (Jan. 1969). The American *Apollo* mission was accomplished when Armstrong and Aldrin became the first men to set foot on the moon. This milestone in manned space flight took place on July 20, 1969. Three *Soyuz II* cosmonauts died within moments of landing in 1971 due to a rapid drop in pressure inside the descent vehicle. *See also* Sputniks, Space Research.

Space Research. By space research we mean scientific research work which can only be carried to otherwise inaccessible observing locations by rocket propulsion. Such propulsion does not rely on the presence of an atmosphere to provide oxygen so that it is capable in principle of conveying objects to unlimited distances. The subject of space research is, therefore, one which is concerned with scientific applications in various fields of a single highly specialised and powerful technique. It is not a single discipline, but can provide data of great importance for many such as the physics of the earth, the sun, moon, and other bodies of the solar system, astronomy, geodesy, and the study of gravitation. The prospect of investigating the biological conditions on different planets such as Mars and Venus is also opened, as well as that of experimental biological studies under conditions of zero gravity. Although the results of many aspects of space research are vital for those concerned with the practical realisation of manned travel in space, space research is largely a branch of pure science, independent of any applications which may stem from it. The major technical problems involved in space research are:

(*a*) Launching of the instrument-containing vehicle with the necessary velocity.

(*b*) Guidance and control of the vehicle so it pursues the desired path.

(*c*) Tracking the vehicle to determine its actual path and the position on the path at any time.

(*d*) Transmission of the data, recorded by the instruments, back to the earth.

(*e*) Satisfactory operation of scientific instruments in the environment within the vehicle.

(*f*) Provision of adequate power supplies to operate the equipment within the vehicle for sufficiently long periods.

It is important to distinguish three distinct types of vehicle—the vertical sounding rocket, the artificial earth satellite, and the deep space probe. The track of a vertical sounding rocket is mainly vertical, and the whole path to the highest point and back is traversed in a few minutes only. An earth satellite circulates in an orbit round the earth in the same way as does our natural satellite, the moon. If it approaches

the earth at any point within 100 miles of the surface the air resistance causes the path to spiral in so rapidly that the vehicle is eventually burnt up by air friction within the dense atmosphere after an orbital life of a few months only. It follows that artificial satellite vehicles are only useful as instrument containers if the distance of closest approach (the perigee distance) is not much less than 100 miles. For the study of the properties of the atmosphere at lower altitudes down to the limit (20 miles) attainable by balloons, vertical sounding rockets must be used. It is a great advantage for work at higher altitudes to use satellites, as it is then possible to make systematic observations for months at a time from a great number of positions relative to the earth. The successful space flights achieved by manned satellites also suggest that it should not be long before manned observatories become practicable. Deep space probes include vehicles which pass out to great distances from the earth and may leave the neighbourhood of the earth for ever to become artificial planets. Such probes may pass close to, or soft-land on, the moon or planets or may merely pursue paths well out into interplanetary space.

Spanish Civil War, 1936 to 1939. The war commenced by a revolt by the Fascist General Franco against the Republic which had succeeded the Monarchy in 1931. Germany and Italy aided the rebels who besieged Madrid for over 2 years. An International Brigade was formed to help the Republic, but the Spanish Government was faced by the greater part of the Army, and very effective assistance from Italy and Germany. Those powers seized the opportunity to have a curtain-raiser to the world conflict which they intended to precipitate. After a total loss of a million men the Fascists overpowered the Republic.

Sparrow, name given to finch-like birds found in most parts of the world, of which the House Sparrow *Passer domesticus*, is the most familiar of British birds. Also native to Britain is the rural Tree Sparrow, distinguished from the male House Sparrow by its chestnut crown. Other European species are the Italian, Spanish and Rock Sparrows.

Specific Gravity, defined as the ratio of the mass of a particular volume of a substance to the mass of an equal volume of water at 4 °C. *See* Hydrometer.

Spectroscopy. Newton's arrangement with the prism was the first spectroscope; its function was to separate out the colour components of a source of light. Two hundred years elapsed before this apparatus was developed into a precise scientific instrument, capable of measuring both the wavelength and intensity of each colour component. In this form it is called a spectrometer. All atoms and molecules have well defined characteristic spectra which can be used to recognise them. In order to produce emission spectra it is necessary to energise the material under investigation by some means, such as by heating in a flame. The resulting radiation then consists largely of sharp bright lines, characteristic of the material. Absorption spectra are produced by interposing the experimental material between a white light source and the spectrometer. Then dark lines are seen, corresponding to absorptions of energy, in exactly the same places as the bright lines are observed in the emission spectra. Spectroscopic techniques have now been developed to such an extent that accurate measurements of wavelength and intensity are possible not only in the visible region, but over almost the whole of the electromagnetic spectrum. Not only does spectroscopy play an important rôle in probing the structure of matter, but it can be applied in the field of astronomy. The use of radio wave spectroscopy has led to the discovery of several new types of stellar object, and this data is now producing a complete reappraisal of our understanding of the universe.

Sphinx, in Greek mythology, a winged creature with a woman's head and a lion's body. The sphinx of ancient Egypt represented the pharaoh in a divine form.

Spiritualism. *See* Section J.

Spirituals, negro melodies with religious inspiration and which are still spontaneously created, but have also passed into art-music.

Sponge. *See* Porifera, F33(1).

Spoonbill. a long-legged, marsh bird, closely related to the ibis and stork, remarkable for its snow-white plumage and broad, flat, spoon-shaped bill. The European species has not bred in England since the beginning of the 17th cent., but is still a regular summer visitor from Holland, where it nests in colonies in reed-beds and islets.

Sputniks, the name of the Russian earth satellites first launched during the period of the International Geophysical Year. *Sputnik I*, launched 4 Oct. 1957, became the first man-made earth satellite. *Sputnik II*, launched a month later, carried a dog as passenger. *Sputnik III*, launched in May 1958, and weighing well over 2 tons, became the first fully-equipped laboratory to operate in space. The father of space travel with rockets was a Russian—Konstantin Eduardovich Tsiolkovsky—the centenary of whose birth practically coincided with the launching of the first earth satellite.

Squirting Cucumber, *Ecballium elaterium*, so named from the fact that when ripe it breaks from the stalk and ejects its seeds and juice from the hole made by the breakage.

Stainless Steel. The development of stainless steel for cutlery manufacture, etc., began with the discovery of Harry Brearsley in 1912 that steel containing 12 per cent. of chromium is rust-proof.

Stalactites are deposits of calcium carbonate formed on the roofs and sides of limestone caves, and in tunnels, under bridges, and other places where the carbonic acid of rain-water percolates through and partly dissolves the limestone, resulting in the growth of icicle-like forms that often assume groupings. The water that drops from these may deposit further calcium carbonate, which accumulates and hardens into a series of sharp mounds or hillocks called stalagmites.

Starch is an organic compound occurring in granules in nearly all green plants, and especially in the seeds of dicotyledonous and cereal plants, potatoes, etc. In its pure form starch is a tasteless, odourless white powder, and is a carbohydrate consisting of carbon, hydrogen, and oxygen.

Star Chamber, an ancient tribunal of State in existence in 1487 and possibly earlier, charged with the duty of trying offences against the Government, unfettered by the ordinary rules of law. It was in effect a Privy Council entrusted with judicial functions. Under Charles I, the Star Chamber was used by the King and his party to persecute opponents; and in 1641 a Bill carried in both Houses abolished it.

Starling (*Sturnus vulgaris*), a well-known European bird now common in many parts of the world. It has handsome iridescent blackish plumage and nests in holes and crevices. Flocks of starlings are often seen wheeling in the air; thousands roost on buildings in the heart of London. Other European species are the Spotless and Rose-coloured starlings. The latter sometimes wanders to the British Isles.

States-General, national assembly in which the chief estates of the realm were represented as separate bodies. The name, though not the institution, has survived in the Netherlands, where the two houses of parliament are known as states-general. In France the states-general consisted of three orders, clergy, nobility, and commons. Philip IV. first summoned it in 1302 to support him in his quarrel with Pope Boniface VIII. While absolute monarchy was establishing itself it met rarely, and not at all from 1614 until 1789, when it was convoked as a last resort by Louis XVI. But when it met it declared itself the National Assembly which marked the beginning of the revolution.

Statistics is a science that deals with the collection of numerical facts and the evaluation of their significance. The word is also used to refer to the facts themselves as in "trade statistics." This important science gives precise meanings to words like "average" and to statements like "this set of data is significantly different from that." In a world in which more and more information is becoming available in numerical form (I.Q.s, examination results, tax

yields, health records, road accidents, etc.) the proper—as opposed to the misleading—use of statistics cannot be over-emphasised. Many young people can now study statistics at school and college, and governments and industries employ many statisticians. *See* Average.

Statute of Westminster, 1931. An Act of parliament which gave a basis of equality to the British Dominions. The Dominions as well as the United Kingdom were defined by the Balfour Memorandum of 1926 as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations." The Statute was the sequel. The Dominions are sovereign States governed solely by their own Parliaments and Governments.

Steam Engine, a machine whereby steam becomes the active agent of the working of machinery, and of very wide application. The leading types of steam engine are: (*a*) condensing, or low-pressure engines, where the steam is generated by a boiler; (*b*) non-condensing, in which the cylinder exhausts its steam into the open air. Engines of the latter type are used where portable engines are required.

Steam Hammer, invented by the Scottish engineer James Nasmyth (1808–90) in 1839, which proved of great utility in the development of the iron trade. The hammer itself, which is fixed to the end of a piston-rod passing through the bottom of an inverted cylinder, often weighs as much as 80 or 100 tons, and is so perfectly controlled by the steam power that its action can be so accurately gauged that it could be made to crack the glass of a watch without actually breaking it, or brought down upon a mass of molten iron with a force representing many hundreds of tons.

Stearin is the portion of fatty matters and oils which remains solid at an ordinary temperature, and is a compound of stearic acid with glycerine. It is largely used in the manufacture of candles. With caustic soda stearin forms a soap (sodium stearate), which is present in most commercial soaps which contain sodium palmitate and oleate in addition.

Steel, an alloy of iron and carbon, with varying proportions of other minerals. The famous blades of Damascus and steels of Toledo were made by the cementation and crucible method. The metal produced by the "Bessemer process" (*q.v.*) is of the highest value for structural purposes, rails, etc. In recent years the technique known as continuous casting has been developed which bypasses some major steps in the conventional process of steel-making.

Stereophonic Broadcasting. A person having normal hearing is able to determine the direction from which a sound reaches him by virtue of the fact that he has two ears, and, therefore, the sound will reach one of them a fraction of a second before it reaches the other. This difference in arrival time allows the brain to calculate direction. It will, therefore, be apparent that if the same person listens to, say, an orchestral concert in a large hall he will be able to determine—even with his eyes shut—the approximate position of a particular instrument with respect to the rest of the orchestra. If, however, he listens at home to a broadcast of the same concert, then, due to the fact that he hears the music after it has been picked up by a single microphone located at one point and radiated over a single-channel transmission system, he will be unable to allocate a definite position to any instrument. The aim of stereophonic broadcasting or sound reproduction, therefore, is to restore the listener's ability to locate the position in space of the various sources of sound and to follow movement. To do this it is necessary to use two microphones in the studio—to simulate the two human ears—and to transmit their outputs, through two similar, but separate, chains of equipment, to two radio receivers and their two loudspeakers, which must be placed some distance apart, in the listener's home. The fundamental work on two-channel stereophony was done by the late A. D. Blumlein of E.M.I. Ltd., his original patent being dated 1931.

Stereotype, a metal cast taken from movable type which has been set up in the ordinary way. The first to introduce the process in practical form in this country was William Ged, of Edinburgh, who made stereotype plates in 1730. An impression of the type matter is first taken by means of a mould of prepared plaster of Paris or moistened sheets of specially prepared paper, and when molten stereo metal is poured upon the mould and allowed to cool and harden, the stereo plate is formed, and can be printed from as a solid block for some time.

Steroids. A class of structurally related compounds, based on a system of condensed rings of carbon and hydrogen, which are widely distributed in animals and plants. Included in the steroid family are sterols, found in all animal cells, vitamin D, sex hormones, bile acids, and cortisone, a drug used in the treatment of rheumatic fever.

Stickleback, a family of small spiny-finned fish widely distributed in both fresh and salt water. Male constructs roofed nest held together by sticky secretion from glands near kidneys. Several females deposit eggs therein which he jealously guards until after young are hatched.

Stirrup, a loop of metal U-shaped strap suspended from the sides of the saddle, used for mounting and to support the horseman's foot. Some authorities allege their use as far back as the early Iron Age, and it is generally believed that they were used in battle in A.D. 378, when the Gothic cavalry defeated the legionaries of the Emperor Valens at Adrianople. Stirrups relieved the tension on the rider's knees and so enabled him to be armed from top to toe.

Stoat, a slender, carnivorous mammal with short legs, related to the weasels. The stoat is distinguished from the latter by its longer tail, which has a black tip. The black tip is retained even in the winter when the animal turns white, the fur then being known as "ermine." It is found in northern latitudes, and is abundant in Arctic America.

Stoma (pl. stomata), microscopic pores on the surfaces of leaves through which gaseous exchanges take place and water is lost. It has been estimated that a single maize plant bears 200 million stomata, usually closed at night.

Stone-Flies, comprise the order of insects called *Plecoptera*, which includes some 700 species, of which about thirty occur in Britain. The wings are membranous, and two long, thread-like feelers protrude at the tail end. The larvae are aquatic.

Stonehenge, a remarkable collection of Bronze Age monuments arranged in two circles, 340 ft. in diameter, standing on Salisbury Plain, Wiltshire. Modern archaeological research dates origin back to between 2100 and 1600 B.C. There is some evidence to suggest that the monument may have been built for astronomical purposes, providing a method of keeping a calendar for predicting the seasons and foretelling eclipses of sun and moon. *See* Section F, Part VI.

Stork, a family of heron-like birds with long bills, freely distributed over Europe, Asia, Africa, and S. America. The White Stork is an occasional visitor to England, and, more rarely, the Black Stork; these are the only two European storks.

Stratosphere, a layer of the earth's atmosphere, which begins 6–7 miles above the earth. The attraction of the stratosphere as a medium for air travel rests upon the absence of storms; indeed weather phenomena as commonly understood do not occur, there being no vertical temperature gradient in the stratosphere and no convection currents.

Stratum (pl. strata), a bed or layer of rock.

Strontium. This silver-white metallic element was discovered by Hope and Klaproth in 1793, and isolated by Sir Humphry Davy in 1808. The chief strontium minerals are celestite (sulphate) and strontianite (carbonate). Compounds of strontium give a brilliant colour to fireworks and signal flares. Radioactive isotopes of strontium (strontium-90) are formed as fission products in nuclear explosions and tend to collect in bone on account of the chemical similarity of strontium and calcium (*q.v.*). This genetic hazard is a cause of great alarm. *See* Fall-out.

Sturgeon, a large fish found in northern seas and

rivers with five rows of bony plates along the back and sides and pointed mouth with four barbels. Caviare is prepared from sturgeon ova. The rights of the Crown to certain wild creatures, including sturgeon, caught off the coasts of Britain and held since the time of Edward II, were abolished in 1970.

Sublimation, when a solid substance is heated and turns into vapour without passing through the liquid stage and then condenses as a solid on a cold surface, it is said to "sublime" and the process is called "sublimation." Iodine behaves in this way, and sublimation is used as a method of purifying it.

Submarine, the first submarine, the *Nautilus*, was designed by Robert Fulton and tried out in the river Seine and in the sea off Brest in 1801. The idea was too revolutionary to find acceptance and it was not until electricity for under-water propulsion became available that the submarine underwent extensive development. Britain became interested about 1900 and the Germans developed it and made it into an instrument of warfare. The first voyage under the North Pole was made in 1958 by the American nuclear-powered submarine *Nautilus* (*q.v.*). The Royal Navy's nuclear submarine fleet includes 4 Polaris vessels—HMS *Resolution*, which became operational in 1968, *Renown* (1969), *Repulse* (1969), *Revenge* (1970), each armed with 16 missiles with thermonuclear warheads—and the nuclear-powered Fleet submarines which include *Dreadnought*, *Valiant*, *Warspite*, *Churchill*, *Conqueror*, *Courageous*, and *Swiftsure*. Britain's nuclear strategic force is assigned to NATO.

Subpœna (L. = under a penalty), a writ commanding a witness to appear before a court of law.

Suez Canal, connecting the Mediterranean and the Red Sea, was built by the French engineer Ferdinand de Lesseps and opened in 1869. An Egyptian company, *Canal Maritime de Suez*, was formed in 1866 with a capital of 200 million francs. The British Government acquired 176,602 shares out of a total of 400,000 for £4 million (value Mar. 31, 1956, £28,982,544). Its length is 101 statute miles, minimum width 196 ft. 10 in. (navigation channel). Under the Convention of 1888 all nations were granted freedom of navigation without discrimination in peace or war. The right was recognised by Egypt in the Anglo-Egyptian Agreement of 1954, under which Britain agreed to give up the Suez base. The Suez Canal Company was nationalised by the Egyptian Government without warning on July 28, 1956, since when it has been widened and deepened and the average time of transit reduced. The Canal has been barred to Israeli ships since the creation of the state of Israel in 1948, and to all shipping since the Middle East war of 1967.

Suffragette, member of the Women's Suffrage Movement who in the early part of this century agitated to obtain the parliamentary vote. The movement ended in 1918, when women of 30 were given the vote. In 1928 a Bill was passed which granted equal suffrage to men and women. The leaders of the Women's Suffrage Movement were Mrs. Pankhurst and her two daughters, Sylvia and Dame Christabel, Mrs. Fawcett, Nellie Kenny, and others.

Sugar, to the chemist the term is a generic one covering a group of carbohydrates, including cane sugar (sucrose), glucose, fructose, and maltose. In ordinary parlance sugar means sucrose, which is obtained from the sugar cane, sugar beet, or sugar maple.

Sulphur, an elementary, brittle, crystalline solid, symbol S, abounding in the vicinity of volcanoes. It is yellow in colour. It occurs in combination with other elements, as sulphates and sulphides, and allied with oxygen, hydrogen, chlorine, etc., is of great commercial utility. Used in its pure state it constitutes the inflammable element in gunpowder; it is also used for matches and for making sulphuric acid.

Sulphuric Acid, a compound of great commercial importance, used in a variety of manufactures, and composed of sulphur, oxygen, and hydrogen. Extremely corrosive.

Sun, one of the millions of stars in the universe, the centre of the solar system, estimated to be distant from the earth 93,004,000 miles, to have a diameter of 865,000 miles, and a volume a million times that of the earth. It rotates on its axis from east to west, though not as a solid, the solar equator turning once in about 25½ days and the poles in about 34 days. Large spots are observed on the sun—varying in size from 30,000 miles in diameter—which form and disappear at irregular intervals. The area of the disc covered by the spots, however, reaches a maximum roughly every 11 years, when the sun's heat seems rather greater than usual and magnetic storms more frequent (sunspot cycle). Spectrum analysis shows that the sun is composed of many elements found in the earth. Its surface temperature is about 6,000° C. Observations made in 1964–65 (Year of the Quiet Sun) complemented those obtained during the International Geophysical Year 1957–58, when the sun was remarkably active. The earth is in the outer atmosphere of the sun and subject to its winds and storms. The apparently inexhaustible heat of the sun, which has maintained life on the earth for millions of years, is derived from the destruction of matter, involved in the transmutation of hydrogen nuclei into helium nuclei, in which process about four million tons of matter is destroyed every second. At this rate of conversion the sun will go on radiating for 30,000 million years. The Soviet space rocket *Lunik I*, fired on 2 Jan. 1959, became the first artificial planet of the sun. *See also* F7.

Superconductor, a metal in a state in which its electrical resistance has entirely vanished so that electric currents can flow indefinitely without generating heat or decreasing in strength. The superconducting state of metals was first discovered in mercury by Onnes in Leiden in 1911. There are many magnetic and thermal properties associated with superconductivity and the phenomenon as a whole has proved to be of great scientific interest; it resisted explanation till about 1957. In the meantime many metals and alloys were found to show the property but only at very low temperatures—below *c.*—260°C. There is a growing number of practical applications, *e.g.*, coils of superconducting wire (kept very cold by liquid helium) can be made to carry enough electric current to produce strong magnetic fields. Such fields are very constant and do not require the large supply of electrical power that ordinary electromagnets need.

Supersonic Speed, a speed greater than the speed of sound (in air at sea-level sound waves travel at about 760 m.p.h.). When a body travels at a speed which is greater than the speed at which disturbances themselves can travel, a mechanism exists for the generation of waves of enhanced intensity. Thus aircraft travelling at supersonic speeds produce shock waves in the air somewhat analogous to the bow waves of fast-moving ships. These shock waves are regions of intensely disturbed air which produce the sonic boom effect so distressing to people living near supersonic routes. *Supersonic* is not to be confused with *ultrasonic* (*q.v.*).

Surface Tension. The surfaces of fluids behave in some respects as though they were covered by a stretched elastic membrane. This property is called "surface tension." The action of detergents may be attributed in part to a reduction in the surface tension of water, allowing it to wet the surface of dirty articles.

Surrealism. The aim of the Surrealist school of painting and sculpture is to overcome the barriers between conscious and unconscious mind, the real and unreal worlds of waking and dreaming. As such it has a long and respectable ancestry, although the term was not in use until 1922 when it was picked by André Breton from Guillaume Apollinaire who had used it in connection with certain works by Chagall. However, Bosch in the 15th cent., Fuseli and Goya in the 18th, and many other purveyors of the weird and fantastic were the forerunners of modern Surrealism. The modern movement has broadly speaking taken two different directions: the first was towards complete fantasy and absurdity which took the form of "found objects"—*e.g.*, a bird-cage filled with sugar-cubes and a thermometer, a bottle-dryer, a bicycle wheel, or abstract works with strange and apparently irrelevant titles such as Paul Klee's *Twittering*

Machine; the second towards highly detailed and realistic paintings of objects placed in strange juxtapositions—*e.g.*, Salvator Dali's trees with limp watches drooping over their branches or Georgio de Chirico's deserted and classical-looking streets with long arcaded perspectives and a lone statue or a bunch of bananas in the foreground. On the whole Surrealism has spent its initial force and become almost respectable; its idea of strange juxtapositions, now widely commercialised, finds a place in advertisement illustrations and in the more sophisticated forms of window-dressing.

Surtax. With the introduction of the unified system of income tax in 1973 surtax was abolished and replaced by "higher rates" of income tax. *See* **Income Tax.**

Swans, large, graceful birds which together with the ducks and geese form the family Anatidae. There are three European species with white plumage; the Mute Swan, distinguished by its orange bill with black knob (less prominent in female), a familiar sight on the rivers and ornamental lakes of this country. Two wild swans are winter visitors here, the Whooper and Bewick's Swan. The "pen" (female) and "cob" (male) mate for life and the young swans are called "cygnets."

Swan-upping. The annual marking of the Thames swans which takes place during the third week of July. This ancient ceremony dates back to the 15th cent. when all the Thames swans were declared to be Royal birds owned by the Crown. Two city guilds—the Vintners' and Dyers' Companies—own one third of the 600 swans now on the Thames. This privilege was granted to them by King Edward IV. in return for money grants. Vintners' birds are marked with a nick on each side of the bill, the Dyers' with a nick on the right side only. The Queen's birds are unmarked.

Sweet Potato. This plant (*Ipomoea batatas*), which is a climbing perennial belonging to the convolvulus family, has thick roots that are rich in starch, and are eaten like potatoes. A native of the W. Indies and Central America, new varieties of sweet potato have been bred which stand cooler climates and can be grown as far north as Cape Cod. The sweet potato of New Zealand is called the Kumara.

Swift, a bird so-called from the extreme speed of its flight, resembling a swallow but related to the humming-bird. It has long, scythe-like wings, sooty-black plumage and greyish-white chin. There are several species inhabiting most parts of the world, particularly the tropics. The British breeding bird is among the latest to return from Africa and the earliest to go. Swifts are the only birds to use saliva for their nests. One oriental species builds its nest entirely from saliva.

Sword, weapon used in personal combat, originally made of bronze. The Romans introduced the iron sword, 20 in. long. During the Middle Ages the most famous blades were those made by the Arabs at Damascus and those made at Toledo.

Symbiosis. When two organisms live together and both derive mutual benefit from the association, the partnership is known as symbiosis. An example is the symbiosis of an alga and a fungus in lichens; another is the ordinary pea plant and the bacteria which live in the nodules on the pea's roots.

Synapse is the point of association between one nerve cell and another. The nervous impulse travelling along one nerve has to be transmitted to the next across a minute gap. This is the synaptic gap. The mode of transmission is chemical though it was at first thought to be electrical. The impulse arriving at the synapse releases a chemical transmitter which diffuses across the gap and stimulates an impulse in the adjacent nerve cell.

Syndicalism. *See* **Section J.**

Synod, an assembly of the clergy of a particular church, state, province, or diocese. The Synod of Whitby (664) settled the dispute between the Celtic and the Roman churches in the matter of Easter in favour of the Roman system of reckoning.

Synoptic Charts. These are meteorological charts used in forecasting on which weather conditions at a network of stations, at a standard hour of observation, are recorded, using symbols of the international weather code. Surface weather maps have been drawn regularly for more than a hundred years and the modern advance is the drawing of other maps showing conditions in the upper air.

Synoptists. The writers of the first three Gospels whose narratives in the main agree, though Matthew and Luke add material not found in Mark (written first); all three differ from John's Gospel.

T

Tabard, a cloak or outer garment worn in mediæval days by the peasantry. The name was also applied to a garment worn by knights over their armour.

Tailor-Bird, name of a small group of warblers, familiar in India and China, and remarkable for their habit of sewing leaves together to enclose their nests. The bill is used as needle, vegetable fibre as thread, and a knot is tied to prevent it slipping.

Taiping Rebellion, 1850–64, most famous of China's many peasant uprisings. It took place in Hunan (the province where Mao Tse-tung was born) and was savagely suppressed with the help of foreign powers.

Taj Mahal, the white marble mausoleum built at Agra by Shah Jehan in memory of his favourite wife who died 1629. Over 20,000 men were occupied for over 20 years in its erection.

Takahe or Notornis, large New Zealand bird of the rail family which for many years was believed to be extinct. Small colony found in 1948 in remote valley of mountainous part of the S. Island. The bird is strictly protected.

Take-over Bid describes an offer made to all the shareholders of a company to purchase their shares at a named price and conditional upon acceptance by the holders of a named proportion of the total share issue. If accepted the purchaser thus gains control of the company.

Tallage, in Norman times, were taxes levied by the Crown upon lands of the royal demesnes. The levying of tallage was taken away by a statute of 1340 which required the consent of Parliament for all direct taxes.

Tally Office, in the Exchequer, was the department of the Government in which tallies were kept, representing the acknowledgment of moneys paid or lent; in 1834 the Houses of Parliament were burnt down through the overheating of a stove with discarded Exchequer tallies.

Tambourine, a light, small, single-headed drum with loose metal discs let into the side of the hoop so that they jingle when the tambourine is shaken. An older name for it is the timbrel.

Tammany, a New York democratic organisation, sprang out of an old benevolent society named after an Indian chief, and has exerted a powerful influence over political movements in New York. The leaders of the organisation have used their power when their party has been successful at the polls to appoint their nominees to every prominent office, and have exacted bribes for concessions and privileges, and generally Tammany rule has meant wholesale corruption. Of this there is ample evidence in the disclosures of the Tweed and other Tammany frauds, and in the fact that the "Boss" usually contrived to make himself wealthy.

Tannins are chemical substances obtained from a variety of plants and trees, from oak-bark, and from galls. They are used in the leather trade, the tanning process making the skins resistant to decay.

Tantalum, a scarce bluish metallic element, symbol Ta, discovered by Ekeberg in 1802. Chemically related to vanadium and niobium, it is usually associated with the latter in nature. For several purposes it can be used in place of platinum, and it finds application in the making of surgical instruments. Tantalum is very hard, and resistant to acids (other than hydrofluoric acid); it is used in alloys.

Taoism. *See* **Section J.**

Tapestry, a fabric largely used in former times for wall decoration and hangings. It was known to the ancient Greeks, but in its modern form came into prominence in the 15th and 16th cent., when it was manufactured in a marked degree

of excellence by the weavers of Flanders, especially those of Arras. The manufacture was introduced into England early in the 17th cent., and was attended by considerable success. At the present day the term is applied to worsted cloths for furniture coverings, and there are also various kinds of tapestry carpets now made. The most famous tapestries of olden times were the Aubusson Tapestry and the Savonnerie. The Gobelin Tapestry factory, originated in Paris in the reign of Francis I., is still a national establishment. *See also* **Bayeux Tapestry.**

Tapirs. The tapirs constitute a family close to the horse family and the rhinoceros in the Ungulate order. They have four toes on the front feet and three on the hind. The snout is drawn out into a short trunk. The largest tapir is the Malayan tapir, which stands 3½ ft. at the shoulder. Four species occur in Central and S. America.

Tar is a dark viscid product obtained from the destructive distillation of wood, coal, peat, etc. Wood tar is acid owing to the presence of acetic acid (" pyroligneous acid "). The highest proportion of coal tar goes into road making. Distillation of coal tar yields many valuable compounds, including benzene, phenol (carbolic acid), naphthalene, and creosote; the final residue after distillation is pitch. Based on the chemical manipulation of compounds from coal tar is the preparation of many perfumes, food essences, drugs, antiseptics and plastics.

Tarpeian Rock at Rome received its named from the tradition that Tarpeia, the daughter of the Governor of the Citadel who betrayed the fortress to the Sabines, was crushed to death by their shields and buried beneath the rock. From this height persons guilty of treason were hurled to death.

Tartaric Acid is prepared from tartar (potassium hydrogen tartrate) deposited in wine vats during fermentation. " Cream of tartar " is purified potassium hydrogen tartrate, which is incorporated in baking powder. Tartaric acid is also used in the manufacture of effervescent salts.

Tate Gallery, named after its founder, Sir Henry Tate, at Millbank, S.W., was opened in 1897; Sir Henry Tate bore the cost of the building (£80,000) and also contributed the nucleus of the present collection. " The Turner Wing," the gift of Sir Joseph Duveen, was added in 1910. The collection is thoroughly representative of British art and has been extended several times to include modern foreign art.

Tay Bridge spans the Tay at Dundee, opened for rail traffic on 20 June 1887. A previous bridge, completed in 1877, was blown down on 28 Dec. 1879, as a train was passing over it. A new bridge was opened on 18 August 1966 for road traffic, 7,356 ft. in length, the longest road bridge in Britain.

Tea was introduced into England about the middle of the 17th cent., when it was a great luxury, and fetched from £6 to £10 a pound. It is an Asiatic plant, native properly to China, Japan, and India. Up to about 1885 most of the tea imported into this country came from China; the bulk now comes from India and Ceylon.

Teal, the smallest of the European ducks and next to the Mallard the commonest British species. It is a handsome bird and a very swift flier, but not as swift as the Garganey or Summer Teal.

Te Deum, the song of praise (" Te Deum laudamus "—" We praise Thee, O God "), is supposed to have been the composition of St. Ambrose in the 4th cent. and is used in Roman Catholic and English Church services.

Telecommunications. The sending of messages over a distance. The term is generally applied to the sending of messages by telegraph, telephone, radio, television or radar. The first submarine telegraph cable between England and France was laid in 1850 and, following Hertz's investigations into electric waves, Marconi's invention led to Britain being linked with Europe by wireless telegraphy in 1899. The first permanently successful telegraph cable across the Atlantic was laid in 1866. The first telephone service between London and Paris was opened in 1891. The electro-magnetic telephone was invented by Alexander Graham Bell, a Scottish-born American, in 1876. The first submarine telephone cable to span the Atlantic was laid in 1956 connecting Britain with Canada and the United States, and many submarine telephone cables have since been laid, including the Commonwealth cable system completed in 1967. The spectacular advances in space research depended on the new tools of work provided by parallel developments in telecommunications, *e.g.*, long-range radio and television transmission, electronic computer control. The performance of *Telstar* in July 1962 and of *Early Bird* in April 1965 showed that intercontinental communication by satellites in space was practical. *See also* **Radar, Radio, Television.**

Telemetry, measurement at remote distances by means of a radio-link from the object (missile or satellite) to the ground. The third Russian sputnik, for instance, carried apparatus for measuring, among other things, the pressure and composition of the atmosphere, and the intensity of different kinds of radiation from the sun. Its radio transmitter, powered by solar-energy batteries, sent out the information in coded form by means of uninterrupted signals at 20·005 megacycles with a duration of 150–300 milli-seconds. Radio telemetry from inside the body is being increasingly used in medical and biological research; miniature radio transmitters can be swallowed or implanted in man or animal to detect physiological conditions.

Telepathy and Clairvoyance. *See* **Section J.**

Teleprinter, a telegraph transmitter with a typewriter keyboard, by which characters of a message are transmitted electrically in combinations of 5 units, being recorded similarly by the receiving instrument, which then translates the matter mechanically into printed characters. The telex or public teleprinter service provides direct person-to-person transmission of written messages.

Telescope, an optical instrument for viewing objects at a distance, " the astronomer's intelligencer." Lippershey is credited with construction of the first in 1608; Galileo constructed several from 1609 and Newton was the first to construct a reflecting telescope. The ordinary telescope consists of an object-glass and an eye-lens, with two intermediates to bring the object into an erect position. A lens brings it near to us, and the magnifier enlarges it for inspection. A refracting telescope gathers the rays together near the eye-piece and is necessarily limited as to size, but the reflecting telescope collects the rays on a larger mirror, and these are thrown back to the eye-piece. The world's largest reflectors are at Mount Semirodriki, Caucasus (236·2 in.), Mount Palomar California (200 in.), Mount Wilson, California (100 in.), the McDonald Observatory at Mount Locke, Texas (82 in.), and the Victoria B.C. Observatory (72 in.). At the Royal Observatory, formerly at Greenwich, now at Herstmonceux, Sussex, a 98 in. *Isaac Newton* telescope has been installed. The *Hale* 200 in. telescope at Mount Palomar has revealed objects never before photographed; it is able to probe space and photograph remote galaxies out to a limiting distance of 2,000 million light years. The *Schmidt* telescope at Mount Palomar has been used to make a huge photographic map of the universe. The giant steerable radio telescope built by Manchester University at Jodrell Bank, Cheshire, has a 250 ft. reflector with a beam width of 12 minutes of arc. Early in its career it tracked the Russian earth satellites and the American lunar probes. Another instrument of radio astronomy is the interferometer which consists of spaced aerials. Recently the technique of linking radio telescopes on different continents has been developed for fine observation. *See also* **F3, Observatories, Astronomy, Radio Astronomy.**

Television, or the transmission of images of moving objects by radio. To understand the problems of television it is necessary to consider the action of the human eye. Basically the eye consists of a lens which projects an image of the scene before it upon the retina, a light-sensitive screen at the back of the eye. The retina is made up of several millions of tiny light-sensitive elements, each quite separate and distinct from its neighbours, and each separately connected to the brain by an individual fibre in

the optic nerve. Thus the eye is a very complex organ, and it is able to pick out numbers of tiny details from a scene and convey each detail separately and simultaneously to the brain. It does not send a blend of different points of light and shade in the same way that the ear sends a blend of different sounds; if it did the brain would receive a completely unintelligible blur. From this it is clear that a television system which transmitted a mixture of detail would be useless; it must transmit all the details in a scene separately, yet almost simultaneously, and re-assemble them at such a speed that the eye cannot observe the building-up process. A means of doing this was provided by Nipkow in 1884, when he invented his famous scanning disc, and later Weiller invented the mirror drum for the same purpose. Such mechanical devices as these held the field for many years and in 1923 Baird in this country and Jenkins in America were both using them for the experiments which, in 1925, led to the successful transmission of shadows and simple outlines. It was not until 1926, however, that the first practical demonstration of television, as we understand it, took place when Baird transmitted by radio moving pictures of living human faces over a short distance. The B.B.C. began television broadcasts in 1930; the I.T.A. in 1955. The first television exchange across the Atlantic was made in July 1962 by way of the *Telstar* satellite.

Tellurium, a relatively scarce element, symbol Te, discovered in 1782 by Reichenstein. Chemically it behaves rather like sulphur; its salts are known as tellurides. It occurs chiefly combined with metals in ores of gold, silver, copper, and lead. It is a semiconductor, and some of its compounds (also semiconductors) are coming into use in technical devices.

Templars were soldier knights organised in the 12th cent. for the purpose of protecting pilgrims in their journeyings to and from Jerusalem, and obtained their name from having had granted to them by Baldwin II. a temple for their accommodation. At first they were non-military, and wore neither crests nor helmets, but a long wide mantle and a red cross on the left shoulder. They were established in England about 1180. During the crusades they rendered valuable service, showing great bravery and devotion. In the 12th cent. they founded numerous religious houses in various parts of Europe and became possessed of considerable wealth. It was this that caused their downfall. Kings and Popes alike grew jealous of their influence, and they were subjected to much persecution, and Pope Clement V. abolished the Order in 1312. Edward II. in 1308 seized all the property of the English Templars. The English possessions of the Order were transferred to the Hospitallers of St. John, afterwards called the Knights of Malta. *See also* **Hospitallers, Knights, Teutonic Order.**

Temple, a building dedicated to the worship of a deity or deities. Those built by the ancient Greeks at Olympia, Athens, and Delphi were the most famous. The Temple of Diana at Ephesus was another. The Temple of Solomon at Jerusalem was destroyed and rebuilt several times; Herod's Temple was destroyed by the Romans in A.D. 70.

Temple Bar, an historic gateway that until 1879 stood at the western entrance to Fleet Street near the bottom of Chancery Lane. In olden times it was the custom to impale the heads of traitors over this gateway. It has been at Theobald's Park, Cheshunt, since 1888.

Terbium, an element, symbol Tb, discovered in 1842 by Mosander, belonging to the group of rare-earth metals.

Teredo, the scientific name of the ship-worm, a peculiar bivalve mollusc, which lodges itself when young on the bottoms of wooden ships and bores its way inwards, causing much injury.

Termites, also known as *White Ants*, though they are not related to the true ants and are placed in an entirely different insect order (*Isoptera*). They abound in the tropics and also occur in temperate countries, though only two species are common in Europe. There is no British species. They live in colonies and their nests take the form of mounds of earth and wood, cemented together with saliva, and up to 20 ft. in height. Five separate castes are recognised, three of them being capable of reproduction, and the other two are sterile.

Tern. This slender, gull-like bird has long pointed wings, a deeply-forked tail, pale grey and white plumage, black cap, and is a very graceful flier. There are several species, some of which are summer migrants to Britain. The Arctic tern winters in the Antarctic, returning to find a nesting place in the spring.

Terrapin, a kind of fresh-water tortoise. There are several species widely distributed in the Northern Hemisphere.

Tertiary Rocks, in geology the rocks formed during the Caenozoic era comprising the Eocene, Oligocene, Miocene, and Pliocene periods. *See* **F45.**

Teutonic Order, of German military knights, was founded in the Holy Land at the end of the 12th cent. for succouring the wounded of the Christian army before Acre. They were dispersed in the 15th cent. but the Order continued to exist until 1809, when Napoleon I. confiscated its properties. In 1840 the order was resuscitated in Austria as a semi-religious knighthood. *See also* **Hospitallers, Knights, Templars.**

Thallium, a blue-grey metallic element, symbol Tl, discovered by Crookes in 1861. It is obtained from the flue dust resulting from the burning of pyrites for sulphuric acid manufacture.

Thanksgiving Day, a national holiday in the United States, observed on the fourth Thursday in November: instituted by the Pilgrim Fathers in 1621 to celebrate their first successful harvest.

Theodolite. The instrument used by surveyors for measuring angles in the horizontal and vertical planes; also used in meteorology for following balloons to measure the speed and direction of wind.

Therm. The charges for gas for lighting and heating (formerly reckoned at per cubic foot) are now based on the calorific, or heat, value of the gas, and the unit used is termed a therm. The therm is 100,000 British thermal units.

Thermionic Emission is the departure of charged particles from matter under the influence of heat. The higher the temperature the greater the flow of escaping particles. The most common example is the emission of electrons from red-hot electrodes—this is the basic phenomenon made use of in thermionic valves (*see* **Valve**). If the hot electrode (the cathode) is enclosed in an evacuated or gas-filled bulb, the emitted electrons can be collected at another electrode (the anode) and will flow through an external circuit back to the emitter. Thus an electric current has been generated by heat.

Thermodynamics, a term first applied by Joule to designate that branch of physical science which treats of the relations of heat to work. What is called the first law of thermodynamics is thus stated by Clerk Maxwell: "When work is transformed into heat, or heat into work, the quantity of work is mechanically equivalent to the quantity of heat." In one of its many formulations, the second law asserts that "the heat tends to flow from a body of hotter temperature to one that is colder, and will not naturally flow in any other way." *See* **F17(1).**

Thermo-electric Devices. If two wires of different materials are formed into a loop and if the two joins are kept at different temperatures a current flows in the loop. This was discovered by Seebeck in 1822, and the device is called a thermocouple. The electric current could in principle be made to drive some useful machine, and the energy comes from the heat that is absorbed by the thermocouple—if one part of the thermocouple is not hotter than the others it will not work. It has long been realised that this is a device that converts heat directly into electricity without raising steam and driving dynamos as in a power-station. However, until recently nobody has used thermocouples for much besides temperature measurement, for which they are exceedingly useful. The new development is the manufacture of semiconductors (*q.v.*); for the thermoelectric effects of these new materials are much greater than those of metals. A material much studied in this connection is a compound of bismuth and tellurium, bismuth telluride. It now seems

practicable to generate useful electricity from suitably designed thermocouples. For example, the U.S.S.R. produces a thermoelectric device which uses the heat from the chimney of a domestic oil-lamp to produce enough electricity to work a radio. Presumably this is very useful in remote parts with no electricity supply. But the possibilities do not stop there. Indeed, an eminent Russian authority has stated that thermocouples could produce electricity direct from the warmth of sunlight on a scale and at a cost comparable with conventional fuel-burning power-stations. Even if solar energy cannot be so used, it might be possible to use the heat of nuclear reactors, but this means that the thermoelectric devices would have to stand up to very heavy radioactivity and still work. It is not surprising, however, that many firms are showing great interest in thermoelectricity these days.

Thermometer, an instrument by which the temperature of bodies is ascertained. The most familiar kind of thermometer consists of a glass tube with a very small bore, containing, in general, mercury or alcohol. This expands or contracts with variation in the temperature, and the length of the thread of mercury or alcohol gives the temperature reading on a scale graduated in degrees. Various forms of thermometer are used for particular purposes.

Thermonuclear Reactions. *See* **Nuclear Fusion.**

Thirty-nine Articles. *See* **Articles.**

Thistle, Order of. *See* **Knighthood.**

Thorium, a scarce, dark grey, metal element, symbol Th, discovered by Berzelius in 1828. All substances containing thorium are radioactive. Chief source of thorium is monazite sand, big deposits of which occur in Travancore (India), Brazil, and the U.S.A. Considered important as a potential source of atomic energy since the discovery that it can be transmuted into U233, which is capable of fission like U235.

Thrush, a large family of song-birds of the *Passeriform* order, distributed all over the world. The British species include the robin, redstart, nightingale, song-thrush (or mavis), blackbird, mistle-thrush, ring-ouzel of the mountains, and large numbers of migrant fieldfares and redwings from northern Europe are winter visitors.

Thunder, the sound heard after the occurrence of a lightning flash. It is due to vibrations of the air along the path of the flash, which are set up by the sudden heating (and expansion) followed by the rapid cooling (and contraction) to which the air is subjected. It is unusual for thunder to be heard more than 10 miles away, the distance being estimated roughly by allowing 1 mile for every 5 seconds which elapse between seeing the flash and hearing the thunder. Continued rolling of thunder results from the zig-zag nature of the flash and the multiple strokes of which it is composed, variations in the energy developed along the path, and echo effects. Thunderstorms are caused by powerful rising currents of air within towering cumulonimbus clouds and are most frequent during the afternoons and evenings of sunny summer days.

Thursday, the 5th day of the week, named after Thor, the Scandinavian deity. To the ancient Romans Thursday was *dies Jovis*, or Jupiter's day.

Tidal Power. The principle of exploiting the energy of the tides is similar to hydro-power since it involves the harnessing of falling water. A barrage across a bay or estuary is filled during flow tide and closed during ebb tide creating a difference in level. When the water is allowed to fall towards the lower side of the barrage it operates a turbine which drives a generator. More sophisticated schemes would incorporate pumped storage facilities. An essential requirement is a large tidal range in order to get a sufficient head of water. Although a 240MW scheme has recently been completed on the River Rance in France, it is believed that the economics of tidal power are generally insufficiently favourable for the method to be widely used. *See also* **Hydroelectric Schemes.**

Tides, the periodical rise and fall of the waters of the ocean and its arms, are due to the gravitational effect of the moon and sun. Newton was the first to give a general explanation of the phenomenon of the tides. He supposed the ocean to cover the whole earth, and to assume at each instant a figure of equilibrium, under the combined gravitational influence of earth, sun, and moon, thus making and controlling the tides. At most places there are two tides a day, and the times of high- and low-water vary according to the positions of the sun and moon relative to the earth. When earth, moon and sun are in line (at full moon and new moon) the gravitational pull is greatest and we get "spring" tides. When sun and moon are at right angles (first and third quarters of the moon's phases) we get the smaller "neap" tides.

Tiers Etat, the lowest of the three estates of the realm as reckoned in France—nobility, clergy, and commons (*tiers état*)—prior to the Revolution.

Tiger, a powerful carnivorous animal of the cat family, which occurs in India and certain other parts of Asia. Its skin is of a tawny yellow, relieved by black stripings of great beauty of formation. Some tigers attain a length of from 9 to 12 ft.

Time. The measurement of time has become of increasing importance to man with the advance of civilisation. It was at first almost inevitably based on the succession of night and day, the waxing and the waning of the moon, and on the changing seasons of the year, and the astronomical observation of these three periodic effects has served as the basis of time measurement until recent years. The precision of the observations has continually increased, and clocks have been developed for dividing the day into smaller units. The clocks were adjusted so as to keep in step with the rotation of the earth on its axis, but during recent years an atomic standard of time has been developed, and clocks are now adjusted so as to keep in step with the natural period of an atomic vibration. *See* **Clocks, Greenwich Mean Time, British Standard Time.**

Tin is a white, metal element, symbol Sn (Latin *Stannum*), whose commonest ore is cassiterite (tin oxide), which occurs in Malaya, Indonesia, Bolivia, Congo, Nigeria, and Cornwall. It protects iron from rusting, and the tin coating on tinplate is applied by dipping the thin steel sheet in molten tin or by electrolysis. Tin alloys of importance include solder, bronze, pewter, and Britannia metal.

Tit *or* **Titmouse**, a small insectivorous bird of the woodlands and forests, bright of plumage and very active and agile, often seen hanging upside down searching for food. There are over fifty species, eight of which occur in Britain: the Great and Blue Tits, familiar in gardens and countryside, the Cole Tit, Marsh Tit, Willow Tit, Bearded Tit, Long-tailed or "Bottle" Tit, and the Scottish Crested Tit.

Titanium, a scarce metal, symbol Ti, difficult to extract from ores, found in association with oxygen in rutile, anatase, and brookite, as well as with certain magnetic iron ores. It combines with nitrogen at a high temperature. Discovered by the Rev. William Gregor in 1791. Titanium alloys, being very resistant to stress and corrosion, and combining strength with lightness, are finding wide application not only in marine and chemical engineering but in the building of aircraft, rockets, and the nuclear-energy field. Titanium dioxide is now widely used in making paints.

Tithes, an ecclesiastical tax consisting of a tenth part of the annual produce known to the ancient Jews, and first imposed by Christian authorities in the 4th cent., although not made compulsory in England before the 9th cent. Tithes derived from land are termed "praedial," those derived from cattle being styled "mixed," while others are personal. After the passing of the Tithes' Commutation Act of 1836, tithes were gradually converted into rent charges, and today the old form of tithes exists only to a small degree. Consult Tithe Act of 1936.

T.N.T. (**Trinitrotoluene**). A high explosive formed by the action of a mixture of nitric and sulphuric acids on toluene. Not highly sensitive to shock, it can be used in shells without danger, and is exploded by a time, or detonator, fuse. Apart

from wartime applications, it is used in blasting in quarries and mines.

Toad, an amphibian, differing from the frog in having a dry, warty skin, a heavier, squat build and shorter limbs. It has a similar metamorphosis, is largely nocturnal, and will wander far from water after the breeding season. Two toads occur in Britain, the Common Toad and the Natterjack. The latter can be identified by the narrow light stripe running down the middle of the back.

Tobacco is made from the leaves of various narcotic plants of the *Nicotiana* family, which contain a volatile oil and an alkaloid called nicotine. Tobacco is largely grown in America, India, Japan, Turkey, Greece, Canada, Italy, Indonesia, Bulgaria, Philippines, France, Congo, China, Rhodesia, Zambia, S. Africa, S. America, and other countries of a warm climate. It undergoes various processes of preparation. The leaves are first dried, then cut into small pieces, moistened and compressed, and in this form it is known as cut or "shag" tobacco; when moistened with syrup or treacle and pressed into cakes, it is Cavendish; when twisted into string form, it is "twist" or "pig-tail." For cigars the midribs of the dry leaves are removed, and what is left is moistened and rolled into cylindrical shape. For snuff, the tobacco leaves are moistened and allowed to ferment, then dried, powdered and scented. *See* Section P (Respiratory System) for the connection between tobacco-smoking and lung cancer.

Tolls. Payments for privileges of passage were first exacted in respect of ships passing up rivers, tolls being demanded on the Elbe in 1109. Tolls for land passage are said to have originated in England in 1269, toll-bars being erected at certain distances on the high-roads in the 17th cent., where toll had to be paid for all vehicles passing to and fro. After about 1825 they began to disappear, but still linger on some country roads and bridges. Tolls on London river bridges ceased in 1878–79.

Tonic Sol-Fa, a system of musical notation in which monosyllables are substituted for notes. Thus the major diatonic scale is represented by Doh, Ray, Me, Fah, Soh, La, Te, Doh. The system was invented by a Miss Glover of Norwich in about 1840 and has proved of great assistance in the teaching of music in schools.

Tonsure, the shaven part of the head of a Roman Catholic ecclesiastic, dates from the 5th or 6th cent. In the Roman Catholic Churches only a circle, or a crown, is shaved, while in the Greek Church shaving is forbidden.

Topaz, a transparent mineral gem, being a silicate and fluoride of aluminium and generally found in granitic rocks. Its colour is yellow, but it also occurs in pink and blue shades. The best kinds come from Brazil.

Topiary, the art of clipping and trimming trees, shrubs, etc., into ornamental shapes. In Britain this art goes back before Elizabethan times when gardens were formal and the shapes simple and symmetrical. By the end of Queen Anne's reign topiary had become much more elaborate, and all kinds of fanciful shapes were produced. Pliny in his *Letters* tells how box hedges were clipped into different shapes in Roman times.

Tornado, a violent whirlwind, characterised by a black, funnel-shaped cloud hanging from heavy cumulonimbus. Usually tornadoes are only a few hundred feet in diameter and occur frequently in the Mississippi region of the U.S.A., where it has been estimated that the wind speeds within them may exceed 200 m.p.h. In West Africa the term is applied to thundery squalls.

Tortoises and Turtles, are cold-blooded reptiles, four-footed, and encased in a strong shell protection, the shells of some species being of beautifully horny substance and design, in much demand for combs, spectacle frames, and ornamental work. It is the custom to designate the land species as tortoises and the aquatic kinds as turtles. The green turtle, so called because its fat has a green tinge, is in great demand for soup. Together the tortoises and turtles make up the reptilian order called *Chelonia*, the biggest representatives of which are the giant land tortoises of the Galapagos Islands, reaching a weight of 500 lb. and living a century. Some of these giant tortoises are even said to have reached 200 or 300 years of age.

Toucan, a South and Central American family of brilliantly coloured birds, remarkable for their huge bills. Toucans live on fruit, are of arboreal habits, and nest in holes. There are about 37 species.

Touchstone, a kind of jasper called by the ancients "Lydian stone," of economic value in testing the quality of metal alloys, especially gold alloys. The testing process is very simple. The alloy is drawn across the broken surface of the Touchstone, and from the nature of the mark or streak it makes the quality of the alloy can be ascertained.

Tourmaline, a mineral occurring in different colours in prismatic crystals. It is a well-known example of a pyro-electric crystal, *i.e.*, one that has a permanent electric polarisation. A double silicate of aluminium and boron, it occurs in Cornwall, Devon, S. America and Asia.

Tournaments were equestrian contests between military knights and others armed with lances, and frequent in the Middle Ages. The Normans introduced them to England.

Tower of London was built as a fortress by William the Conqueror. It was a royal palace in the Middle Ages and later used as a garrison and prison. Many distinguished prisoners were executed there, or on the neighbouring Tower Hill, including Anne Boleyn, Catherine Howard, Lady Jane Grey, the 2nd Earl of Essex, and the Duke of Monmouth. The Chapel Royal of St. Peter and Vincula in the Tower was built in 1105 and took its present shape in the reign of Henry VIII. The Crown Jewels are kept at the Tower, and in the Armoury a fine collection of armour is preserved. The attendant staff are called Yeomen Warders of the Tower. Their style of dress is of the Tudor period.

Trade-Mark, a mark used in relation to goods for the purpose of indicating a connection in the course of trade between the goods and some person having the right, either as a proprietor or registered user, to use the mark. Trade-marks can be registered, the registration holding good for 7 years and being renewable thereafter indefinitely for periods of 14 years. Infringement of a registered trade-mark renders the infringer liable to damages.

Trade Winds form part of the circulation of air round the great permanent anticyclones of the tropics and blow inwards from north-east and south-east towards the equatorial region of low pressure. Atlantic trades are more regular than those of the Pacific. The belts may extend over 1,500 miles of latitude and, together with the Doldrums, move north and south in sympathy with the seasonal changes in the sun's declination, the average annual range being about 5 degrees of latitude.

Trafalgar, Battle of, was fought off Cape Trafalgar on Oct. 21, 1805, between the British under Nelson and the French and Spanish under Villeneuve and Gravina. It was a complete victory for the British, but Nelson was killed.

Trafalgar Square. The site has often been referred to as the finest in Europe. It was conceived originally as a square by John Nash (1752–1835) when the project was considered of linking Whitehall with Bloomsbury and the British Museum. It was to be named after the new monarch as King William the Fourth's Square but on the suggestion of George Ledwell Taylor (a property owner near the site) alteration to the more popular name Trafalgar Square was agreed to by the King. On the north side the National Gallery was planned by Nash and erected by William Wilkins on the place of the Royal Mews—a work of William Kent a century before. The lay-out was the idea of Charles Barry but he did not approve the erection of the Nelson column (which see). His idea was for the square to have a grand flight of steps from the north side with sculptural figures of Wellington and Nelson but the Commons decided otherwise and the column as designed by William Railton was begun in 1840. The two fountains by Barry were supplanted in 1948 by ones designed (1938)

by Sir Edwin Lutyens. Executed in Portland stone they are flanked by some bronze sculptures. In the same year memorial busts of Lords Jellicoe and Beatty were placed by the north wall.

Transept, the portion of a church which extends across the interior between the nave and the choir.

Transistor. An electronic device consisting of a small piece of semiconducting solid (usually germanium or silicon) to which contact is made at appropriate places by three wires. The three parts resemble in function (not construction or behaviour) the cathode, anode, and grid of a thermionic valve, and transistors can perform many of the operations that valves have hitherto been used for in radio, television, etc. They possess several advantages over valves since there is no need for evacuated glass bulbs nor for a heated emitter to give off electrons. This leads to much greater compactness and economy as well as to a much longer life. Nevertheless, there are certain limitations to their use, and they are not yet suitable as substitutes for valves in all cases. The device was invented by the Americans Bardeen, Brattain, and Shockley in 1948.

Transubstantiation. *See* Section J.

Treasure-Trove, a legal term applying to treasure (coin, bullion, gold or silver articles) found hidden in the earth or other place, for which no owner can be discovered. The treasure legally belongs to the Crown, but it is the practice to return to the finder all articles not required for national museums and to reward him with the full market value of such as may be retained. It is the duty of the finder to report to the Coroner for the district in which the find is made who holds an inquest to find whether the discovery be treasure-trove or no. In England concealment is a criminal offence. *See also* **Wreck.**

Tree Frog, occurs most commonly in America and Australasia. The common European tree frog is a brilliant green animal, the adhesive discs at the tips of its fingers and toes enabling it to cling to trees, etc., with ease.

Tree Shrew, an arboreal insectivorous mammal of Asia belonging to the family *Tupaiidae*. Tree shrews are related to the shrews, though in appearance they resemble squirrels except for their sharply pointed snout. They occur in Borneo, Siam, China, and Malaya. Some zoologists classify them as primitive primates.

Trent, Council of, the longest and one of the most important in the history of the Roman Catholic Church, was convened to combat the doctrines of Martin Luther. It first sat in 1545, the last sitting being in 1563. At this Council the general policy, principles, and dogmas of the Roman Catholic Church were authoritatively settled.

Triassic *or* **Trias**, the earliest geological period in the Mesozoic era, which began some 225 million years ago. Triassic formations 25,000 ft. thick occur in the Alps. Modern insects were appearing, and also small reptile-like mammals. Other important Triassic animals were: dinosaurs, ichthyosaurs (marine reptiles), and pterosaurs (flying reptiles). *See* **F45.**

Tribunes, name assigned to officers of different descriptions in ancient Rome. The original tribunes were the commanders of contingents of cavalry and infantry. The most important tribunes were the tribunes of the plebs, first elected in 494 B.C. as the outcome of the struggle between the patrician and the plebeian orders. They held the power of veto and their persons were sacred.

Trichoptera. This is the insect order comprising the Caddis-flies. These are moth-like insects, having hairs on the wings. They are usually found fluttering weakly near water. The larvae are aquatic and are remarkable for the cases (caddis cases) which they build out of sticks, small stones, sand grains, and shells.

Tricolour, the flag of the French Republic since 1789, consisting of three nearly equal vertical bands of blue, white, and red (ratio 90 : 99 : 111).

Trilobites, extinct marine arthropods, most abundant in the Cambrian and Ordovician systems. Their appearance may be roughly described as resembling that of a woodlouse, and like that animal the trilobites were capable of rolling their bodies up into a ball.

Trinity. The Christian doctrine that God exists in three persons, all co-equal, and indivisible, of the same substance—God the Father, God the Son (who became incarnate as Jesus), begotten of the Father, and God the Holy Ghost, proceeding from Father and Son. The system denying the Trinity is Unitarianism (*see* **Sec. J**).

Trinity House, on Tower Hill, London, was incorporated in 1514 as an association for piloting ships, and has ever since been entrusted with various matters connected with the regulation of British navigation. Since 1854 the lighthouses of the country have been under its supervision. The acting Elder Brethren act as Nautical Assessors in Marine causes which are tried by the High Court of Justice.

Triptych, a picture, carving, or other representation, with two swing doors, by which it could be closed in; frequently used as an altar-piece. Also a writing tablet in three parts, two of which folded over the one in the centre.

Trireme, an ancient vessel with three rows of oars of great effectuality in early naval warfare. Mentioned by Thucydides. It was a long, narrow vessel propelled by 170 rowers. The Romans copied it from the Greeks.

Trisagion ("thrice holy"), an ancient Jewish hymn, still regularly sung in the service of the Greek Church. A version of it—"Tersanctus"—also forms part of the Anglican Eucharistic service.

Tritium, a radioactive isotope of hydrogen which has three times the weight of the ordinary hydrogen atom. It is produced by bombarding an isotope of lithium with neutrons and has a half-life of 12½ years, decaying with the emission of β-particles (electrons).

Triumvirate, a term used to denote a coalition of three persons in the exercise of supreme authority. The first Roman triumvirate was that of Pompey, Julius Caesar, and Crassus, 60 B.C.; the second was that of Mark Antony, Octavus, and Lepidus, 43 B.C.

Tropic-Bird, a long-tailed sea bird, of which there are 3 species (the Red-billed, the White-tailed, and the Red-tailed), frequenting the tropical regions of the Atlantic, Pacific, and Indian oceans. They are commonly called Bo'sun Birds.

Troposphere. The atmospheric layer which extends from the earth's surface to the stratosphere. As a general rule the temperature in the troposphere falls as altitude increases. *See* **Atmosphere.**

Troubadours, lyric poets who flourished from the 11th to the end of the 13th cent., chiefly in Provence and the north of Italy. They were often knightly amateurs, and cultivated a lyrical poetry intricate in metre and rhyme and usually of a romantic amatory strain. They did much to cultivate the romantic sentiment in days when society was somewhat barbaric and helped considerably in the formation of those unwritten codes of honour which served to mitigate the rudeness of mediaeval days. *See also* **Jongleurs.**

Trouvère *or* **Trouveur**, mediaeval poet of northern France, whose compositions were of a more elaborate character—epics, romances, fables, and chansons de geste—than those of the troubadour of the south. Flourished between the 11th and 14th cent.

Truffles are subterranean edible fungi much esteemed for seasoning purposes. There are many species, and they are found in considerable quantities in France and Italy, less commonly in Britain. They are often met with under beech or oak trees, and prefer calcareous soils, but there are no positive indications on the surface to show where they are, and they are not to be cultivated. Hogs, and sometimes dogs, are used to scent them out, the former, by reason of their rooting propensities, being the most successful in the work.

Tsetse, an African dipterous fly belonging to the same family as the house-fly. It is a serious economic pest as it transmits the protozoon causing African sleeping sickness when it pierces human skin in order to suck blood, which forms its food. *See* **Gammexane.**

Tuatara or *Sphenodon punctatum*, a primitive lizard found in New Zealand. It has a rudimentary

third eye on the top of the head; this is called the pineal eye and corresponds to tissue which in mammals forms the pineal gland.

Tube Foot, the characteristic organ of locomotion of starfishes and kindred animals. They are arranged in pairs along the underside of the arms, and their sucker-like ends can grip a surface very tightly. The action of the suckers depends on hydraulic pressure.

Tudor Period extends from 1485 to 1603. The first Tudor sovereign was Henry VII., descended from Owen Tudor; then followed Henry VIII., Edward VI., Mary, and Elizabeth, the last of the line.

Tuesday, the third day of the week, named from the Saxon deity Tuisto, Tiw, or Teusco. To the Romans it was the day of Mars.

Tuileries, a French royal and imperial palace dating from 1564. It was attacked by insurgents during the outbreaks of 1792, 1830, and 1848, and was burned down during the Commune of Paris in 1871.

Tumulus, a mound of earth raised over the bodies of the dead. The mound of Marathon, enclosing the bodies of the Athenians who were killed in the famous battle with the Persians, is a celebrated tumulus. Such mounds were commonly raised over the tombs of the distinguished dead in ancient times, and sometimes enclosed heavy structures of masonry. The Roman "barrows" were tumuli. Evidences of such mounds are frequent in prehistoric remains.

Tuna *or* **Tunny**, a large marine fish belonging to the mackerel family, frequenting the warm waters of the Atlantic, Pacific, and Mediterranean. Tuna fisheries are an important industry.

Tundra, the vast barren treeless plains with small lakes and morasses lying in the arctic regions of northern N. America and northern Russia where the winters are long and severe and the subsoil permanently frozen. Sparsely inhabited by nomadic peoples—Lapps, Samoyeds, and Eskimos—who support themselves by hunting and fishing. The reindeer is domesticated and supplies most of their needs.

Tungsten, a hard, brittle metal, symbol W (it was formerly called wolfram), silver to grey in colour. Its chief ores are wolframite (iron and manganese tungstate) and scheelite (calcium tungstate). Tungsten is alloyed in steel for the manufacture of cutting tools; also in the non-ferrous alloy stellite (*q.v.*). Electric lamp filaments are made from tungsten. Tungsten carbide is one of the hardest substances known and is used for tipping tools.

Turbines propelled by steam provide power for the propulsion of many ships, and on land steam turbines are a principal source of power, being used in large central electricity stations, for instance, to convert heat energy into electrical energy. Gas turbines have recently come into use in aeroplanes, and gas-turbine railway locomotives are being developed. The first gas-turbine ship had its trials in 1947, just half a century after the first steam-turbine ship.

Turbot, a large flat fish, highly valued as food. It often attains from 30 to 40 lb. in weight. Its flesh is white and firm. It is confined to European waters, and is caught by line or trawl.

Turkey, a fowl of American origin, brought to Europe from America soon after the discovery of that country. It was a domesticated bird in England in the first half of the 16th cent.

Turpentine, an oily substance obtained from coniferous trees, mostly pines and firs. It is widely used especially in making paints and varnishes, and also has medicinal properties.

Turquoise, formerly called Turkey-Stone, is a blue or greenish-blue precious stone, the earliest and best specimens of which came from Persia. It is composed of a phosphate of aluminium, with small proportions of copper and iron. India, Tibet, and Silesia yield turquoises, and a variety is found in New Mexico and Nevada. It derives its name from the fact that the first specimens were imported through Turkey.

Turtle Dove, a summer visitor from Africa to southern England. It is a small, slender bird with reddish-brown upper parts, pinkish throat, black tail with white edges, and a repeated purring note.

Tweed. A rough-surfaced fabric of the twilled type, usually all-wool, though cheaper kinds may include cotton. Of a soft, open, flexible texture, it may have a check, twill, or herringbone pattern. Harris, Lewis, Bannockburn, and Donegal tweeds are well known. "Tweeds" is said to have been written in error by a clerk for "twills."

Twelfth Night is the eve of the feast of the Epiphany, and in olden times was made the occasion of many festivities. It was the most popular festival next to Christmas, but is now little observed.

Twilight is the light which is reflected from the upper portion of the earth's atmosphere when the sun is below the horizon (before sunrise or after sunset). The term is most usually understood to refer, however, to the evening light; the morning light we call dawn. The twilight varies in duration in different countries, according to the position of the sun. In tropical countries it is short; in the extreme north it continues through the night.

Tyburn, a former small tributary of the Thames, which gave its name to the district where now stands the Marble Arch, Hyde Park. Here public executions formerly took place.

Tycoon, the title by which the commander-in-chief of the Japanese army (virtually the ruler of Japan) was formerly described by foreigners. (In Japanese *taikun* means great lord or prince.) The term is now applied, usually in a derogatory sense, to an influential business magnate.

Tympanum is, in architectural phraseology, the triangular space at the back of a pediment, or, indeed, any space in a similar position, as over window or between the lintel and the arch of a doorway. In ecclesiastical edifices the tympanum is often adorned with sculpture.

Tynwald, the title given to the Parliament of the Isle of Man, which includes the Governor and Council (the Upper House), and the House of Keys, the representative assembly. This practically constitutes Home Rule, the Acts passed by the Tynwald simply requiring the assent of the Sovereign.

U

Uhlan, a light cavalry soldier armed with lance, pistol, and sabre and employed chiefly as skirmisher or scout. Marshal Saxe had a corps of them in the French Army; and in the Franco-German war of 1870 the Prussian Uhlans won fame.

Ultramarine, a sky-blue pigment obtained from *Lapis lazuli*, a stone found in Tibet, Persia, Siberia, and some other countries. A cheaper ultramarine is now produced by grinding and heating a mixture of clay, sulphur, carbonate of soda, and resin.

Ultrasonics, sound waves of frequency so high as to be inaudible to humans, *i.e.*, about 20,000 Hz and upwards (Hz is SI unit for cycle per sec.). Ultrasonic waves are commonly produced by causing a solid object to vibrate with a suitably high frequency and to impart its vibrations to the air or other fluid. The object may be a quartz or other crystal in which vibrations are excited electrically, or a nickel component which is magnetically energised. There are numerous technical applications, *e.g.* submarine echo sounding, flaw detection in castings, drilling glass and ceramics, emulsification. Ultrasonic waves are an important tool of research in physics. Bats produce very loud sounds when they are flying, but at ultrasonic frequencies (20,000 to 100,000 Hz), so that we cannot ourselves hear them.

Ultra-Violet Rays. These are invisible electromagnetic rays whose wavelengths are less than 3,900 A. (Angstrom = one-hundredth of a millionth of a centimetre). The sun's radiation is rich in ultra-violet light, but much of it never reaches the earth, being absorbed by molecules of atmospheric gases (in particular, ozone) as well as by soot and smoke particles. One beneficial effect of ultra-violet light on human beings is that it brings about synthesis of vitamin-D from certain fatty substances (called sterols) in the skin. The wavelengths which effect this vitamin synthesis also cause sun tan and sun burn. Ultra-violet lamps (which are mercury-vapour discharge lamps) are also used for sterilising the air inside buildings, their rays

being lethal to bacteria. Many substances fluoresce under ultra-violet light; for instance, zinc silicate glows green, while cadmium borate throws out red light. This phenomenon is applied practically in fluorescent lamps, the light of requisite hue being secured by judicious mixture of the fluorescent materials which coat the lamp. *See* Electric Light.

Umbra, the full shadow of the earth or moon during an eclipse; the half shadow is called penumbra.

Uncia. The Romans took over the Egyptian cubit and divided it into 16 digits as well as into 12 parts called *unciae*, the *uncia* being the origin of the inch.

Unction, the act of anointing with oil, a symbol of consecration practised in the Roman Catholic, Greek, and other Churches, but not in the Protestant. *Extreme unction* is the rite of anointing a dying person with holy oil. This function consists in anointing the eyes, ears, nostrils, mouth, the palms of the hands, and the soles of the feet.

Underdeveloped Countries are countries in which primitive methods of production still largely prevail. Most of the population are peasants, carrying on agricultural pursuits on small-holdings without much use of capital, and the industrial production is largely in the hands of individual craftsmen working without expensive capital instruments. Many of these countries are now trying to carry through large plans of industrialisation, but are severely hampered by lack of capital resources, as they need to import capital goods for which they find it difficult to pay with exports, especially when the "terms of trade" (*see* G6) are unfavourable to primary producers. The need for capital imposes on such countries the necessity of a high rate of saving out of their national incomes; but this is difficult to enforce in view of the deep poverty of most of the people. They accordingly stand in need of help from the advanced countries, both with capital loans at low interest rates and gifts. *See* Section G, Part III.

Unicorn, a fabulous single-horned animal. In heraldry its form is horse-like, with the tail of a lion and pointed single horn growing out of the forehead. In the Middle Ages the unicorn was a symbol of virginity.

Union of Great Britain and Ireland was proposed in the Irish Parliament in Jan. 1799 after the 1798 Rebellion and came into force on Jan. 1, 1801. The troubled history of Ireland, associated with the question of self-government, nationalism, land, and religion, culminated in the Easter revolution of 1916. A treaty giving the 26 southern counties independence in 1921, as the Irish Free State, was followed by a period of internal dissention. In 1937 a new constitution was enacted in Eire in which no reference was made to the Crown. This, however, left in force the External Relations Act of 1936 and with its repeal in 1948, Eire separated itself from the British Crown and thus severed the last constitutional link with the Commonwealth, and became an independent Republic.

Union, Treaty of, was the treaty by which Scotland became formally united to England, the two countries being incorporated as the United Kingdom of Great Britain, the same Parliament to represent both, Scotland electing sixteen peers and forty-five members of the House of Commons. Uniformity of coins, weights, and measures was provided for, Scottish trade laws and customs were assimilated to those of England, and as regards religion and the practices of the law, Scotland was to continue as before. This Act was ratified on May 1, 1707.

Universe in astronomy means not only the star system (of which the sun and planets are a small part) but all the countless star systems or nebulae which may be separated from each other by millions of light-years. *See* F3–7.

Universities are institutions of higher education whose principal objects are the increase of knowledge over a wide field through original thought and research and its extension by the teaching of students. Such societies existed in the ancient world, notably in Greece and India, but the origin of the University as we know it today lies in mediaeval Europe, the word *universitas* being a contraction of the Latin term for corporations of teachers and students organised for the promotion of higher learning. The earliest bodies to become recognised under this description were at Bologna and Paris in the first half of the 12th cent.; Oxford was founded by an early migration of scholars from Paris, and Cambridge began with a further migration from Oxford. Other Universities sprang up all over Europe, including three in Scotland—St. Andrews (1412), Glasgow (1451), and Aberdeen (1494)—which were followed by Edinburgh in 1582. These six bodies remained the only Universities in Great Britain until the foundation in 1826–29 of University and King's Colleges in London (resulting in the establishment of the University of London in 1836) and of the University of Durham in 1832. There are (1974) thirty-three Universities in England: Aston, Bath, Birmingham, Bradford, Bristol, Brunel, Cambridge, The City, Durham, East Anglia, Essex, Exeter, Hull, Keele, Kent, Lancaster, Leeds, Leicester, Liverpool, London, Loughborough, Manchester, Newcastle, Nottingham, Oxford, Reading, Salford, Sheffield, Southampton, Surrey, Sussex, Warwick and York. Other institutions where the work is of university standard are the University of Manchester Institute of Science and Technology; the Manchester Business School; the London Graduate School of Business Studies; Cranfield Institute of Technology; and the Royal College of Art. Formed from colleges of technology, art and design, commerce, and other institutions, thirty polytechnics have been established in England and Wales as centres of higher education. Wales has one University (The University of Wales with colleges at Aberystwyth, Bangor, Cardiff and Swansea) in addition to the Welsh National School of Medicine, the Institute of Science and Technology, and St. David's, Lampeter. Scotland now has eight: Aberdeen, Dundee (1967), Edinburgh, Glasgow, Heriot-Watt (1966), St. Andrews, Stirling (1967), and Strathclyde (1964), Britain's first technological University. Northern Ireland has two: Queen's University, Belfast, and the New University of Ulster at Coleraine. The number of full-time students in Great Britain was about 241,000 in 1972–3, over four times the number at the end of the war. The Open University received its charter in 1969; it provides degree and other courses together with radio and television programmes and began its broadcasts in January 1971 for 25,000 students (in 1973 some 38,000 students were following courses). The Republic of Ireland has the University of Dublin (Trinity College, Dublin), and the National University of Ireland with colleges at Dublin, Cork and Galway. The 19th cent. also saw a wide extension of the University movement throughout the British Empire, the early important foundations being McGill (1821), Toronto (1827), and Leval (1852) in Canada; Sydney (1850) and Melbourne (1853) in Australia; New Zealand (1870); South Africa (1873); Bombay, Calcutta, and Madras in 1857 in India; and the University of the Punjab (1882) in the present Pakistan. Since the war a number of Universities and University Colleges have been instituted in Commonwealth countries. In the U.S.A. the development of higher education has left the Universities less sharply defined than in Europe and the Commonwealth, the best-known being Harvard, Yale, Princeton, Columbia, and Chicago. In 1973 the United Nations University was established with headquarters in Tokyo. In Britain, Universities receive aid from the State mainly in the form of direct grants from the Treasury made on the advice of the University Grants Committee. But they are self-governing institutions free from State control. In recent years students have increased their contributions to the formulation of university policy. *See* Section R.

Uranium, a metal, symbol U, discovered by Klaproth in 1789 in pitchblende. It is a white metal which tarnishes readily in air. Great developments have followed the discovery that the nucleus of the uranium isotope U^{235} undergoes fission, and uranium minerals have become very important since it was found that atomic energy could be released controllably by taking advantage of fission. Previous to the second

world war the uranium content of all the uranium ores that were mined was estimated at 1,000 tons. Before atomic energy work began to take the major part of the world's output of uranium minerals, the chief users of uranium compounds were the ceramics and textile industries. *See also* Nuclear Reactors, Nuclear Fission, F12(1).

Uranus. This planet was discovered by Herschel in 1781. Its diameter is 32,000 miles and its average distance from the sun is 1,783 million miles. It has five small satellites.

Urea, the final product in mammals of the breakdown of nitrogenous waste, *e.g.*, excess amino-acids. It is very soluble in water and is excreted in urine. In 1828 Wohler synthesised urea from inorganic matter. This was the first laboratory synthesis of an organic substance and refuted the idea that living creatures or life force are necessary to create such substances.

Ursa Major, the Greater Bear, or "Charles's Wain," a constellation familiar to all observers because of the brilliance of the seven stars forming its outline. It never sets in these latitudes.

Ursa Minor, the Lesser Bear Constellation, has, like Ursa Major, seven prominent stars, of which the pole star is the brightest.

Utopias. *See* Section J.

V

Valency. A term used by chemists to describe the combining ability of an element with respect to hydrogen. Thus oxygen, which forms water, H_2O, with hydrogen is said to have a valency of two, nitrogen (forms ammonia, NH_3) three, and carbon (forms methane, CH_4) four. Chlorine forms hydrogen chloride, HCl, and is said to be monovalent. This empirical approach cannot account for valency in such compounds as carbon monoxide, CO, which appears to require both elements to have the same valency. With the discovery of the electron it was realised that the concept of valency and chemical bonds is intimately concerned with the electronic structure of atoms, and theories have been advanced to explain why the same element can have different valencies in different compounds. Iron, for example, can have a valency of two ($FeCl_2$, ferrous chloride) or three ($FeCl_3$, ferric chloride). *See* F20(2), and Table of Elements.

Valentine's Day, the 14th Feb., is a festival in celebration of St. Valentine, one of the Christian martyrs of the 3rd cent. A sweetheart or Valentine is chosen on that day and letters or tokens sent secretly to the object of affection.

Valhalla, in Scandinavian mythology, is the special Paradise to which the souls of warriors slain in battle were transported. The term is also generally used to designate a burial place of great men.

Valkyries, the chosen handmaidens of Odin, appointed to serve at the Valhalla banquets. Their most important office, however, according to the Norse mythology, was to ride through the air at a time of battle and point out the heroes who were to fall. It is one of these Valkyries who is made the heroine of Wagner's opera "Die Walküre."

Valve, an electronic device consisting of two or more metal plates (electrodes) usually enclosed in an evacuated glass bulb. One of the electrodes is heated causing electrons to be emitted. If a positive voltage is applied to the other electrode, the electrons will move towards it and the valve must conduct electricity. The current will only flow in one direction as the electrons are emitted only from one electrode. A valve with two electrodes is called a diode, but by putting in one or more intermediate electrodes the flow of current can be sensitively controlled and the valves are then called triodes, pentodes, etc., according to the total number of electrodes in them. Valves have found extensive applications in amplifiers, rectifiers, oscillators, and many electronic devices, but are now being superseded by transistors in many applications where it is advantageous to have greater reliability, smaller power consumption, and smaller size.

Vampire *or* **Werewolf,** according to ancient superstition, was a spectre in human form which rose from its grave in the night-time and preyed upon the living as they slept, sucking their blood, and then returning to the grave.

Vampire-Bats, blood-eating bats of tropical America. They puncture the skin with their incisor teeth, leaving a wound that bleeds profusely. The blood is lapped up by the bat, not sucked.

Vanadium, a scarce metallic element, symbol V, whose chief ores are carnotite and patronite. Some iron ores contain it. Most of the vanadium commercially produced finds its way into vanadium steels, which are used for tools and parts of vehicles, being hard, tough, and very resistant to shocks. The oxide is used as a catalyst in industry, especially in making sulphuric acid.

Van Allen Belts. One of the most remarkable discoveries made during the I.G.Y., 1957–58, was that the earth is surrounded by a great belt of radiation. Evidence came from *Sputnik II* (which carried the dog Laika) and from the American satellites, *Explorers I* and *III*. The American scientist, J. A. van Allen, was able to explain the puzzling data collected from these satellites. Subsequent observations with deep space-probes showed that there are in fact two zones of high intensity particle radiation surrounding the earth, one concentrated at a distance of about 1,000 miles, the other at about 15,000 miles. A close relation exists between the shapes of the zones and the earth's magnetic field. Recent evidence suggests that Jupiter also is surrounded by a dense belt of trapped energetic particles.

Varnish is of two leading kinds: spirit varnish, made from resinous substances dissolved in spirit; and oil varnish, in which the dissolving agent is linseed oil and turpentine.

Vatican, the Papal residence at Rome, a famous palace on the hill adjacent to St. Peter's. Its museum is a rich treasure-house of literary and artistic objects. Works of Michelangelo glorify the Sistine Chapel.

Vauxhall Gardens, a famous London pleasure resort from the early part of the 18th to the middle of the 19th cent. It was here that many great singers appeared, where the earliest balloon ascents were made, and where there were fine displays of fireworks.

Venus, the brightest of all the planets, whose orbit lies between that of Mercury and the earth, second in order from the sun (*see* F7). It can approach the earth to within 25 million miles. In common with all the other planets it moves around the sun in the same direction as the earth, but is the only one that rotates about its axis in the opposite direction. The planet takes just under 225 earth days to complete an orbit round the sun. In 1967 Russia succeeded in soft-landing an instrumented canister from their *Venus 4* research spacecraft. Measurements gave a picture of a very hostile environment—high surface temperature, a very high atmospheric pressure, and an atmosphere of almost pure carbon dioxide, findings very close to those obtained by later probes. *Venus 5 and Venus 6* made twin landings in May 1969 and sent back data on the planet's mysterious veil of white clouds. *Venus 8* was the first to transmit directly from the surface of a planet and gave data of importance to the study of Venusian geology.

Venus Fly-trap, a well-known insectivorous plant (*Dionaea muscipula*) occurring in Carolina in damp mossy places. It is related to the Sundew. The leaf is the organ that catches the insects. The leaf blade is in two halves, hinged along the centre line. Each half bears three sensitive hairs called "trigger hairs." When an insect touches a trigger, the two halves of the leaf clap together, trapping the insect between them, when it is digested by a secretion (digestive enzymes) from the leaf, which afterwards absorbs the soluble products.

Vernalization. Seeds which, after being exposed to a low temperature, produce plants that flower earlier than usual are said to have been "vernalized." This technique of seed treatment devised by Lysenko is called vernalization. It is claimed to have been widely used in Russia to

obtain cereal crops in places where climatic conditions are favourable for only a short season.

Versailles, Treaty of. The Peace Treaty, 1919, ending the first world war. The first half was devoted to the organisation of the League of Nations. Among the territorial changes Germany ceded Alsace-Lorraine to France, Posen and the Corridor to Poland. Germany undertook to disarm, to abolish universal military service, to keep only a small army of 100,000 and a small navy. Her colonies were to be shared out among the Allies under League Mandates. Reparations were to be paid, but were gradually reduced and entirely ceased in 1932. Hitler took unilateral action against the Treaty especially in regard to rearmament and the annexation of Austria. Hitler's attempt to change the eastern frontiers was the immediate cause of the Second World War.

Victoria and Albert Museum, in Kensington, London, was begun in 1852 as the Museum of Ornamental Art at Marlborough House. The present building was completed in 1909, and has the following nine departments: Architecture and Sculpture; Ceramics; Engraving, Illustration and Design; Metalwork; Paintings; Woodwork; Textiles; Library (of books on art) and Book-production; and the Dept. of Circulation. The Bethnal Green Museum is a branch of the V. and A.

Victoria Cross, an order of merit for conspicuous valour, awarded to members of the Army, Navy, and Air Force, was established in 1856.

Vienna Congress, sat at Vienna from Sept. 1814 to June 1815, and settled the delimination of the territories of the various European nations after the defeat of Napoleon. The Treaty of Vienna which resulted gave Ceylon, Mauritius, Cape Colony, Heligoland, Malta, and part of Guiana to England; France was not permitted to hold more territory than she had possessed at the outbreak of the Revolution in 1789; Austria took Northern Italy; Russia part of Poland; and Prussia, part of Saxony and the Rhenish province. Except for one or two changes the clauses of the treaty were maintained for over forty years.

Viet-Minh, the Indo-Chinese (Annamite) national movement led by Ho Chi-Minh which resisted French rule from 1945 to 1954, when Vietnam was partitioned as a result of the Geneva Conference. The National Liberation Front of South Vietnam is the political arm of the Viet Cong.

Vikings. Scandinavian pirates who from the 8th to the 10th cent. were the terror of northern waters. Sometimes the Viking raids reached south to the Mediterranean and east to the White Sea. Their leader Rurik founded the first Russian kingdom of Novgorod in A.D. 862. The Icelandic Vikings under Eric the Red discovered Greenland in A.D. 982 and a warm period in world climate allowed many to settle there. Their expeditions took them to Labrador and Newfoundland. The Vikings excelled in shipbuilding, were fine sailors and splendid craftsmen.

Vinegar. This condiment and preservative is a weak solution of acetic acid (3–9%) formed by the oxidation of ethyl alcohol by the action of bacteria on alcoholic liquor (wine, beer, cider, fermented fruit juices, or malted cereals). Wine vinegar is usually red; malt vinegar is brown. The name vinegar is derived from the latin *vinum aigre*, bad wine. *See also* Acetic Acid.

Vinyl Plastics are polymers made from derivatives of ethylene, examples are polyvinyl chloride (P.V.C.), which is used in making plastic pipes and kitchen utensils, among other things; polyvinyl acetate used in the paint industry and in bonding laminated articles like plywood; and polystyrene (poly vinyl benzene) used in making electrical fittings and for lenses.

Viper, a family of poisonous snakes of which there is one example in Britain, the common viper or adder, only found in very dry localities.

Virus. *See* P7, F26(2).

Visibility is defined by the distance at which the farthest of a series of objects, specially selected to show against the skyline or in good contrast with their background, can be distinguished. Visibility depends chiefly upon the concentration of water or dust particles suspended in the air. Instruments are available to measure the obscurity of the atmosphere more directly, including that at night. A large lapse rate of temperature and a strong wind are favourable to good visibility; a small lapse rate, calm or light wind favourable to bad visibility. Fog is when the visibility is less than 1,100 yds.; mist or haze when it is between 1,100 and 2,200 yds. *See* Pollution.

Viscount, a title of rank coming between that of Earl and Baron. The title originally stood for deputy-earl. The first English Viscount was Viscount Beaumont, created in 1440.

Vitamins, name of a group of organic substances found in relatively minute amounts in certain foodstuffs, essential for growth and the maintenance of normal bodily structure and function. The Hungarian biochemist Szent-Györgyi, who first isolated vitamin C or ascorbic acid, defined the vitamin as "a substance that makes you ill if you don't eat it!" *See* F27(1).

Volcanoes are vents through which magma reaches the surface as lava flows, or as the solid products, *e.g.*, ashes and bombs, of explosive eruption. The vent may be cylindrical or it may be a long fissure. The former type usually builds up cones, *e.g.*, Vesuvius. Notable active volcanoes are Etna, Vesuvius and Stromboli, in Italy; Hekla in Iceland; and Mont Pelée in Martinique. The last-named was in violent eruption in 1902, when the chief town of St. Pierre was completely destroyed. Volcanic eruptions are sometimes linked with brilliant sunset phenomena, *e.g.*, the Indonesian island of Krakatoa (1883), whose atmospheric and tidal effects were recorded all over the world, and Agung on the island of Bali (1963), which had been dormant for 120 years. A new fissure volcano (Surtsey) developed off the coast of Iceland in 1963. The 1971 eruption of Etna was a serious one, though minor compared with that of 1669.

Vole. There are three species of British vole; the Field-vole, the Bank-vole, and the Water-vole.

Volt, the electromotive force unit, named after Alessandro Volta (1745–1827), and defined in terms of the coulomb, the second, and the joule.

Vraic, a name for seaweed in the Channel Islands, where it is extensively used as a manure.

Vulgate, a term used to designate the Latin version of the Scriptures sanctioned by the Council of Trent. The work of St. Jerome in the late 4th cent. A.D. and still the official Bible of the Roman Catholic Church.

Vulture, a famous bird of prey of two distinctive groups; that of the Old World, whose nostrils are separated by a bony partition, and the New World vulture, which has no such division. Vultures feed on carrion and are the great scavengers of tropical regions. The European species are the Egyptian vulture, Griffon vulture, Black vulture, and Bearded vulture. Vultures have no feathers on the head and neck.

W

Wading Birds, *Charadriiformes*, an order of migratory, long-legged, long-billed birds, frequenting marshes and shallow waters. They include the plovers, avocets, stilts, oystercatchers, curlews, phalaropes, godwits, dunlins, sandpipers, redshanks, greenshanks, snipe, woodcocks, the pratincole of the Mediterranean, and the sun bittern of tropical America. Many species breed in Britain.

Wagtails, familiar long-tailed small birds, the most common British species being the Pied or Water (with sub-species White) Grey and the Yellow (sub-species Blue.) Wagtails nest in holes and are active of habit.

Walloons, name given to the French-speaking population of the southern provinces of Belgium, in contrast to the Flemings or Dutch-speaking population of the northern provinces. The Walloon areas contain the mining and heavy industries of the country; the Flemish regions are more agricultural. Walloons number *c.* 3 million, Flemings *c.* 5 million. The *Mouvement Populaire Wallon* desires an autonomous Wallonia within the Belgian state.

Walpurgis Night, the night before May 1st, when witches and creatures of evil are supposed to

have liberty to roam. Named after St. Walpurgis, an English nun, who went on a mission to Germany in the 8th cent.

Walrus, a very large marine mammal, related to the seals having in the upper jaw two large curved tusks, which average in length from 15 in. to 2 ft. It lives on bi-valve molluscs, and inhabits the Arctic seas. An adult walrus can exceed 12 ft. in length and weigh over a ton.

Wapentake, the ancient name given in the northern counties to territorial divisions corresponding to the Hundreds of southern counties.

Warblers, a family of small, lively song-birds closely related to the flycatchers and thrushes. Represented in Britain by about 36 species, including the chiffchaff, one of the earliest spring visitors, willow-wren, wood-warbler, blackcap, garden-warbler, whitethroats, sedge- and grasshopper-warbler.

Water is the simplest compound of hydrogen and oxygen. It is formed when an electric spark is passed through a mixture of the gases, and is a product of combustion of all hydrogen-containing compounds, *e.g.*, petrol, coal, coal gas, and wood. Water is essential to living matter, and is the medium which carries food to animals and plants. Salts in hard water may be removed by distillation of the water or by a process known as ion-exchange (water softening). Pure water freezes at 0° C and boils at 100° C and is used as a standard of temperature on this scale. It has a maximum density at 4° C. Heating water above 100° C. converts it into steam, which is used under pressure to convert heat energy into useful work, as in electrical power stations and steam engines. Water gas is a mixture mainly of carbon monoxide and hydrogen formed by blowing steam and oxygen through red-hot coke: it is used as a fuel. Water is one of the very few compounds which freezes from the surface down rather than from the bulk of the liquid up. This property has important consequences on the preservation of life in rivers and lakes when they are frozen over. *See also* F23.

Water Hyacinth (*Eichhornia crassipes*), a beautiful aquatic plant native to Brazil which has spread to other favourable equatorial regions of the world causing havoc on account of its abnormal rate of reproduction away from its natural environment. In recent years it has invaded the Nile and the Zaire, forming vast floating carpets which block the channels, clog the paddles of river craft and de-oxygenate the water, killing the fish. It is being held in check by spraying with the herbicide 2,4-D.

Waterloo, Battle of, was fought on June 18th, 1815. The Allies (British, German, and Dutch) under Wellington and Blücher defeated the French under Napoleon. This ended Napoleon's career.

Waterloo Bridge, crossing the Thames, was built by Rennie, and opened in 1817. It had nine arches, each of 120 ft. span, was built of granite, and had a length (including approaches) of 2,456 ft. The present bridge, completed in 1942, and formally opened Dec. 10, 1945, is a fine example of reinforced concrete construction. (Architect, Sir Giles Gilbert-Scott.)

Water-Spider, an interesting little animal which spins a sac of silk on a water-plant, which it uses as a sort of diving bell. Into this bell it introduces bubbles of air, one at a time; thus the spider is enabled to remain below the surface a considerable time.

Waterspout, whirling tornado-like cloud, occurring at sea. It begins as a cone of cloud tapering slowly downwards, the sea surface becoming disturbed; on reaching the centre of the cloud of spray the spout takes on the appearance of a column of water. A number of these vortices may form fairly close together at about the same time, their duration ranging up to 30 minutes.

Watling Street, the name of the old Roman road which ran from the Channel ports by way of London to Shropshire. *See also* Roman Roads.

Watt. A unit of electrical power equivalent to 1 joule of work per second, named after James Watt (1736–1819).

Wax, the name applied to certain substances or mixtures which are solids having little crystalline form and may be regarded as solidified oils. They are used for various purposes, such as the making of wax candles, bleaching, and making artificial flowers and anatomical models, also in pharmacy for blending in the composition of plasters, ointment, etc. The best-known natural wax is beeswax, and there are others, such as spermaceti, obtained from the sperm whale, and Chinese wax, which is a cerotyl cerotate.

Waxbill, a small Oriental and African bird of the *Estrildidae* family, with wax-like bill and beautifully variegated plumage. The Java sparrow, and the Blue-breasted waxbill are attractive, and often find their way into cages.

Wayz-Goose, the name given to a festive gathering of people employed in printing and other works, so called from the fact that in earlier times a goose was the principal dish of the feast.

Weasel. A carnivore mammal found in Britain, smallest member of the group including the Stoat, Polecat, and Pine-marten, about 8 in. long. Its fur is reddish on the upper side of the animal, white on the under side; it may all turn white in winter with the exception of the tail.

Weather, the factors determining to-morrow's weather are so manifold, variable, and complex that the task of the meteorologist is no easy one. There are still people who cling to the idea that weather is determined by the phase of the moon, but their predictions have no scientific backing, and can be dismissed. Changes in temperature, humidity, and speed of air masses can best be measured by instruments designed for the purpose. By taking into account the peculiar character of any part of the country, whether coastal, high- or low-lying, industrial, sheltered, precise forecasts for that particular region can be made up to twenty-four hours ahead and sometimes longer. We need to know more about the heat exchange between oceans and the atmosphere before long-range forecasting is possible. The British Isles lie in the path of depressions moving north-eastward across the Atlantic. It is the frequency, intensity, and speed of these centres of low pressure, which give these islands such changeable weather. On the other hand, when an anticyclone builds up and embraces the British Isles, settled weather is fairly certain, the type of weather, whether dull or cloudless, warm or cold, depending mainly on the direction of the wind in the particular area concerned and the time of year. An American earth satellite, *Vanguard II*, was launched in Feb. 1959 to serve as the first "weather-eye" in space.

Weather Lore. Before instruments were invented to measure atmospheric conditions, man relied on his own observation of wind and sky, behaviour of birds and animals, and came to associate certain phenomena with types of weather. Many popular weather rhymes have survived the centuries, and as long as forecasting is confined to the next 24 hours there is perhaps something to be said for them, particularly those dealing with the winds. What is very unlikely is that next year's summer can be predicted from this year's winter, or that one month's weather is related to that of another. The study of past records reveals too many exceptions for such predictions to be of much use in forecasting.

Weaver Bird, the popular name for a large group of finch-like birds belonging to the family *Ploceidae*, found principally in Africa but also in Southern Asia, Australia, and Europe and remarkable for their habit of building nests formed of blades of grass dexterously interwoven and suspended from the boughs of trees.

Weaving has been practised since before any times of which we have record. The Egyptians credit the invention to Isis, the Grecians to Minerva. The main principle of the weaving loom is the same to-day as it was thousands of years ago; a warp extends lengthwise through the loom, the threads being held in separate regular order by being passed through a reed or "slay," while the weft is crossed through alternating threads of the warp by means of a shuttle which holds the weft. Thus the fabric is built up. Weaving was done by hand up to the early part of the 19th cent., when Cartwright's steam-power loom was introduced, and is now in universal use. The Jacquard loom for weaving figured designs dates from 1801.

Wedding Anniversaries are: first, Cotton; second, Paper; third, Leather; fourth, Fruit and

Flower; fifth, Wooden; sixth, Sugar; seventh Woollen; eighth, Salt; ninth, Copper; tenth, Tin; twelfth, Silk and Fine Linen; fifteenth, Crystal; twentieth, China; twenty-fifth, Silver; thirtieth, Pearl; thirty-fifth, Coral; fortieth, Ruby; fiftieth, Golden; sixtieth, Diamond; sixty-fifth, Blue Sapphire; seventieth, Platinum.

Wednesday, the 4th day of the week, derived its name from Woden or Odin, the Norse god of war.

Weights and Measures. *See* **Section N.**

Welding is a means of joining together two pieces of material, often metals, by heating the joint until the substances melt locally, run together, and then solidify. The heating can be by burning gas (*e.g.*, oxy-acetylene welding) or electric current (electric arc welding). Techniques exist for welding anything from hair-like wires to massive steel plates. *See* **Soldering.**

Werewolf, a man or woman, who according to mediaeval belief, could be turned by witchcraft or magic into a wolf, eat human flesh or drink human blood, and turn into himself again. This belief was widely held in Europe, and similar superstitions prevail among most primitive peoples, *e.g.*, the " leopard man " of certain African tribes. Lycanthropy (from Gr. = wolf-man) is a form of madness in which the patient imagines himself a beast (*See* **Section J**).

Westminster Abbey stands on the site of an old church and Benedictine foundation of the 7th cent. It was rebuilt under Edward the Confessor, and again under Henry III., and important additions were made by Edward II., Edward III., Richard II., Richard III. and Henry VII., the latter erecting the beautiful eastern chapel in the perpendicular style which bears his name. The western towers and front were rebuilt by Wren in the 18th cent. It contains tombs of many sovereigns, of the Unknown Warrior, and many other illustrious men are commemorated by monuments.

Westminster Cathedral, seat of the Roman Catholic Archbishop of Westminster. It was designed by J. F. Bentley and built between 1895 and 1910. It is of red brick, in early Christian Byzantine style with a domed campanile, 283 ft. high, and a decorative interior.

Westminster Hall, adjoining the Houses of Parliament, was built as a Banqueting Hall by William Rufus, and many courtly festivals were held there in succeeding centuries. King John established the Law Courts there. It now forms a gigantic hallway, leading to the Houses of Parliament. Charles I., Sir Thomas More, and Warren Hastings were tried there.

Whale, a completely aquatic mammal; the fore-limbs are modified to form fin-like paddles and there is virtually no external trace of the hind-limbs. There are two major groups of whales—the *Toothed Whales*, including the Sperm-whale (Cachalot), Dolphins, Killer-whales, and Porpoises; and the *Whalebone Whales*. In the latter a series of whalebone plates grow down from the roof of the mouth, and, being frayed at their edges into a hairy fringe, together constitute a filtering mechanism. The animal takes in sea water containing minute organisms on which it feeds; the mouth is then closed and the tongue raised when the water is forced out through the filter, on which is left the food. As the tongue is lowered, the whalebone plates straighten up, flicking the food on to the tongue, which transfers it to the gut. Most whale oil is obtained from the thick layer of fat under the skin (blubber), but in the Sperm-whale there is a large reserve of oil in the head. The oil is used for making candles, margarine, and soap. Ambergris used in perfumery comes from the intestine of whales. The number of whales that may be killed in a season is limited by International Convention.

Whimbrel, a bird of the Curlew family, more common in Scotland than in England.

Whinchat, a small migratory bird, a breeding visitor to Britain (Apr. to Oct.); bright brown plumage, with prominent eye stripe.

Whirlwind, a sudden circular rush of opposing winds, which often causes much damage.

Whiskers in physics and materials science (*q.v.*) are tiny rods of crystal, thinner than human hair and perhaps half an inch long. Their importance lies in the fact that such crystals are free from the defects described on **F18.** They are also free from surface cracks and steps. This means they are immensely strong because failures of strength in ordinary solids are due to imperfections and cracks of one kind or another. Large numbers of whiskers of strong solids like graphite, silicon, or silicon carbide embedded in a matrix of softer matter such as plastic or metal would make a very strong new material. Many laboratories are developing such substances.

Whisky, an ardent spirit distilled from malt or other grain, and containing a large percentage of alcohol. It has a greater consumption than any other spirit, and is of many kinds, Scotch and Irish whiskies being chiefly consumed in this country, and being of pot still or patent still production, or a blend of the two. Whisky is the most heavily taxed product: in 1661 a duty of 4*d.* a gallon was imposed; today (1972) the duty on Scotch and Irish whiskies is £18.85 per proof gallon. American whiskies are mostly distilled from corn (maize), or rye. *See* **Alcohol.**

White Elephant, a term in common use to designate a gift that causes the recipient more trouble or cost than it is worth; derived from an old-time custom of the Kings of Siam who presented a white elephant to a courtier whom it was desired to ruin.

Whitehall Palace, built within sight of Westminster by Hubert de Burgh, Earl of Kent, round about 1240, was the residence of the Archbishops of York until Wolsey presented it to Henry VIII in 1530. Thence-forward to 1697, when it was burned down, it continued to be the favourite town residence of royalty, and to the Stuarts especially it was a great centre of court festivities. In those days, with its grounds, it extended from the Strand to the river. The only portion of Whitehall Palace now standing is the Banqueting Hall built by Inigo Jones, on a scaffold projected from the front of which Charles I was beheaded. A block of new government buildings has recently been built on part of the site of the old Palace.

White House, the official residence at Washington of the President of the United States.

Whitsuntide, the festival celebrating the descent of the Holy Ghost and occurring seven weeks after Easter.

Whydah Bird, the widow-bird of Equatorial Africa. The Paradise Whydah is remarkable for the long tail and handsome black-and-scarlet plumage of the male during mating season.

Widow Bird, certain species of African weaver birds with predominantly black plumage. In the breeding season the male birds are strikingly beautiful, with scarlet and buff markings and long tail feathers. They are social parasites and trick other birds into rearing their young.

Wigeon, a surface-feeding duck of northern Europe, known in Britain more as a winter visitor than a nesting bird. It feeds in flocks in the muddy estuaries and has a characteristic " whee-oo " call.

Willow, a water-side-loving tree of the genus *Salix*, to which the osiers belong. The best cricket-bat blades are made from a white willow, *S. alba* var. *caerulea*, a fine tree with bluish-green leaves, mostly found in Essex. Willow is also used for polo balls. Weeping willow, *S. babylonica*, is native to China and is the willow seen on Old China willow-pattern plates.

Wind, air set in motion by special atmospheric conditions, is of various degrees, from a slight rustling breeze to a hurricane. Winds are *constant*, as in trade winds or anti-trade winds; *periodic*, as in monsoons and other wind-visitations occurring according to influences of season; *cyclonic* and *anti-cyclonic*, when their motion is spiral; *whirlwinds*, *hurricanes*, and *tornados*, when high temperature and great density induce extreme agitation. Ordinarily, a wind is named from the point of the compass from which it blows, or it may be expressed in degrees from true north. The *sirocco*, the *mistral*, and the *simoom* are local forms of winds of great velocity. A *blizzard* is a biting blast of icy temperature. *See also* **Section N.**

Windmills were in use in the East in ancient times, but were not much seen in Europe before the 13th cent. Wind sawmills were invented by a Dutchman in the 17th cent., and one was erected

near the Strand in London in 1633. Great improvements have been made in these mills, especially in the United States, where, by the application of the windshaft principle, much space is saved and the mills can be used for pumping, grinding, and other purposes.

Windows (Old Norse *vindauga* = wind-eye), an opening in a wall of a building to admit light and air, and to afford a view of what is outside. In northern Europe windows, as the derivation of the word implies, were first used for ventilation and glass was not used in private houses before the end of the 12th cent. In early Gothic (12th cent.) windows were still small and narrow, with rounded heads. In Early English (13th cent.) they became longer and the heads pointed. In the Decorated period (14th cent.) windows were mullioned (divided by slender bars into panes) and the pointed heads often traceried. In Tudor times when the Renaissance had found its way to England, windows were larger and the bay-window (projecting from the wall) and the oriel window (*q.v.*) were much in vogue; in the late 18th cent. curved bays (called bow-windows) became fashionable. Sash windows (invented by the English) with wooden frames and divided into equal rectangular panes were used in Queen Anne and Georgian houses. Their design was influenced by a passion for symmetry; they were very efficient ventilators. The French window reaches to the floor and has double casements opening as doors. A Dormer window is a vertical window set on the sloping side of a roof. One of the main features of modern architecture is the large area devoted to windows, a development made possible by improved heating systems. Windows are now mass-produced in stock sizes and patterns.

Windsor Castle, the famous British royal residence on the banks of the Thames, as it now stands, was mainly built by Henry III., though a royal residence had existed there from the time of the Conqueror. Additions were made by Henry VIII., Elizabeth, and Charles II. Windsor Park and Forest comprise over 13,000 acres.

Wine, the fermented juice of the freshly-gathered grape. There are innumerable varieties, each obtaining its distinctive character from the species of wine producing the grape, the locality of the vineyard, method of cultivation, etc. Wines are of three main kinds: *sparkling*, as in champagne, due to their having been bottled before fermentation is complete; *beverage*, when the must has been fermented out before bottling. Such wines include the famous red and white wines of Burgundy, Bordeaux and the Rhone valley and the white wines of the Rhine Moselle and Loire valleys. Wines are *fortified* by the addition of alcohol either after fermentation is complete (*e.g.*, Sherry) or during fermentation (*e.g.*, Port). The principal wine-producing countries are: France, Italy, Algeria, Spain, Portugal, Rumania, Argentine, Yugoslavia, U.S.S.R., Greece, Germany, Hungary.

Witan *or* **Witenagemot**, the name given to the king's council of "wise men" in Anglo-Saxon times, composed of the archbishops, bishops, abbots of the greater abbeys, caldormen, and influential thanes.

Witchcraft. *See* Section J.

Woad, a plant (*Isatis tinctoria*) that in olden days was largely used in England for the blue dye obtained from the leaves. It is a biennial plant belonging to the same family (*Cruciferae*) as the wallflower.

Wolves, well-known carnivorous animals still found in many parts of Europe, but not existing in Britain since the middle of the 17th cent. They usually hunt in packs.

Women's Liberation Movement. *See* Section J.

Woodcock, a wading bird, greatly valued for its flesh. It is a member of the snipe family, and breeds in Britain. The parent bird is able to carry its young between its thigh and body when flying to and from the feeding spots. It is one of the birds protected by the Game Laws.

Woodpecker, a familiar tree-climbing, insectivorous bird of conspicuous plumage, of which three species are found in Britain, the green woodpecker or yaffle (because of its harsh cry) and the great lesser spotted woodpeckers. They build in the hollows of trees. Yaffle has a long sticky tongue for licking up ground insects, especially ants. The other two obtain insects by digging into tree trunks with strong, chisel-like bills, spearing the insects with a sharp tongue. The metallic drumming sound made by the birds in spring is thought to be caused by their beaks hammering away at some hard resounding substance.

Wood's Metal, an alloy with a very low melting point (65° C., which is under 150° F.) so that a spoon made of it will melt when used to stir a cup of tea. Contains bismuth 4 parts, lead 2 parts, tin 1 part, cadmium 1 part. Its use as a heat exchanger has now been largely superseded by silicone oils, which have a wider temperature range.

Woodworm. Four beetles are mainly responsible for woodworm damage: common furniture beetle (*Anobium punctatum*), powder post beetle (*Lyctus brunneus*), death watch beetle (*Xestobium rufovillosum*), and house longhorn beetle (*Hylotrupes bajulus*). Particular attention should be paid to wood in damp, dark, and out-of-the-way places, and the backs and undersides of furniture. The most frequent cause of woodworm damage is the common furniture beetle (*q.v.*).

Wool is a fibre, made up of very long protein molecules. It has been largely grown and used in the manufacture of cloth in England since before the Roman invasion. It is grown on the backs of sheep, and is of various kinds, according to the breed of sheep from which it is derived. Wool differs from hair in that it has a wavy, serrated fibre, its curl being a notable characteristic, whereas hair has a smooth surface comparatively free from serratures. Long wools are mostly used for the manufacture of worsted goods, and short wools for woollen cloths, though the improvements in machinery in recent years have enabled manufacturers to utilise short wools to a great extent for dress fabrics as well as for woollens. The finest wools are obtained from the fleece of the Spanish merino sheep. Australia, New Zealand, and the Argentine are the greatest wool-producing countries.

Woolsack, the name given to the seat occupied by the Lord Chancellor in the House of Lords. It is a large square bag of wool, without back or arms, covered with red cloth. At the time when it was first used, in the reign of Edward III., wool was the great staple commodity of the country and, it is said, chosen for the seat of judges as a constant reminder of the main source of the national wealth. The Lord Chancellor is said to be "appointed to the woolsack."

World Council of Churches. *See* Section J.

World Population. According to United Nations sources world population in mid-1972 was 3,782 million, an increase of 76 million in one year. More than half the total live in Asia (2,154 million). Different countries are at different stages in a demographic transition from the stability provided by a combination of high birth rate and high death rate to that provided by a combination of low birth rate and low death rate. Their recent population history and current trend of growth, the age-structure of their population, and consequently their population potential for the near future are all widely different. A baby girl born in Holland may expect to live the longest (77 years) and a baby boy in Sweden (72 years). One born in Gabon may expect to live no more than 25 years. By the beginning of the Christian era world population is believed to have been 200–300 million, rising to about 500 million by 1650, and it is estimated that about one in 25 of all human beings who have ever lived are alive today.

Wreck, the name given to trove found under water, usually from a maritime wreck. Finds must be brought to the notice of the Official Receiver of Wrecks, an officer of H.M. Customs and Excise.

Wren, a family of small passerine birds possessing upturned tails and most abundant in South America. The British species is an interesting singing bird with a surprisingly loud note for its size.

X

Xenon a rare gaseous element, symbol Xe, occurring in minute quantities in the atmosphere, discovered by Sir William Ramsay and M. W. Travers in 1898. *See* Rare Gases.

X-Rays were discovered in 1895 by Professor Röntgen, of Wurzburg, while experimenting with a Crookes vacuum tube, when the fact was accidentally revealed that a photographic plate, contained in a dark box and exposed to its rays, was affected. To the X-rays the box was transparent. X-ray photographs are now commonly taken to obtain information about objects enclosed within solid bodies; they enable bullets and any solid bodies of metal, as well as bones, etc., in the body to be perfectly located and investigated. The discovery has proved of great advantage in surgical operations. X-rays are used to determine the structure of matter; the atoms in a substance may be located and their relative positions determined by photographing reflections of the X-rays by the specimen. *See* F11(1).

Xylem, the woody tissue of higher plants whose function is to conduct water and mineral salts upwards, and to provide mechanical support.

Y

Yacht, a light vessel now much used for pleasure trips and racing. The first yachting club was the Cork Harbour Club, started about 1720; and in 1812 the Royal Yacht Squadron was founded at Cowes. The Royal Thames Yacht Club dates from 1823. The most famous international yachting trophy is *The America's Cup* (*q.v.*). *See also* U32.

Yak, a curious, long-haired ox, found in Tibet, used as a beast of burden, and also kept for milk and meat.

Yard, a standard measure of 36 in, the word being derived from the Saxon gyrd, or rod. The yard and pound are now defined by reference to the metre and the kilogramme: yard = 0·9144 of a metre; pound = 0·45359237 of a kilogramme. By international agreement the metre is defined by reference to the wavelength of Krypton-86 light.

Yellowhammer, a common British bird of the bunting family, of lemon-yellow and brown plumage. Nests on or near the ground.

Yeomen of the Guard are a body of Foot Guards established in the reign of Henry VII. for the protection of the Royal Person. Yeomen are now about 100 in number, and their duties consist in being present on ceremonial State occasions, the yearly distribution of Maundy Money, and the searching of the vaults of the Houses of Parliament on Guy Fawkes' day. "Beefeater" is the nickname of both Yeomen of the Guard and Yeomen Warders of the Tower, and they both wear the style of dress of the Tudor period, but with one distinction, the Yeomen of the Guard wear a cross belt, the Warders do not.

Yeti, opinions differ as to whether this is a mythical inhabitant of the Himalayas, a primitive primate or bear. Evidence to date is inconclusive.

Yoga. *See* Section J.

York Minster, one of the oldest and finest of English cathedrals, is 524 ft. long, its nave is 240 ft. broad, and the central tower is 216 ft. high. The present edifice, in parts, dates back to the 12th cent., but a church stood on the site in the 7th cent. In 1829 it was set on fire by a lunatic named Jonathan Martin, and the destruction that then took place cost £60,000 to restore.

Ytterbium, a chemical element discovered by Urbain in 1907; one of the group of rare earth metals.

Yttrium, a chemical element discovered by Mosander in 1842. It is found in a few rare minerals such as gadolinite, xenotime, fergusonite, and euxenite. One of the group of rare-earth metals.

Z

Zamboni Pile, a dry galvanic battery, which can provide small amounts of high-voltage current over a very long time. At Oxford a couple of Zamboni piles have kept a bell ringing for over a hundred years. These piles in the second world war were perfected and produced in quantity, being the most convenient source of current for infra-red signalling devices.

Zebra, an African quadruped of whitish-grey colour, with regular black stripings, perhaps the most beautiful member of the Equine family. Rather larger than an ass and smaller than the horse, it has a tufted tail, is of light build, wild, and fleet of foot. The Zebra is threatened with extinction—already the fate of the Quagga species—because of its slaughter by man for its beautiful skin.

Zen Buddhism. *See* Section J.

Zenith, the highest point in the heavens above an observer's head, the opposite pole to the nadir.

Zero, the cypher signifying nothing. The West is indebted to the Arabs for it, who probably got it from the Hindus and passed it to European mathematicians towards the end of the Middle Ages. The zero has also been found in Babylonian cuneiform. The Greeks had no such symbol, which hindered the development of their mathematics. The use of zero led to the invention of decimal fractions and to the later developments in astronomy, physics and chemistry. For absolute zero on the temperature scale *see* L2.

Zinc, a familiar metallic element, symbol Zn, known to the ancients, and used by them in the making of brass. It occurs as the sulphide, carbonate, etc. The ores of zinc are crushed, roasted, and reduced with coal. In combination with copper it constitutes the familiar alloy called brass, and zinc itself is much used for roofing and other protective purposes. Zinc ores are mined in Canada, the U.S.A., Mexico, Poland, Australia, Russia, Italy, Spain, and many other parts of the world. Zinc smelting is carried on in most industrial countries, including Great Britain.

Zionism. *See* Section J.

Zirconium, metallic element, symbol Zr, was discovered by Klaproth in the sand of the rivers of Ceylon in 1789. The crystalline metal is white, soft, and ductile; in its amorphous condition it is a blue-black powder. Zirconium is used in atomic reactors as containers for fuel elements, since it does not absorb neutrons.

Zodiac, an imaginary zone or belt of the sky enclosing the circuit over which the principal planets travel. It is divided into 12 equal spaces of 30 degrees each, comprising respectively the 12 signs of the zodiac—Aries, Taurus, Gemini, Cancer, Leo, Virgo, Libra, Scorpio, Sagittarius, Capricornus, Aquarius and Pisces. The idea of the zodiac originated with the Babylonians about 2000 B.C. and passed by way of the Greeks to the Western world.

Zodiacal Light, a faint cone of light occasionally seen stretching along the zodiac from the western horizon after evening twilight or the eastern horizon before morning twilight. It is believed to be due to the scattering of the sun's light by dust particles in orbit round the sun and extending beyond the earth. Recent observations at the high altitude station at Chacaltaya in the Andes suggest that the dust is travelling round the sun in regular planetary orbits.

Zonda, a warm moist wind in Argentina of great velocity blowing from the north or northwest, and, like the Sirocco in Southern Europe, causes much discomfort. It happens when a depression is moving across the pampas, bringing with it a mass of air from the humid tropics. It is followed by a refreshing wind from the south-east.

Zoological Gardens of London were opened in 1828, and belong to the Zoological Society of London. They contain one of the largest and most varied collections of living animals in the world. The Society maintains an open-air zoo at Whipsnade, on the edge of Dunstable Downs; this was opened in 1931.

Zoology, the science of animal biology, treating of the structure, classification, and distribution of the various members, of the animal kingdom.

Zoroastrianism, *See* Section J.

NOBEL PRIZE WINNERS (1901–1973)

Year.	Physics.	Chemistry.	Physiology and Medicine.	Literature.	Peace.
1901	W. C. Röntgen (G).	J. H. van't Hoff (D).	E. v. Behring (G).	R. F. A. Sully Prudhomme (F).	H. Dunant (Sw), F. Passy (F).
1902	H. A. Lorentz (D), P. Zeeman (D).	E. Fischer (G).	R. Ross (B).	T. Mommsen (G).	E. Ducommun (Sw), A. Gobat (Sw).
1903	H. Becquerel (F), P. Curie (F), Marie Curie (F).	S. Arrhenius (S).	N. R. Finsen (Da).	B. Björnson (N).	Sir W. R. Cremer (B).
1904	Lord J. W. S. Rayleigh (B).	W. Ramsay (B).	I. P. Pavlov (R).	F. Mistral (F), J. Echegaray (Sp).	Institut de Droit International.
1905	P. Lenard (G).	A. v. Bayer (G).	R. Koch (G).	H. Sienkiewicz (P).	Bertha von Suttner (Au).
1906	J. J. Thomson (B).	H. Moissan (F).	C. Golgi (I), S. R. y Cajal (Sp).	G. Carducci (I).	T. Roosevelt (A).
1907	A. A. Michelson (A).	E. Buchner (G).	C. L. A. Laveran (F).	Rudyard Kipling (B).	E. T. Moneta (I), L. Renault (F).
1908	G. Lippmann (F).	E. Rutherford (B).	P. Ehrich (G), E. Metchnikoff (R).	R. Eucken (G).	K. P. Arnoldson (S), F. Bajer (Da).
1909	F. Braun (G), G. Marconi (I).	W. Ostwald (G).	T. Kocher (Sw).	S. Lagerlöf (S).	A. M. F. Beernaert (Be), Baron d'Estournelles de Constant de Rebecque (F).
1910	J. D. van der Waals (D).	O. Wallach (G).	A. Kossel (G).	P. Heyse (G).	The Bureau International Permanent de la Paix, Berne.
1911	W. Wien (G).	Marie Curie (F).	A. Gullstrand (S).	M. Maeterlinck (Be).	T. M. C. Asser (D), A. H. Fried (Au).
1912	G. Dalén (S).	V. Grignard (F), P. Sabatier (F).	A. Carrel (A).	G. Hauptmann (G).	E. Root (A).
1913	H. Kamerlingh Onnes (D).	A. Werner (Sw).	C. Richet (F).	R. Tagore (In).	H. la Fontaine (Be).
1914	M. v. Laue (G).	T. W. Richards (A).	R. Bárány (Au).	—	—
1915	W. H. Bragg (B), W. L. Bragg (B).	R. Willstaetter (G).	—	R. Roland (F).	—
1916	—	—	—	V. von Heidenstam (S).	—
1917	C. G. Barkla (B).	—	—	K. Gjellerup (Da), H. Pontoppidan (Da).	Comité International de la Croix-Rouge, Geneva.
1918	M. Planck (G).	F. Haber (G).	—	—	—
1919	J. Stark (G).	—	J. Bordet (Be).	C. Spitteler (Sw).	W. Wilson (A).
1920	C. E. Guillaume (F).	W. Nernst (G).	A. Krogh (Da).	K. Hamsun (N).	L. Bourgeois (F).
1921	A. Einstein (G).	F. Soddy (B).	—	A. France (F).	K. H. Branting (S), C. L. Lange (N).
1922	N. Bohr (Da).	F. W. Aston (B).	A. Hill (B), O. Meyerhof (G).	J. Benavente y Martinez (Sp).	F. Nansen (N).

VI. Literary Forms 69–72

I. THE CONTEMPORARY NOVEL

This section discusses novels written in English and published since 1945. It consists of two parts: I. Introduction; II. Directory of Novelists.

Most of us read novels because they "take us out of ourselves". Sometimes we are just seeking relaxation and enjoyment, at others we hope that the book will leave us with a feeling of having lived more intensely, that it will make us more aware of life's possibilities and help us better to understand its meaning.

If we pick up a modern novel that seems incoherent or even to consist of little more than detailed descriptions of objects, we may well be tempted to abandon it; but, although of course novels exist which not only seem, but indeed are incoherent rubbish, many only appear so because we do not know how to read them. If we can learn to, we may find them some of the most rewarding of all novels.

Perhaps the author's technique is unfamiliar to us. Perhaps our disappointment and difficulty stem from the fact we have misunderstood his intention. If we are accustomed to novelists who, like Jane Austen, describe their characters' emotions, we may at first be confused by Joyce's technique in *Portrait of the Artist*, which involves not the description but the poetic evocation of feeling. Bellow's fine comedy *Herzog* will seem trivial if we are expecting it to be a symbolic tragedy on the lines of Melville's *Moby Dick*. In a novel of ideas, such as Vonnegut's *Player Piano* or Orwell's *1984*, there is no place for the kind of realistic description and subtle characterisation that we find in James's *Wings of a Dove* or George Eliot's *Middlemarch*.

Wide and attentive reading makes it easier for us to appreciate an author's techniques and to understand his intention, but we must also remember that every worthwhile novel is an individual work of art, creating its own rules. However strange the book at first may seem, we should, therefore, try to suspend judgment until we have read, and perhaps even re-read, it carefully and receptively.

The second part of this article reviews some of the most interesting and talented novels of the last three decades and suggests ways of approaching them; but the contemporary novel developed from, and in some respects in reaction to, European and American novels of the nineteenth and early twentieth centuries. Our first section therefore summarises important characteristics of these earlier novels and suggests some of the ways in which new ideas and attitudes seem to have affected the work of our contemporary writers.

INTRODUCTION.

The Mid-Nineteenth Century.

(a) English and American Novels.

At this time English novelists were members of a comparatively secure and stable society which possessed generally accepted social and moral standards, and the theme of almost all their writing is the interaction of the individual and the community. Novelists such as George Eliot, Dickens, Thackeray, and Trollope depict characters who progress towards self-knowledge as they learn to discriminate between the genuine and the false, the good and the evil in the people and institutions with which they are brought into contact. Since these writers were as much concerned with the presentation of society as of individuals, most of their work contains naturalistic descriptions of the life and manners of their day and, although the main characters of the Victorian novel are the focal points of its action, as Douglas Hewitt has remarked, they are not central to it in the way that the hero of a tragedy is central, the action is not "orientated towards them."

Most English novels of this period are comparatively loose and episodic in form. They usually present a chronological story told by an omniscient narrator, who reports the characters' actions and feelings, commenting upon them and judging them against standards the reader is assumed to share. Quite often the narrator addresses the reader directly and it is common for him or her to introduce general remarks on social and intellectual questions.

A notable exception to this general pattern is *Wuthering Heights*. In both its techniques and its view of life Emily Brontë's novel has more in common with mid-nineteenth-century American fiction than with the work of her compatriots and is unique among the English novels of its day in its disregard of society and of social and moral conventions.

American novelists, such as Twain, Hawthorne and Melville, were interested in the presentation of individuals rather than of society. This was natural in a country inhabited by pioneers and exiles, and their descendants, who had no common culture. Like the heroes of tragedies, the main characters of mid-nineteenth-century American novels are central to their action, isolated pioneers and exiles who create their own worlds.

American novelists used chronological narrative, but they generally wrote in the first person and their techniques were in other ways different from those of most of their English contemporaries and characterised by the use of allegory and symbolism.

In both countries novelists wrote for a middle-class public and, like their readers, they saw fiction as a mode of entertainment and, or, instruction. However, in France other ideas were being born which were to affect both the form and content of twentieth-century English and American fiction and lead many writers to think of novels as primarily works of art.

(b) French Novels.

Gautier and Æstheticism.

As early as 1825 Gautier had said that a writer must concern himself only with perfecting the style and form of his work and that this was impossible if he considered "the needs of society", "civilization", or "progress". Later, he wrote, "A beautiful form is a beautiful idea", implying that a novelist could treat any subject, no matter how sordid or painful, so long as he embodied it in a beautiful work of art.

Flaubert and Realism.

Flaubert, a leading member of the Realist school, felt that novelists must strive to be impersonal, adapting their style to their subject-matter, for only thus could they write "realistically". He believed that it helped novelists to be objective if they based their work on scientific documentation and said, "It is necessary to discuss the human soul with the [same] impersonality that one uses in [the study of] physical sciences." To the public, who were shocked by Flaubert's unconventional subject-matter, "realistic" became a term signifying moral disapproval.

"Realistic" is now used of (i) novels of working-class life, such as Sillitoe's *Saturday Night and Sunday Morning* (*see* **Neo-Realism, M8**); (ii) any

frank treatment of the physical aspects of life, or of painful or sordid subjects, as in Mailer's *The Naked and the Dead*. Our use of the term has been influenced by Marxist theory and by the writing of the Naturalists.

Zola and Naturalism.

Zola and his followers called themselves Naturalists because, although they agreed with Flaubert that novelists should aim at objectivity, they wanted to produce "slices of life" rather than "works of art". Zola was stimulated by new scientific ideas and particularly interested in the effects of heredity and environment upon character. He inclined to the theory that character is largely determined by environment and wrote of the former in terms of the latter. Fascinated by the sordid side of nineteenth-century life, he tended to concentrate on it to the exclusion of all else and stimulated interest in the portrayal of moral degradation, brutality, and squalor. In England the National Vigilance Society waged a vigorous, and unsuccessful, campaign against the publication of translations of such "corrupt literature"!

1880–1910.

This period introduced some of the most popular kinds of modern novel: inspired by the work of the Frenchman Verne, H. G. Wells began to write Science Fiction; W. Le Queux's *Guilty Bonds*, 1890, introduced the Spy Thriller, a genre brilliantly exploited by Conrad in *The Secret Agent*, 1907, and Conan Doyle developed the Dectective Story.

The work of the French Naturalists was influential throughout this period, but, although it helped to widen the scope of the novel it found few close adherents among English or American writers who were, and are, more interested in those idiosyncratic aspects of personality disregarded by the Naturalists. The influence of Gautier and, particularly, Flaubert was more important and was first apparent in the work of James and Conrad, both of whom saw themselves as artists, rather than teachers or entertainers. They have been called the first Modern English Novelists.

(a) Henry James (1843–1916).

James admired the work of Gautier and was much impressed by Flaubert's theory of fiction. Like Flaubert, he strove towards an objective, detailed presentation of character and constantly sought to depict the nuances of feeling more delicately and precisely and to give his novels greater aesthetic unity. Many twentieth-century writers call James "The Master", for the scrupulous care with which he revised and polished the style of his novels and short-stories established an ideal of literary craftsmanship. The artistry and poetic sensitivity of his writing have had a marked effect upon the work of writers such as Elizabeth Bowen and Hartley. James began the process of combining the social novel of the European tradition with the more poetic American novel, a process to be carried much farther by Conrad in *Nostromo*.

(b) Joseph Conrad (1857–1926).

Conrad spent his youth in France and was well read in French literature. The sense of insecurity which permeates his writing is one of the first signs in English fiction of the break-up of the social and moral stability of the nineteenth century. This change appeared earlier on the Continent than in England and it is perhaps significant that Conrad was of Polish birth and always spoke French better than English, but his sense of insecurity was doubtless intensified by the hazards of his early naval career in the days of sailing-ships.

Like the novels of present-day writers such as Beckett, Lowry, and White, Conrad's books are essentially poetic and can be read on a number of different levels. They are as realistic as nineteenth-century French novels, but their every detail bears a significant relation to the plight of their central characters, and in his masterpiece, *Nostromo*, Conrad showed that a novel of great poetic intensity could yet encompass the life of a whole society.

James had been unable to banish the intrusive presence of the author from his novels; Conrad managed to: at times by using a narrator who is deeply involved in the action, at others by reviving an eighteenth-century technique of telling the story from shifting points of view. At the same time he abandoned chronological narrative for a shifting time sequence, which reinforces his themes by intensifying a feeling of insecurity. Narrative of this kind has been used with similar effect by a number of modern novelists, including Beckett, Bellow, and Naipaul, and, although the use of the shifting time sequence, which marks one of the most obvious differences between nineteenth- and twentieth-century fiction, has been influenced by the writing of Proust and Joyce and by new ideas in theoretical physics and psychology, Conrad was the first modern novelist to use this kind of narrative.

The Early Twentieth Century.

"On or about December 1910 human nature changed", said Virginia Woolf. She probably chose that date because it marked the opening of the first London exhibition of the paintings of the post-impressionists. The work of these artists expressed a new vision of reality which was characteristic of the intellectual and cultural revolution sweeping Western society in the early decades of the century. The stimulus of this new Renaissance was reflected not only in painting, but in the music of Stravinsky, the dance of the Diaghilev Ballet, the poetry of Pound and Eliot and the novels of Proust, Joyce, and Virginia Woolf herself. The sense of exhilaration felt at this time is vividly suggested in Leonard Woolf's autobiographical work *Beginning Again*.

The stability and formality of nineteenth-century life, which had already been undermined by the ideas of Darwin and Huxley, the growing literacy of the working-classes, and the accelerating technological revolution, was now shattered by the combined impact of psychological theories, the ideas of social anthropologists such as Sir James Frazer and the work of physicists like Planck, Einstein, and Rutherford (*see* **F10–13**). As a result, novelists could no longer assume that readers' attitudes and values would resemble their own and were obliged to reconsider the nature of the relationship between art and life. The exploration of this relationship becomes one of the major themes of twentieth-century fiction, and after the First World War it is accompanied by an increasing sense of the isolation and insecurity of the individual's life and the inadequacy of words as vehicles for communicating experience.

For most writers the nineteenth-century European novel now seemed inadequate to express the complex and fluid nature of consciousness revealed by psychologists, and narrative consisting of a simple chronological progression of events was felt to give a misleading impression of our experience of time. Novelists were therefore compelled to search for new techniques, and were encouraged to do so by the example of experiments already taking place in art and music and by the example of the French Symbolist poets.

(a) The Influence of Psychological Theories.

The interest in the nature of perception revealed in the work of impressionist and post-impressionist painters had been growing since the turn of the century and was stimulated by the writings of the American William James and the Frenchman Henri Bergson.

In 1890, James, the brother of novelist Henry James, had published *Principles of Psychology*, in which he compared consciousness with a "river or a stream," implying that it carries within it submerged and floating memories and receives a fluid series of impressions of the exterior world.

The term "stream of consciousness", derived from James's theory, was later applied to a new literary technique evolved by Joyce.

In *Matter and Memory* (1894), Bergson had suggested that perception is controlled by memory and said that our view of the world changes at every moment, "as though by a turn of a kaleidoscope," suggesting that perception involves an involuntary, creative readjustment of elements of past experience. This idea was to have a profound effect upon the work of Proust, to whom Bergson was related by marriage.

The writings of Freud, which began to be published in English in 1913, drew further attention to details of human experience, stimulating the growing interest in the subconscious mind, in dreams and the symbolic transformation of experience, and combining with the influence of the Symbolist writers and the music of Wagner to give new impetus to the use of symbolism in fiction.

The influence of Freudian theory also extended the novel's potential subject-matter in two most important ways.

By emphasising the frail barrier between rational and irrational behaviour Freud made possible an imaginative discussion of neurosis and insanity, which had been regarded as shameful in the nineteenth century. The results of this more sympathetic attitude can be seen in the novels of writers such as Faulkner, Bellow, and White, while novels like Doris Lessing's *Briefing for a Descent into Hell* (1971) (*q.v.*) and Jennifer Dawson's *The Ha-Ha* (1961), an imaginative study of a schizophrenic, are inconceivable as the work of any pre-Freudian writer.

Perhaps the most influential of all Freud's theories was his suggestion that our attitudes and behaviour are determined primarily by sexual needs and experience. Nineteenth-century novelists had been extremely reserved in their treatment of sexual life and although eighteenth-century writers had been uninhibited they had regarded erotic experience either as merely incidental to their characters' lives, or as a subject for ribald comedy and satire. Freudian theories have encouraged modern novelists to treat sexual experience more freely than it was in the nineteenth century and more imaginatively and seriously than it had been by earlier writers. Indeed it is now unusual for a novelist to treat sex humorously!

Freud's ideas on infantile sexuality also aroused enormous interest in childhood experience and relationships between parents and children, particularly in the ways that these might later affect the adult. Novelists whose work reflects this interest include Ivy Compton-Burnett, Hartley, Styron, and Wilson.

It is interesting to note that, despite the influence of Freud and later psychologists, and writers such as Kinsey, it is only within the last decade that English public opinion has allowed novelists to treat erotic love and sexual deviation as frankly as eighteenth-century writers could. An important date in the restriction of censorship came in 1960, when Penguin Books won their case for the publication of an unexpurgated edition of Lawrence's *Lady Chatterley's Lover*.

(b) The Influence of the Symbolists. *See also* M44.

The work and ideas of the writers associated with this school, which arose in France in the last decades of the nineteenth century, and included the poets Rimbaud and Mallarmé, have had a far-reaching effect upon modern fiction.

The Symbolists' technical experiments in using verbal association, deliberate ambiguities of phrase and syntax, multiple analogies and esoteric allusion, in poetry, and interior monologue in fiction, suggested means by which modern novelists might attempt to express the subtleties of individual consciousness and to create new forms of novel. The Symbolists' feeling that artists are gifted with a mystical apprehension of Reality, and their consequent belief that, in order to express this apprehension, art should possess the evocative, lyrical qualities of music, not only helped novelists like Proust and Joyce to evolve new forms for the novel, but has had a less happy influence on some other writers, encouraging them to indulge in vague metaphysical musings. Two gifted novelists whose work seems to have suffered in this way are the Austrian Hermann Broch and a writer from Guyana, Wilson Harris, both of whose novels are at times highly evocative, but too often seem to degenerate into meaningless verbiage. (However, the eminent critic George Steiner suggests in *Language and Silence* that Broch's *Death of Virgil* (1945) is one of the greatest novels of the century, comparable only with Joyce's *Ulysses*. Its theme is similar to that of T. S. Eliot's *Four Quartets*, and, like Eliot's poem, it is constructed in the form of four "movements", each based on the "key" of one of the elements, earth, air, fire, and water).

The Symbolists' dream of producing a "universal poem", an epic myth on the scale of Goethe's *Faust*, has been reflected in the work of many modern novelists, notably in Joyce's *Ulysses* and *Finnegans Wake*, the German Thomas Mann's *Joseph and His Brothers*, Broch's *Death of Virgil* and, more recently, in the novels of Beckett, Golding, Lowry, Styron, and White.

(c) The Influence of Russian Literature.

A subsidiary, but nevertheless important influence upon the novel has come from the writing of the great nineteenth-century Russian authors. Turgenev has been available in English since the 1890s. Tolstoy, Dostoyevsky, and Chekhov began to be translated just before the First World War. Their writing heightened novelists' interest in conveying a more spiritual reality and the work of Turgenev and Chekhov particularly encouraged writers who were moving towards a more lyrical treatment of style and form, while the novels of Dostoyevsky stimulated the interest aroused by Freud in the imaginative presentation of mentally handicapped, neurotic, psychotic, and psychopathic characters. American and English novelists' attitudes to the work of these and other Russian authors can be studied in the anthology *Russian Literature and Modern English Fiction*, edited, D. Davie.

(d) Innovators of Literary Techniques.

Marcel Proust (1871–1922).

In his huge novel *À la recherche du temps perdu* (1913–27) Proust evokes the kaleidoscopic patterns of involuntary memory as they float through his narrator's mind. His work has therefore been called a *roman fleuve*—a river novel. Its plot seems non-existent, but the novel is in fact constructed with the greatest artistry and, just as the Symbolist poets used evocative images with a multiplicity of associations, so Proust introduces the characters and events of his narrative, presenting them from different viewpoints and investing them with new significance each time they are recalled. Proust's work had a notable influence upon the writing of Virginia Woolf and Forster and among more recent novelists Powell is Proust's avowed disciple. A translation of *À la recherche du temps perdu* is now published in paperback by Chatto and Windus.

James Joyce (1882–1941).

Joyce, an Irishman, spent most of his life on the Continent and although his work, like that of all great artists, was highly individual, it owed much to the stimulus of the ideas of Flaubert and the work of the Symbolists. Like Flaubert, Joyce believed that a novel should be objective and rooted in experience of everyday life, and by

developing the Symbolists' techniques he achieved an hitherto unparalleled impression of objectivity in his portrayal of character.

Joyce's name is particularly associated with the "stream of consciousness" technique, which he evolved from the Symbolist writer Dujardin's "interior monologue", in order to be able to express the mind's activity—not only the way we receive passive impressions of the exterior world and associate them with past experience, the subconscious distortion and imaginative control exercised by the mind, but also how our sensibility and imagination are involved in an active "dialogue" with the world as we apprehend it. Joyce's use of this technique therefore varies considerably, according to the kind of character he is presenting, and since he attempts to express non-verbal experience, as well as verbal thought, his sentences often have a poetic rather than a discursive logic. Stimulated by Joyce's example, later novelists, including Faulkner and Lowry, have evolved their own poetic forms of the stream of consciousness technique, but most later writers have preferred to use a less poetic version, more akin to the interior monologue, expressing the stream of thought, rather than of consciousness. A contemporary novelist who uses interior monologue in this way is Bellow.

It has been suggested that Joyce, having created a new kind of novel, himself used it in every possible way. In *Portrait of the Artist* (1916) he covered the childhood and adolescence of a writer. *Ulysses* (1922) shows a day in the life of Dublin through the eyes of three people and, at the same time, creates a universal image of man's experience of life. In *Finnegans Wake* (1939) Joyce attempted to express the history of the world by evoking the dreams of a Dublin publican, but, despite its occasional brilliance, *Finnegans Wake* is largely inaccessible to readers who have not spent years studying it. Joyce has, therefore, a twofold significance for later writers: he evolved a new kind of novel and, although he wrote with such skill that others have often despaired of emulating him, his achievements have encouraged novelists to experiment, while *Finnegans Wake* has provided a classic warning of the dangers of indulging in esoteric mythmaking.

(e) Heirs of the Victorian Tradition.

D. H. Lawrence (1885–1930). *See also* Section I.

Lawrence had a vivid appreciation of the beauty of the natural world and emphasised the importance of the instinctual, as opposed to the intellectual, life. He felt that it was only through basic human experience, particularly through the experience of unselfish erotic love, that we could attain the peaceful self-unity that comes from an apprehension of the sacramental quality of life.

Although he abhorred didactic literature, Lawrence was, therefore, a man with a message, the "flag-bearer of intuition in its interminable struggle against logic and reason"—a true heir of the Romantic movement (*see* Section J). Lawrence's attitude to the novel was thus akin to that of Victorian writers and the form of his work has much in common with theirs, although, unlike most Victorians, he made deliberate use of poetic symbolism, which, as Walter Allen has said, "enabled him to render the felt quality of the immediate, instinctive self as it had never been before."

Although no later novelist has equalled Lawrence in the tender poetic expression of unselfish erotic love, his ideas have been widely influential. Doris Lessing is among those later novelists whose work, like Lawrence's, has emphasised the unhappiness and sterility of selfish relationships, and the American writer Baldwin also reflects his influence.

E. M. Forster (1879–1970).

Like Lawrence, Forster was a moralist, primarily interested in relationships between people and used techniques and a novel form that have much in common with those of the Victorians. A much more sophisticated novelist than Lawrence, Forster was, superficially, a writer of social comedy in the tradition of Jane Austen, but he was always aware of the numinous quality of life, and expressed it in his novels through complex symbols. His books explore individuals' attempts to "connect" with each other across "the divisions of daily life" in a mutual quest for truth. These themes, which are stated, rather than successfully conveyed in symbolic terms in his early novels, find poetic expression in his masterpiece, *A Passage to India* (1924).

Forster preferred that his early novel, *Maurice* (*see* **M 17**) should not appear in his lifetime. He wrote no others after *A Passage to India*, because, he said, "I had been accustomed to write about the old-fashioned world with its homes and its family life and its comparative peace. All that went, and though I can think about the new world I cannot write about it."

The "new world" is the theme of Kafka and Huxley.

(f) Important Novelists of the 1930s.

Franz Kafka (1883–1924).

A Czech by birth, Kafka wrote in German. His novels first became known to the English-speaking world on the appearance of a translation of *The Castle* in 1930. It was followed in 1935 by *The Trial*. These haunting parables of a man's nightmare life in a world where everything appears contingent, now seem prophetic, and their influence is apparent in works like Rex Warner's *The Aerodrome* (1941), Orwell's *1984*, Ellison's *The Invisible Man*, and the novels of Beckett. Surrealist techniques, giving an effect of confusion between the world of consciousness and that of dream, had been used before Kafka, but he gave them fresh significance.

His tragic short story, *Metamorphosis*, which tells of a man who wakes one day to find himself transformed into a huge insect, brought new dimensions to serious science fiction.

Aldous Huxley (1894–1963).

Huxley was unique among the novelists of the inter-war years. He declared that nothing deserved to be taken seriously save the suffering men inflict upon themselves by their own crimes and follies, and he criticised both the traditional "social" novel of personal relationships and the more poetic individualism of Joyce, Virginia Woolf, *et al.*, as reflecting conventional values that create suffering and help to perpetuate misery. Although Huxley's highly intelligent satires are very different in style from those of any other twentieth-century writer, his themes look forward to those of some of the more important post-war novelists.

John Dos Passos (1896–1970).

Dos Passos was a member of the group of Radical American novelists which also included Farrell and Steinbeck, all of whom were influenced by the work of the Naturalists. In his trilogy *U.S.A.* (1930–36), which is a panorama of American life between 1910 and 1927, Dos Passos developed the collage techniques he had evolved in *Manhattan Transfer* (1925). The trilogy is composed of short sections: some are written in interior monologue, others consist of extracts from newspaper headlines and articles and snatches of popular song, others are biographies of leading American personalities, written in a kind of "free verse" and yet others consist of extracts from the lives of fictional characters. *U.S.A.* does not form an imaginative whole and has nothing of the power of Proust's and Joyce's novels, but Dos Passos' technical experiments have exerted considerable influence, not only on a number of later American novelists, particularly Mailer, but also on French writers such as Sartre.

Recent Developments.

(a) Le Nouveau Roman.

Some critics consider the most exciting recent developments in the novel's form have been made in France by the heterogeneous group of writers whose work is given the title of *le nouveau roman*. Most of their novels are published by Éditions de Minuit, of which Alain Robbe-Grillet, one of their leaders, is a director, and are available in English translation from Calder and Boyars.

Apart from Robbe-Grillet, the most notable of these novelists include Claude Simon Michel Butor and Nathalie Sarraute. Some of their theories about fiction are to be found in Robbe-Grillet's *For a New Novel*, Butor's *The Inventory* and Sarraute's *The Age Of Suspicion*. Interested readers should also refer to *Writing Degree Zero*, *Mythologies* and *S/Z*, by the influential critic and linguistic philosopher Roland Barthes.

Although the writers of the *nouveau roman* have individual styles, all seek to present a character's state of mind over a brief period of time, while introducing incidental details of his past experience. Their techniques involve the inconsequential repetition of key images and phrases in ever differing combinations and contexts. Such aims may seem new to the French literary scene but they are familiar to English readers of the eighteenth-century Lawrence Sterne (*v.* his *Tristram Shandy*, 1760–7). The techniques of the *nouveau roman*, derived from the Symbolists, Joyce and Proust, are not really new either and, although skilfully deployed, often mask the trivial content of works which have nothing of the power of Samuel Beckett's fables (*qq.v.*), their immediate inspiration.

The only English novelist closely associated with this French group is Christine Brooke-Rose (*q.v.*). The experimental writer B. S. Johnson (*q.v.*) has expressed similar aims to those of authors of the *nouveau roman*, but his novels are very different from theirs.

(b) Novels from the Commonwealth.

Since 1945 the language of the English novel has been invigorated by the work of talented African and West Indian writers. Drawing upon a long tradition of oral story-telling these novelists are particularly skilful in their treatment of narrative and dialogue. The importance of their work was recognised in 1965 by the institution of the Jock Campbell–New Statesman prize, awarded triennially to an African or Caribbean novelist writing in English. The first two prizes went to the leading Nigerian writers Chinua Achebe and Wole Soyinka (*qq.v.*). The third was won by Shiva Naipaul, younger brother of the outstanding V. S. Naipaul from Trinidad (*qq.v.*)

There are various guides to the work of the new African novelists. Charles K. Larson's *The Emergence of African Fiction*, 1972, is particularly recommended. Heinemann Educational publish a very good, inexpensive series of editions of African writing.

Novelists from other areas of the Commonwealth have also made their mark. Nadine Gordimer, Dan Jacobson and Doris Lessing (*qq.v.*), Southern African writers of European stock, have given new impetus to the English novel's traditional interest in the interaction of society and the individual. A more idiosyncratic genius is that of the Australian Patrick White (*q.v.*). Some consider his *Tree of Man* and *Voss* to be among the finest modern novels in any language.

Indian writers have made a smaller impression partly because their work has, with few important exceptions, seemed more conventional and less vigorous, partly because the work of some of the leading Indian novelists writing in English can be difficult to obtain. However, most libraries can offer some examples of R. K. Narayan's classic comedies (*q.v.*) and *bona fide* students may be able to borrow the work of other important writers such as Mulk Raj Anand and Raj Rao (*qq.v.*) from the London library of the Indian High Commission. Two critical guides are worth consulting: K. R. Srinavasa Iyengar's *Indian Writing in English*, 1962, and Margaret E. Derrett's *Modern Indian Novel in English*, 1966.

(c) Neo-Realism.

In the late 1950s and early '60s there was an upsurge of realistic writing in England. The early "kitchen sink" dramas of Osborne and Wesker (*see* Section I) were complemented by novels such as Keith Waterhouse's *There is a Happy Land*, 1957 (P) and *Billy Liar*, 1959 (P); Allan Sillitoe's *Saturday Night and Sunday Morning*, 1958 (P) and his fine *nouvelle The Loneliness of the Long-Distance Runner*, 1959; David Storey's *This Sporting Life*, 1960 and Stan Barstow's *A Kind of Loving*, 1960.

Most earlier novels of working-class life, such as Arthur Morrison's *The Hole in the Wall*, 1902, and Walter Greenwood's classic of the '30s *Love on the Dole*, had been primarily concerned to reveal the suffering of the poor. This new group of young writers, though very aware of its hardships, sought rather to present objective realistic images of working life as seen from the inside. The most interesting member of the group is David Storey (*q.v.*). At the moment a new reaction against neo-realistic writing is affecting the novel as well as the theatre, but two new younger writers, Melvyn Bragg and Philip Callow have produced promising work.

(d) Documentary and Brechtian Novels.

The "theatre of fact" (*see* I5), which attempted to present objective documentary plays on political subjects such as the Oppenheimer case, was followed towards the end of the '60s by a new kind of "documentary" novel when Mailer published his *Armies of the Night*, 1968 (*q.v.*), a factual account of the 1967 Peace March on the Pentagon in which Mailer participated. In the novel he is himself humorously described in the third person. This book and Mailer's subsequent *Miami and the Siege of Chicago* and *Of a Fire on the Moon* (*qq.v.*) differ from plays of the "theatre of fact" in using a comic tone as the vehicle of their implied criticism of the American authorities. Brian Moore's *The Revolution Script*, 1972 (*q.v.*), is more sombre. Its subject is the Quebec Separatist Movement's kidnapping of James Cross and Pierre Laporte.

Another dramatic influence, that of Brechtian epic theatre (*see* I20), would seem to lie behind John Berger's *G.*, 1972 (*q.v.*), in which the narrator assumes the pose of a completely detached observer calmly presenting his characters, now pausing to refer to contemporary social and political questions, now introducing lyrical passages of first-person narrative in which the protagonist "speaks" to the "audience", now discussing matters of literary techniques.

The influence of Brecht's "alienation" methods may also have affected the narrative approach of John Fowles in his *French Lieutenant's Woman*, 1969 (*q.v.*), and possibly had some influence on the form of Alan Burns's satire *Dreamerika!* 1972 (*q.v.*).

Unlike the Victorian "omniscient" author, the modern Brechtian novelist makes no pretence of complete knowledge of his characters. He presents what a privileged observer may see of their actions and deduce of their thought and feelings.

Conclusions.

In general during the twentieth century the novel has gained in dramatic and poetic intensity but its vision of the world has become restricted to that of one or a few characters. It thus resembles the nineteenth-century American novel more closely than that of Victorian England. The reason for this may be partly a result of the interest in individual experience aroused by psychology, but seems more particularly a reflection of modern life. The diverse nature of our urbanised society

makes it virtually impossible to write a modern *Middlemarch*, and in a world possessing few generally accepted moral or social standards men are likely to feel more akin to the pioneers and exiles of nineteenth-century America. But nineteenth-century Americans were supported by a strong religious or humanist faith, which we have generally lost. A great deal of modern art, not only fiction, expresses feelings of isolation, bewilderment and suffering, themes which find their supreme expression in modern literature in the tragi-comic novels and plays of Beckett. But some fine novelists, such as Bellow, have a more positive vision.

Many writers continue to use and adapt the techniques developed by Proust and Joyce in the early part of the century but others are combining a poetic use of symbols with a comparatively straightforward, realistic narrative, more akin to that of Lawrence and Forster. It is interesting that, except for Kingsley Amis, Graham Greene and the French Robbe-Grillet, no contemporary novelist of any stature has chosen to exploit the highly popular form of the detective novel, while the vigorous school of science fiction writers has produced no really outstanding work since the 1930s.

II. DIRECTORY OF NOVELISTS.

In this part we discuss the work of some of the more important novelists who have published since 1945. It is inevitably selective. A more detailed treatment of the twentieth-century American and English novel may be found in Walter Allen's *Tradition and Dream* (P). The revised edition of Anthony Burgess's *The Novel Now* has some useful bibliographies and helpful studies of individual authors are available in Oliver and Boyd's paperbacked series *Writers and Their Critics*.

Dates quoted are those of the first publication.

Paperback editions are referred to thus: C: Calder and Boyars. Co: Corgi. F: Faber and Faber. Fo: Fontana. FS: Four Square. M: Mayflower. P: Penguin. Pa: Panther. S: Signet Books.

Chinua Achebe (b. 1930).

Achebe, the Nigerian author of four most elegantly-written novels, was awarded the first *New Statesman* prize for African and Caribbean writers in 1965.

Things Fall Apart, 1958; *No Longer at Ease* 1960; *Arrow of God*, 1964.

These novels are all concerned with the impact of Western society upon Ibo culture in earlier years of the century. Achebe shows a vivid appreciation of the value and dignity of the Ibo's traditional ways of life, but his overriding theme is the need for men to have flexible, receptive minds. The hero of each of these novels comes to a tragic end because he cannot adapt to the demands of a new and unforeseen situation.

The three books are characterised by the grace and dignity of their language and are very different in tone from Achebe's latest novel.

A Man of People. 1966.

This is a fiercely ironic study of the career of Chief Nanga, leading demagogue in a newly independent African state. It has been suggested that the portrait of Nanga is modelled from Nkrumah. Although Achebe presents Nanga as an unscrupulous opportunist he also stresses the attractive qualities of his character and suggests that he is, ultimately, a victim of circumstances. It is interesting to compare this novel with Gordimer's *A Guest of Honour* and Naipaul's *Mimic Men* (*qq.v.*).

Kingsley Amis (b. 1922).

Amis made his name with *Lucky Jim*, 1954 (P), which was later filmed with Ian Carmichael giving an hilarious performance in the title role of a young lecturer in rebellion against the "phoneyness" of middle-class values in his provincial university.

Together with John Wain, whose *Hurry on Down* had appeared a few months earlier, Amis articulated the feelings of the post-war generation of graduates, many of them from the lower-middle and working classes, the beneficiaries of the 1944 Education Act. They scorned the pretentions of an upper-middle-class "Establishment" while envying its confidence and jealous of its power. "Lucky Jim" became something of a folk hero and Amis was spoken of as if he had inaugurated the cult of the Angry Young Man. His name was for a time associated with those of Braine, Barstow and Sillitoe who, in novels like *Room at the Top*, *A Kind of Loving* and *Saturday Night and Sunday Morning* portrayed other young men rebelling against the provincial society in which they found themselves; but Amis never had much in common with such neo-realist novelists (*see* M8), and as time has passed his difference from them has become ever more apparent. He is primarily a writer of farcical satire, with a lively talent for mimicry and a beautifully lucid style.

Amis has now some dozen novels to his credit, of which the most interesting, apart from *Lucky Jim* are *The Anti-Death League*, 1966 (P), a parody of the spy thriller, and *Girl 20*, 1971 (Pa), his best novel, which satirises those middle-aged men who strenuously attempt to preserve a youthful veneer by aping the latest adolescent fashion and having affaires with very young women. *The Riverside Villas Murder*, 1973, Amis's most recent book, is a parody of the classic dectective story.

A writer of great natural gifts he is always entertaining but has yet to publish a really outstanding novel.

Mulk Raj Anand (b. 1905).

Mulk Raj Anand is one of the most important Indian novelists writing in English. Much of his work is published in Bombay, but can sometimes be obtained from libraries. His novels include *The Private Life of an Indian Prince*, 1953; *The Old Woman and the Cow*, 1960; *Death of a Hero*, 1963, and *Morning Face*, 1968.

James Baldwin (b. 1924).

Baldwin emphasises the harsh brutality of contemporary life, particularly for the Black American. One of his dominant themes is the necessity for honesty about oneself; this includes a frank acceptance of one's sexual nature, whether heterosexual or homosexual. He suggests the brutality of modern life is due to the fact that many people, especially, though not only, White people, are afraid of themselves and therefore incapable of accepting or loving others, but fear them and sadistically exploit and attack them. He shows the tragic effects of such viciousness upon those who suffer it and also upon its perpetrators. Much of the distinction of Baldwin's work comes from the compassionate understanding with which he treats the latter. He acknowledges the discovery and acceptance of oneself may involve great suffering and always requires courage, and suggests it is only possible if one is willing to love others and accept the support of their love.

Go Tell It on the Mountain. 1954. Co.

The novel covers two days in the lives of a Black American family who belong to a strict fundamentalist sect, The Fire Baptised. The members of this fellowship identify themselves with the Israelites in captivity. Baldwin shows how this is a reaction to the harshness of their lives and compassionately reveals the mixture of genuine and deluded religious experience among the sect's members. The language of the novel is permeated by echoes of the Authorised Version of the Bible.

Giovanni's Room. 1956. Co.

This is a tragic story of a young American who fears his homosexual predilections and hideously ruins the lives of his Italian lover and of his own fiancée.

Another Country. 1962. Co.

The novel is centred on the lives of a mixed racial group of Greenwich Village artists and intellectuals. The brutality of New York life is reflected in the crude and obscene language the characters use so casually. At the end of the novel five of its central figures are, as the title suggests, on the verge of a new, though not necessarily easy, life, after their difficult and often bitter quest for love and self-knowledge.

Tell Me How Long the Train's Been Gone. 1968. Co.

A star Negro actor looks back on a life dominated by fear and concludes that, for the majority of Black Americans, violence offers the only road to freedom. This is a disappointing novel when compared with Baldwin's earlier ones, for it is less objective and therefore less powerful than they. It is, nevertheless, an important expression of the growing bitterness of Black Americans and constitutes a vehement denunciation of the behaviour of the White community.

In each of these novels Baldwin uses a mixture of straightforward narrative and "flash-back" techniques.

Samuel Beckett (b. 1906). *See also* **Section I.**

Since about 1945 Beckett, who now lives in Paris, has written in French then recreated his work in English. In the following notes, dates refer to the first publication of a novel. Where its first English edition came later this date is given in brackets.

Beckett's work first reached a wide public with the production of his play *En attendant Godot* (*Waiting for Godot*) in 1953, but he began as a satiric poet and novelist and has become one of the greatest novelists of the age. In 1969 he received the Nobel Prize for Literature.

The compelling force of his work derives from the courageous honesty and poetic power with which it expresses contemporary uncertainties about the meaning and purpose of life, together with the experience of confronting these uncertainties with a mingled sense of helplessness, fear and fluctuating resolution. He is a supreme exponent of the themes of isolation, bewilderment and suffering that are to be found in the work of so many contemporary writers and of artists such as Francis Bacon.

In his search for a form which would truthfully "accommodate the mess" of modern life Beckett has made use of various philosophical and religious ideas. Their symbolic power and poetic shape are important to his work. Their content offers few keys to it. Similarly, some of Beckett's images are inspired by Dante and a knowledge of the Italian poet helps us to appreciate Beckett, but to read his novels as religious allegories would be to oversimplify. For example, Belacqua, the hero of his first book, *More Pricks Than Kicks*, 1934 (C), derives from the sluggish Belacqua of the *Purgatorio* (canto iv, 97–135). Knowing that he will be refused entry to the "cleansing pain" beyond the gate of Mt. Purgatory until he has redeemed his mis-spent past, Dante's Belacqua sits idly in the shadows with his head between his knees. Beckett's heroes often speak of him and in their rare moments of tranquillity always copy Belacqua's pose. However, they only do so because it recalls the time of their greatest happiness, the first months of life—as an embryo. In Beckett's novels birth is the supreme evil. To be born means to sign one's "life warrant" into a cruel world of fear, irrational hope and compulsive need. Dante's Belacqua will eventually move towards Paradise. Beckett's heroes wonder, "Might not even the Beatific vision become boring in the long run? 'They prefer "rotting in peace".

In the 1930s Beckett published a collection of stories, *More Pricks Than Kicks*, and a picaresque satire, *Murphy*, 1938 (C). These offer a helpful introduction to his subsequent writing. Allusions to them appear in the later work and its themes of pursuit and quest are adumbrated in these first books, whose protagonists, learned eccentric "layabouts" foreshadow the tramps and outcasts of Beckett's later novels and plays.

In the post-war novels life is reduced to its barest essentials. Even memory and imagination flicker and die. The wheel comes full circle and man returns to the helpless state of the embryo. There remains only waiting for an end, but no end is assured. The novels' circular forms suggest only a new beginning. The religious expectation of a rebirth has here become fraught with menace.

Watt. 1953. C.

A rather prolix transitional work, the last novel Beckett has completed in English, was composed between 1942 and '44 when he was in hiding as a member of the French Resistance. Its tone is comic and its style recalls Sterne's *Tristram Shandy*.

Sam, a patient in a psychiatric hospital, tells the story of his fellow inmate Watt, formerly servant to the mysterious Mr. Knott. Watt's purpose in becoming Knott's servant and his resulting discoveries are expressed in terms of a religious quest.

The Nouvelles, written c. 1945, published 1946–55 (1954–67), and *Mercier et Camier*.

Beckett's first work in French consisted of four nouvelles and a draft novel, *Mercier et Camier*. All were written about 1945. The novel has so far remained unpublished but some idea of its nature can be gained from J. Fletcher's *The Novels of Samuel Beckett* (1964).

Three of the nouvelles form a short trilogy. They are *The End*, *The Calmative* and *The Expelled*. These stories underwent several revisions and were published in their final forms in the French *Nouvelles et Textes pour rien* (1955) and the English *No's Knife* (1967). They seem in some ways to have been a trial outline of the form which Beckett brought to perfection in his later *Molloy Trilogy* and give most poignant expression to his recurrent theme of exile. Like the abandoned Jesus, to whom he is often compared, Beckett's tramp-like hero is "despised and rejected of men, a man of sorrows and acquainted with grief", a "crucified bastard". Through him Beckett expresses a biting criticism of our society's hypocritical cruelty towards its outcasts.

Beckett has said that the three stories can be read as tales of the three phases of existence—prime (*The Expelled*), death (*The End*) and limbo (*The Calmative*). Each story seems to be told by the same, anonymous speaker who, like the narrator of the *Molloy Trilogy*, recounts stories of his past.

In *The End* the speaker is ejected from a "charitable institution", eventually finds lodging in a cellar, but then expelled by a new landlord he wanders, ever more wretched, until his life slowly dwindles away.

The dead narrator of *The Calmative* tells himself a tranquillising story so as to avoid listening to the sound of his body decaying. The time of the tale's action is uncertain, possibly it represents the present, possibly the future, and with characteristic glee the speaker here contemplates his readers' confusion! In his story he wanders, as if in a dream, through the streets of his home town seeking people to talk to.

In *The Expelled* he goes on to speak of the prime of his life, when "they" ejected him from his childhood home. Hiring a cab he spent the day seeking lodgings and, unsuccessful, eventually accepted the cab driver's offer of a night's shelter in a stable, before resuming his quest.

First Love, written *c.* 1945, published 1970 (1973).

A fourth nouvelle, *First Love*, seems to concern the same speaker as the previous three stories. Again he is ejected from his childhood home. This time he makes his way to a canal bench and there encounters the prostitute Lulu, who seduces him. As winter approaches he abandons the bench for a deserted cattle shed, but unable to forget the woman, now called Anna, seeks her again. She provides him with a room and cares for him, but on the night of their child's birth he runs away, pursued by the cries of her agonising labour, which for ever haunt him.

It would seem that Beckett may have delayed publication of this story because it is extraneous to his first trilogy and yet, if considered as an independent work, it seems very slight.

The Trilogy: *Molloy*, 1951 (1955), C; *Malone Dies*, 1951 (1956), C & P: *The Unnamable*, 1953 (1958), C.

A first-person narrative as compelling as the Ancient Mariner's, Beckett's finest novel is painful, yet constantly enlivened by bizarre comedy and wry humour. Its first volume, *Molloy*, is divided into halves. In the first, the bedridden Molloy, a disreputable old Irish writer, recounts the vicissitudes of his search for his mother. In the second half the tyrant Youdi sends a messenger, Gaber, to a conventionally respectable French smallholder, Moran, ordering him to go and find Molloy. Moran doubts Youdi's existence but fears to disobey After many adventures he comes upon Molloy but does not recognise him, so at last returns home, believing he has failed in his mission. However, he has gradually come to resemble Molloy and at the end of the book is in the state Molloy was in at its beginning.

The form of this tale may derive from Jungian psychological theories of the quest for the mother and the invasion of the personality by its subconscious " shadow ". It would be unwise to attribute any particular religious significance to Youdi and Gaber but their names have religious overtones: Youdi, a French colloquialism for *Jew*, is derived from the Arabic *Yahudi* and recalls the Old Testament *Yaweh*; Gaber suggests *Gabriel*.

In the second book, *Malone Dies*, the story is told by the all but helpless Malone, who says that Molloy and Moran were characters he invented. Awaiting death he " tells stories " about other personifications of himself in order to pass the time. It would seem that he dies between the end of this book and the beginning of the next.

The harrowing *The Unnamable* discovers the hero in a formless limbo continuing an ever more frenzied quest for identity, recalling all his past " selves ", including Murphy, Watt, Molloy and Moran, before deciding that the embryonic Worm most nearly approximates to the true self whose essence yet eludes him.

The circular form of each volume of the trilogy symbolises the hero's endless, repetitive journey. A possible interpretation of the whole is suggested by Beckett's early essay on Proust, where he says, " the individual is a succession of individuals ", life, " a succession of habits ", broken only by " periods of transition . . . when for a moment the boredom of living is replaced by the suffering of being."

Texts For Nothing, 1955 (1974).

After finishing *The Unnamable* Beckett was uncertain how to proceed. He began to resolve his dilemma in the experimental *Textes pour rien* (*Texts For Nothing*), thirteen short pieces of lyric prose resembling contemporary French experimental poetry. Their name derives from the musical term *mesure pour rien* (a bar's rest). Opening and closing with the same words—on the same note—they are essentially compositions in word music and sound beautiful, particularly in French, but little meaning can be ascribed to them: they mean " nothing ".

From an Abandoned Work written 1955. Published 1967 in *No's Knife*.

An unfinished novel, Beckett's most recent attempt at work in English, was probably put aside because he felt a dramatic form would be more suitable for his material. The novel bears resemblances to his subsequent play, *Krapp's Last Tape* (*see* I16). In both an old man recalls his youth and looks forward to " a long unbroken time without before or after . . . life and death all nothing ".

From an Unabandoned Work, 1960, was the title given to an extract from Beckett's next novel, *How it is*.

How It Is. 1961 (1964). C.

Expressing an experience akin to the power of nightmare delirium in its pain and horror, an anonymous " mouthpiece " who seems in the throes of a mortal illness, speaks of his life. Naked and dumb [*sic*], in pitch darkness he crawls through mud with a sack of tinned fish hanging from his neck. His only other possession is a tin opener. He refers to " dreams ", apparently connected with a previous life " above " in the light, but then says these are only " visions " seen in the mud. Suddenly he bumps into another man, Pim, whom he tortures with the tin opener until Pim speaks. Now the " mouthpiece " has a name, Bom. After a while the pair are separated. In anguished solitude Bom, posing the idea of life as a circle of torturers and victims, awaits his own torturer; then, suddenly, he dismisses the whole story as rubbish. There is no one and never has been anyone but himself—spreadeagled, as on the cross, alone in the mud in the dark.

Bom's grim determination and sardonic self-mockery form the only positive aspect of this dreadful recital, which may have been inspired by cantos vi and vii of the *Inferno*, where Dante pictures the damned crawling through mud. Kermode suggests parallels with symbols of other mediaeval allegories: Bom's sack recalls symbols of the soul, the burden and support of the body; Pim suggests an image of Christ, the tortured Word Incarnate.

The novel is divided into three equal parts, " before Pim with Pim after Pim ", and is written in short passages of ritualistic prose punctuated only by Bom's panting for breath. Fletcher has shown that, in the original French, the language echoes the patterns of uneducated speech. The novel is again circular in form and its closing words repeat the opening ones. The effect of this horrifying symbolic repetition is heightened in the original version for, when spoken, the words *comment c'est* (how it is) are indistinguishable from *commencez* (begin).

The Residua.

Beckett has published no full-length work since 1961 and seems again to be searching for a new way forward. He describes his recent work as *Residua* and has explained that the title has a twofold significance: these pieces are all that remain of more extended writings; they are also residual to " the whole body of previous work ". Any reader unfamiliar with this previous work would probably find the *Residua* baffling, and, as usual with Beckett's works, our appreciation is enhanced if we read each in the order of its composition.

In *Since* " *How It Is* ", a helpful analysis of the later pieces, B. H. Finney says that Beckett has told him the *Residua* were written in the following order, *Imagination Dead Imagine*, *Enough*, *The Lost Ones*, *Ping*, *Lessness*. However, they were published: *Imagination Dead Imagine*, 1965, *Enough*, 1966 (1967 in *No's Knife*), *Ping*, 1966 (1967 in *Encounter* XXVII, 2 and in *No's Knife*), *Lessness*, 1969 (1970, *The New Statesman*, 1 May) and *The Lost Ones* 1970 (1972).

Like the *Texts for Nothing*, *Enough*, *Ping* and *Lessness* are concentrated prose poems. The other two *Residua*, discussed below, are short novels.

Imagination Dead Imagine. 1965. C.

In striking contrast to *How It Is*, a work of plangent lyric beauty presents a scene of clinical whiteness, but Beckett's themes remain those of loss and anguish.

As imagination dies life becomes a fluctuating vision of a tiny white rotunda. Here a naked couple lie curled side by side, motionless except when shaken by the rotunda's intermittent trembling. The vision fades for the last time and the novel ends on a reverberating cry of fear and anguish.

The significance of the rotunda and its tiny figures, described with mathematical precision, remains elusive, paradoxically suggesting both embryonic life and mankind on the verge of extinction. The novel's linear form and dramatic ending are unusual in Beckett's work.

The Lost Ones. 1970 (1972).

Although published later, all but the final paragraph of this novel was written in 1966.

A brief ritualistic work of mythical power, originally entitled *Le Dépeupleur*, it was inspired by a line from Lamartine's *Méditations Poétiques*: "Un seul être vous manque et tout est dépeuplé." (You lose a single human being and the world is empty.) The words, which appear in the first *Méditation*, *L'Isolement*, express Lamartine's sense of blank indifference to a world which his solitude has rendered utterly meaningless. Beckett's novel is not intended to illustrate Lamartine's line. It rather offers a comment on it. In Beckett's world such an indifference is highly to be prized, but his characters seldom achieve it. Instead they are condemned to a repetitive search for meaning and purpose where none, it seems exists.

Unlike the other post-war novels this concerns a large group of people, the two hundred naked Lost Ones, prisoners in a gloomy cylinder suggestive of a concentration camp. Here life is ruled by rigid conventions. Individual identity has been lost, although distinctions of age and sex remain. The people are divided among four groups of which the two largest are the "climbers" and the "searchers". The climbers mount ladders in quest of the legendary but non-existent escape route from the cylinder. The searchers roam the area seeking in its murk for their lost ones. Around the walls sit respected semi-sages, the "sedentary". Here too slump the fifteen blind "vanquished". At intervals light and heat fade and all is still. An end seems possible; but light and heat return. Life resumes.

Two figures are distinguished from the throng. They are both among the vanquished. The first, a woman with red hair, the second a white-haired mother clasping a baby to her breast. Because of the unusual fixity of her pose, the red-haired woman is used by the others as a point of orientation, since they have no other means of determining their whereabouts in the cylinder. She may be intended to recall the Scarlet Woman, a Protestant symbol of the Catholic church. The archetypal figure of the mother and child has more general religious associations but here, as elsewhere in Beckett's writing, an image of the continuing renewal of life is allied with tragic import.

Saul Bellow (b. 1915).

Bellow is a leading American novelist and short story writer. Like Beckett's, his characters engage in purgatorial quests, but whereas Beckett's seek answers to the questions, "Who am I? What is truth?" Bellow's ask rather, "What makes a good life?" For the heroes of Beckett's tragic fables death is both sought as a release from their quest and feared lest the apparent release it offers prove an illusion. For Bellow it is death which above all else gives meaning to life, and only when his heroes face the physical reality of death, which they fear, do they begin to accept that death of the self which will enable them to combine individual freedom with social responsibility. Thus, while Beckett's characters become increasingly isolated in a sterile world, Bellow's move towards escaping from self-absorption into an awareness that the significance of life is to be found "in the ranks with other people" and in selfless love for them. Only in *The Victim* and *Mr. Sammler's Planet*, however, does Bellow show any of his heroes attempting to put this into practice and this last novel is the only one with a wholly convincing conclusion.

Bellow's ethical and social concern, a product of his heritage as the son of Russian Jewish emigrés, links him with the great nineteenth-century European novelists. He feels that although earlier writers' answers to the question of what makes a good life may be inadequate for us who live in an urban, technological society, the question nevertheless remains and he considers that most modern novelists evade it, retreating into ivory towers and concentrating upon the production of formally perfect works of art.

Despite his emphasis upon the importance of a novel's content, Bellow has always striven to improve the style and form of his work. This led him to abandon the "Flaubertian standard" he had adopted for his first two novels, when he discovered it was an inadequate vehicle for his own—very different—experiences. The form of the transitional *Augie March* is shapeless and Bellow's style in this book and in *Henderson the Rain King* is sometimes undisciplined, but his later novels are very carefully and skilfully constructed and at its best his writing is vigorously exuberant and often wildly funny.

Bellow is keenly aware of the ugliness and suffering of life, which he vividly portrays in his novels, yet the overall effect of his work is one of hopeful optimism, in contrast to the anguish and wryly stoical endurance of Beckett.

The Victim. 1947. P.

This, Bellow's second novel, his first, *Dangling Man*, appeared in 1944, has a New York setting of purgatorial heat and squalor. Its Jewish hero, Levanthal, a moderately prosperous journalist, has known hard times and tears their return. Alone for a few days while his wife visits her mother, he feels particularly vulnerable. His worst fears become embodied in the person of the Gentile Albee, a former casual acquaintance, who appears declaring that his present misfortunes, the loss of his job and wife, are Levanthal's fault. Only when he is able to admit some responsibility for Albee, and saves him from death, is Levanthal freed from fear.

This concentrated novel still seems one of Bellow's finest.

The Adventures of Augie March. 1953. P.

Originally entitled *Among the Machiavellians*, this is a picaresque chronicle of the fortunes of an illegitimate slum boy as he seeks a way of life which will enable him to combine responsibility towards others with freedom from the Machiavellian "reality instructors" who seek to dominate him and to convince him that life is a rat-race.

Although this prize-winning novel was highly praised on publication, its rambling shapelessness now makes it seem Bellow's least successful.

Seize the Day. 1956. P.

This *nouvelle* was first published together with three short stories, *A Father to Be*, *Looking for Mr. Green* and *The Gonzaga Manuscripts*. Like them it is concerned with the insidious power of money. Broke and out of work, Wilhelm feels he is being strangled by the encircling pressures exerted especially by his separated wife, his swindling friend and his scornful father. On "the day" of which Bellow writes Wilhelm's troubles come to a head, but through them he struggles to regain the sense of "general love" for other people, which is, he becomes convinced, "the right clue" to the resolution of his difficulties.

Henderson the Rain King. 1959. P.

The prodigal Henderson dissipates his massive strength and fortune, creating havoc and misery as he seeks to quell his soul's demand for a meaningful life. Eventually he flees to Africa where he inadvertently becomes the Rain Maker of a primitive tribe and thus heir-presumptive to its king. When the latter's death is contrived by his jealous subjects Henderson, who has already realised that it is his duty to return to his wife, escapes from the tribesmen and begins his journey home, a "fighting Lazarus".

Herzog. 1964. P.

Whereas Henderson escaped to Africa, Herzog, a lecturer in philosophy, retires to bed in the derelict country house to which he has fled, shattered by his wife's desertion and his own inability to hate her new husband, whom he had planned to shoot! Incidents in his past life are interspersed with extracts from the letters Herzog endlessly composes on personal, social and philosophical questions as he seeks to "explain, to justify, to put in perspective, to make amends." Gradually he realises that he has stopped hating his former enemies and that to continue his solitary brooding would be self-indulgent, so, like Henderson, he prepares to return to "our common life", "to share with other human beings as far as possible".

This hilarious novel is constructed with great skill and ingenuity.

Mr. Sammler's Planet. 1969. P.

Born into a wealthy Polish family, educated at Oxford, denizen of Bloomsbury and later of a concentration camp, from which he miraculously escaped, the 72-year-old Sammler is an interested observer of modern American life, where people seem to him to be frantically seeking to ignore the fact of death and absorbed in illusory attempts at self-fulfilment, rather than in caring for one another. The death of a nephew makes Sammler realise that he too has begun to evade his responsibility towards others.

John Berger (b. 1926).

Berger, an art critic, essayist and Marxist humanist, had already published three interesting naturalistic novels when his fine *G.* appeared in 1972. They were *A Painter of Our Time*, 1958; *The Foot of Clive*, 1962; *Corker's Freedom*, 1964 P.

G. 1972. P.

This novel, for which Berger received the Booker prize, is arguably the best to have been published in 1972.

G., the hero of this Brechtian epic set at the turn of the century, is the illegitimate son of an Anglo-American heiress and a prosperous Livornese merchant. Deprived of affection as a child he becomes a promiscuous man, seeking to reveal his own true nature and to discover that of the woman of the moment through the intimacy of the sexual act. Berger presents him as an innocent revolutionary, a liberator of the women he seduces since he treats them with profound seriousness as unique individuals, whereas their husbands, like most other men of the day, regard them as chattels or playthings. G. is also presented as an essential ally of the working classes, who also seek recognition of themselves, and in three key passages, Berger suggests the contrast between G.'s instinctive alliance with the depressed poor and his father's fear of the mob.

Berger has the gift of creating vivid word pictures and the most moving part of his novel is the early section on G.'s childhood. This stimulating book combines detached observation with intense impressionism, interposed by factual references to history and politics and discussions of literary, social and moral problems, in a manner unlike that of any other contemporary novel but akin to the style of Brecht's dramas.

Elizabeth Bowen (1899–1973).

A stylistic artist in the tradition of James, Elizabeth Bowen is famed for the beauty of her descriptive writing and for her sensitive analyses of feeling. Her finest novels are *To the North*, 1932, *The House in Paris*, 1935, *The Death of the Heart*, 1938 (P).

Of her later novels, the best seems *The Heat of the Day*, 1949 (P), a love story set in war-time London; but her last book, *Eva Trout*, 1969, was awarded the James Tait Black Memorial prize for the best novel of 1969.

Christine Brooke-Rose (b. 1916).

The writing of Christine Brooke-Rose, a lecturer at the free university of Valenciennes, is associated with that of the French authors of the *nouveau roman* and she has translated the work of Robbe-Grillet, one of their leaders.

Herself the author of eight novels, she now disowns the first five, which are traditional in style and form, acknowledging only her recent, experimental work, the novels *Out*, *Such*, *Between* and the short stories *Go When You See the Green Man Walking*, 1970.

She has a poetic gift for creating precise visual images and a comedian's joy in the ambiguity of words, which she delights to place in novel and unexpected juxtapositions, using a stream-of-consciousness technique which relies on the repetition of key images and symbols in various forms and contexts.

Out. 1964.

The time is "after the displacement", the setting "Afro-Eurasia". In "Chinese-America" and "Seatoaria" life is grim. Even the comparatively prosperous Afro-Eurasia suffers grave under-employment and poverty. Although this society is officially multi-racial, in practice the white "Colourless" are pariahs. Most of them originate from the "Ukay" and "Uessay" and are suffering from "the malady", a mortal radiation-leukemia, whose victims often experience hallucinations.

The central consciousness of the novel is that of such a man. Once a Ukay academic humanist he now struggles to distinguish reality and illusion as he talks with his wife Lilly, visits the Labour Exchange and hospital and attempts odd jobs on the estate of Mrs. Mgulu, his wife's employer.

The novel suggests that, in contrast to African and Asian cultures, Western scientific technical society is becoming bloodless: Western man, denying the vital forces of his own humanity, is destroying himself by means of the power he has gained over nature. These themes are most skilfully expressed through a combination of arid and esoteric scientific jargon with vivid images of creation and destruction, including food, flies, love-making, trees, a garden, water, sun and fire.

Unfortunately, this novel, laced with comedy and satire, is now out of print, but it can usually be had from public libraries.

Such. 1966.

This bizarre work may have been ispired by Nathalie Sarraute's *Between Life and Death* 1965. The key to its significance seems to lie in the sentence, "Surely man as such puts tremendous effort into moving through space and time." The struggling central consciousness of the book belongs to Laurence/Larry/Lazarus, who at first hovers between life and death, later between consciousness and unconsciousness, then between a continued withdrawal from everyday life and returning to it. An underlying theme is man's effort to distinguish between reality and illusion, honesty and self-deception, truth and falsity.

The novel's imagery is drawn from the world of astrophysics, in which Laurence worked, and also owes something to popular science fiction.

Between. 1969.

The lyrical and often very amusing *Between* expresses a sense of suspended animation and loss of identity in a world devoid of significance, as experienced by a woman interpreter. Of mixed nationality, neither married nor unmarried, neither young nor old, she moves from one meaningless international conference to another in indistinguishable 'planes, stays at indistinguishable hotels, meets indistinguishable people speaking a confused Babel of languages, as she does herself.

The weakness of *Between* is that it expresses rather than explores a state of mind and such expression can be more powerfully and economically conveyed in verse than prose.

Alan Burns (b. *c.* 1935).

Burns is regarded by some critics as among the *avant garde* of contemporary English novelists and his work has been highly praised by Angus Wilson, a writer in a much more traditional vein. Burns's vision of the brutality, hypocrisy and futile materialism of modern life finds its most successful expression in the early *nouvelle Buster* and in *Celebrations*. Both draw upon his traumatic adolescent experience of the deaths of his mother and brother.

Originally trained as a lawyer, Burns conceived his first tale, *Buster*, as a series of snapshots after noticing some photographs in a Chancery Lane window. His next three novels were written in two stages: Burns cut his draft manuscripts into hundreds of slips of paper and then shuffled them to achieve new, random associations between their words and images. This technique, if technique it can be called, seems first to have been devised by the popular American writer William Burroughs.

The most successful novel Burns composed in this way is *Celebrations*, where a residue of the book's powerful initial inspiration transcends its fragmented expression. *Europe After the Rain* and *Babel* have less to offer and in his later book, *Dreamerika!* Burns modifies his method of composition, writing the main text in short paragraphs of generally coherent prose and reserving his "cut up and shuffle technique" for the newspaper cuttings which he places between each section. These have an occasional relevance to the adjacent text but in general offer a harsh, staccatto descant to the book's main theme.

Buster. 1961. C.

Published in Calder's *New Writers I* and later filmed, this short, impressionistic tale is more easily followed than Burns's later novels and throws helpful light upon *Celebrations* (*q.v.*).

Its protagonist, Buster, early wins the approval of his conventional father, who designates him as a future Lord Chief Justice, while rejecting his older son, who has repudiated his values. Buster, however, admires his brother. Later he too rebels against their father and deliberately fails his law exams. When, in consequence, he is also rejected, he bursts into the family home and, unexpectedly fulfilling his father's prediction, wreaks "justice" upon Helen, the older man's beautiful, spiteful mistress.

Europe After the Rain. 1965. C.

This novel was inspired by Max Ernst's painting, *Europe After the Rain*, depicting a devastated urban landscape. Inconsequential and dream-like, the action opens with its narrator, accompanied by a girl, crossing a river into a devastated region which is under martial law. The girl is searching for her father whom, from time to time, she finds. Her quest merges with the narrator's intermittently successful search for her. The novel ends with his return across the river, alone, but satisfied.

Celebrations. 1967. C.

Here, as in *Buster*, the novel centres upon the antagonistic relationships between two brothers, their brutal father and his mistress.

The novel's setting moves erratically between the Arctic and a typical suburban industrial estate. The timing of its action fluctuates in a similarly irregular way between the early part of this century and the present.

Williams, the father, is the head of a factory/state. His sons work there and when the younger wishes to leave Williams contrives his death. The older son plays a waiting game, eventually wins the hand of his father's mistress and usurps his position in the factory.

The parts of this surrealistic novel evoking life in the factory have a nightmare quality. The intervening parodies of state funerals and weddings are bitingly satiric.

Babel. 1969. C.

Unlike Burns's previous novels this lacks even a skeletal narrative. Most of the book is written in short passages of rhythmic prose, but the rhythms are monotonous and numb one's response to the sense of the words. Each passage opens with a headline quotation. Sometimes this headline stands alone but usually it is followed by a brief meditation or comment. References are made to over two hundred people, alive and dead, including many prominent in various walks of public life. The overall result is confusion and bewilderment, admittedly an appropriate image of Babel, but aesthetically and imaginatively unrewarding. One feels, that Burns might have expressed this disenchanted vision more successfully had he submitted it to the discipline of verse.

Dreamerika! 1972.

In a much more lucid book the inchoate revulsion from modern society expressed by *Babel* is distilled into a ferocious hatred of the American way of life as exemplified by the Kennedy family. A factual narrative is interwoven with grotesque fantasy as Burns follows the fortunes of Jack, Bobby, Teddy, Jackie and Joe Kennedy (Bobby's hippie son). A brief opening section is concerned with the founding of the family's fortunes and a poetic concluding section evokes an archaeologist's picture of a long-forgotten civilisation.

Ivy Compton-Burnett (1884–1969).

Dame Ivy Compton-Burnett was a highly conscious artist, who knew her limits and never exceeded them. Apart from an early rejected work, *Dolores*, she published eighteen novels, the first, *Pastors and Masters* in 1925, the last, *The Mighty and Their Fall*, in 1963. Her nineteenth novel, *The Last and the First* was published posthumously, in 1971. Written mainly in dialogue, each of her books deals with the claustrophobic life of a well-to-do middle-class household at the turn of the century. Dame Ivy's themes are those of Greek tragedy; her formal, decorous language is reminiscent of Jane Austen. The combination can be disconcerting.

Margaret Drabble (b. 1939).

Margaret Drabble had already published five novels and won two important literary prizes when her first major work, *The Needle's Eye*, appeared in 1972. Its reviewers compared her with George Eliot, another writer in whom moral sensibility was allied with acute intelligence. Like the nineteenth-century novelist, and like her own older contemporaries Doris Lessing and Iris Murdoch (*qq.v.*), Margaret Drabble charts her characters' growing self-knowledge and moral education at the hands of society. She explores the conflicts of reason and emotion of duty and desire, in the

dilemmas of everyday life. She is less concerned with blacks and whites of moral absolutes than with difficulties of distinguishing the various shades of grey, and her novels are much warmer and less melodramatic than Iris Murdoch's, where characters are deployed in symbolic moral fables, but they lack the passion of Doris Lessing's concern with the demands of moral absolutes in extreme situations. They are ratiocinative rather than poetic and have nothing of the visual immediacy which the work of Iris Murdoch and Doris Lessing shares with the greater Victorians'.

Margaret Drabble's first three novels are in many ways alike. Their popularity seems to stem from the fact that they talk of common problems in a briskly colloquial, gossipy style. Each is a first-person narrative. The speakers are given different names and are in different situations but they have the same voice and are, like Margaret Drabble herself, highly intelligent well-educated young women from professional families.

A Summer Bird-Cage. 1962. P.

Sarah, just down from Oxford, has a dull job with the BBC while her fiancé is in America for a year. The novel centres on her relationship with the clever older sister of whom she has hitherto felt afraid and rather jealous.

The Garrick Year. 1964. P.

Emma is married to an actor and has two small children. The marriage goes through a difficult phase when her husband accepts a contract to spend the summer season in Hereford, where he is happily busy but she bored to distraction.

The Millstone. 1965. P.

This novel won the Llewellyn Rhys Memorial Prize. Here Rosamund, a lonely research student, faces life as the unmarried mother of a delicate baby.

Jerusalem the Golden. 1967. P.

Awarded the James Tait Black Memorial Prize, this novel has a wider range. The narrative is similar in tone to that of the previous books, but is written in the third person and presents a more varied cast in greater depth. It centres on the relationship between Clara, a clever, selfish girl from a poor home and her frustrated, domineering mother.

As a whole the novel is less satisfying then the earlier ones, because, although the indirect narrative gives more distance to the story, Clara is less objectively presented than the earlier heroines. However, various minor characters and relationships are vividly caught, particularly Clara's lover Gabriel, in his disastrous marriage to the frigidly neurotic Phillipa.

The Waterfall. 1969. P.

Miss Drabble experimented further in this transitional novel which is concerned with the relationships of Jane, a young deserted wife, her cousin Lucy and Lucy's husband, James. Ingredients of the previous books are here combined into a thicker brew. In some ways Jane's upbringing resembles Clara's, her relationship with Lucy recalls that of the sisters of *A Summer Bird-Cage* and her position as a lonely mother has similarities with Rosamund's in *The Millstone.*

The form of the novel is more complex and self-conscious than that of the earlier books: the story is told by Jane, but in alternate sections of third and first person narrative. The style, though still colloquial, has a more meditative tone which looks forward to that of *The Needle's Eye.*

The Needle's Eye. 1972. P.

The plot of *The Needle's Eye* is much more complex than anything Margaret Drabble had attempted before and presents two characters in equal depth. Simon, a reluctant barrister of humble origins, unhappily married to a rich neurotic, meets the divorced Rose at a dinner party. The daughter of a self-made millionaire, Rose was brought up by a puritanical nurse and has a horror of privilege. Having given away a fortune to build an African school (quickly destroyed in a civil war) she now lives in a poor district and takes menial jobs to support herself and her children. She feels guilty at having divorced her violent husband, Christopher, and when he institutes proceedings for custody of the children is worried lest she is selfish in depriving him of them. Simon advises her on her case, comes to the rescue when Christopher kidnaps the children, and is instrumental in the parents' eventual reconciliation.

Margaret Drabble is here concerned both with man's search for goodness and justice in a privileged society and with the individual's struggle to reconcile the claims of his desire for personal satisfaction with those of his duty towards other people. Rose becomes something of an expert on Africa and when she next inherits money (as she will) her spontaneous charity will be tempered by knowledge. Simon has become a barrister to please his mother but specialises in unfashionable trade union law. He and Rose gradually realise they love each other but they recognise their responsibilities towards their partners and cannot deny these claims. In the difficult task of reconciling duty and desire they lose their spontaneity but may discover their true selves. At the Alexandra Palace they come upon a stone lion. Rose thinks, "It was gritty and cold, a beast of the people. Mass produced it had been, but it had weathered into identity. And this, she hoped, for every human soul."

The novel has a complex narrative style that lacks the immediacy of the earlier books, but it is more subtle, moving unobtrusively from narration to implicit comment or to expressing a character's feelings, reflections and thoughts. Certain idiosyncratic mannerisms appropriate to the colloquial tone of the earlier novels now become more noticeable. They are sometimes monotonously obtrusive but can be the vehicle of a tart wit: "she had rejected his overtures but was happy to report he had turned out well, this ski instructor . . . she operated on a high level, on the whole, this woman."

The chief weakness of the writing lies in its dialogue—all the characters speak in the same voice—and in its lack of genial humour, but as a whole, the novel, which is not easy to appreciate fully on a first reading, suggests that Margaret Drabble has it in her to become a writer of real consequence.

Lawrence Durrell (b. 1912).

Durrell's shorter novels are *The Black Book, White Eagles Over Serbia,* and *The Dark Labyrinth.* His longer, baroque fantasies have had a mixed reception. Their most appreciative critic is G. S. Fraser.

The Alexandria Quartet—*Justine,* 1956, *Balthazar,* 1958, *Mountolive,* 1958, *Clea,* 1960 (all F).

Some find the Quartet a most enjoyable novel for others it is all but unreadable. Its form, says Durrell, is based on the relativity proposition, the first three volumes, which give differing aspects and views of the characters' lives and motives, having a "spatial" relationship, the fourth, which continues the narrative more or less chronologically, representing time. The novel's construction thus resembles that of Faulkner's *The Sound and the Fury,* and has much in common too with works like Cary's Gulley Jimpson trilogy.

Durrell's apparent theme is erotic love, but his underlying interest is the relationship between art and life. He suggests life is significant only when

interpreted by art. This attitude, rather than the form of his work, differentiates it from novels like Faulkner's and Cary's.

Durrell's volumes contain splendid passages, but too often in the novel as a whole his sensuous language seems merely florid and pretentious, his characters but flimsy inhabitants of a decadent fairyland.

Tunc. 1968. F. *Nunquam.* F. 1970.

These two volumes comprise a single novel. Their titles are derived from a line from Petronius's *Satyricon*, "Aut tunc, aut nunquam"—"Then or never." The theme of the work seems to be the individual's struggle for a sense of freedom in a world dominated by international commerce, but, although Durrell's theme is serious, his treatment of it seems not only bizarre but frivolous as he chronicles the career of his protagonist, Charlock, an inventor who is taken captive by the all-powerful international firm of Merlin and eventually becomes its head.

Some passages in *Tunc* describing Athens and Constantinople recall the better parts of *The Alexandria Quartet*, but in *Nunquam* there is a loss of momentum. This second volume is mainly concerned with the creation of a life-like dummy representing the dead film star Iolanthe, with whom Julian, the impotent head of Merlin, falls desperately in love, and dies as he tries to prevent "her" from committing "suicide" by jumping from the gallery of St. Paul's Cathedral.

Ralph Ellison (b. 1914).

The Invisible Man. 1952. P.

Ellison is an American Negro and former musician. This, his only novel, is poetic in its complex symbolism and compelling language, and in the intensity of its feeling.

We learn from the prologue that Ellison's hero is not only "invisible," but an "underground man", living in a cellar. He has affinities with the narrator of Dostoyevsky's *Notes from the Underground*. The novel also recalls Kafka. Like Kafka's, Ellison's hero is anonymous, and his vividly recounted experiences have the quality of bewildering dreams, at times of nightmare. He tells of his life from the night he received a scholarship to the State Negro College, to the night of a terrifying Harlem race riot, when, fleeing from supporters of a deranged Black nationalist, Ras the Destroyer, he took refuge in the cellar.

One of the novel's central episodes is that in a paint factory hospital, where the hero is subjected to torturous experiments and there is talk of castrating him. Among other things, the episode signifies the way in which all the "scientists" he encounters exploit those in their power, attempting to force all life into rigid sterile patterns. "Life", he says, "is to be lived, not controlled." A free society is loving and infinitely various.

The hero realises the "scientists"—politicians, demagogues, and confidence men—are unaware of the limitations of their vision and cannot see they are destroying themselves as well as their dupes and victims. Images of blindness recur throughout the novel. The narrator calls himself "invisible" because he has come to feel people who look at him see only projections of their own imaginations. He realises he has been equally blind. One of the novel's themes is his gradual enlightenment as he learns to understand himself and others better—to see "reality".

J. G. Farrell (b. 1935).

Although born in Liverpool, Farrell was brought up in Ireland. Before going to Oxford he taught in a Dublin prep school and worked as a labourer in the Canadian Arctic. He lived for some years in France—the scene of his first novel—and has since travelled in Mexico, Morocco and India.

His early novels, which were favourably reviewed, are *A Man from Elsewhere*, *The Lung* and *A Girl in the Head*. Recently, Farrell has been working on a set of three novels covering "watersheds" in the history of the British Empire. Two have appeared, *Troubles*, which is set in Ireland during 1919–20, and *The Siege of Krishnapur*, whose action takes place in 1857, at the time of the Indian Mutiny. The third volume will concern life in Singapore in 1941.

Each of these novels is self-contained and they are designed to be read in any order, but Farrell said, "each will bear some relation, possibly subterranean, to the other two."

In choosing the form of the historical novel he has been prompted by a desire to show the past as reflected in the present, the present as reflected by the past, and so to encourage us to think again about ourselves and our society, the ideas and prejudices by which they are motivated.

At the same time, Farrell seeks to write a captivating story, which will "lead the reader into a new experience." Giving Kafka as an example, he says that the best novelists do this "with extraordinary ease. To read them is like undergoing an hallucination." Both *Troubles* and *The Siege of Krishnapur* have this kind of intense imaginative power to make us see the world in a new light.

Both are in some respects very sad books, but both are also extraordinarily comic. Farrell has a rare gift for surprising his reader, sometimes with a shock of horror, more often with a shock of astonished amusement. One of the funniest episodes in modern fiction is his account of how during the heat of the sepoys' attack on beleaguered Krishnapur, the compound's padre pursues a young civilian, Fleury, who had once mildly objected to God's being described as "the designer of the universe." Dodging the enemy fire and frantically trying to help re-load the only cannon, Fleury cannot pause to draw a breath before up pops the parson with another question! Here, as always in these novels, Farrell convinces us that this is the kind of way in which people both did and do behave.

Troubles. 1970.

In 1919 Major Brendan Archer, an English gentleman finally discharged from the hospital where he has been recovering from shell-shock, goes to County Wicklow to visit Angela Spencer, a young Anglo-Irish woman he had met some years before in Brighton, while on leave from France.

Angela's father, Edward, owns the huge but ramshackle Majestic hotel, standing in its own large grounds and park, which cover most of a peninsula. Farrell conjures up with uncanny intensity the atmosphere of this vast decaying building, the few twittering old ladies who comprise its permanent residents, dotted here and there, "throbbing cells of life" in otherwise derelict wings.

Edward, an attractive and essentially kind man, but a dogmatic Unionist, recklessly antagonises the local people and, as the Troubles increase, against a background of world disorder, the position of the Majestic grows ever more perilous. His confidence undermined by the death of a daughter and the defection of his only son, Edward becomes increasingly withdrawn and unpredictable, leaving the Major willy nilly responsible for the residents' welfare and safety.

The Major's political and social attitudes are the conventional ones of his day. He has automatically and unthinkingly accepted the ideas that the British are morally superior to the Irish and the Irish totally unfitted to govern themselves, but his own experience of war has left him with an unconscious sympathy for the sufferings of the Irish people and he grows ever more disquieted by Edward's fanaticism.

Farrell vividly evokes the world of 1919–20, making us intensely aware of both how little is new in the current Irish problems and how much of the trouble stems from the tragic blindness and inflexibility of well-intentioned, fundamentally kind, men.

The novel was awarded the biennial Faber Memorial Prize in 1970.

The Siege of Krishnapur. 1973.

In a second highly entertaining and thought-provoking book, Farrell again takes a small group of people isolated among hostile "natives", who threaten to overwhelm them. He has said that this kind of enclosed situation not only resolves for the novelist such difficulties as "how your characters will meet each other", but also seems to him a paradigm of life and of the human condition.

His story was suggested by reading a diary of Maria German, who survived the siege of Lucknow.

Farrell's hero is Mr. Hopkins, the East India Company's Collector for the Krishnapur district. A man of private means and lively intelligence, Hopkins is fascinated by the inventions of his day. He rejoices in his belief that the progress of industrial society will bring comfort and happiness to all, yet he cannot help observing how long and difficult a task it will be to alleviate the lot of most Indians. His belief and pleasure in benevolent materialism are to be sadly and severely undermined by his experience of the Mutiny.

A diverse group of subsidiary characters includes two doctors, one prejudiced and old-fashioned, the other liberal and open-minded, carefully taking notes of all his patients' symptoms. A young civilian, Fleury, who has long aimed at looking "soulful" and "interesting" discovers that fashion has changed and he is now regarded as "hangdog"! Spurred by the necessities of life under siege, and yet more by his desire to captivate beautiful Louise Davenport, he struggles to turn himself into a practical fellow. Louise herself abandons the self-conscious airs and graces of a bored and idle young lady and, helped by Fleury's widowed sister, becomes a capable and fearless nurse.

Farrell makes vivid use of details, such as the unpleasantness and discomfort of the heat and lack of washing facilities, to impress upon us the experience of life during the Mutiny. But his novel is more than an exciting historical adventure-story. It is also both a lament for the, albeit naïve, social idealism of the better Victorians, and a mirror in which we may see reflections of our own foibles and follies.

William Faulkner (1897–1965).

The American Faulkner received the Nobel Prize for Literature in 1950. Although his last novel was published only three years before his death, most of his best work appeared between 1929 and 1936: *The Sound and the Fury*, *As I Lay Dying*, *Light in August* (all P), *Absalom, Absalom!* Together with the comic *The Hamlet*, 1940, these novels are his finest achievement.

Faulkner's post-war novels can be divided into three groups: (1) those which are simply enjoyable stories: *The Town*, 1957, *The Mansion*, 1959, which together with *The Hamlet* form the Snopes trilogy, and *The Reivers*, 1962 (P); (2) *The Intruder in the Dust*, 1948 (P), which is too overtly didactic to be a successful novel, though of great interest to anyone concerned by the racial problems of the South; (3) two ritualistic novels: *Requiem for a Nun*, 1951 (P), and *A Fable*, 1954; the latter, set in France in early 1918, is constructed on an elaborate series of parallels with the events of Holy Week.

Faulkner's work is concerned almost exclusively with the Southern States and set in the mythological Yoknapatawpha County, Mississippi. A Southerner by birth, he is soaked in the history and legendary folklore of Mississippi. Although many of his most memorable characters are bizarre, tragic figures, subnormal poor-Whites, murderers, or other outcasts of society, his work reflects not only the grimness, the callousness and brutality of the South, but also the proud individualism, courage, humour, and vitality of its people. Thus one reads Faulkner with pleasure, despite the difficulties presented by his style.

These difficulties are at times inherent in his subject, as at the beginning of *The Sound and the Fury*, which is told from the viewpoint of a moron; in the touching episode in *The Hamlet*, when the idiot Ike Snopes steals a cow he loves; in the evocation of Charles Mallison's nightmare (*Intruder in the Dust*). Sometimes, however, Faulkner seems needlessly obscure; he indulges in turgid rhetoric; his sentences are often three or four pages long, sparsely punctuated and containing innumerable parentheses, and parentheses within parentheses. The effect of such clumsy syntax is utterly bewildering, and one sympathises with the exasperated critic who declared Faulkner a "genius without talent." Such criticism, however, ignores the comic aspect of Faulkner's work, his gift for racy, demotic humour.

E. M. Forster (1879–1970).

Maurice. 1971.

Published posthumously, as Forster had requested, this eagerly-awaited novel proved disappointing. It was written in 1913–1914, soon after *Howard's End*, whose theme, "Only connect", although repeated is here subordinated to that of a young man's painful discovery of his homosexual nature.

Forster gives an authentic picture of the fine distinctions of the English class system. Cambridge scenes and those of Maurice's home life are particularly well-drawn, but Maurice himself is not always presented objectively and the result is embarrassing; while the novel's conclusion lacks conviction: the problems Maurice and his partner will have to come to terms with in face of a hostile society are not resolved, but dismissed by a sleight of hand.

John Fowles (b. 1926).

Once a schoolmaster, Fowles became a full-time writer in 1963. He has published three novels, including the prize-winning *French Lieutenant's Woman*. A helpful introduction to his novels and to the artistic attitudes determining their forms is to be found in *The Aristos*, rev. ed., 1968 (Pan). In this controversial book Fowles sets forth his personal philosophy. In reading it we must always bear in mind his prefactory remark that he does not "expect agreement". "By stating baldly what I believe I hope to force you to state baldly to yourself what *you* believe." We must also remember that although we may profoundly disagree with Fowles's ideas on some matters we need to understand his point of view if we are to appreciate his novels.

In *The Aristos* Fowles distinguishes an intellectual and moral Élite from an unthinking, conformist Mass. This division does not correspond with any between "upper" and "lower" social classes, but cuts right across them. He also feels that class distinctions are in any case wrong and that the gifted Élite should not be thought of as in any way superior to the rest. They are simply more fortunate and have commensurate responsibilities towards their fellow men.

Fowles adds that the division between the Few and the Many is present not only in mankind as a whole but also in every person, for there exists in all of us a fruitful tension between individuality and pressure to conform with the social mores of our class and group. He sees a similar tension existing between "art" and "science"—the

"two great manners of apprehending and enjoying existence". Each of Fowles's three novels may be understood as an exploration of such tensions.

Fowles is highly critical of the modern emphasis on the importance of self-expression and of our tendency to equate genius with the ability to develop a distinctive artistic style and technique. He pertinently remarks that the genius, a rare bird, may discover a new technique, but does so as a result of having something new to say. To concentrate on style and form at the expense of content is to produce lifeless art. "What will finally matter . . . will be skill in expressing one's meaning with *styles*, not just one style carefully selected and developed to signal one's individuality rather than to satisfy the requirements of the subject matter." As a novelist Fowles has therefore used various forms and techniques.

The Collector. 1963. Pan.

A psychological thriller, later filmed, explores the way the relationship between the sexes and that between the Few and the Many is damaged by feelings of contempt and envy arising from invidious social distinctions. A subsidiary theme is the way ignorance and fear distort the relationship between art and science.

Fowles presents only two characters. The isolated clerk, Fred Clegg, butt of his workmates at the Town Hall, has been brought up by a loveless aunt. He divides his free time between collecting butterflies and day-dreaming "respectfully" about the pretty Miranda Grey, to whom he has never spoken. Miranda, a doctor's daughter, wins a scholarship to the Slade. Fred wins the pools, buys an isolated cottage and kidnaps Miranda so that she may learn to love him.

The first half of the story is told by the whining, self-righteous, yet pitifully envious and insecure Fred. There follows Miranda's bewildered, partly sympathetic, partly contemptuous, increasingly frightened diary of their relationship. Fred concludes the tale.

Fowles says that the novel is intended to show the actual evil in Fred overcoming the potential good in Miranda. Herein lies the book's major weakness, for while the characterisation of Fred is a *tour de force*, Miranda is presented more as a typical, talented middle-class student than as an individual, potentiality being extremely difficult to express.

The Magus. 1966. Pan.

Here the main theme is age-old—the education of a young man as he finds himself torn between love for two women. Nicholas Urfe, the narrator, is a typical, conventionally unconventional public-schoolmaster, who fancies himself as something of a Don Juan. When his affair with the pretty air-hostess Alison shows signs of becoming serious, Nicholas runs off to a job on a Greek island. There he meets a puzzling millionaire, Conchis, and is subjected to a series of trials organised by this self-appointed Magus and his talented assistants, who include the beautiful Julie, alias Lily.

The conflict caused by class distinction plays some part in the relationship between the young people, but is subordinate to the theme of the Elite's responsibility towards the Many. The Elite are here represented by Conchis and his friends, who also exemplify the union of art and science.

The book is something of a *roman à thèse*. Fowles organises his complicated narrative very skilfully, but invention and interest flag in the second half and the revelation of the rôle of Conchis and his helpers, and their subsequent disappearance after a bizarre ritualistic ceremony, is unconvincing.

The chief interest of the novel lies in the contrast it presents to the stark simplicity of *The Collector* and the complex realism of *The French Lieutenant's Woman*.

The French Lieutenant's Woman. 1969. Pan.

This novel, a popular success in both Britain and America, won the W. H. Smith Literary Award in 1970. Set in Lyme Regis, Exeter and London in the 1860s, it offers a much more subtle and complex exploration of Fowles's chosen themes.

Its form is based on that of the traditional Victorian novel, with indirect narrative, references to social, religious and political events and comments on the characters' behaviour and motives from the point of view of an omniscient observer conversing with his readers. However, Fowles, parodying Thackeray the "puppet-master", disclaims omniscience, often says he does not understand a character's motives, sometimes that he does not know exactly what happened next and gives his story two, equally plausible, endings. The effect, which is to make one constantly aware that one is reading an invented story, may owe something to Brechtian dramatic theory. (*See* M8 and I9).

In essence the novel's plot is a simple one. Charles Smithson, a disciple of Darwin and heir to a baronet, is engaged to the pretty Ernestina, cosseted only child of a wealthy tradesman. Visiting Ernestina while she is on holdiay with her aunt, Charles meets and falls passionately in love with the penurious Sarah, an orphaned ex-governess, whose reputation has been ruined by her innocent infatuation for a shipwrecked French Lieutenant.

We are shown Charles, Ernestina and Sarah each engaged in a struggle to realise their individuality, in the best sense, rather than to obey the dictates of convention. Charles's is the most fully drawn character, but all three are splendidly convincing.

A sub-plot concerns the complementary love story of Charles's man Sam, and Mary, Ernestina's maid.

William Golding (b. 1911).

Golding has said that he aims to write "total myths", illuminating contemporary life. A novelist of extraordinary technical virtuosity, he is essentially a religious—though not a specifically Christian—writer, expressing a poetic vision of the tragedy of men who have lost their faith and "seem unable to move without killing each other". However, Golding's vision is far from negative, for he suggests that it is possible to regain freedom and that state of grace in "which everything that lives is holy", and all his novels except *Pincher Martin* express the wonder and beauty of life as well as its horror. His most recent work, a collection of three *nouvelles* entitled *The Scorpion God* (P), suggests that an anguished loss of faith is inevitable at times when a comparatively simple form of religion is developing into a more sophisticated one.

Lord of the Flies. 1954. F. P.

Golding rewrites *Coral Island* in "realistic" terms, as an allegory of the Fall and an image of twentieth-century society that makes and drops atomic bombs.

The Inheritors. 1955. F.

This astonishing *tour de force* shows the advent of *Homo sapiens*, mainly through the eyes of the Neanderthal Lok. The measure of Golding's skill is not simply his brilliant evocation of the largely non-verbal world of Neanderthal Man, but his avoidance of sentimentality. He shows the inevitability of *Homo sapiens'* supremacy, and the tragedy in which it involves him, as well as Lok.

Pincher Martin. 1956. F. P.

This novel chronicles the struggles of a drowned sailor against God's overwhelming love. Made, like all men, in God's image, Martin is named Christopher. Alive he chose to "pinch" everything he could; dead, he refuses abnegation of himself, and therefore continues to exist, in a

self-made Hell, on a rock he creates from the memory of a decaying tooth. Martin's struggles for "survival" are heroic, ghastly, futile.

Free Fall. 1959. F. P.

Sammy Mountjoy retraces his life, to discover when he lost his innocent delight in life and its beauty, and how he regained this. Containing fine passages, the novel is marred by the fact that Sammy interprets the significance of events, instead of the interpretation being left to us.

The Spire. 1964. F.

The narrative of this, Golding's masterpiece, centres on the building of the spire of Barchester (Salisbury) Cathedral. The cathedral symbolises three aspects of life: man suffering, crucified; man praying; erotic man.

Jocelyn, the Dean, believing himself divinely appointed to build the spire, presses for its completion with ruthless disregard of the suffering and death he causes. His motives are in fact mixed and largely unconscious. Gradually he recognises his hubris and the mixed motives behind his obsession, realising his wicked folly. Admitting on his deathbed he knows nothing about God, Jocelyn is granted a vision of His glory and the wonder of creation, as he gazes at the transfigured spire.

The Pyramid. 1967. F.

Set in Stillbourne, a small Wiltshire town, the novel is superficially a tragi-comedy of provincial life (its central episode is very funny) but on a deeper level *The Pyramid* is a searching exposure of materialism.

The novel's central images are musical ones. Various tastes in, and ways of performing, music signify various kinds of love and modes of life. The title suggests the social pyramid on which the townsfolk wish to rise, and also a metronome, to whose rhythm, that of a selfish, class-ridden society, they choose to move like robots.

Nadine Gordimer (b. 1923).

The work of this South African writer is banned in her own country. She has published five novels, three of them very short, and five collections of stories, the most recent being *Livingstone's Companions*, 1972.

Her earlier work suggested that the short story and *nouvelle* were her true *métiers*. Her crisp vignettes of the dilemmas of South Africa compelled admiration, but in her first long novel, *A World of Strangers*, 1958, her handling of character was less assured.

Although Miss Gordimer has been labelled a "political" novelist, like English Victorian writers she is concerned with the inter-relation of the individual and society. Politics are important in her writing in so far as they play an important part in social and individual life in Africa. In her last short novel, *The Late Bourgeois World*, 1965, one of her themes was the dilemma of a white liberal who supports majority rule in South Africa and is yet too considerate to give uncritical support to every revolutionary scheme. She showed how this attitude affected her heroine's personal and social life, but her novel was equally concerned with the heroine's adjustment to the violent death of her husband, a neurotic, compulsive revolutionary from whom she had long been separated. The personal, political and social themes were inextricably entwined, as they are in her latest novel.

A Guest of Honour. 1971. P.

Creative adaptability, opposed to destructive inflexibility, is the unifying theme of this novel set in a newly independent African state.

An ex-colonial civil servant, Colonel James Bray, had been recalled from this country at the behest of white settlers because he and his wife, Olivia, supported the African Independence party. He and Olivia have spent ten years' quiet happiness in their Wiltshire home. For her this has become "the definitive life". For Bray it has not, as he realises when he returns to the former colony as the honoured guest of its President, his friend Mweta, for whom he feels a warm, fatherly affection. Bray had intended his visit to be short, but Mweta persuades him to stay to survey the country's educational needs and resources.

Bray is astounded to discover that his own contemporary, Shinza, the Independence party's formidable *eminence grise*, has been elbowed into the wilderness by Mweta, their joint protegé. Beneath the President's charm lies an unadaptable personality, dazzled by power. Against his will, Bray is driven to recognise this, to recognise also that Shinza, for whom he cares less, remains vitally concerned for his country's welfare.

Slowly, Bray realises that his warm relationship with Mweta has ended, become as much a part of the past as his life with Olivia, who has evaded the question of joining him in Africa. In the struggle between the two politicians Bray is now Shinza's man.

Bray's gradual acknowledgment of active commitment in his adoptive country's politics is paralleled by his gradual acceptance of the fact he is now committed to Rebecca, the young woman to whom he has been drawn by their mutual loneliness and what he cynically dismissed to himself as "the last kick of the prostate". Bray's relationships with Shinza and Rebecca lead to his death in the ensuing civil war, but, "even when we are dead what we did goes on making . . . new combinations . . . that's as true for private history as the other kind." Both Rebecca and the country benefit permanently from his actions.

Miss Gordimer's creation of Bray, a wholly convincing good man, is a triumph, but although he is the central character and the action seen through his eyes, there is a vivid host of peripheral figures and a background painted with loving precision. Few modern writers have succeeded, as Miss Gordimer has here, in creating a life-affirming tragedy.

Graham Greene (b. 1904).

Greene's best work is *The Power and the Glory*, 1940 (P). Apart from the books he calls "entertainments", of which the latest is *Travels with My Aunt*, 1969, Greene has published six novels since the War. They are: *The Heart of the Matter*, 1948, *The End of the Affair*, 1951, *The Quiet American*, 1955 (all P), *A Burnt-out Case*, 1961, *The Comedians*, 1966 (P). All have settings of topical interest: war-time London, the Congo, Vietnam, Haiti, South America.

While Greene's work has been influenced by the thriller and the film, his literary master is Conrad and, although Greene's novels often seem rather superficial and, at times, he appears unable to treat his characters objectively, he nevertheless tells a good story and is skilled at evoking the discomfort and squalor of life in the tropics. In his first two post-war novels he failed to achieve artistic resolution between his religious beliefs and his feeling that life is a sordid struggle against impossible odds, but *The Quiet American* and *The Comedians*, which have no overtly religious themes, are more successful.

The Honorary Consul. 1973.

Greene's latest novel is a typical example of his better work and combines an exciting, up-to-the-minute melodrama with an exploration of fundamentally religious feeling. Its setting is a small town on the Argentine–Paraguayan border, its subject the kidnapping of an Honorary British Consul by left-wing revolutionaries who hope to exchange him for their imprisoned comrades.

The main characters present types familiar from Greene's earlier work. His central figures are two men of British nationality but South American upbringing, Charlie Fortnum, the Honorary Consul, and his friend Dr. Plarr.

As his title suggests, Fortnum's official standing is more nominal than actual. A seedy, elderly drunkard, kind and sentimental, he has fallen helplessly in love with a young girl from the local brothel and married her, knowing that since he cannot live long, his pension will assure her financial security for the rest of her life.

Plarr, a rootless cynic, divides his time between treating poverty-stricken peasants and having casual affairs with rich married women. Although chary of any sort of commitment, he allows himself to become involved with Fortnum's kidnappers, who include two of his former school-friends. In this Plarr is motivated partly by the revolutionaries' promise to ask for the release of his own father, imprisoned some twenty years before as an associate of Paraguayan rebels. But he also wants to protect the kidnappers from the results of their own incompetence and to save not only Fortnum's life, but theirs. In the attempt to do so Plarr himself is killed.

The revolutionaries are led by an unfrocked, married priest, Father Rivas. His feeling for the poor has led him to reject the institutionalised Church, whose officials live in luxury, hob-nobbing with dictators while telling their undernourished and poverty-stricken flock to "sell all you have and give to the poor." Rivas realises the comfort of religion helps the suffering peasant but he himself retains only a half-hopeful half-sceptical belief in God: "I do not forget my old claptrap . . . but I have never yet seen any sign that He interferes in our world or our politics."

Whereas in books like *The Heart of the Matter* and *The End of the Affair* religious themes are obtrusive and overtly didactic, in *The Honorary Consul* Greene fully incorporates them into the fabric of his novel. He is able to do so partly because he has chosen a setting where the question of the relationship of Church and State is of vital topical importance. We therefore feel that it is entirely appropriate that Rivas and his friends should be concerned with it. At the same time, the intractability of the problems faced by all liberals in South American dictatorships makes Rivas's ambivalent attitude to the Church relevant and meaningful.

Moreover, although the novel is thus, and appropriately, concerned with contemporary feelings about specifically Christian problems, it is equally an exploration of the secular virtue of *machismo*—self-respect—and, at a deeper level gives expression to two general themes: of the necessity for self-sacrificial commitment to those weaker than ourselves and of man's need for some awareness of an all-absorbing, parental love.

The novel makes a most interesting contrast to Brian Moore's earlier, documentary treatment of a similar story, in *The Revolution Script* (*q.v.*).

L. P. Hartley (1895–1972).

Hartley is a professional novelist and craftsman in the tradition of James and Hawthorne, the latter his acknowledged master. Like Hawthorne's, Hartley's themes are moral, illuminated by skilful use of symbolism. In his best novels his style is humorous and gently ironical, but in others he lapses into sentimental melodrama.

Hartley seems at his happiest when writing of children and adolescents: a recurrent figure in his work is the delicate, overprotected, hypersensitive, and introspective boy, as in *Eustace and Hilda*, 1947, *The Go-Between*, 1953, *The Brickfield*, 1964. (The heroes of *The Boat*, 1950 (Co), *The Betrayal*, 1966, and *My Sisters' Keeper*, 1970, are older, less successful versions of the same figure.) Hartley is skilled in evoking the atmosphere and scene of his characters' environment, particularly when this is Oxford, Venice or East Anglia in the earlier years of the century.

The Will and the Way, 1973, was the last of his eighteen novels, but his best work is earlier, the *Eustace and Hilda trilogy*, *The Go-Between* and *A Perfect Woman*.

The Eustace and Hilda trilogy—*The Shrimp and the Anemone*, *The Sixth Heaven*, *Eustace and Hilda*. F.

The novel's theme is symbolised in the opening chapter when Eustace and Hilda, playing on the beach at Anchorstone (Hunstanton) try to rescue a half-eaten shrimp from an anemone. The former is an image of the self-sacrificing Eustace, the latter of his beautiful, possessive sister. "The effort to qualify for Hilda's approval" is the "ruling force in Eustace's life."

Hartley presents his hero with sympathy and humour. The novel follows Eustace to Oxford and Venice and ends with his return to Anchorstone, to the now paralysed Hilda. Counterpointing their mutually destructive relationship is the vital life of their sister, Barbara, and her husband.

The Go-Between. P.

The innocent Leo, staying with the rich family of a school friend, acts as a messenger between the latter's sister and her farmer lover, who, like the rest of the characters, appear to him as god-like figures.

A Perfect Woman. 1955.

Save for their children Isabel and Harold have little in common. She finds him dull, but, an ardent reader of novels, believes herself aware of the dangers of indulging in romantic daydreams. Her boredom and dissatisfaction become clear when the handsome novelist, Alec, enters their lives after a chance meeting with Harold. Both wish for Alec's approval and friendship and together scheme to procure for him the barmaid of the local pub.

The voice of Isabel's conscience, symbolised in her son's shouts to his sister, "Janice, go back!" constantly interrupts her daydreams of Alec, and the children's game with the doll, Pamelia, gives symbolic warning of the dangers of their parents' wicked scheme.

The full irony of Hartley's title becomes clear at the end of the novel, when the publication of Alec's new book provides another comment on his relationship with Isabel and Harold.

Others of Hartley's novels, *The Boat*, *My Fellow Devils*, 1961, *The Brickfield*, and *The Betrayal*, have very similar themes to that of *A Perfect Woman*, but only in the treatment of Margaret, the heroine of *My Fellow Devils*, does he approach the objective sympathy which characterises his presentation of Isabel and Harold, and in none of these other novels does he make such subtle use of poetic imagery as he does in *A Perfect Woman*, *Eustace and Hilda* and *The Go-Between*.

Ernest Hemingway (1898–1961).

This controversial American was awarded the Nobel Prize for Literature in 1954. Hemingway's language and syntax are of extreme, at times monotonous, simplicity. He writes best of physical activities like hunting and fishing. The theme of all his writing is personal honour and courage, but he tends to romanticise violence and suffering. His finest work is his earliest, the short stories *In Our Time*, 1924, and the novel *A Farewell to Arms*, 1929 (P). Hemingway's last novel, *The Old Man and the Sea*, 1952, the story of an old man's struggle to catch and land an enormous fish, has immediate appeal, but on subsequent readings its language seems contrived and precious.

Originally entitled *The Sea in Being*, *The Old Man and the Sea* was planned as one of four volumes set in the Caribbean. Hemingway intended eventually to weld them into a single novel. Two of the other books he called *The Sea When Young* and *The Sea When Absent*. The other, unnamed one, he considered complete and intended to publish it in 1951, but this plan fell through. Now given the posthumous titles

Bimini, Cuba and *At Sea* these volumes, which have been subjected to the editorial cutting of Mrs. Hemingway and C. J. Schribner Jr., have been collected and published as *The Islands in the Stream*, 1970.

Susan Hill (b. 1942).

By the time she graduated from London University Susan Hill was the author of two novels: *The Enclosure*, 1961, written when she was sixteen, and an undergraduate work, *Do Me a Favour*, which flopped and is now unobtainable. She spent five years as a literary critic of the *Coventry Evening Telegraph* before returning to novel-writing with *Gentleman and Ladies*, 1968, and has since published five other novels including *A Change for the Better*, 1969: *I'm the King of the Castle*, 1970 (P)—which won the Somerset Maugham award; *Strange Meeting*, 1971 (P); *The Bird of Night*, 1972—which won the Whitbread prize and was short-listed for the Booker award. In 1972 she won the John Llewellyn Rhys Memorial Prize for a volume of short stories, *The Albatross*, (P), which contains some of her best work.

The Enclosure is more interesting as the work of a sixteen-year old than as a novel, but it shows that adventurous readiness to tackle subjects outside her immediate experience which is so characteristic a feature of Miss Hill's later writing. She has attempted an extraordinarily wide range of subjects, but still seems to be trying her wings without having any clear sense of direction: at present her work is more brilliant than significant.

Gentleman and Ladies and *A Change for the Better* show a gift for vivid, wittily realistic dialogue and convincing characterisation of diverse types. *Gentleman and Ladies* concerns a group of ageing people in a small Midland village and its nearby town. *A Change For the Better* is set in a genteel seaside resort and contrasts the reaction of a negative divorcée to the death of her hated mother with that of a courageous old woman to the loss of her much-loved husband.

I'm the King of the Castle is more concentrated and depicts the relationship between two small boys, the vicious bully Hooper, and the kindly, sensitive Kingshaw. The novel has been compared with Golding's *Lord of the Flies* (*q.v.*), but the resemblance is superficial: the relationship between Miss Hill's characters has some similarity to that between Golding's Jack and Piggy and may be interpreted as an image of the relationship between evil and its helpless victim, but *I'm the King of the Castle* lacks Golding's poetic allusiveness and mythic power. It is a firmly realistic study of character—a powerful and striking book, but on a much smaller scale than Golding's novel.

Both *Strange Meeting* and *The Bird of Night* concern a Platonic relationship between two men. In *Strange Meeting*—the title comes from a poem by Wilfred Owen—the theme is the liberating, life-giving effect of selfless love. The setting, in the trenches of the First War, is brilliantly created through precise images, but the novel's characterisation is blurred and ineffectual.

The Bird of Night is more concerned with the cost of love than its liberating power. Harvey, an octogenarian scholar, now living in a remote Suffolk coastal village, talks about his earlier relationship with the manic-depressive Francis, a poet of genius, for whose sake he had abandoned his career and altered his whole way of life.

Miss Hill catches the sense of claustrophobic strain involved in a close relationship with the deranged, and her scene setting, in Suffolk, Dorset, London and Venice is, as always, highly evocative and convincing. The characterisation of Harvey, obliquely expressed through his own reminiscence, is much more assured than any in *Strange Meeting*, but her portrait of Francis lacks depth, as is made very clear by a comparison with Lowry's presentation of Firmin, the alcoholic hero of *Under the Volcano* (*q.v.*).

In the Springtime of the Year appeared early in 1974 and received a generally favourable press.

Dan Jacobson (b. 1929).

Jacobson, by birth a South African, now lives in England. He has published seven novels. The earlier are traditional in form.

The Trap, 1955; *A Dance in the Sun*, 1956; *The Price of Diamonds*, 1957 (all P).

These are three beautifully precise vignettes of South African life. *The Trap* and *A Dance in the Sun* present the tragic spiritual corruption engendered in those who support *apartheid*. *The Price of Diamonds* is a deliciously comic study of two business partners in a small mining town.

The Evidence of Love. 1959.

Jacobson's first full-length novel, *The Evidence of Love*, lacks the verve and precision of his earlier work. It tells how two protégés of a wealthy South African spinster fall in love and of the difficulties they face due to the fact that one of them is Coloured, the other White. Those parts of the novel which deal with the life of the Coloured Kenneth are often vivid, but Jacobson's presentation of the heroine, Isabel, is rather lifeless.

The Beginners. 1966. P.

Jacobson's novels with a South African setting culminated with this chronicle of the life of a family of South African Jews, evoked through a series of brief snapshots. The career of the novel's central character, Joel, bears some resemblance to Jacobson's own.

The Rape of Tamar. 1970.

A note of cynical despair, a sense that life is futilely repetitive, but faintly discernible in *The Evidence of Love* and *The Beginners*, here becomes predominant. The story of *The Rape of Tamar* derives from *2, Samuel 13* but Jacobson's interest lies not in the creation of an historical verisimilitude, but in the presentation of his narrator, the cynical, speculative Yonadab, a ghost conversant with twentieth-century culture, who, like the novelist, feels compelled to recreate his past experience in order to objectify it.

The Wonder Worker. 1973.
